We are not continuously checking her vitals as she is comfort measures only. Observed oxygen in the room was appropriate though noted to still be on 15 L of O2 by blow-by. Labs have not been checked in several days.

Louis is quite proud of his mother's improvement. He has been working hard to give her small sips of water and Ensure. He has also been helping to mobilize her joints and try and strengthen her in bed. We all feel that placement in Bainbridge is most appropriate for her. Reviewed current strategy for patient's oral intake and I continue to impress upon Louis that she has aspirated multiple times and remains n.p.o. though he is welcome to feed her if he acknowledges the risk

Physical Exam
General - patient laying in bed. Son had put her dentures in and she had the hydration sponge stick in her mouth. Was mostly calm but intermittently agitated, crying out, grimacing, and had increased WOB.
HEENT - NCAT, edentulous. Left parotid gland is superficially erythematous and appears mildly swollen and is lightly TTP.
Pulmonary - no supplemental oxygen needed. Minimal WOB. No cough. Decreased air movement. Crackles bilaterally mild.
Skin - no rash or concerning lesion of exposed skin. Incision site medial aspect with scab that appears picked off. No discolored drainage though there is some superficial white slough and 1-2mm of erythema.
Neuro - Does not answer questions.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo: Patient is still a comfort measures only patient though, at the desire of her DPOA and son Luis, remains a minimally necessary elevation of care. With many issues such as IV access and oxygen we have come to the agreement that we are not going to maintain access or provide invasive oxygen therapy. We also are not going to do invasive strength training or pursue PEG tube or NG tube given patient's tenuous oxygen status. This is more in line with a comfort focused order set. However, and working with patient's son, and in maintaining a standard of minimally necessary elevation of care, we find it agreeable to treat superficial concerns such as an infected parotid gland likely from dry oral mucosa and a picked off a scab from her left stump site with topical Betadine and a bandage. There was noted previously, her overall intent distal to provide primarily comfort focused care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. She will likely pass in a matter of days.
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible. Our present plan is to discharge the patient to hospice with the son is agreeable to.
- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn

- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Superficial infection of left stump site
#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time. Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

Weekend Social Work:

Referral: Weekend social work team has been requested to follow for auth pending for Bainbridge Island Rehab and to attempted to send HCS referral.

Data:
Per chart review, patient is Jeanne Leonie Hoffman, 100 year old, female, admitted for Arterial occlusion [I70.90] Acute lower limb ischemia [I99.8].
Patient's home address is listed as: 321 HIGH SCHOOL RD NE
STE D3 PMB 292
BAINBRIDGE ISLAND WA 98110.
Payor Source: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid.

Important Contacts:
-SNF AC, Lisa: 206-518-4425

Intervention:
Weekend social work, reviewed chart and handoff.
TC to Lisa at Bainbridge admissions; auth for rehab has not been submitted. Lisa reports she has attempted to fax 15 times and none of the attempts have been successful. She reports that she will e-mail it to the insurance supervisor today. Lisa agreeable to update this writer with any progress.

SNF has requested HCS referral be submitted for LTC Medicaid as back-up. HCS referral completed, faxed to Region 2S King Co (p: 206-341-7750, f: 206-373-6855) X2 Fax unsuccessful.
Attempted contact by phone to see if another fax number is available- reached VM that states phone/VM staffed M-F only.

Medical team updated.

Plan: Weekend social work will continue to follow and support with coordination to SNF and HCS referral.

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
No significant overnight events.

Had an extended conversation today with Louis at bedside. He is advocating for his mother to work with physical therapy. Luis is requesting crutches so that he can demonstrate for her how they are used. He shows me photos on his personal laptop of her health just 1 year ago and how she was able to move around. He frequently goes into very detailed and superfluous stories providing the necessary information. I discussed with him that while I feel that there are many interventions that we should not offer the patient out of concern for futility and more harm than good, we do need to acknowledge that she is no longer imminently deteriorating and that her oxygen status has improved. Keeping with that recognition, it would be best to offer the patient more care as opposed to last. I am still not advocating to take her off of comfort measures and I explained this to to the son. I think it is worthwhile to keep her in her current order set but offer bits and pieces from a more full care perspective. While I do not think that we should attempt to feed the patient, I explained to Luis that he is welcome to do so. I also explained that it would not be in the patient's best interest to try and collect daily labs and continue with invasive intravenous therapies to which he agreed.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo: I am not going to move this patient off of comfort measures because I do not think that a more treatment based approach is beneficial to her at this time. Various intravenous therapies, routine laboratory monitoring, etc. are not likely to play a large benefit for her long-term health and they cause her significant amount of distress. That being said, she does not appear to be imminently deteriorating as previously thought approximately 5-7 days ago. Therefore, we need to tailor our care for both patient and her DPOA/son. I am advocating for, as previously stated, minimal necessary care with minimal elevation. She remains DNR/DNI. We will continue not to check daily labs, ins and outs, provide intravascular rehydration, or attempt parenteral nutrition. As such, she will effectively remain on comfort measures. However, with the stated goal of rehabilitation per her son, it is worthwhile to attempt to treat superficial infections, keep her wounds clean, provide oxygen as necessary for comfort only, and allow Louis the opportunity to help rehab his mother. I have placed a consult to physical therapy to resume care and assess her in the bed to help with mobility and strength and provide exercises. I have also requested that, on the first sign of desaturation, that the therapeutic exercises be terminated.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen

status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: SNF

Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Placement - Skilled Nursing Facility;Care Coordination;Consult with healthcare team/provider/community

Weekend Social Worker received a referral via the Weekend Worklist to follow up with SNF regarding insurance authorization and to fax HCS referral.

SW called Bainbridge Island SNF Admissions Coordinator Lisa (206-518-4425) for updates. Lisa shared that she has attempted to fax patient's insurance 22 times and has been unsuccessful. She has called them and is awaiting a call back after speaking with an answering service.

Per handoff, SNF has requested HCS referral be submitted for LTC Medicaid as back-up. SW attempted to fax completed HCS referral to Region 2S King Co (p: 206-341-7750, f: 206-373-6855), fax unsuccessful. SW later received information that the new HCS fax number is 425-277-7033. SW re-faxed referral to new number, fax was successful.

SW provided VM handoff to primary SW.

PLAN or OUTCOME:
Patient is anticipated to discharge to Bainbridge Island SNF pending insurance authorization. SW to coordinate discharge and to continue to attempt to submit HCS referral.

Social Work remains available for discharge planning, care coordination, resources, and support.

Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.
- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Superficial infection of left stump site

#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time. Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

#Deconditioning
Patient may be evaluated by PT primarily to help Louis have the tools/education to further strengthen his mother on his own. If she desaturates then the therapy session should be terminated.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare

team/provider/community;Discharge planning;Placement - Skilled Nursing Facility

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Per MD report, pt on comfort care.

Per SW handoff, HCS referral faxed to new HCS fax number (425-277-7033). SNF reports issues w/ submitting insurance auth to Molina.

MSW called main number for pt's Molina insurance (800-869-7175); per phone tree, fax number for authorization is 844-251-1450. Per Molina representative, fax number for authorizations is 833-912-4454. MSW provided both fax numbers to Bainbridge SNF in case they were needed. Update from SNF that auth was successfully faxed.

PLAN or OUTCOME:
SW to continue to follow.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo: I am not going to move this patient off of comfort measures because I do not think that a more treatment based approach is beneficial to her at this time. Various intravenous therapies, routine laboratory monitoring, etc. are not likely to play a large benefit for her long-term health and they cause her significant amount of distress. That being said, she does not appear to be imminently

deteriorating as previously thought approximately 5-7 days ago. Therefore, we need to tailor our care for both patient and her DPOA/son. I am advocating for, as previously stated, minimal necessary care with minimal elevation. She remains DNR/DNI. We will continue not to check daily labs, ins and outs, provide intravascular rehydration, or attempt parenteral nutrition. As such, she will effectively remain on comfort measures. However, with the stated goal of rehabilitation per her son, it is worthwhile to attempt to treat superficial infections, keep her wounds clean, provide oxygen as necessary for comfort only, and allow Louis the opportunity to help rehab his mother. I have placed a consult to physical therapy to resume care and assess her in the bed to help with mobility and strength and provide exercises. I have also requested that, on the first sign of desaturation, that the therapeutic exercises be terminated.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo: I am not going to move this patient off of comfort measures because I do not think that a more treatment based approach is beneficial to her at this time. Various intravenous therapies, routine laboratory monitoring, etc. are not likely to play a large benefit for her long-term health and they cause her significant amount of distress. That being said, she does not appear to be imminently deteriorating as previously thought approximately 5-7 days ago. Therefore, we need to tailor our care for both patient and her DPOA/son. I am advocating for, as previously stated, minimal necessary care with minimal elevation. She remains DNR/DNI. We will continue not to check daily labs, ins and outs, provide intravascular rehydration, or attempt parenteral nutrition. As such, she will effectively remain on comfort measures. However, with the stated goal of rehabilitation per her son, it is worthwhile to attempt to treat superficial infections, keep her wounds clean, provide oxygen as necessary for comfort only, and allow Louis the opportunity to help rehab his mother. I have placed a consult to physical therapy to resume care and assess her in the bed to help with mobility and strength and provide exercises. I have also requested that, on the first sign of desaturation, that the therapeutic exercises be terminated.
Patient plan is still as follows: Minimal necessary escalation of care while maintaining a majority comfort measures only approach. Should there be any signs of actual distress between the patient and her son, recommendation to gently separate son and patient and allow the situation to diffuse naturally before assessing and, level, attempting to maintain comfort measures with minimal necessary escalation of care as determined to be reasonable by care team

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: SNF
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Chart Review/Screening;Counseling/Support/Psychoeducation (coping, adjustment to illness)

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Per MD report, pt on comfort care.

Update from admissions at Bainbridge Island SNF that insurance continues to request additional info, including PT eval. MD, PT updated. PT note completed, SNF updated.

MSW reached out to SW supervisor re: possible assistance from Contracting.

PLAN or OUTCOME:
SW to continue to follow.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
NAEO
Son at bedside; She is sitting up in bed this AM, requests us to hand her glasses (were in her bedsheets)
Plan for discharge to Bainbridge rehab.
PM update:
Patient with fall 3/5 PM, found by RN staff on floor while patient's son not in the room (though seems to have slipped from bed), bed alarm was not enabled (RN staff noted that son had turned off bed alarm, son counseled against this). Met with patient (son was not there at the time), asked patient if had any pain to body or head/asked if she hit her head (she shook her head to these questions). She states (notably with dysarthria) "I didn't break anything", also "don't worry about me", when asks what happens she makes hand swirling motion and says "I rolled down". She shrugs when asked how she fell/slipped out of bed. Counseled patient regarding asking for help if trying to get out of bed, she nods to this. Patient on modified/comfort care as below- she appears comfortable, alert, no further interventions at this time.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- lidocaine, 1 patch, q24h
- psyllium, 1 packet, BID

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo, copied forward from 3/4/2024 progress note by Dr. Stenberg: I am not going to move this patient off of comfort measures because I do not think that a more treatment based approach is beneficial to her at this time. Various intravenous therapies, routine laboratory monitoring, etc. are not likely to play a large benefit for her long-term health and they cause her significant amount of distress. That being said, she does not appear to be imminently deteriorating as previously thought approximately 5-7 days ago. Therefore, we need to tailor our care for both patient and her DPOA/son. I am advocating for, as previously stated, minimal necessary care with minimal elevation. She remains DNR/DNI. We will continue not to check daily labs, ins and outs, provide intravascular rehydration, or attempt parenteral nutrition. As such, she will effectively remain on comfort measures. However, with the stated goal of rehabilitation per her son, it is worthwhile to attempt to treat superficial infections, keep her wounds clean, provide oxygen as necessary for comfort only, and allow Louis the opportunity to help rehab his mother. I have placed a consult to physical therapy to resume care and assess her in the bed to help with mobility and strength and provide exercises. I have also requested that, on the first sign of desaturation, that the therapeutic exercises be terminated.
Patient plan is still as follows: Minimal necessary escalation of care while maintaining a majority comfort measures only approach. Should there be any signs of actual distress between the patient and her son, recommendation to gently separate son and patient and allow the situation to diffuse naturally before assessing and, level, attempting to maintain comfort measures with minimal necessary escalation of care as determined to be reasonable by care team

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.

- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Superficial infection of left stump site
#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time. Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

#Deconditioning
Patient may be evaluated by PT primarily to help Louis have the tools/education to further strengthen his mother on his own. If she desaturates then the therapy session should be terminated.

#Acute encephalopathy
#Chronic pain r/t prior L AKA
#Anxiety
#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
#Hypokalemia

Physical Therapy Evaluation

Jeanne Leonie Hoffman
U8170135

3/5/2025
Duration of session: 40 Minutes

Patient Active Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability

- Advanced care planning/counseling discussion
- Acute lower limb ischemia
- Bradycardia
- Abdominal pain

Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018
• Thrombocytopenia (HCC)	11/2/2016
• Leg weakness, bilateral	1/6/2015
• Weakness of trunk musculature	1/6/2015
• Vertebral fracture *Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed healed*	12/13/2012
• Thyroid nodule, uninodular *CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.*	12/13/2012
• Closed fracture of unspecified intracapsular section of neck of femur *Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.*	5/1/2007
• Unspecified vitamin B deficiency	5/1/2007

Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency

- Impaired fasting glucose 3/22/2007
- Carpal tunnel syndrome 11/20/2006
  Carpal tunnel release right wrist in 1989
- DIAPHRAGMATIC HERNIA 11/20/2006
  CT of abdomen in 2006
- Esophageal reflux 11/20/2006
- Other convulsions 11/20/2006
  Petit Mal since 1975 Carbamazepine level 7.6 on Feb 2007 Discontinued based on ER neuro consult in early 2013 No recurrence
- Allergic rhinitis, cause unspecified 11/20/2006
- DVT, recurrent, lower extremity, chronic 11/20/2006
  Recurrent DVT and phlebitis since 1982 Per Vascular Surgery note 5/9/2006: continue warfarin 3/9/2010 Lower extremity arterial vascular ultrasound studies normal
- Diabetes mellitus (HCC)
- PAD (peripheral artery disease) (HCC)
- Ulcer of left lower extremity, limited to breakdown of skin (HCC)
  Chronic, Multiple sites of lower leg and ankle, with MSSA

Subjective

Patient Report/Self-Assessment: n bed resting, asking if she will be in a coffin, if they will dig a hole, letting me know she pee'd

Patient Stated Goal(s): None stated

Objective
RUE Assessment
RUE Assessment: Exceptions to WFL
RUE Assessment Comments: able to bring hand to mouth, good grip during hand shake, limited hand opening

LUE Assessment
LUE Assessment: Exceptions to WFL
LUE Assessment Comments: able to bring hand to mouth

RLE Assessment
RLE Assessment: Exceptions to WFL
RLE Assessment Comments: antigravity strength

LLE Assessment
LLE Assessment: Exceptions to WFL
LLE Assessment Comments: limited assessment

Sensation
Light Touch: unable to assess

Coordination
Movements are Fluid and Coordinated : No

Static Sitting Balance
Static Sitting Balance Level of Assistance: Dependent (greater than 75% help needed)
Dynamic Sitting Balance
Dynamic Sitting Balance Level of Assistance: Dependent (greater than 75% help needed)

Activity Tolerance
Endurance: Tolerates less than 10 min of activity, no significant change in vital signs

Functional Level:
Bed Mobility
Rolling Left: Dependent (greater than 75% help needed)
Rolling Right: Dependent (greater than 75% help needed)
Supine to Sit: Dependent (greater than 75% help needed)
Sit to Supine: Dependent (greater than 75% help needed)
Transfers
Bed<>Chair/WC: Dependent (greater than 75% help needed)
Bed<>Chair/WC Assistive Device Details: Mechanical lift
Chair/WC<>Bed: Dependent (greater than 75% help needed)
Bed<>Chair/WC Assistive Device Details: Mechanical lift

Interventions:
Therex: provided pt's son with AKA exercise packet - reports he has been attempting these ex's when pt allows - son reports not being able to get into prone to perform hip ext ex's = addressed by having pt be in sidelying as they were taught in previous sessions to perform hip ext ex's
Theract: supine > sit with dependent assist, elevated HOB, assist for initiation sitting EOB x 3 mins - dependent assist, without support > posterior LOB. sits in flexed, kyphotic posture, sacral sitting sit > supine with dependent assist, scooting up in bed with two person dependent assist

ASSESSMENT/PLAN

Jeanne presents to PT at a dependent level for all functional mobility. When sitting EOB she requires continuous dependent assist to prevent posterior LOB. She demonstated she was able to hold my hands and maintain upright postion briefly unitl UEs fatigued and then began to lose balance. She is not able to turn or scoot up in bed without dependent assist. She attempts to communicate but is difficult to understand. Most comments today centered on how her body will be cared for after she dies. She was too fatigued to participate in active LE ex's today so we deferred until next session. Son is well versed in her LE ex's and will assist when pt is agreeable as well. Pt's son focused on a future in where pt will be able to work on standing and walking with crutches.

Barriers to Discharge: pt dependent for all mobility

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Home exercise program, Moderate Assist (between 25-49% help needed)
Estimated Completion Date: 03/14/25
Goal Status: Progressing
Goal: Bed mobility, Moderate Assist (between 25-49% help needed)
Estimated Completion Date: 03/14/25
Goal Status: Not Progressing

Acute Care PT Plan of Care:
Treatment/Interventions: Patient/family training, Therapeutic functional activities, Therapeutic exercise
PT Plan: Skilled PT
PT Dosage: 1-2x/week
Plan for Next Session: LE ther ex, sitting EOB

Other Recommendations:
Recommendation for PT After Hospital Discharge: Will need follow up PT at next level of care
PT Daily Recommendations: 2PA - OOB to chair via sling 3x/day

Jason L Menown, PT

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: SNF Placement
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid
Primary Decision Maker: LNOK - Son, Louis Hoffman (206-780-6885)

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Discharge planning
MSW assisting primary Medicine E SW; this writer completed a chart review. NCC shared patient experienced a fall yesterday and broke her right femur. Per NCC, Orthopedics team was consulted and determined patient not a surgical candidate and will be medical management (versus surgical intervention). **NCC confirmed patient continues to be medically stable for transfer to SNF following fall.** SW consulted for SNF placement.

MSW received call from Sarah of Bainbridge Island Health and Rehab (206-842-4765) confirming receiving prior authorization for patient's SNF rehab stay and have capacity to receive patient tomorrow (Friday, 03/07) before 1600. This writer shared medical update re: patient's fall and faxed 3/6 MD note, 3/6 Orthopedics note, 3/6 RN note, and 24-hour MAR per their request (fax #206-842-4426). This writer later received AIDA message from SNF requesting patient to be stable on PO pain meds for 24 hours prior to admit. This writer responded asking for clarification if patient receiving dilaudid subcutaneous injections is acceptable or patient required to transition to PO prior to admit. This writer also inquired about weekend admissions; had not yet received response from SNF by end of shift.

MSW called Tri-Med and preemptively booked an ambulance, BLS ride for tomorrow at 1200 for discharge to SNF

(MSW to reschedule if DC does not happen).

MSW notified MD Barnes requesting updated POLST.

MSW planning to meet with patient's LNOK/Son, Louis, re: SNF updates but needed to wait until he returned to bedside in the 1500 hour (son told care team he was having surgery today). MSW to meet with Louis if time permits this afternoon.

MSW continues to follow for discharge planning and coordination.

PLAN or OUTCOME:
-MSW meets with patient and LNOK/Son re: DC to SNF
-MSW follows up with Bainbridge Island Health and Rehab re: dilaudid SC injections vs. PO meds and weekend admissions
-MSW follows up with primary team re: updated POLST
-MSW follows up with Tri-Med re: transportation (cancel or reschedule 3/7 ride)
-MSW coordinates DC to SNF

I have also requested that, on the first sign of desaturation, that the therapeutic exercises be terminated.
Patient plan is still as follows: Minimal necessary escalation of care while maintaining a majority comfort measures only approach. Should there be any signs of actual distress between the patient and her son, recommendation to gently separate son and patient and allow the situation to diffuse naturally before assessing and, level, attempting to maintain comfort measures with minimal necessary escalation of care as determined to be reasonable by care team

 # Right hip fracture
- fall in hospital on 3/5 with R hip fracture, non -op management decided upon based on very high operative risks.
- patient's son reported he internally rotated her leg to "set it" and we will repeat 2V femur xray
- I have reiterated that he should not do this. If he does this again I think we need to have a discussion about him not being in her room. He reported he would not do this again.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent
Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.
- CMO
- Pain: HM 0.2-0.4 q1hr prn -> transition to concentrated oral morphine on 3/6/25
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Superficial infection of left stump site
#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time (completed). Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia

Clinical Notes (group 17 of 17) (continued)

#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR. Now stable
- CMO as above

#Deconditioning
Patient may be evaluated by PT primarily to help Louis have the tools/education to further strengthen his mother on his own. If she desaturates then the therapy session should be terminated.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers

Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:

Patient laying in bed difficult to arouse this morning apparently this intermittently occurs has been send says that he thinks she got too much morphine she got 5 mg at 12:00am she did respond to tactile stimulation and moved in response to voice

Later on revisit with son and patient around 12pm, she was very much awake and interactive, complaining of discomfort and itching on back. Had GOC conversation with son (see below)

Got sub q dilaudid overnight, will dc now in favor of oral regimen.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- lidocaine, 1 patch, q24h
- psyllium, 1 packet, BID
- saliva substitute, 15 mL, TID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- atropine, 2 drop, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- camphor-menthol, , BID PRN
- artificial tears, 1 drop, q1h PRN
- HYDROmorphone, 0.2-0.4 mg, q1h PRN **OR** HYDROmorphone, 0.2-0.4 mg, q1h PRN
- LORazepam, 0.25-0.5 mg, q6h PRN **OR** LORazepam, 0.25-0.5 mg, q6h PRN
- magnesium hydroxide, 30 mL, BID PRN
- morphine CONCENTRATED, 5 mg, q4h PRN
- phenol, 1 spray, Q2 Hours PRN
- scopolamine, 1 patch, q72h PRN
- white petrolatum, , PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. It was previously thought that she would pass in a matter of days however her oxygen status has recovered to an extent

Portions copied forward from 3/4/2024 progress note by Dr. Stenberg: I am not going to move this patient off of comfort measures because I do not think that a more treatment based approach is beneficial to her at this time. Various intravenous therapies, routine laboratory monitoring, etc. are not likely to play a large benefit for her long-term health and they cause her significant amount of distress. That being said, she does not appear to be imminently deteriorating as previously thought approximately 1-2 weeks ago Therefore, we need to tailor our care for both patient and her DPOA/son. I am advocating for, as previously stated, minimal necessary care with minimal elevation. She remains DNR/DNI while here. Patient's son as surrogate decision-maker was in agreement with DNR/DNI but on 3/7 he said that he wanted her to be full code when she leaves. We had numerous discussions about how we felt this was going to cause her more harm than good (see discussion with palliative on 2/18/25 regarding similar

discussion to ours today and after which she was determined to be DNR), and he said he wanted to make the decision at the moment. We feel that it is medically inappropriate to code her here given her frailty and co morbidities and will remain DNR/DNI, however her POLST states Full code. He stated his understanding that she is DNR/DNI in the hospital during my discussion re: POLST form. He did say his hope was that she improves over the coming weeks and if not, he would revisit the code status. When leaving the room he came by and said that he agreed that we should do what we can to make her comfortable. This will likely require ongoing conversations.

We will continue not to check daily labs, ins and outs, provide intravascular rehydration, or attempt parenteral nutrition. As such, she will effectively remain on comfort measures. However, with the stated goal of rehabilitation per her son, it is worthwhile to attempt to treat superficial infections, keep her wounds clean, provide oxygen as necessary for comfort only, and allow Louis the opportunity to help rehab his mother if she improves. I have placed a consult to physical therapy to resume care and assess her in the bed to help with mobility and strength and provide exercises.

Patient plan is still as follows: Minimal necessary escalation of care while maintaining a majority comfort measures only approach. Should there be any signs of actual distress between the patient and her son, recommendation to gently separate son and patient and allow the situation to diffuse naturally before assessing and, level, attempting to maintain comfort measures with minimal necessary escalation of care as determined to be reasonable by care team

She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible.
- CMO (modified as above)
- see pain
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

 # Right hip fracture
- fall in hospital on 3/5 with R hip fracture, non -op management decided upon based on very high operative risks.
- patient's son reported he internally rotated her leg to "set it" and we will repeat 2V femur xray - d/w orthoi and looks like there is no intervention needed after this manipulation by son
- I have reiterated that he should not do this. If he does this again I think we need to have a discussion about him not being in her room. He reported he would not do this again.
- brace placed by orthotics on 3/7 at request of son and with guidance from orthotics and ortho.
- NWB on Right leg
- Should limit motion of leg (ideally no ROM of R leg)
- abduction pillow
- log rolls for turning
- hip-spica brace now in place settings 0-60, slight abduction
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25 (ordered as outpatient in case it needs to be done here vs at SNF)
- concentrated oxycodone for pain (low dose 2.5 mg)
- will continue lovenox for now, but if causing significant discomfort can stop

#Superficial infection of left stump site
#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time (completed). Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x

dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR. Now stable
- CMO as above

#Deconditioning
Patient may be evaluated by PT primarily to help Louis have the tools/education to further strengthen his mother on his own. If she desaturates then the therapy session should be terminated.

ADDENDUM:
--Covering SW confirmed a Tri-Med BLS (Ambulance) for pt to DC at *1100 on Sat 3/8/25* to SNF Bainbridge Island Health and Rehab.
--Covering SW contacted Lisa of Bainbridge Island Health and Rehab in her cell: 206-518-4425 and updated her on pt's tentative DC at 1100 on 3/8. She was appreciative and understood that a weekend SW would be reaching out to her tomorrow morning with an update
--SW updated provider and provider confirmed that POLST was in process with pt's son.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: DC to SNF
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid

INTERVENTIONS and REFERRALS:
Covering SW participated in rounds with medical team and dicussed pt's discharge plan. Provider shared that he would be speaking with pt's son this morning to completes the pt's POLST, prior to a possible DC today or this weekend.

SW contacted the accepting SNF, Lisa of Bainbridge Island Health and Rehab (Work: 206-842-4765, Lisa's Cell: 206-518-4425 - use this on weekend) and Lisa confirmed that pt *must be stable on PO pain meds for 24 hours prior to admit* (cannot be on dilaudid subcutaneous injections). Because pt received dilaudid subcutaneous injections within the last 24 hours SW ended up cancelling pt's Trimed ambulance booked for 1200 Noon today and updated provider.

Lisa at Bainbridge Island Health and Rehab went on to share that they can only accept pt over the weekend if *she leaves here by 1100 or 1200 at the latest on Sat 3/8.* They cannot accept pt on Sunday 3/9/25. SW updated provider with this information.

SW to provide a hand off to the Weekend SW team if pt is on track to DC on Saturday 3/8 before Noon.

PLAN or OUTCOME:
--SW to coordinate transportation with Tri-Med to Bainbridge Island Health and Rehab when pt is medically ready to DC.
--MSW follows up with primary team re: updated POLST
--MSW to call Lisa (Cell: 206-518-4425) at Bainbridge Island Health and Rehab when pt is medically ready to DC to coordinate DC

PROSTHETICS & ORTHOTICS - HIP SPICA/ABDUCTION BRACE

Patient is a 100 year old female with history of concerns for chronic LLE wounds and increased pain, ultimately found to have acute limb ischemia and went to the OR urgently with vascular surgery for AKA.
Right peri-implant femur fracture 3/5.

She was seen on 7SA-7411 per consult for right hip spica orthosis. Orthosis indicated to provide support and restrict ROM. The patient was measured and fit with a Newport hip stabilizer orthosis. Medium Pelvic and size small thigh components were used. Hip joint set at 0-60 degrees flexion and slight abduction for comfort. Patient appears to be comfortable at this time with the brace in place.

Orthosis to be removed for regular skin inspection. The orthosis was inspected for structural integrity and determined to be appropriate for delivery today. Written and verbal instructions were provided to the patient and/or left at bedside. Spare set of pad were left at bedside with her son.

Please contact Prosthetics and Orthotics with questions or concerns at 206.598.4025 (M-F 8-4pm) or page P&O from Teams.

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: acute limb ischemia s/p L AKA, heart block s/p PPM, malnutrition, R femur fracture, GOC, support, palliative care.

INTERVAL HISTORY:
-Discussed case with Dr. Barnes. Jeanne had R femur fracture in the setting of a fall. No surgical intervention, is non-weightbearing. Plan was for Jeanne to d/c to SNF today for rehab, however, she required SQ hydromorphone overnight. Is now transitioned to an oral regimen.
-Per discussion with Dr. Barnes, son Louis expressed desire for Jeanne to be full code upon discharge. This topic came up with completing POLST. Dr. Barnes and I made plans to follow up for further discussion. Jeanne has been more somnolent this morning.
-Dr. Barnes and I discussed case with bedside RN Rosalie and charge RN Alex. Rosalie shared that Louis has been requesting a brace for Jeanne's leg to help stabilize it. Per discussion with Dr. Barnes, Louis manipulated Jeanne's leg trying to "set it".

Dr. Barnes, Rosalie Puleo RN, and I met bedside with Louis. Initially, Louis shared a desire for his mom to have a brace placed to stabilize her leg. He had done some research on is own and had some ideas about possible options. Louis shared worry that if her leg is not stabilized she will have severe pain with turns, which she will need to have for things such as toileting. He shared that she is quite sensitive to pain medications. If she becomes sedated from pain medications then she will not eat and then will eventually starve to death. I reflected to Louis that we were facing her decreased intake weeks ago and that it seems like this has been up and down. Louis shared that he wants to give his mom a chance to recover.

We shared worry with Louis that Jeanne will continue to have complications and may not be able to recover and may be close to EOL. He shared that he knows that she will survive and will be able to get better.

We discussed with Louis standard of care and ortho recs for no brace, log roll turns. Louis shared how important it is to him for Jeanne to have her leg as stable as possible to have the best chance at recovery. We discussed that pain management will still be necessary as part of her care plan. He was accepting of this and expressed a desire to minimize opioids as much as possible.

We then addressed code status. Shared with Louis our perspective that providing interventions such as CPR or a breathing tube are unlinely to be helpful to Jeanne given her comorbidities and current clinical situation. Louis shared a hope for peace at EOL and also does not want to take things off of the table when she leaves the hospital. Shared that a peaceful EOL for Jeanne would not involve CPR. We asked Louis what his plan would be if his mom does not improve and continues to worsen. Louis shared taht eh would be willing to re-evaluate in the moment and make the decision.

PHYSICAL EXAM:
BP (!) 101/54 (Patient Position: Lying) | Pulse 92 | Temp 36.3 °C (Temporal) | Resp 16 | Ht 5' (1.524 m) | Wt 45.7 kg (100 lb 12 oz) | SpO2 94% | BMI 19.68 kg/m²
Jeanne was laying supine in bed, intermittently yelled out and appeared uncomfortable, pointed to my back when I asked her about pain, try mouth/tongue.

IMPRESSION: Jeanne remains hospitalized and has been stable on comfort care for the past few weeks. She recently sustained a femur fracture which has increased her pain. Her son Louis has concerns about ongoing pain and has requested a brace to support her leg. At this time his is hoping for recovery and would like for his mom to remain full code. If things chance and his mom is clearly declining, then he is willing to consider changing her code status to DNR/ DNI. At this time Louis hopes for rehab oriented care for his mom.

RECOMMENDATIONS:
-Continue with current level of care. Louis would like code status changed to full code upon discharge from the hospital. Will leave code status as DNR/DNI and continue with comfort oriented care. Dr. Barnes and I are in agreement that full code status would not be medically appropriate at this time.
-Appreciate orthotics support with getting a brace for Jeanne if possible.
-Recommend trial of scheduled tylenol suppository (recommend Q8 hour dosing with turns).
-Recommend oxycodone 2.5-5mg PO Q8 hours PRN pain. Will be helpful to premedicate before turns.
-Louis is willing to reconsider POLST and changing code status in the future should Jeanne continue to clinically declline or not tolerate rehab oriented care.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 106 minutes for the patient's care on the date of the service.

Foxx, Vivian Amber, LICSW at 3/8/2025 0848

Weekend Social Work Progress Note

ASSESSMENT:

Admit reason: This is a 100 year old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: DC to SNF
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid

INTERVENTIONS and REFERRALS:
Per Covering SW note from 03/07/2025:
--Provider shared that he would be speaking with pt's son this morning to completes the pt's POLST, prior to a possible DC today or this weekend.
--SW contacted the accepting SNF, Lisa of Bainbridge Island Health and Rehab (Work: 206-842-4765, Lisa's Cell: 206-518-4425 - use this on weekend) and Lisa confirmed that pt must be stable on PO pain meds for 24 hours prior to admit (cannot be on dilaudid subcutaneous injections).
--Because pt received dilaudid subcutaneous injections within the last 24 hours SW ended up cancelling pt's Trimed ambulance booked for 1200 Noon today and updated provider.
--Lisa at Bainbridge Island Health and Rehab went on to share that they can only accept pt over the weekend if she leaves here by 1100 or 1200 at the latest on Sat 3/8. They cannot accept pt on Sunday 3/9/25. SW updated provider with this information.
--Covering SW confirmed a Tri-Med BLS (Ambulance) for pt to DC at 1100 on Sat 3/8/25 to SNF Bainbridge Island Health and Rehab.
--Covering SW contacted Lisa of Bainbridge Island Health and Rehab in her cell: 206-518-4425 and updated her on pt's tentative DC at 1100 on 3/8. She was appreciative and understood that a weekend SW would be reaching out to her tomorrow morning with an update
--SW updated provider and provider confirmed that POLST was in process with pt's son.
--SW to provide a hand off to the Weekend SW team if pt is on track to DC on Saturday 3/8 before Noon.

Weekend SW coordinated with Dr. Barnes and RN Puelo, who confirmed that patient is medically ready for DC to SNF. MD confirmed completion of PASRR and paper scripts for controlled medications. MD also confirmed POLST completed.

SW contacted admission coordinator Lisa Fry of Bainbridge Island Health and Rehab; she confirmed patient admission on 03/08/2025 with a DC from UWMC at 11am via Trimed ambulance.

SW met with patient and her son; son confirmed the DC plan. Son expressed concern for patient's future needs, as he has been her primary caregiver. SW provided emotional support and encouraged ongoing conversation with treatment team and SNF staff to ensure her needs continue to be met appropriately. Son confirmed agreement.

SW contacted Trimed and confirmed ride; SW also informed that son and her wheelchair (with additional personal items) will be going with her as well. Trimed confirmed no concerns for this plan.

SW initiated completion of PASRR; MD completed PASRR.

SW created DC planning supplement.

SW uploaded paper scripts for controlled medications and PASRR into AIDA for SNF.

SW created DC packet.

SW confirmed the above with the medical team. SW confirmed that RN has been provided RN-to-RN phone number.

SW later confirmed the above with admission coordinator Lisa Fry of Bainbridge Island Health and Rehab; she confirmed she has all needed DC documents and denied any further concerns.

No further SW needs identified.

PLAN or OUTCOME:
Patient DC to Bainbridge Island Health and Rehab at 11am. Social work will continue to provide support and care coordination, as needed.

Electronically signed by Foxx, Vivian Amber, LICSW at 3/8/2025 7:05 PM

Admit Date: 1/9/2025
Code Status: Full Code

Brief summary of event:
Called to bedside for desaturation to 85%. Per bedside RN, pt's son was giving her water as she was slumped over/low in the bed and she then developed a wet-sounding cough. SpO2 at that time dropped to 85% and quickly recovered to the 90s without intervention, but then continued to fluctuate between 88-92. Pt was resistant to wearing nasal cannula although not overly agitated and not combative. Had recovered to a consistent 92% with good waveform upon my arrival to bedside and did not have any witnessed coughing. Was not consistently following commands or answering questions but per pt's son at bedside and nursing staff this is consistent with prior days and her fluctuating delirium.

Pertinent vitals:
Temp 36.3
HR 70s
BP 154/73
SpO2 steadily at 92% on room air with good waveform

Physical Exam
GENERAL: laying in bed, eyes shut, does not appear to be in acute distress
HEENT: moist mucous membranes, edentulous
CARDIAC: RRR, no m/r/g
PULM: clear in anterior lung fields, good air movement, no rales/crackles/wheeze
EXT: warm and well perfused, s/p L AKA
NEURO: awake but not answering questions verbally, moving all extremities

Pertinent labs:
Results for orders placed or performed during the hospital encounter of 01/09/25 (from the past 12 hours)

POC Glucose, Whole Blood - UWMC Montlake
Collection Time: 01/24/25 4:54 PM

Result	Value	Ref Range
Glucose (POC)	136 (H)	62 - 125 mg/dL

POC Glucose, Whole Blood - UWMC Montlake
Collection Time: 01/24/25 9:52 PM

Result	Value	Ref Range
Glucose (POC)	125	62 - 125 mg/dL

Blood Gas, Venous (no electrolytes)
Collection Time: 01/25/25 3:21 AM

Result	Value	Ref Range
Specimen Description	Venous	No Ref. Range
pH, VEN	7.37	7.32 - 7.40
pCO2, VEN	38 (L)	42 - 50 mm[Hg]
pO2, VEN	45 (H)	35 - 40 mm[Hg]
Bicarbonate, VEN	22 (L)	23 - 27 meq/L
O2 Saturation, VEN	77 (H)	70 - 75 %
Base Excess, Blood, VEN	Test Not Required	0.0 - 3.0 meq/L
Base Deficit Blood, VEN	3.0 (H)	0.0 - 2.0 meq/L

L Lactate, Venous WB (To U/H Lab < 30 Min)
Collection Time: 01/25/25 3:21 AM

Result	Value	Ref Range
L Lactate (Direct), Venous Whole Blood	2.1 (H)	0.6 - 1.9 mmol/L

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 17 of 17) (continued)

CBC

Collection Time: 01/25/25 3:21 AM

Result	Value	Ref Range
WBC	7.77	4.3 - 10.0 10*3/uL
RBC	3.38 (L)	3.80 - 5.00 10*6/uL
Hemoglobin	10.6 (L)	11.5 - 15.5 g/dL
Hematocrit	35 (L)	36.0 - 45.0 %
MCV	103 (H)	81 - 98 fL
MCH	31.4	27.3 - 33.6 pg
MCHC	30.5 (L)	32.2 - 36.5 g/dL
Platelet Count	362	150 - 400 10*3/uL
RDW-CV	15.7 (H)	11.0 - 14.5 %

Assessment/Plan:
Seems as though pt may have had mild aspiration event given episode of desaturation occurred after pt's son was giving pt water as she was slumped over/low in the bed. Had essentially recovered from event by the time I was at the bedside. Pulmonary exam not concerning and CXR appears unchanged from prior. Obtained CBC to ensure no mounting leukocytosis to raise suspicion for a developing pneumonia which was reassuring. VBG also unremarkable. Lactate very mildly elevated at 2.1 so gave 500cc of NS given suspicion that pt has not had optimal PO intake. Reasonable to have pt remain NPO for remainder of evening and have SLP re-evaluate tomorrow given ongoing concern for aspiration. Need to continue to build rapport with and educate son, hopeful that provider continuity with team transfer today will help.

Dispo: to remain on acute care
Discussed with: bedside RN, STAT RN

Electronically signed by Wilson, Julia, MD at 1/25/2025 7:20 AM

RRT for potential aspiration event w/ acute desaturations to 70s. Pt. went from RA -> NRB -> HFM 60L/60%. CXR done. Nebs given. Holding abx treatment for now d/t current goals of care.

Electronically signed by Arzaga, Aaron, RN at 2/16/2025 6:26 AM

Alumbaugh, Allison Andreea, MD at 2/16/2025 0622

Attestation signed by Bhandari, Shiv, MD at 2/16/2025 6:41 AM

Date of Service: 02/16/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.

Rapid Response Note - Provider

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

Brief summary of event:
Received RRT page at 5:51AM for acute hypoxia to 80's.

Pertinent vitals:
BP 161/101, RR 20, HR 85, T 36.3, SpO2 86%

Physical Exam
General: frail appearing, in mild distress
Pulm: breath sounds audible bilaterally, crackles on the right lower side, breathing through the mouth
CV: RRR, no M/R/G
Skin: warm

Pertinent labs:
No labs obtained.
CXR: low lung volumes with increased bibasilar opacification R>L

Assessment/Plan:
Ms Hoffman with acute hypoxia, likely due to aspiration and atelectasis. Pt with high aspiration risk, increased secretions, breathing mostly through the mouth. Chest film opacity follows the aspiration pattern on the right lower lobe.
Low concern of infection, such as HAP. Pt afebrile, no tachypnea. Secretions although increased, but thin and clear.No indication for antibiotics unless further decompensates or becomes febrile.
Low concern for PE, pt on DVT PPX, no tachycardia.
Pt placed on NRB, then on high flow 50L 40%, maintaining 94% SpO2. High flow is within GOC, and discussion was held with the son, who is expressing understanding and agrees to the plan. Additionally will trial duoneb and hypertonic saline to break up secretions, followed by endotracheal suctioning if not cleared by spontaneous cough.

Dispo: acute care

Swallow: Chokes on liquids, Chokes on solids, Difficulty swallowing
Neuro Symptoms: Fatigue
Relieved by: Rest

Implemented floor mat and provided fall prevention education to son (low bed, bed alarm, fall mat, notifying staff when exiting room for long periods of time). Son witnessed turning off bed alarm while staff outside of room completing post-fall documentation. Verbalizes understanding of importance of bed alarm in fall prevention and turns alarm back on.

Paul, Sharmila, MD at 3/6/2025 0615

Patient reportedly had fall in AM (see Dr. Abay's PM update on 3/5 note) after which point she had LLE swelling but given low likelihood of operative management and apparent stable functionality, imaging had not been obtained. Provider called to bedside d/t son's concerns re: patient's leg. On inspection, thigh swelling with rotated thigh, able to wiggle toes on command and palpable pulses, no notable hematoma. Son (DPOA) stated patient was not in pain and that he preferred patient not to receive pain meds (concern for oversedation). Pelvis and femur XR's were ordered; son expressed concern that he wanted to know what/where fracture may be if there was a fracture; notably, son had been counseled regarding that operative management could be morbid and appears to be contradictory to her previously established goals. XR showed R inter-implant femur fracture; at that time, results were discussed with patient's son who stated that he would at least want orthopedic consultation; he stated conflicting goals of longevity but only at "quality of life" (which he did not elaborate on) though endorsed persistent DNR/DNI. Did not change status given vacillating and conflicting goals and significant documentation indicating patient would prefer current care status. Notably, on repeat evaluation, directly asked patient if she was in pain and she nodded; counseled son that Jeanne might not express pain clearly and son agreed to trial hydromorphone (has prns ordered). Additionally, had nursing evaluate for pain and instructed to give prn HM if not contraindicated by respiratory status or oversedation. Orthopedics was called and they evaluated patient (see Dr. Ingalls's note); after significant discussion with patient and her son, non-operative management was pursued.

Troponin_I	0.03	<0.04 ng/mL	—	UWMC

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Labs (group 1 of 9) (continued)

Comment:
A value of 0.04 ng/mL is the 99th percentile for a healthy population. Consensus guide lines for interpreting troponin results slightly above the 99th percentile are available at JACC 2012, 60:2427-63. For additional information see http://tests.labmed.washington.edu/TROPIG

Instance released by: Czarnecki, Maciej, MD (auto-released) 1/9/2025 4:26 PM
Discontinued by: Thomas, Tamlyn P, RN 01/10/25 0749
Order comments: Standard Insulin Infusion: check BG every 1 hr until it is within goal range for 4 consecutive hrs. Then MAY decrease BG checks to every 2 hrs. Check BG 2 hours after stopping insulin infusion to ensure safe transition. ALWAYS resume hourly checks when: 1. BG exits goal range 2. Oral carbohydrate consumed 3. Changing algorithms 4. Change in health status or as indicated for medical or surgical procedures FOR ICU ONLY: IF ICU POCT BG invalid, THEN draw serum glucose per policy.

Phosphate Resulted: 01/10/25 0246, Result status: Final result

Ordering provider: Schwarz, Samuel, MD 01/09/25 1806
Filed by: Uw Lab Results Interface, User 01/10/25 0246
Resulting lab: UWMC MONTLAKE DEPT OF LAB MED

Order status: Completed
Collected by: Sande, Nathan R, RN 01/10/25 0211

Components

Component	Value	Reference Range	Flag	Lab
Phosphate	2.7	2.5 - 4.5 mg/dL	—	UWMC

Comment:
Hemolysis present. Hemolysis interferes with this test method giving elevated results.

Testing Performed By

Discontinued by: Chi, Frank, MD 01/26/25 0845
Order comments: HYPOGLYCEMIA PROTOCOL: Retest BG Q15-20 min and repeat RESCUE until POC BG > 100 mg/dL or until BG between 71-99 for > 1 hour. Once achieved, re-check POC BG in 1 hour to monitor for recurrent hypoglycemia. If BG < 55 mg/dL OR hypoglycemia persists at 40 min, notify provider STAT to evaluate need for ongoing glucose source, e.g. D10 @ 50 mL/hr.

Question	Answer
Release Result to Patient	Immediate

Scheduling instructions
Vitamin D (25-Hydroxy) is not covered with routine preventative visits. It is only indicated and covered with the following diagnoses: osteoporosis, hypocalcemia or hypercalcemia, chronic kidney disease stage III or greater, hypercalcuria, hyper viataminosis D, parathyroid disorders, malabsorption states, obstructive jaundice, osteomalacia, rickets, and vitamin D deficiency related to the above diagnoses. Medicare patients who do not have an above condition but desire testing must sign an ABN and agree to pay.

Result:
This test was developed and its performance characteristics determined by the University of Washington Department of Laboratory Medicine and Pathology. It has not been cleared or approved by the US
Food and Drug Administration.
This laboratory is certified under the Clinical Laboratory Improvement Amendments (CLIA) as qualified to perform high complexity clinical laboratory testing. This test is used for clinical purposes.
It should not be regarded as investigational or for research.

.

Specimens

A Leg, Left, Left leg and left leg thrombus
B Leg, Left, left leg thrombus

.

Final Diagnosis

A) Left leg, amputation:
- Ulcerated skin and subcutaneous tissue with minimal chronic inflammation.
- Skeletal muscle with ischemic/atrophic changes.
- Vessels with calcific atherosclerosis.
- Bone and soft tissue resection margins viable and free of inflammation.

B) Left leg, thrombus, thrombectomy:
- Organizing thrombus.

Electronically signed by Chen, Eleanor Yuan, MD on 1/17/2025 at 1606

.

Clinical Information

Pre-op diagnosis:
Acute lower limb ischemia [I99.8]

Gross Description

A. Leg, Left.
Received fresh labeled, "Hoffman, Jeanne; Left leg and left leg thrombus" is a 73 cm in length x 11 cm in diameter at the widest above-knee amputation specimen. The proximal margin is 6 inches of the femur, with soft tissue removed. Skin is present from the knee distally. Then leg is wrapped in blue tape and the lower leg, ankle and foot was encased in a brown wound bandage material. Five toes are present.

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Autopsy Lab Result (continued)

Proximal margin soft tissue is healthy in appearance. The bone cortex is white/tan and firm with red marrow.
The anterior popliteal vessel is removed and is serially sectioned. 85% of the length of the vessel is calcified. A representative section is submitted. The popliteal vessel is serially sectioned and approximately 75% of the length is calcified and a representative section is submitted.

A1) Proximal margin femoral artery and muscle en face
A2) Ulcerated soft tissue
A3) Margin skin, soft tissue on fos
A4) Anterior tibial artery (blue) and popliteal artery (uninked) -decal
A5) Tibial bone underlying ulceration -decal
A6) Femur, margin - decal
(JM)

B. Leg, Left.
Received fresh labeled, "Hoffman, Jeanne; left leg thrombus" is a firm, brown/black specimen measuring 17 cm in length and varying in diameter between 0.5 and 0.2 cm. 3 cm from one end is a bifurcation in the structure measuring 1.0 cm in length and 0.2 in diameter. Upon sectioning the thrombus material is friable. Representative sections are submitted in B1.
(JM)

Autopsy Lab Result (continued)

Proximal margin soft tissue is healthy in appearance. The bone cortex is white/tan and firm with red marrow.
The anterior popliteal vessel is removed and is serially sectioned. 85% of the length of the vessel is calcified. A representative section is submitted. The popliteal vessel is serially sectioned and approximately 75% of the length is calcified and a representative section is submitted.

A1) Proximal margin femoral artery and muscle en face
A2) Ulcerated soft tissue
A3) Margin skin, soft tissue on fos
A4) Anterior tibial artery (blue) and popliteal artery (uninked) -decal
A5) Tibial bone underlying ulceration -decal
A6) Femur, margin - decal
(JM)

B. Leg, Left.
Received fresh labeled, "Hoffman, Jeanne; left leg thrombus" is a firm, brown/black specimen measuring 17 cm in length and varying in diameter between 0.5 and 0.2 cm. 3 cm from one end is a bifurcation in the structure measuring 1.0 cm in length and 0.2 in diameter. Upon sectioning the thrombus material is friable. Representative sections are submitted in B1.

17 - REFLAB	OUTSIDE REFERENCE PERFORMING LAB	Pcp, Unknown	(See Results)	08/18/21 1016 - Present

Result Findings

Temporary Pacemaker
Pacer Type: floating balloon tip pacer wire
Capture threshold: 1 V
Backup rate set to: 60 bpm
Voltage set to: 5 V
Temporary pacemaker was secured in place.

Access
First venous access site: percutaneous right internal jugular vein
Sheath Size: 6 Fr
Access obtained using ultrasound guidance.
Closure method: skin suture

Narrative
INDICATIONS: Bradycardia [R00.1]

NARRATIVE:
The procedure was performed using 1% lidocaine local anesthesia and the Seldinger with micropuncture technique with ultrasound and fluoroscopic guidance. A thin-walled needle was placed in the vessel and a floppy guide wire was advanced through it. The needle was withdrawn and a 6F sheath was advanced over the wire into the vessel.
Temporary pacemaker was introduced into the RV apex. Capture was confirmed at a HR of 60 with a loss of capture at 0.8mV. This was then increased to an output of 5V for transport.
At the conclusion of the procedure, the catheter was sutured in place for subsequent treatment.

PRESENCE STATEMENT:
I, Alaa S Ayyoub, MD, was present for the entire procedure.

MODIFIER 22:
This procedure required substantial additional work because of severe symptomatic bradycardia in an elderly patient which added to the intensity of the procedure.

Conclusion
Bradycardia at 39 bpm with 2:1 AV Block

Normal left ventricular chamber size and wall thickness with proximal septal thickening. Normal systolic function (LVEF 74% by biplane). Unable to assess diastolic function due to rhythm.

Moderate aortic stenosis (peak velocity 3.0m/s, mean gradient 19 mmHg, velocity ratio 0.4) without regurgitation. Suggest re-evaluation at a normal heart rate.

Moderate mitral annular calcification with mild regurgitation.

Mildly elevated estimated PA systolic pressure, 34-39 mmHg, inclusive of estimated right atrial pressure, 5-10 mmHg.

Normal right ventricular size and systolic function. CIED is present in the right heart.

Transthoracic Echo Report

Patient Name: HOFFMAN, JEANNE LEONIE	**MRN:** U8170135	**Study Date:** 01/10/2025 04:06 PM	**Patient Class:** Inpatient
DOB: 01/06/1925	**Age:** 100 yrs	**Height:** 60 in	**Weight:** 100 lb
BP: 144/35 mmHg	**HR:** 40	**BSA:** 1.4 m^2	**Service:**
Gender: Female	**Pt. Origin:** UECHOL^^^UWMED	**Portable:** Yes	**Equipment:**

History: Bradycardia
Reason For Study: Symptomatic bradycardia in patient w/ prior bradycardia
Study Quality: Good
CPT Codes:
93306/04830022: Transthoracic Echo with Spectral and Color Doppler.
ICD Codes
I45.5: Other heart Block - Rank:1 (1-8).

CONCLUSIONS:
Bradycardia at 39 bpm with 2:1 AV Block

Normal left ventricular chamber size and wall thickness with proximal septal thickening. Normal systolic function (LVEF 74% by biplane). Unable to assess diastolic function due to rhythm.

Moderate aortic stenosis (peak velocity 3.0m/s, mean gradient 19 mmHg, velocity ratio 0.4) without regurgitation. Suggest re-evaluation at a normal heart rate.

Moderate mitral annular calcification with mild regurgitation.

Mildly elevated estimated PA systolic pressure, 34-39 mmHg, inclusive of estimated right atrial pressure, 5-10 mmHg.

Normal right ventricular size and systolic function. CIED is present in the right heart.

No pericardial effusion.

No prior study for comparison.

Primary team was notified of findings at 5:15pm on 1/10/25.

PROCEDURE NOTES:
A complete two-dimensional transthoracic echocardiogram was performed (2D, M-mode, Doppler and color flow Doppler). Exam was interrupted by the cath lab team for urgent transport in the cath lab. Difficult parasternal windows secondary to uncooperative patient and lung interference. The underlying rhythm was bradycardia.

FINDINGS:
Left Ventricle:
The left ventricle is normal in size. The calculated ejection fraction, as determined by the biplane method of disks, is 74%. No regional wall motion abnormalities are present.
Right Ventricle:
The basal right ventricular diameter measured from a right ventricular focused view is 3.3 cm. The tricuspid annular plane systolic excursion (TAPSE) measurement is 2.9 cm. A pacer/defibrillator lead is present in the right heart.
Aortic Valve:
The aortic valve peak velocity is 3 cm/sec. No aortic regurgitation is present.
Mitral Valve:
Moderate mitral annular calcification is present. The mitral annular calcification is both posterior and anterior. There is mild mitral regurgitation.
Tricuspid Valve:
The tricuspid valve is normal in structure and function. Mild tricuspid regurgitation present.
Left Atrium:
The left atrial volume indexed to body surface area is 43 ml/m2. This refers to the maximal volume measured prior to mitral valve opening. Left atrial volume index is moderately increased.
Right Atrium:
The right atrium is mildly dilated. The inferior vena cava is normal in diameter (<2.1cm) but collapse <50% with sniff (estimated right atrial pressure 5-10mmHg).
Pulmonary Artery:
The pulmonary artery systolic pressure, calculated from a peak tricuspid regurgitant velocity in conjunction with an estimated right atrial pressure, is 34-39mmHg.
Pericardium/Pleural Space:
There is no pericardial effusion.

ECHO DIMENSIONS:

LAV (MOD-bp): 60.8 ml
LAV (MOD-bp) index: 43.7 ml/m^2 (16-34)
LVd-Vol Index: 36.0 ml/m^2 (F: 29-61/M: 34-74)
EF (MOD-bp): 74.2 % (F: 54-74/M: 52-72)

DOPPLER FINDINGS:
LVOT max: 120.0 cm/sec
TR max vel: 267.9 cm/sec
AoV max: 298.0 cm/sec

PACEMAKER INITIAL IMPLANT - SINGLE CHAMBER [EP87]	

Testing Performed By

Lab - Abbreviation	Name	Director	Address	Valid Date Range
17 - REFLAB	OUTSIDE REFERENCE PERFORMING LAB	Pcp, Unknown	(See Results)	08/18/21 1016 - Present

Result Findings

Initial Device Implant
INDICATIONS
Jeanne Leonie Hoffman is a 100 year old with RBBB at baseline, now with symptomatic high degree AV block, meeting class 1 indication for permanent pacing who presents for single chamber pacemaker.

PROCEDURE

Following informed consent, the patient was transferred to the Electrophysiology Laboratory in a fasting state. The left chest was prepped and draped in the usual sterile position. Timeout protocol was performed. Local anesthesia was achieved with 2% lidocaine.

Access was then obtained in the left axillary vein using the modified Seldinger technique under direct ultrasound visualization and microvascular access..

Following adequate anesthesia, an incision was performed in the left infraclavicular area. A pocket was created in the left pectoral submuscular space using electrocautery and blunt dissection. The two bellies of the pectoralis major muscle were divided and a submuscular pocket was fashioned taking care to avoid the neurovascular bundle.

A 6 Fr sheath was advanced over a J-tip guidewire. The right ventricle lead (LEAD PACEMAKER 52CM INGEVITY+ AF ISI) was advanced under fluoroscopic guidance to the RV apex using the technique of stylet exchange and adequate parameters were found. Once the position and redundancy of the lead had been confirmed with multiple fluoroscopic views, the RV lead was anchored to the prepectoral fascia.

After the lead(s) were placed, the leads were attached to the generator. The pocket was copiously irrigated with antibiotic solution. The device was placed in the pocket. The generator was secured with one non-absorbable tie. The pocket was closed in three running layers using absorbable suture. The wound was then dressed with skin adhesive and a Primapore dressing.

Device Data
DEVICE MEASUREMENTS
1. Right ventricle: R waves 25 mV, pacing impedance 630 ohms, threshold 0.9V at 0.4 ms.

FINAL PROGRAMMED PARAMETERS
VVIR 70-120

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

CTA Abdomen Angio
Resulted: 01/09/25 1228, Result status: Final result

Ordering provider: Vrablik, Marie Clougherty, MD 01/09/25 1100
Order status: Completed
Resulted by: Hartman, Jason Brett, MD
Filed by: Interface, Radiology Results In 01/09/25 1231
Performed: 01/09/25 1135 - 01/09/25 1214
Accession number: 47201762
Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
CTA ABDOMEN ANGIO: AORTA WITH PERIPHERAL RUNOFF

CLINICAL INDICATION:

Imaging (continued)

eval for flow to L leg, L leg appears acutely mottled, cold, discolored

TECHNIQUE:
CVA 10 CTA Abdomen, pelvis and lower extremities
CTA of abdominal aorta and lower extremities was performed in the arterial phase following contrast from the domes of the diaphragm to feet. On an independent workstation, volume rendered and/or MIP reconstructions were generated to evaluate the abdominal and lower extremity vessels.
CTV Lower Extremity:
CT angiography of the lower extremities from the pelvis to the feet was performed in the late venous phase of intravenous contrast enhancement. On an independent workstation, 3D and / or MIPs of the vessels was performed on an independent workstation.

CONTRAST:
IOHEXOL 350 MG/ML IV SOLN,80 mL Intravenous,01/09/2025 1214

COMPARISON:
None.

FINDINGS:
Abdominal Aorta: Patent. No aneurysm. Moderate to severe atherosclerosis.
Iliac arteries: Patent common iliacs. Occluded left external iliac artery.

Right femoral arteries: Patent. Severe atherosclerosis
Right popliteal artery:Patent. Moderate atherosclerosis
Right calf arteries:Weakly opacified. Severe atherosclerosis.
Number of vessels crossing the right ankle mortise: 2

Left femoral arteries: Occluded.
Left popliteal artery:Occluded.
Left calf arteries:Occluded.
Number of vessels crossing the left ankle mortise: 0

Lower chest: Moderate hiatal hernia.

Liver: Unremarkable.
Gallbladder: Unremarkable.
Bile ducts: Unremarkable.
Spleen: Unremarkable.
Pancreas: Unremarkable.
Adrenal glands: Unremarkable.
Kidneys and Ureters: Unremarkable.
Lymph Nodes: No enlarged lymph nodes.
Other vasculature: Unremarkable.
Bowel: Scattered diverticulosis, but no findings to suggest acute diverticulitis
Peritoneum: Unremarkable
Abdominal Wall: Unremarkable.
Reproductive organs: Unremarkable
Bladder: Unremarkable.
Bones:Right femur ORIF.

Left leg with diffuse skin thickening below the knee. No subcutaneous emphysema.

Impression:
Occlusion of the left lower extremity vasculature beginning at the left external iliac artery. There is associated skin thickening/swelling of the distal left lower extremity which likely represents edema. No associated subcutaneous emphysema or definitive evidence of necrotizing soft tissue infection.

Vascular US Venous Duplex for DVT or Venous Obstruction Lower Extremity Right Resulted: 01/22/25 0921, Result status: Final result

Ordering provider: Holmberg, Mackenzie Howard, MD 01/21/25 1039 Order status: Completed
Resulted by: Zierler, Robert Eugene, MD Filed by: Interface, Radiology Results In 01/22/25 0925
Performed: 01/21/25 1137 - 01/21/25 1211 Accession number: 47410394
Resulting lab: UW RADIOLOGY
Narrative:
D. E. STRANDNESS, JR. VASCULAR LABORATORY
University of Washington Medical Center
1959 NE Pacific Street
Seattle, WA 98195
206-598-4449

Accredited by the Intersocietal Accreditation Commission - Vascular Testing

EXAMINATION:
LOWER EXTREMITY VENOUS DUPLEX (RIGHT)
Venous duplex examination performed using B-mode, color flow, and Doppler spectral waveform assessment.

INDICATION:
This is a 100 year old woman who is status-post left above-knee amputation on 01/09/2025. The patient presents with right lower extremity swelling.

PREVIOUS EXAMINATIONS:
06/02/2021 (right lower extremity venous duplex reported no deep vein thrombosis)
05/05/2021 (right lower extremity venous duplex reported no deep vein thrombosis)
01/22/2020 (bilateral lower extremity venous duplex reported no deep vein thrombosis)

EQUIPMENT:
Philips Epiq 7

FINDINGS:
This is a technically difficult exam due to calcific shadowing from arteries, patient positioning, and intolerance of probe pressure.

LOWER EXTREMITY VENOUS DUPLEX

RIGHT DEEP SYSTEM
Common Femoral Vein: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes
Deep Femoral Vein: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes

Main Femoral Vein Prox: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes
Main Femoral Vein Mid: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes
Main Femoral Vein Dist: Not positively identified

Imaging (continued)

Popliteal Vein: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes

Posterior Tibial Vein: Complete color filling
Peroneal Vein: Complete color filling

Gastrocnemius Veins: Not positively identified
Soleal Veins: Complete compressions, no intraluminal echoes

RIGHT SUPERFICIAL VENOUS SYSTEM
Great Saphenous Vein: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes at the saphenofemoral junction.
Small Saphenous Vein: Not positively identified

LEFT DEEP SYSTEM
Common Femoral Vein: Complete compressions, spontaneous and phasic flow, complete color filling, no intraluminal echoes

Kacey Jaenicke BS, RVT
Vascular Technologist

FINAL PHYSICIAN INTERPRETATION

RIGHT LOWER EXTREMITY VENOUS
- No deep vein thrombosis in the right lower extremity, where evaluated, on a technically limited examination.
- The right distal femoral vein, gastrocnemius veins, and small saphenous vein are not positively identified.
- The right paired posterior tibial and peroneal veins are patent but poorly visualized.
- No superficial vein thrombosis in the right lower extremity, where evaluated.

I have personally reviewed the images and agree with the report (or as edited).

XR Abdomen 1 View

Resulted: 02/18/25 1552, Result status: Final result

Ordering provider: Pillai, Sunita, MD 02/18/25 1403
Resulted by: Bhargava, Puneet, MD
Performed: 02/18/25 1440 - 02/18/25 1445
Resulting lab: UW RADIOLOGY

Order status: Completed
Filed by: Interface, Radiology Results In 02/18/25 1555
Accession number: 47955702

Narrative:
EXAMINATION:
XR ABDOMEN 1 VW

CLINICAL INDICATION:
NGT placement

COMPARISON:
1/9/2025 and 2/16/2025.

Impression:

Weighted enteric tube tip is in the lower third of the esophagus. Tube could be advanced further by 10 cm.

Lung findings are unchanged.

Testing Performed By

CT Abdomen And Pelvis wo Contrast

Resulted: 02/19/25 1314, Result status: Final result

Ordering provider: Fancher-Dominguez, Alexandria Paige, MD 02/19/25 1055
Order status: Completed
Resulted by:
Dighe, Manjiri Kiran, MD
Mahdavi Anari, Seyed Arash, MD
Filed by: Interface, Radiology Results In 02/19/25 1317
Performed: 02/19/25 1136 - 02/19/25 1212
Accession number: 47974296
Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
CT ABDOMEN AND PELVIS W/O CONTRAST

Imaging (continued)

CLINICAL INDICATION:
Severe abdominal pain, diffuse, in minimally interactive patient. No IV access.
Generalized abdominal pain

TECHNIQUE:
CTB A2 CT Abdomen Pelvis Survey without contrast.
Computed tomography was obtained through the abdomen and pelvis without contrast.

CONTRAST:
Intravenous contrast was not used.

COMPARISON:
CTA abdomen pelvis 1/9/2025.

FINDINGS:
Lower chest: New moderate-volume bilateral pleural effusion with passive atelectasis of bilateral lower lobes.
New reticular changes in bilateral lower lobes, right greater than left, suggesting infectious process in proper clinical settings.
Similar dense calcification of aortic and mitral valves.
Similar large hiatal hernia.
Liver: Unremarkable.
Gallbladder: Distended gallbladder with transverse diameter measuring 4.2 cm (601/43). No pericholecystic inflammatory changes.
Bile ducts: Unremarkable.
Spleen: Unremarkable.
Pancreas: Similar diffuse pancreatic steatosis.
Adrenal glands: Unremarkable.
Kidneys and Ureters: Similar 1.8 cm left renal cyst (601/55).
Abdominal Lymph Nodes and Retroperitoneum: No enlarged lymph nodes.
Vasculature: Similar severe aortoiliac atherosclerosis with no aneurysm.
Bowel: Severe colonic diverticulosis particularly in the sigmoid colon, without acute cholecystitis.
Peritoneum: Unremarkable
Abdominal Wall: Diffuse anasarca. Fat-containing right inguinal hernia. Similar linear calcification in paravertebral muscles.
Reproductive organs: Surgically absent.
Bladder: Unremarkable.
Bones: Similar degenerative changes of the lumbar spine with levoscoliosis. Similar mild level wedging of lower thoracic and lumbar spine. Right femur ORIF.

Impression:
* Gallbladder distention without pericholecystic inflammation. Gallbladder ultrasound could be helpful for further evaluation, if clinically indicated.
* New bilateral moderate-volume pleural effusion and new reticular pulmonary parenchymal changes, which could suggest pneumonia in proper clinical settings.

I have personally reviewed the images and agree with the report (or as edited).

Is this a Non-Reportable exam (auto advance the study to final)?		

XR GI Tube Intro W Fluoro Resulted: 02/20/25 1710, Result status: Final result

Ordering provider: Fancher-Dominguez, Alexandria Paige, MD 02/19/25 1344
Order status: Completed
Resulted by: Dhyani, Manish, MD
Filed by: Interface, Radiology Results In 02/20/25 1713
Performed: 02/20/25 1425 - 02/20/25 1510
Accession number: 47984429
Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
Feeding Tube Placement

CLINICAL INDICATION:
Pt needing FT, difficult placement

COMPARISON:

Imaging (continued)

FINDINGS AND
Impression:
Using guide wire and fluoroscopy, a weighted 10 French feeding tube was placed transnasally, however despite multiple attempts and lack of patient's cooperation, repeated attempts resulted in tracheal placement. After multiple attempts, and patient's inability to cooperate, the study was stopped without placement of tube.

Fluoroscopy time was 214 seconds.

PRESENCE STATEMENT:
I, Manish Dhyani, was present during the entire procedure, reviewed the images and agree with the report above.

Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
XR FEMUR 2 VW RIGHT, XR PELVIS 1-2 VW

CLINICAL INDICATION:
fall, now pain with moving leg, concern about hip vs femur fracture.

COMPARISON:

Imaging (continued)

CT abdomen pelvis dated 2/19/2025.

FINDINGS AND
Impression:
PELVIS: Acute comminuted impacted peri-implant right femur fracture with varus angulation. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Moderate left hip osteoarthritis. Diffuse osseous demineralization limits evaluation for nondisplaced fractures. Vascular calcifications.

RIGHT FEMUR: Acute comminuted peri-implant femur fracture with varus angulation and up to 8 cm of impaction. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Diffuse osseous demineralization. Vascular calcifications. Limited evaluation of the contralateral left lower extremity demonstrates an above knee amputation.

ANESTHESIA PLAN

Preoperative Discussion: **PMHx and PSHx as above, verified NPO within guidelines.**

Discussed anesthetic plan of General Anesthesia. Discussed risks including; risks associated with airway placement, PONV, pulmonary complications, MI, or cardiac arrest. Discussed in detail that given pts advanced age, and PMHx there is an elevated risk of cardiac arrest. Patient and family in understanding. Discussed that family and patient wishes all measures to be taken in event of arrest. All patient questions answered. Patient and decision maker in agreement to proceed.

Informed Consent:
Anesthesia Plan discussed with:
Patient and child
Use of blood products:
Consented
Discussed with: **patient and child**
ASA Score:
ASA: **4**
Planned Anesthetic Type:

Procedure Orders
1. Nerve Block [360324135] ordered by Houston, Nicklaus, MD

Nerve Block

Staff:
Performing provider: Houston, Nicklaus, MD
Authorizing provider: Bollag, Laurent Albert, MD

Block Indication/Location:
Patient location: OR/Procedural area
Reason for block: post-op pain management.

Consent:
Type: verbal consent obtained
Risk discussed: block failure or incomplete block, motor weakness, nerve injury, bleeding, infection and local anesthetic toxicity.
Obtained by: Bollag, Laurent Albert, MD.
Obtained from: patient

Regional anesthesia checklist:
Patient identifed with two distinct identifiers
Procedural consent reviewed
Block site confirmed by hospital protocol
Allergies reviewed
Anticoagulation status reviewed
Maximum local anesthetic dose calculated
Emergency drugs available
Medication syringes labeled
Monitoring in place

Block type:
Procedure type: nerve catheter
Block laterality: left
Block: femoral

Preparation:
Patient position: reclined
Patient sedation: sedated
Monitors: SpO2, ECG, NIBP and EtCO2
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask, sterile drape and probe cover
Skin local anesthetic used: injected

Block needle:
Needle type: Tuohy
Needle gauge: 18 G
Needle length: 3.5 in
Guidance: ultrasound (in plane)no

Catheter:
Catheter type: epidural
Catheter size: 19 G
Ultrasound verification: Yes
Depth catheter secured at skin 15 cm
Securement: dermabond and clear occlusive dressing

Date and time block placed:
1/9/2025 4:00 PM

Additional block(s)

Block type:
Procedure type: single shot block
Block laterality: left
Block: sciatic (popliteal)

Preparation:
Position: reclined
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask and probe cover
Skin LA used: injected

Block needle:
Needle type: block needle
Needle gauge: 21 G
Needle length: 100 mm
Guidance: ultrasound (in plane)
Ultrasound image saved: no

Date and time block placed:
1/9/2025 3:50 PM

Assessment:
Sensory block: unable to assess
Motor block: unable to assess
Pain relief: unable to assess
Complications: well tolerated

Final block comments:
Femoral catheter 10cm at skin initially, tunneled to 15cm at skin. Catheter site confirmed with US and secured with dermabond + tegaderm after tunneling.

ID	Type	Source	Tests	Collected by	Time
1 : Left leg and left leg thrombus	Tissue	Leg, Left	PATHOLOGY, SURGICAL	Smith, Matthew C, MD	1/9/2025 1650
2 : left leg thrombus	Tissue	Leg, Left	PATHOLOGY, SURGICAL	Smith, Matthew C, MD	1/9/2025 1714

FINDINGS

- PNC placed pre-op
- Above-knee amputation with little blood loss
- Closed with 3 layers sutures; staples for skin
- Patient extubated in OR without issue
-

POST OP PLAN

- Admit CT ICU
- Bed rest overnight; will be NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for CLD, will advance in AM
- Insulin gtt for BG management; ok to transition to SQI once up in ICU
- SBP 100-160
- Cardiology consulted for bradycardia to 20s with 2nd degree AVB
- TTE needed for completion of embolic workup; ok to be done in AM unless cardiology would like it done sooner
- Hold AC until tomorrow AM at which point Hep gtt will resume

Procedures:
Left above knee amputation

Procedure Summary
Anesthesia: General **ASA:** IV

Indications: Jeanne Leonie Hoffman is a 100 year old female who presents with Rutherford class III acute limb ischemia presenting with an insensate left lower extremity at the level of the high shin on the left which has been going on for somewhere between 2 weeks and 2 days. As the patient is a relatively poor historian. She had no motor function or distal leg. I offered her the options of palliative pain control versus an above-knee amputation and counseled her on a very high risk of mortality in either case as well as severe disability from the amputation. The patient and her son understood this and wished to proceed with amputation.

Findings: Amputation of left leg above the knee

Procedure Details: After obtaining informed consent in the preoperative care unit the patient was brought to the operating room was placed in a comfortable supine position on the operating room table. A timeout was performed indicating the appropriate patient, left above-knee amputation as the procedure and need for preoperative antibiotics. General and regional anesthesia was induced and the left leg an incision was made just above the kneecap on the left leg was prepped and draped in the usual sterile fashion. And Bovie cautery was used to carry the dissection down through subcutaneous tissues including the muscle. This was carried down to the level of the bone circumferentially. The muscle appeared healthy and there was a small amount of bleeding in both muscle and fat tissues. The bone was transected with an oscillating bone saw the femoral vessels were then controlled and independently ligated. The femoral nerve was identified and injected with additional ropivacaine and tied off using a 2 oh tie. I then used Bovie to transect the remainder of the muscular attachments in the posterior leg. The wound was irrigated and then closed in

multiple layers using 2-0 and 3-0 Vicryl followed by staples at the skin. The wound was dressed in Xeroform, Kerlix and an Ace wrap

As the attending surgeon, I was present and scrubbed for the entire case, all needle, sponge and instrument counts were correct at the end of the procedure.

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Pain Management
Consult performed by: Gicheru, Florence W, ARNP
Consult ordered by: Smith, Matthew C, MD
Reason for consult: Complex postoperative pain management requiring PNC for pain medication administration

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27.
APS is consulted for complex post-operative pain management, including PNC management

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Per Dr. Sonderman's note dated 1/9/25:
Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB. Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

PAIN ASSESSMENT:
Pain Location:
surgical site: Left lower extremity above the knee amputation site
Pain Severity:
Worst Pain: 0
Least Pain: 0
Pain Intensity and Patient Reported Outcomes:
Pain control: well controlled
Patient Reported Treatment Side Effects:
No Nausea:
No itching

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

HISTORY REVIEWED:
I have reviewed the patient's social history with the patient.

Past Pain/Substance Use History: Notable opioid related events Multiple narcan events at home and inpatient per family

Up to date information could not be retrieved from the PDMP.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

APS is consulted for complex post-operative pain management, including PNC management

Pt. Seen at this time in the ICU. She is inially sleeping but later wakes up. She is HOH but responds appropriately to simple questions written on a board. Her son, also her caregiver, is at bedside and a good historian. Son reports that in 2023, pt. Was on opioids for chronic pain but had a number of narcan events at home, at which point all opioids were discontinued. She also had a narcan event during her most recent hospitalization. Pt. Consequently started using Tylenol but must have taken "one too many," which resulted in Acetaminophen toxicity per son. She has since been using positioning and activity to help with the pain.

Pt. Denies any pain at this time. She is on a PNC Ropivacaine 0.2% continuous infusion at 8ml/hr for pain. Per RN, she was unable to swallow any medications this evening hence low dose Acetaminophen IV ordered. Contacted the primary team to determine if the pt. Is a candidate for NSAIDS for pain management for which she is not due to a drop in HCT, currently 32% per lab review. Pt. Discussed with attending due to the significant hx. Of opioid adverse effects and limitation of non-opioid medications due to her hx. And labs. Plan at this time is to cautiously and use low dose opioids for pain and make adjustments as needed for pain and safety. HM 0.1mg IV q2hrs PRN ordered. Pt. Is not a candidate for PCA at this time.

Pt. Sleeping when checked on overnight. Pain appears to be well controlled with no PRN use/administered thus far

0430: Pain remains well controlled with PNC Ropivacaine@8ml/hr. Has not required PRN pain medication.

Today's Plan (Changes in bold):

01/09/25: Left Femoral PNC, 15cm @skin

CONT:
Ropivacaine 0.2% @8ml/hr

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: Pt. Family, RN, primary team and APS attending

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

HISTORY

Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion

- Acute lower limb ischemia
- Bradycardia

Home Medications

Prescriptions

Cholecalciferol 1000 units Oral Tab
Sig: Take 2 tablets (2,000 units) by mouth daily.

Cyanocobalamin (VITAMIN B-12 OR)
Sig: Take 1 tablet by mouth daily.

MULTIPLE VITAMIN OR
Sig: Take 1 tablet by mouth daily.

Wound Dressings (medihoney) topical gel
Sig: Apply topically daily. Apply to ulcerations on legs. Apply dressing over the Medi Honey.

Wound Dressings (medihoney) topical gel
Sig: Apply topically every other day. Apply to wound before applying dressing

atorvastatin 10 MG tablet
Sig: Take 1 tablet (10 mg) by mouth daily.

lidocaine 4 % patch
Sig: Apply 1 patch onto the skin every 24 hours. Apply to painful area for up to 12 hours in a 24 hour period.

pentoxifylline ER 400 MG ER tablet
Sig: Take 1 tablet (400 mg) by mouth 3 times a day. Take with food.

timolol maleate 0.5 % ophthalmic solution
Sig: instill 1 drop into both eyes twice a day

Additional Comments: None

Inpatient Medications

SCHEDULED MEDICATIONS:
- acetaminophen, 500 mg, q6h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-4 units, q HS
- insulin LISPRO, 0-5 units, TID before meals
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- DOPamine, 0-20 mcg/kg/min (Dosing Weight), Continuous, Last Rate: 5 mcg/kg/min (01/10/25 1600)
- ROPivacaine, , Continuous

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- [START ON 1/12/2025] bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.1 mg, Q2 Hours PRN
- magnesium sulfate, 2 g, q6h PRN

- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- perflutren lipid microspheres (Definity) 1.3 mL in sodium chloride (PF) 0.9 % 8.7 mL injection, 1-10 mL, Once PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- [START ON 1/12/2025] senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Pain Management
Consult performed by: Gicheru, Florence W, ARNP
Consult ordered by: Smith, Matthew C, MD

Reason for consult: Complex postoperative pain management requiring PNC for pain medication administration

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27.
APS is consulted for complex post-operative pain management, including PNC management

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Per Dr. Sonderman's note dated 1/9/25:
Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB. Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

PAIN ASSESSMENT:
Pain Location:
surgical site: Left lower extremity above the knee amputation site
Pain Severity:
Worst Pain: 0
Least Pain: 0
Pain Intensity and Patient Reported Outcomes:
Pain control: well controlled
Patient Reported Treatment Side Effects:
No Nausea:
No itching

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

HISTORY REVIEWED:
I have reviewed the patient's social history with the patient.

Past Pain/Substance Use History: Notable opioid related events Multiple narcan events at home and inpatient per family

Up to date information could not be retrieved from the PDMP.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

APS is consulted for complex post-operative pain management, including PNC management

Pt. Seen at this time in the ICU. She is inially sleeping but later wakes up. She is HOH but responds appropriately to simple questions written on a board. Her son, also her caregiver, is at bedside and a good historian. Son reports that in 2023, pt. Was on opioids for chronic pain but had a number of narcan events at home, at which point all opioids were discontinued. She also had a narcan event during her most recent hospitalization. Pt. Consequently started using Tylenol but must have taken "one too many," which resulted in Acetaminophen toxicity per son. She has since been using positioning and activity to help with the pain.

Pt. Denies any pain at this time. She is on a PNC Ropivacaine 0.2% continuous infusion at 8ml/hr for pain. Per RN, she was unable to swallow any medications this evening hence low dose Acetaminophen IV ordered. Contacted the primary team to determine if the pt. Is a candidate for NSAIDS for pain management for which she is not due to a drop in HCT, currently 32% per lab review. Pt. Discussed with attending due to the significant hx. Of opioid adverse effects and limitation of non-opioid medications due to her hx. And labs. Plan at this time is to cautiously and use low dose opioids for pain and make adjustments as needed for pain and safety. HM 0.1mg IV q2hrs PRN ordered. Pt. Is not a candidate for PCA at this time.

Pt. Sleeping when checked on overnight. Pain appears to be well controlled with no PRN use/administered thus far

0430: Pain remains well controlled with PNC Ropivacaine@8ml/hr. Has not required PRN pain medication.

Today's Plan (Changes in bold):

01/09/25: Left Femoral PNC, 15cm @skin

CONT:
Ropivacaine 0.2% @8ml/hr

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: Pt. Family, RN, primary team and APS attending

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Relevant procedures / diagnostic studies: none

Cardiac
EKG 01/09/25:
Sinus brady
First degree AV block
?right bundle branch block

TTE 1/10/25:
Bradycardia at 39 bpm with 2:1 AV Block

Normal left ventricular chamber size and wall thickness with proximal septal thickening. Normal systolic function (LVEF 74% by biplane). Unable to assess diastolic function due to rhythm.

Moderate aortic stenosis (peak velocity 3.0m/s, mean gradient 19 mmHg, velocity ratio 0.4) without regurgitation. Suggest re-evaluation at a normal heart rate.

Moderate mitral annular calcification with mild regurgitation.

Mildly elevated estimated PA systolic pressure, 34-39 mmHg, inclusive of estimated right atrial pressure, 5-10 mmHg.

Normal right ventricular size and systolic function. CIED is present in the right heart.

No pericardial effusion.

No prior study for comparison.

Perioperative Risk Scores:

PONV: Intermediate Risk Total Score: 2

Female patient
Non-smoker
Criteria that do not apply:
History of PONV
History of motion sickness
Intended opioid administration

ANESTHESIA PLAN

Informed Consent:
Anesthesia Plan discussed with:
Child

ASA Score:
ASA: **4**
Planned Anesthetic Type:
MAC
MAC Justification:
age>70, surgeon request, airway risk and comorbid disease
Supervising Provider Comments:
Patient seen and examined in holding area. Risks and benefits of anesthesia discussed in detail with family. All questions answered. Plan for MAC with GA backup Patient family agreed to proceed.

Anesthesia on 01/13/25

Anesthesia Information

Anesthesia Summary - Hoffman, Jeanne Leonie [U8170135] Female
100 year old Current as of 04/30/25 0936

Height: 5' (1.524 m) (01/09/25)
Weight: 45.7 kg (100 lb 12 oz) (02/21/25)
BMI: 19.68
NPO Status: Not recorded
Allergies: ADHESIVES, ASPIRIN, NITROFURANTOIN, PENICILLINS, SULFA ANTIBIOTICS, SULFANILAMIDE

Procedure Summary

Date: 01/13/25
Room / Location: UWMC EP LAB 1 / UWMC ELECTROPHYSIOLOGY LAB
Anesthesia Start: 1542
Anesthesia Stop: 1726
Procedure: Pacemaker Initial Implant - Single Chamber (Left: Heart Electrophysiology)
Diagnosis:
Bradycardia
(Bradycardia [R00.1])
Providers: Akoum, Nazem Walid, MD
Responsible Provider: Lombaard, Stefan Andre, MD
Anesthesia Type: MAC
ASA Status: 4

Attestation Information

Staff Name	Date	Time	Type
Sheu, Richard David, MD	01/13/25	1542	Pre Eval Attending
I personally evaluated and examined the patient prior to anesthetic care. I reviewed and modified the pre-anesthetic evaluation to reflect my findings and my anesthesia plan.			
Singsaas, Julie M, RN	01/13/25	1603	Time Out
Sheu, Richard David, MD	01/13/25	1604	Induction Not Applicable
I attest that induction was not applicable in this case.			
Sheu, Richard David, MD	01/13/25	1612	Anesthesia Presence
At the time indicated by this attestion, I was physically present in the patient's room and participated in anesthetic care for this patient.			
Sheu, Richard David, MD	01/13/25	1612	Handover of Responsibility
During the time period of medical direction, I was immediately available at all times. I was frequently present in the room, including specifically at the times indicated by my Anesthesia Presence attestations. I conducted a handover of anesthesia care to the provider indicated in the record, and ceded medical responsibility to that individual at the time indicated by their assumption of responsibility documentation.			
Lombaard, Stefan Andre, MD	01/13/25	1612	Anesthesia Presence
At the time indicated by this attestion, I was physically present in the patient's room and participated in anesthetic care for this patient.			
Lombaard, Stefan Andre, MD	01/13/25	1612	Assumption of Responsibility
I assumed care of this patient at the indicated time, and am the medically responsible attending anesthesiologist for this patient’s care until such time as another anesthesiologist relieves me or the case ends, whichever is first.			
Singsaas, Julie M, RN	01/13/25	1618	Time Out
Lombaard, Stefan Andre, MD	01/13/25	1707	Anesthesia Presence
At the time indicated by this attestion, I was physically present in the patient's room and participated in anesthetic care for this			

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Anesthesia on 01/13/25 (continued)

patient.

Lombaard, Stefan Andre, MD	01/13/25	1707	Emergence Not Applicable

I attest that emergence was not applicable in this case.

Lombaard, Stefan Andre, MD	01/13/25	1726	Post Anesthesia

The patient was transported to the post-procedure location documented in the chart. I have reviewed and verified the documented handover and anesthesia end time. I was continuously available during the time of my medical direction of the case unless otherwise indicated within the medical record system. I was frequently present in the room, including specifically at the times indicated by my Anesthesia Presence attestations.

Notes

Anesthesia Postprocedure Evaluation

Hong, Stephanie, MD at 1/13/2025 1726

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Anesthesia on 01/13/25 (continued)

Procedure Summary:

Date: 1/13/2025	Room/Location: UWMC EP LAB 1 / UWMC ELECTROPHYSIOLOGY LAB
Anesthesia Start: 3:42 PM	Anesthesia Stop:
Procedure(s): Pacemaker Initial Implant - Single Chamber	Post-op Diagnosis * Bradycardia [R00.1]
Responsible Provider: Lombaard, Stefan Andre, MD	ASA Status: 4

Vitals	Value	Taken Time
BP	122/60	01/13/25 1720
Temp	36	01/13/25 1726
Pulse	77	01/13/25 1725
SpO2	100 %	01/13/25 1725

Vitals shown include unfiled device data.

Place of evaluation: ICU

Patient participation: patient participated

Level of consciousness: fully conscious

Patient pain control satisfaction: patient is satisfied with level of pain control

Airway patency: patent

Cardiovascular status during assessment: stable

Respiratory status during assessment: breathing comfortably

Anesthetic complications: no

Intravascular volume status assessment: euvolemic

Nausea / vomiting: patient is not experiencing nausea

Planned post-operative disposition at time of assessment: ICU care

Electronically signed by Hong, Stephanie, MD at 1/13/2025 5:26 PM

Anesthesia Preprocedure Evaluation

Hong, Stephanie, MD at 1/13/2025 1531

Patient: Jeanne Leonie Hoffman

Procedure Information

Date/Time: 01/13/25 1505
Procedure: Pacemaker Initial Implant - Single Chamber (Left: Heart Electrophysiology)
Location: UWMC EP LAB 1 / UWMC ELECTROPHYSIOLOGY LAB
Providers: Akoum, Nazem Walid, MD

HPI: Jeanne Leonie Hoffman is a 100 year old female with HTN, T2DM, non-healing lower extremity wounds s/p AKA presenting for PPM placement.

Relevant Problems

Pulmonary
(+) Community acquired bacterial pneumonia

Cardio
(+) Acute lower limb ischemia
(+) Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
(+) Essential hypertension, benign
(+) Hypercholesterolemia

HEENT
(+) Primary open angle glaucoma (POAG) of both eyes
(+) Reduced vision
(+) Sensorineural hearing loss, unspecified

Endo/Immunology
(+) Type 2 diabetes mellitus without complication (HCC)

Relevant surgical history:

Past Surgical History:

Procedure	Laterality	Date
• PR TOTAL ABDOMINAL HYSTERECT W/WO RMVL TUBE OVARY		

Medications:

Outpatient:

Current Outpatient Medications

Medication	Instructions

• atorvastatin (LIPITOR)	10 mg, Oral, Daily
• cholecalciferol (VITAMIN D-3)	2,000 units, Daily
• Cyanocobalamin (VITAMIN B-12 OR)	1 tablet, Daily
• lidocaine 4 % patch	1 patch, Transdermal, Every 24 hours, Apply to painful area for up to 12 hours in a 24 hour period.
• MULTIPLE VITAMIN OR	1 tablet, Oral, Daily
• pentoxifylline ER (TRENTAL)	400 mg, Oral, 3 times daily, Take with food.
• timolol maleate 0.5 % ophthalmic solution	instill 1 drop into both eyes twice a day
• Wound Dressings (medihoney) topical gel	Topical, Daily, Apply to ulcerations on legs. Apply dressing over the Medi Honey.
• Wound Dressings (medihoney) topical gel	Topical, Every other day, Apply to wound before applying dressing

Inpatient:

Scheduled

- acetaminophen, 650 mg, q8h SCH
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 1 mg, BID
- [Held By Provider] heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

Continuous

- DOPamine, 2 mcg/kg/min (Dosing Weight), Continuous, Last Rate: 2.5 mcg/kg/min (01/13/25 1515)
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/13/25 1500)
- ROPivacaine, , Continuous
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: 10 mL/hr (01/13/25 1500)

PRN

- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- magnesium sulfate, 2 g, q6h PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 5 mg, q4h PRN
- ondansetron, 4 mg, q8h PRN

- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Review of patient's allergies indicates:

Allergies

Allergen	Reactions
• Adhesives	
• Aspirin	Other and Skin: Rash
• Nitrofurantoin *confusion*	Other
• Penicillins *3/22/2024 Patient tolerate cephalosporins which she has had in the last year for cellulitis and pneumonia. William E Neighbor Jr, MD*	Skin: Rash
• Sulfa Antibiotics	Skin: Rash

Social History:

Social History

Tobacco Use	
• Smoking status:	Never
• Smokeless tobacco:	Never
Substance Use Topics	
• Alcohol use:	No
• Drug use:	No

Medical History and Review of Systems

Pulmonary
(+) pneumonia

Cardiovascular
(+) hypertension
(+) dysrhythmias (heart block 1st degree), bradycardia

GI/Hepatic/Renal

(+) renal disease, CKD

Endo/Immunology
(+) diabetes

Physical Exam

Airway
Mallampati: III
Neck ROM: Full
Mouth Opening: Normal
Facial Hair: None

Dental
edentulous

Cardiovascular
Paced with TVP at 80bpm
Rhythm: Regular
Rate: Normal

Pulmonary
decreased breath sounds

Other Physical Exam Findings: Confused, noncommunicative

Labs: (*last year*)

Relevant procedures / diagnostic studies: none

Cardiac
EKG 01/09/25:
Sinus brady
First degree AV block
?right bundle branch block

TTE 1/10/25:
Bradycardia at 39 bpm with 2:1 AV Block

Normal left ventricular chamber size and wall thickness with proximal septal thickening. Normal systolic function (LVEF 74% by biplane). Unable to assess diastolic function due to rhythm.

Moderate aortic stenosis (peak velocity 3.0m/s, mean gradient 19 mmHg, velocity ratio 0.4) without regurgitation. Suggest re-evaluation at a normal heart rate.

Moderate mitral annular calcification with mild regurgitation.

Mildly elevated estimated PA systolic pressure, 34-39 mmHg, inclusive of estimated right atrial pressure, 5-10 mmHg.

Normal right ventricular size and systolic function. CIED is present in the right heart.

No pericardial effusion.

No prior study for comparison.

Perioperative Risk Scores:

PONV: Intermediate Risk Total Score: 2

Female patient
Non-smoker
Criteria that do not apply:
History of PONV
History of motion sickness
Intended opioid administration

ANESTHESIA PLAN

Informed Consent:
Anesthesia Plan discussed with:
Child

ASA Score:
ASA: **4**
Planned Anesthetic Type:
MAC
MAC Justification:
age>70, surgeon request, airway risk and comorbid disease
Supervising Provider Comments:
Patient seen and examined in holding area. Risks and benefits of anesthesia discussed in detail with family. All questions answered. Plan for MAC with GA backup Patient family agreed to proceed.

Anesthesia Information

Anesthesia Summary - Hoffman, Jeanne Leonie [U8170135] Female
100 year old Current as of 04/30/25 0936

Height: 5' (1.524 m) (01/09/25)
Weight: 45.7 kg (100 lb 12 oz) (02/21/25)
BMI: 19.68
NPO Status: Not recorded
Allergies: ADHESIVES, ASPIRIN, NITROFURANTOIN, PENICILLINS, SULFA ANTIBIOTICS, SULFANILAMIDE

Procedure Summary

Date: 01/09/25
Anesthesia Start: 1516
Procedure: AMPUTATION, ABOVE KNEE (Left: Thigh)
Surgeons: Smith, Matthew C, MD
Anesthesia Type: general

Room / Location: UWMC MAIN OR 06 / UWMC MAIN OR
Anesthesia Stop: 1754
Diagnosis:
Acute lower limb ischemia
(Acute lower limb ischemia [I99.8])
Responsible Provider: Lee, Christopher Ryan, MD
ASA Status: 4

Attestation Information

Staff Name	Date	Time	Type
Bollag, Laurent Albert, MD	01/09/25	1653	Pre Eval Attending

I personally evaluated and examined the patient prior to anesthetic care. I reviewed and modified the pre-anesthetic evaluation to reflect my findings and my anesthesia plan.

Bollag, Laurent Albert, MD	01/09/25	1653	Present at Induction

I was physically present and participated during the induction of anesthesia.

Bollag, Laurent Albert, MD	01/09/25	1653	Anesthesia Presence

At the time indicated by this attestion, I was physically present in the patient's room and participated in anesthetic care for this patient.

Bollag, Laurent Albert, MD	01/09/25	1653	Handover of Responsibility

During the time period of medical direction, I was immediately available at all times. I was frequently present in the room, including specifically at the times indicated by my Anesthesia Presence attestations. I conducted a handover of anesthesia care to the provider indicated in the record, and ceded medical responsibility to that individual at the time indicated by their assumption of responsibility documentation.

Bollag, Laurent Albert, MD	01/09/25	1653	Present for Procedural Care

For the procedure(s) indicated below, I attest to the indicated level of involvement for the procedure.

Lee, Christopher Ryan, MD 01/09/25 1653 Anesthesia Presence

At the time indicated by this attestion, I was physically present in the patient's room and participated in anesthetic care for this patient.

Lee, Christopher Ryan, MD 01/09/25 1653 Assumption of Responsibility

I assumed care of this patient at the indicated time, and am the medically responsible attending anesthesiologist for this patient’s care until such time as another anesthesiologist relieves me or the case ends, whichever is first.

Lee, Christopher Ryan, MD 01/09/25 1754 Present at Emergence

I was physically present and participated during emergence from the administered anesthetic care.

Lee, Christopher Ryan, MD 01/09/25 1754 Post Anesthesia

The patient was transported to the post-procedure location documented in the chart. I have reviewed and verified the documented handover and anesthesia end time. I was continuously available during the time of my medical direction of the case unless otherwise indicated within the medical record system. I was frequently present in the room, including specifically at the times indicated by my Anesthesia Presence attestations.

Forsyth, Kevin K, RN 01/09/25 1932 Phase I

Anesthesia Postprocedure Evaluation

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Anesthesia on 01/09/25 (continued)

Lee, Christopher Ryan, MD at 1/9/2025 1945

Patient: Jeanne Leonie Hoffman

Procedure Summary:

Date: 1/9/2025	Room/Location: UWMC MAIN OR 06 / UWMC MAIN OR
Anesthesia Start: 3:16 PM	Anesthesia Stop: 5:54 PM
Procedure(s): AMPUTATION, ABOVE KNEE	Post-op Diagnosis * Acute lower limb ischemia [I99.8]
Responsible Provider: Lee, Christopher Ryan, MD	ASA Status: 4

Vitals	Value	Taken Time
BP	135/35	01/09/25 1930
Temp	36 °C	01/09/25 1750
Pulse	39	01/09/25 1944
SpO2	100 %	01/09/25 1944

Vitals shown include unfiled device data.

Place of evaluation: PACU

Patient participation: patient participated

Level of consciousness: fully conscious

Patient pain control satisfaction: patient is satisfied with level of pain control

Airway patency: patent

Cardiovascular status during assessment: stable

Respiratory status during assessment: breathing comfortably

Anesthetic complications: no

Intravascular volume status assessment: euvolemic

Nausea / vomiting: patient is not experiencing nausea

Planned post-operative disposition at time of assessment: ICU care

Electronically signed by Lee, Christopher Ryan, MD at 1/9/2025 7:47 PM

Anesthesia Preprocedure Evaluation

Czarnecki, Maciej, MD at 1/9/2025 1356

Patient: Jeanne Leonie Hoffman

Procedure Information

Date/Time: 01/09/25 1405
Procedure: AMPUTATION, ABOVE KNEE (Left: Thigh)
Location: UWMC MAIN OR 06 / UWMC MAIN OR
Surgeons: Smith, Matthew C, MD

HPI: Jeanne Leonie Hoffman is a 100 year old female with HTN, T2DM, non-healing lower extremity wounds presenting for emergent left AKA.

Medications:

Outpatient:

Current Outpatient Medications

Anesthesia on 01/09/25 (continued)

Medication	Instructions
• atorvastatin (LIPITOR)	10 mg, Oral, Daily
• Calcium Carbonate 500 MG Oral Chew Tab	2 tablets, Oral, 3 times daily PRN
• cholecalciferol (VITAMIN D-3)	2,000 units, Oral, Daily
• lidocaine 4 % patch	1 patch, Transdermal, Every 24 hours, Apply to painful area for up to 12 hours in a 24 hour period.
• MULTIPLE VITAMIN OR	Oral
• pentoxifylline ER (TRENTAL)	400 mg, Oral, 3 times daily, Take with food.
• timolol maleate 0.5 % ophthalmic solution	instill 1 drop into both eyes twice a day
• Wound Dressings (medihoney) topical gel	Topical, Daily, Apply to ulcerations on legs. Apply dressing over the Medi Honey.
• Wound Dressings (medihoney) topical gel	Topical, Every other day, Apply to wound before applying dressing

Inpatient:

Scheduled

• aspirin, 81 mg, Daily

Continuous

• [Held By Provider] heparin, 0-35 Units/kg/hr (Dosing Weight), Continuous, Last Rate: Stopped (01/09/25 1434)

PRN

ANESTHESIA PLAN

Preoperative Discussion: **PMHx and PSHx as above, verified NPO within guidelines.**

Discussed anesthetic plan of General Anesthesia. Discussed risks including; risks associated with airway placement, PONV, pulmonary complications, MI, or cardiac arrest. Discussed in detail that given pts advanced age, and PMHx there is an elevated risk of cardiac arrest. Patient and family in understanding. Discussed that family and patient wishes all measures to be taken in event of arrest. All patient questions answered. Patient and decision maker in agreement to proceed.

Anesthesia on 01/09/25 (continued)

Informed Consent:
Anesthesia Plan discussed with:
Patient and child
Use of blood products:
Consented
Discussed with: **patient and child**
ASA Score:
ASA: **4**
Planned Anesthetic Type:
general

Anesthesia Procedure Notes

Houston, Nicklaus, MD at 1/9/2025 1621

Procedure Orders
1. Nerve Block [360324135] ordered by Houston, Nicklaus, MD

Nerve Block

Staff:
Performing provider: Houston, Nicklaus, MD
Authorizing provider: Bollag, Laurent Albert, MD

Block Indication/Location:
Patient location: OR/Procedural area
Reason for block: post-op pain management.

Consent:
Type: verbal consent obtained
Risk discussed: block failure or incomplete block, motor weakness, nerve injury, bleeding, infection and local anesthetic toxicity.
Obtained by: Bollag, Laurent Albert, MD.
Obtained from: patient

Regional anesthesia checklist:
Patient identifed with two distinct identifiers
Procedural consent reviewed
Block site confirmed by hospital protocol
Allergies reviewed
Anticoagulation status reviewed
Maximum local anesthetic dose calculated
Emergency drugs available

Medication syringes labeled
Monitoring in place

Block type:
Procedure type: nerve catheter
Block laterality: left
Block: femoral

Preparation:
Patient position: reclined
Patient sedation: sedated
Monitors: SpO2, ECG, NIBP and EtCO2
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask, sterile drape and probe cover
Skin local anesthetic used: injected

Block needle:
Needle type: Tuohy
Needle gauge: 18 G
Needle length: 3.5 in
Guidance: ultrasound (in plane)no

Catheter:
Catheter type: epidural
Catheter size: 19 G
Ultrasound verification: Yes
Depth catheter secured at skin 15 cm
Securement: dermabond and clear occlusive dressing

Date and time block placed:
1/9/2025 4:00 PM

Additional block(s)

Block type:
Procedure type: single shot block
Block laterality: left
Block: sciatic (popliteal)

Preparation:
Position: reclined
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask and probe cover
Skin LA used: injected

Block needle:
Needle type: block needle
Needle gauge: 21 G
Needle length: 100 mm
Guidance: ultrasound (in plane)
Ultrasound image saved: no

Date and time block placed:

Anesthesia on 01/09/25 (continued)

1/9/2025 3:50 PM

Assessment:
Sensory block: unable to assess
Motor block: unable to assess
Pain relief: unable to assess
Complications: well tolerated

Final block comments:
Femoral catheter 10cm at skin initially, tunneled to 15cm at skin. Catheter site confirmed with US and secured with dermabond + tegaderm after tunneling.

Electronically signed by Houston, Nicklaus, MD at 1/9/2025 4:25 PM

Czarnecki, Maciej, MD at 1/9/2025 1648

Procedure Orders
1. Airway Placement [360331968] ordered by Czarnecki, Maciej, MD

Airway Placement

Staff:
Performing Provider: Czarnecki, Maciej, MD
Authorizing Provider: Bollag, Laurent Albert, MD

Airway management:
Patient location: OR/Procedural area
Final airway type: Supraglottic airway
Intubation reason: General anesthesia/planned procedure

Induction:
Positioning: supine
Preoxygenation: Yes
Apneic Oxygenation: Standard nasal cannula at flush rate
Mask Ventilation: Grade 1 - Ventilated by mask

Intubation:

Number of Attempts: 1

Final Attempt
Airway Type: SGA
LMA Type**:** i-gel
LMA Size:3

Assessment:
Confirmation: auscultation
Difficult Airway: no
Procedure Abandoned: no

Anesthesia Orders

propofol (Diprivan) injection (Discontinued)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1526** — Status: **Discontinued**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1526 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: Routine PRN 01/09/25 1526 - 01/09/25 1812 — Class: Normal
Discontinued by: Czarnecki, Maciej, MD 01/09/25 1812 [Patient discharge] — Package: 63323-269-22

etomidate (Amidate) injection (Discontinued)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1527** — Status: **Discontinued**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1527 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: Routine PRN 01/09/25 1526 - 01/09/25 1812 — Class: Normal
Discontinued by: Czarnecki, Maciej, MD 01/09/25 1812 [Patient discharge] — Package: 0143-9506-01

fentaNYL PF injection (Discontinued)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1528** — Status: **Discontinued**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1528 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: Routine PRN 01/09/25 1528 - 01/09/25 1812 — Class: Normal
Discontinued by: Czarnecki, Maciej, MD 01/09/25 1812 [Patient discharge] — Package: 0409-9094-12

norepinephrine 16 mg in D5W 250 mL (0.064 mg/mL) infusion (premix) (Discontinued)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1529** — Status: **Discontinued**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1529 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: STAT Continuous PRN 01/09/25 1529 - 01/09/25 1812 — Class: Normal
Discontinued by: Czarnecki, Maciej, MD 01/09/25 1812 [Patient discharge] — Package: 0338-0116-20

ePHEDrine injection (Discontinued)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1531** — Status: **Discontinued**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1531 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: Routine PRN 01/09/25 1531 - 01/09/25 1812 — Class: Normal
Discontinued by: Czarnecki, Maciej, MD 01/09/25 1812 [Patient discharge] — Package: 51754-4250-1

Airway Placement (Final result)

Electronically signed by: **Czarnecki, Maciej, MD on 01/09/25 1648** — Status: **Completed**
Ordering user: Czarnecki, Maciej, MD 01/09/25 1648 — Ordering provider: Czarnecki, Maciej, MD
Authorized by: Bollag, Laurent Albert, MD — Ordering mode: Standard
Frequency: Routine Once 01/09/25 1649 - 1 occurrence — Class: Clinic Performed
Quantity: 1 — Lab status: Final result
Instance released by: Czarnecki, Maciej, MD 1/9/2025 4:48 PM
Order comments: This order was created via procedure documentation

Airway Placement — Resulted: 01/09/25 1532, Result status: Final result

Ordering provider: Czarnecki, Maciej, MD 01/09/25 1648 — Order status: Completed
Filed by: Czarnecki, Maciej, MD 01/09/25 1650 — Resulting lab: OUTSIDE REFERENCE PERFORMING LAB
Narrative:
Czarnecki, Maciej, MD 1/9/2025 4:50 PM
Airway Placement

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Anesthesia on 01/09/25 (continued)

Airway management:
Patient location: OR/Procedural area
Final airway type: Supraglottic airway
Intubation reason: General anesthesia/planned procedure

Induction:
Positioning: supine
Preoxygenation: Yes
Apneic Oxygenation: Standard nasal cannula at flush rate
Mask Ventilation: Grade 1 - Ventilated by mask

Intubation:

Number of Attempts: 1

Final Attempt
Airway Type: SGA
LMA Type: i-gel
LMA Size:3

Assessment:
Confirmation: auscultation
Difficult Airway: no
Procedure Abandoned: no

Date / Time Airway Secured / Re-Secured:
1/9/2025 3:32 PM

Nerve Block

Staff:
Performing provider: Houston, Nicklaus, MD
Authorizing provider: Bollag, Laurent Albert, MD

Block Indication/Location:
Patient location: OR/Procedural area
Reason for block: post-op pain management.

Consent:
Type: verbal consent obtained
Risk discussed: block failure or incomplete block, motor weakness, nerve injury, bleeding, infection and local anesthetic toxicity.
Obtained by: Bollag, Laurent Albert, MD.
Obtained from: patient

Regional anesthesia checklist:
Patient identifed with two distinct identifiers
Procedural consent reviewed
Block site confirmed by hospital protocol
Allergies reviewed
Anticoagulation status reviewed
Maximum local anesthetic dose calculated
Emergency drugs available
Medication syringes labeled
Monitoring in place

Block type:

Anesthesia on 01/09/25 (continued)

Procedure type: nerve catheter
Block laterality: left
Block: femoral

Preparation:
Patient position: reclined
Patient sedation: sedated
Monitors: SpO2, ECG, NIBP and EtCO2
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask, sterile drape and probe cover
Skin local anesthetic used: injected

Block needle:
Needle type: Tuohy
Needle gauge: 18 G
Needle length: 3.5 in
Guidance: ultrasound (in plane)no

Catheter:
Catheter type: epidural
Catheter size: 19 G
Ultrasound verification: Yes
Depth catheter secured at skin 15 cm
Securement: dermabond and clear occlusive dressing

Date and time block placed:
1/9/2025 4:00 PM

Additional block(s)

Block type:
Procedure type: single shot block
Block laterality: left
Block: sciatic (popliteal)

Preparation:
Position: reclined
Skin prep: chlorhexidine
Sterile barriers: sterile gloves, mask and probe cover
Skin LA used: injected

Block needle:
Needle type: block needle
Needle gauge: 21 G
Needle length: 100 mm
Guidance: ultrasound (in plane)
Ultrasound image saved: no

Date and time block placed:
1/9/2025 3:50 PM

Assessment:
Sensory block: unable to assess
Motor block: unable to assess
Pain relief: unable to assess
Complications: well tolerated

Final block comments:
Femoral catheter 10cm at skin initially, tunneled to 15cm at skin.
Catheter site confirmed with US and secured with dermabond + tegaderm
after tunneling.

Medication Administrations

acetaminophen (Ofirmev) IV 1,000 mg [363639848]

Ordering Provider: Chi, Frank, MD
Ordered On: 01/25/25 1126
Ordered Dose (Remaining/Total): 1,000 mg (0/1)
Frequency: Once
Admin Instructions: Do NOT refrigerate.

Status: Completed (Past End Date/Time)
Starts/Ends: 01/25/25 1156 - 01/25/25 1336
Route: Intravenous
Ordered Rate/Order Duration: 400 mL/hr / 15 Minutes

Question	Answer	Comment
How does patient meet IV acetaminophen usage criteria?:	None of the above choices apply	—
Is pain or transfusion reaction interfering with normal activity despite optimization of opioid regimen (or opioids are not indicated)? (For pain only, comment what normal activities are causing pain):	Yes	—
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.:	Yes	—
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?:	Yes	—
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?:	Yes	—

insulin LISPRO injection 0-4 units [360358573]

Ordering Provider: Grabar, Christina, MD
Ordered On: 01/09/25 1954
Ordered Dose (Remaining/Total): 0-4 units (—/—)
Frequency: Nightly
Admin Instructions: BEDTIME **LOW** Dose CORRECTION Insulin
< 200 = DO NOT GIVE CORRECTIONAL INSULIN
250-299 = 3 units
>349 = recheck blood sugar once now, then give 4 units.
For BG > 349, call Provider and recheck BG in 1-2 hours.

2. If BG is LESS than or equal to 90mg/dL, offer patient juice or a small snack if appropriate. If BG is LESS than or equal to 70 mg/dL, follow Hypoglycemia Protocol.

Status: Discontinued (Past End Date/Time)
Starts/Ends: 01/09/25 2100 - 01/11/25 1410
Route: Subcutaneous
Ordered Rate/Order Duration: — / —
Blood sugar = Dose

200-249 = 2 units
300-349 = 3 units

For BG > 500, send venous blood glucose STAT.
1. Check BG. Even if patient is NPO or not eating, GIVE correction insulin IF indicated by correction scale.
3. CHECK BG at 3AM if bedtime correction insulin dose given.

insulin REGULAR 100 units in NS 100 mL (1 unit/mL) infusion (pkg premix) [360325646]

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Medication Administrations (continued)

Ordering Provider: Czarnecki, Maciej, MD
Ordered On: 01/09/25 1626
Ordered Dose (Remaining/Total): 0-19 Units/hr (—/—)
Frequency: Continuous
Admin Instructions: Patients with T1DM should never have the insulin infusion turned off for > 1 hour.

Status: Discontinued (Past End Date/Time)
Starts/Ends: 01/09/25 1657 - 01/09/25 1954
Route: Intravenous
Ordered Rate/Order Duration: 0-19 mL/hr / —
When transitioning off insulin infusion, administer a dose of subcutaneous basal insulin (if ordered), continue titrating infusion for 2 hrs, then discontinue infusion.
Insulin Infusion STANDARD Protocol - start at Algoirthm 1.

Refer to Insulin Infusion Algorithm Decision Tree for subsequent dosing.

Questionnaire

Question	Answer
How does patient meet IV acetaminophen usage criteria?	None of the above choices apply
Is pain or transfusion reaction interfering with normal activity despite optimization of opioid regimen (or opioids are not indicated)? (For pain only, comment what normal activities are causing pain)	Yes
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.	Yes
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?	Yes
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?	Yes

Admin instructions: Do NOT refrigerate.

Questionnaire

Question	Answer
How does patient meet IV acetaminophen usage criteria?	None of the above choices apply
Is pain or transfusion reaction interfering with normal activity despite optimization of opioid regimen (or opioids are not indicated)? (For pain only, comment what normal activities are causing pain)	Yes
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.	Yes
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?	Yes
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?	Yes

Admin instructions: Do NOT refrigerate.
Package: 63323-434-41

Questionnaire

Question	Answer
How does patient meet IV acetaminophen usage criteria?	None of the above choices apply
Is pain or transfusion reaction interfering with normal activity despite optimization of opioid regimen (or opioids are not indicated)? (For pain only, comment what normal activities are causing pain)	Yes
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.	Yes
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?	Yes
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?	Yes

Admin instructions: Do NOT refrigerate.
Package: 43825-102-01

Ordering user: Fancher-Dominguez, Alexandria Paige, MD 02/22/25 1600
Ordering provider: Fancher-Dominguez, Alexandria Paige, MD
Authorized by: Fancher-Dominguez, Alexandria Paige, MD
Ordering mode: Standard
PRN reasons: mild pain moderate pain severe pain
Frequency: Routine q6h PRN 02/22/25 1600 - 1 occurrence
Class: Normal
Acknowledged: Porter, Allen, RN 02/22/25 1600 for Placing Order

Questionnaire

Question	Answer
How does patient meet IV acetaminophen usage criteria?	None of the above choices apply
Is pain or transfusion reaction interfering with normal activity despite optimization of opioid regimen (or opioids are not indicated)? (For pain only, comment what normal activities are causing pain)	Yes
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.	Yes
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?	Yes
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?	Yes

Admin instructions: Do NOT refrigerate.
Package: 43825-102-01
Reordered from: acetaminophen (Ofirmev) IV 1,000 mg

Instance released by: Phan, Janet, MD (auto-released) 1/11/2025 8:04 PM
Discontinued by: Wilson, Julia, MD 01/14/25 1220

Questionnaire

Question	Answer
WHEN:	ICU SLEEP: Discontinue orders when the patient is transferred to Acute Care.

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Other Orders (group 10 of 15) (continued)

Order comments: [PANEL: Acute Care/ICU Sleep Promotion Protocol]

Weigh Patient (Discontinued)

Electronically signed by: **Schwarz, Samuel, MD on 01/09/25 1805** Status: **Discontinued**
Ordering user: Schwarz, Samuel, MD 01/09/25 1805 Ordering provider: Wilson, Julia, MD
Authorized by: Wilson, Julia, MD Ordering mode: Standard
Frequency: Routine Daily 01/09/25 1807 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Schwarz, Samuel, MD (auto-released) 1/12/2025 12:30 AM
Discontinued by: Fancher-Dominguez, Alexandria Paige, MD 02/24/25 1141

Patient Education - Diabetes (Discontinued)

Electronically signed by: **Mahdi, Elaa, MD on 01/11/25 1410** Status: **Discontinued**
Ordering user: Mahdi, Elaa, MD 01/11/25 1410 Ordering provider: Wilson, Julia, MD
Authorized by: Wilson, Julia, MD Ordering mode: Standard
Frequency: Routine Daily 01/11/25 1411 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Mahdi, Elaa, MD (auto-released) 1/12/2025 12:30 AM
Discontinued by: Chi, Frank, MD 01/26/25 0845
Order comments: Daily by Staff RN.

Cardiac Monitoring (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Until discontinued 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released) 1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]
Order comments: At start of Dexmedetomidine infusion until stabilized due to bradycardic & hypotensive effects.

Blood Pressure (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Until discontinued 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released) 1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]
Order comments: At start of Dexmedetomidine infusion until stabilized due to bradycardic & hypotensive effects.

Respiratory Rate (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Per unit protocol 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released) 1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]

SpO2 Spot Check (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Per unit protocol 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released)

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Other Orders (group 10 of 15) (continued)

1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]

Sedation Score Assessment (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Per Standard of Care 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released) 1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]

Questionnaire

Question	Answer
Sedation Target Goal:	RASS 0 to -1

Hold Dexmedetomidine infusion and Notify Provider for Heart Rate <50, MAP < 60, SBP < 90 (Discontinued)

Electronically signed by: **Phan, Janet, MD on 01/12/25 0430** Status: **Discontinued**
Ordering user: Phan, Janet, MD 01/12/25 0430 Ordering provider: Phan, Janet, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Until discontinued 01/12/25 0430 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Phan, Janet, MD (auto-released) 1/12/2025 4:30 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]
Order comments: Notify Provider If goal of RASS < +3 not met with maximum dose.

Cardiac Monitoring (Discontinued)

Electronically signed by: **Mahdi, Elaa, MD on 01/12/25 0817** Status: **Discontinued**
Ordering user: Mahdi, Elaa, MD 01/12/25 0817 Ordering provider: Mahdi, Elaa, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Until discontinued 01/12/25 0818 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Mahdi, Elaa, MD (auto-released) 1/12/2025 8:17 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]
Order comments: At start of Dexmedetomidine infusion until stabilized due to bradycardic & hypotensive effects.

Blood Pressure (Discontinued)

Electronically signed by: **Mahdi, Elaa, MD on 01/12/25 0817** Status: **Discontinued**
Ordering user: Mahdi, Elaa, MD 01/12/25 0817 Ordering provider: Mahdi, Elaa, MD
Authorized by: Smith, Matthew C, MD Ordering mode: Standard
Frequency: Routine Until discontinued 01/12/25 0818 - Until Specified Class: Hospital Performed
Quantity: 1 Instance released by: Mahdi, Elaa, MD (auto-released) 1/12/2025 8:17 AM
Discontinued by: Walks, Tristan H, RN 01/13/25 1859 [Treatment Complete]
Order comments: At start of Dexmedetomidine infusion until stabilized due to bradycardic & hypotensive effects.

Respiratory Rate (Discontinued)

Discontinued by: Discharge Provider, Automatic 03/08/25 1542 [Patient Discharge]

Questionnaire

Question	Answer
Hospital	UWMC ML INPATIENT
Reason for Consult	Functional Mobility & Transfers Wheelchair Seating & Positioning

Order comments: Very complex disposition situation. Made CMO 6 days ago I/s/o severe worsening respiratory status. Seems to have nearly fully recovered. True care needs, per son/dpoa, are between a more comfort focused approach and a minimal necessary care approach. We are requesting some bedside exercises for the patient/son. If she desats, the assessment is over. Please call for more details/questions 210-867-4777 Dan Stenberg

Referral

Transfer

ED to floor bed request (Completed)

Electronically signed by: **Song, Chris, MD on 01/09/25 1344** Status: **Completed**
Ordering user: Song, Chris, MD 01/09/25 1344
Ordering provider: Song, Chris, MD
Authorized by: Vrablik, Marie Clougherty, MD
Ordering mode: Standard
Frequency: Routine Once 01/09/25 1345 - 1 occurrence
Class: Hospital Performed
Quantity: 1
Instance released by: Song, Chris, MD (auto-released) 1/9/2025 1:44 PM

Updates

Diagnosis: Arterial occlusion [I70.90]
Level of care: Intensive Care
Service: SURGERY VASCULAR

Transfer Patient (Completed)

Electronically signed by: **Wilson, Julia, MD on 01/14/25 0943** Status: **Completed**
Ordering user: Wilson, Julia, MD 01/14/25 0943
Ordering provider: Wilson, Julia, MD
Authorized by: Wilson, Julia, MD
Ordering mode: Standard
Frequency: Routine Once 01/14/25 0944 - 1 occurrence
Class: Hospital Performed
Quantity: 1
Instance released by: Wilson, Julia, MD (auto-released) 1/14/2025 9:43 AM

Questionnaire

Question	Answer
Provider Care Team	U INTERNAL MEDICINE MED H
Are they the primary team?	Yes
Remove all existing teams?	No

Updates

Attending provider: Wilson, Julia, MD
Level of care: Acute Care

Transfer to Other UWM Facility/Campus (Completed)

Electronically signed by: **Fancher-Dominguez, Alexandria Paige, MD on 02/25/25 1314** Status: **Completed**
Ordering user: Fancher-Dominguez, Alexandria Paige, MD 02/25/25 1314
Ordering provider: Fancher-Dominguez, Alexandria Paige, MD
Authorized by: Fancher-Dominguez, Alexandria Paige, MD
Ordering mode: Standard
Frequency: Routine Once 02/25/25 1312 - 1 occurrence
Class: Hospital Performed
Quantity: 1
Instance released by: Fancher-Dominguez, Alexandria Paige, MD (auto-released) 2/25/2025 1:14 PM

Questionnaire

Question	Answer
Diagnosis	Pt with history of critical limb ischemia s/p AKA c/b heart block requiring pacemaker, progressive encephalopathy, dyphagia, severe malnutrition. Pt's son requesting transfer for NG tube placement under anesthesia. Declined here d/t risk.
Requested Destination	HMC
Requested Level of Care	Acute Care
Isolation or Sitter Needs?	No
Medically Emergent Transfer	No
Default priority	High
Reason for Transfer	Patient/Family request
Patient or decision-maker agrees to transfer?	Yes
Anticipated Admitting Service	INTERNAL MEDICINE

Updates

Request type: Transfer - Incoming
Transfer center region: UWM Transfer Center

Patient Summary

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Flowsheets (group 3 of 16) (continued)

Came into room after hearing pt.coughing from hallway. Pt. Son stated he gave pt. water. Pt was slumped down low in bed and appeared restless trying to get out of bed. Coughing but not clearing secretions. Readjusted pt. and raised HOB. Provider notified, CXR done at bedside. O2 dropped down into 80s temporarily, pt. Appeared more distressed and mouthing "help me." attempted to suction and apply supplemental O2. Pt. Resisted suctioning and oxygen. Rapid response called. Labs drawn by Stat RN. 500 bolus given per order. pt. NPO pending speech eval. Pt. Respiratory distress resolved, resting comfortable on RA.
