Immunizations

Immunizations last reviewed by Pearson, Terri Jeanne, CMA on 5/21/2021 0953

COVID-19 Pfizer mRNA bivalent 12 yrs and older

Given by: Tesfay, Lemlem H, CMA
Date: 10/10/2022 1026
Dose: 30 mcg
Site: Left Deltoid
Route: Intramuscular
NDC: 59267-0304-1
CVX code: 300
VIS Publish Date: 8/31/2022
Product: Pfizer COVID-19 Vac Bivalent
Manufacturer: Pfizer, Inc
Lot number: GJ6665
Expiration date: 12/15/2022

Questionnaire

Question	Answer
Vaccine Information Sheet (VIS)/EUA Fact Sheet was presented to the patient, parent or guardian on: (Date)	10/10/2022

Patient (continued)

Immunizations (continued)

VFC Status	Ineligible

COVID-19 Pfizer mRNA bivalent 12 yrs and older

Given by: Perez, Delmis Joel, RN
Site: Left Deltoid
CVX code: 300
Product: Pfizer COVID-19 Vac Bivalent
Expiration date: 7/6/2023
Date: 5/10/2023 1111
Route: Intramuscular
VIS Publish Date: 4/28/2023
Manufacturer: Pfizer, Inc
Dose: 30 mcg
NDC: 59267-1404-2
Lot number: GK1337

Questionnaire

Question	Answer
Vaccine Information Sheet (VIS)/EUA Fact Sheet was presented to the patient, parent or guardian on: (Date)	5/10/2023
VFC Status	Ineligible

COVID-19 Pfizer mRNA monovalent 12 yrs and older

Given by: Proctor, Suliana M, RN
Site: Left Deltoid
CVX code: 208
Product: Pfizer-BioNTech COVID-19 Vacc
Expiration date: 6/30/2021
Date: 2/11/2021 1000
Route: Intramuscular
VIS Publish Date: 12/1/2020
Manufacturer: Pfizer, Inc
Dose: 0.3 mL
NDC: 59267-1000-1
Lot number: EM9810

Questionnaire

Question	Answer
Vaccine Information Sheet (VIS)/EUA Fact Sheet was presented to the patient, parent or guardian on: (Date)	2/11/2021
VFC Status	Ineligible

COVID-19 Pfizer mRNA monovalent 12 yrs and older

Given by: Hennessy V, Laura, RN
Site: Left Deltoid
CVX code: 208
Product: Pfizer-BioNTech COVID-19 Vacc
Expiration date: 6/30/2021
Date: 2/28/2021 0955
Route: Intramuscular
VIS Publish Date: 1/1/2021
Manufacturer: Pfizer, Inc
Dose: 0.3 mL
NDC: 59267-1000-1
Lot number: EN6198

Questionnaire

Question	Answer
Vaccine Information Sheet (VIS)/EUA Fact Sheet was presented to the patient, parent or guardian on: (Date)	2/28/2021
VFC Status	Ineligible

COVID-19 Pfizer mRNA monovalent 12 yrs and older

Given by: Erhardt, Mark Allen, CMA
Site: Right Deltoid
CVX code: 208
Product: Pfizer-BioNTech COVID-19 Vacc
Expiration date: 1/30/2022
Comment: RD per pt request
Date: 10/13/2021 1154
Route: Intramuscular
VIS Publish Date: 9/22/2021
Manufacturer: Pfizer, Inc
Dose: 0.3 mL
NDC: 59267-1000-1
Lot number: FH8020

Questionnaire

Question	Answer
Vaccine Information Sheet (VIS)/EUA Fact Sheet was presented to the patient, parent or guardian on: (Date)	10/13/2021
VFC Status	Ineligible

COVID-19 Pfizer mRNA monovalent tris-sucrose 12 yrs and older

Given by: Erhardt, Mark Allen, CMA
Date: 4/27/2022 0908
Dose: 30 mcg

Patient (continued)

Immunizations (continued)

Site: Left Deltoid | Route: Intramuscular | NDC: 59267-1025-1

ACP (Advance Care Planning) by Grabar, Christina, MD at 1/10/2025 0201

Author: Grabar, Christina, MD
Filed: 1/10/2025 2:28 AM
Editor: Grabar, Christina, MD (Resident)
Service: Cardiothoracic Intensive Care
Date of Service: 1/10/2025 2:01 AM
Author Type: Resident
Status: Signed
Cosigner: Nikravan, Sara, MD at 2/7/2025 6:01 PM

Advance Care Planning (ACP) / Goals of Care (GOC):

- Discussed goals of care with**: Patient, Louis - son**
- Name of LNOK or DPOA-HC: Louis - Medical power of attorney
  - DPOA-HC documented in EMR: Yes
- **Patient/family understanding of medical situtation**: Louis expressed understanding that his mother is clinically stable but requiring intensive care overnight after her vascular surgery. He expressed understanding that her heart

Patient (continued)

Advance Care Planning (continued)

rate is lower than previously and is low what is considered normal, we currently have pacing pads on her chest in case her heart rate drops further and she is currently requiring a continuous infusion and additional IV medication doses to maintain her heart rate and blood pressure. We discussed that this is possibly transient after her procedure, but that she might require an in future procedure to regulate her heart rate. They understand that patient will need rehab and work with therapies

- **Patient/family goals and values:** Patient indicated that she was feeling well and that I should have my discussion regarding her medical decisions with her son who was at bedside. Luis shared with me that prior to the last 5 or 6 days when patient's leg began hurting, she was very independent often interacting with strangers when out and about, watching Al Roker on NBC, and enjoys reading. He also states that earlier this year patient accompanied him on business trips via train and being able to travel is important to her.
-
- Louis is adamant that patient should not be in a nursing home, says that they have "tried that" and they were in a tent for a few weeks while he was hopeful that they would be able to move into a 2 bedroom apartment for the two of them. Patient's son expressed that when she was previously in a nursing home it was as if they were "waiting for her to die." He reports patient has had 3 falls this year, but was overall ambulatory with cane at home.
- **Patient's minimal acceptable quality of life, if discussed:** Louis indicated that if she was not able to be independent with these tasks (watching TV, reading, interacting with people), this would not be an acceptable quality of life. We discussed the poor neurologic outcomes for patients of Jeanne's age following cardiac arrest and return of spontaneous circulation following resuscitation. We discussed how Jeanne would likely not be able to perform the tasks that she finds meaningful and would recommend allowing natural death to occur if her heart were to stop. Louis acknowledged this, but expressed that patient wanted to be full code in previous discussions, as indicated in outpatient POLST form. After our discussion, Louis was concerned about the potential harm to patient given her age, frailty (osteoporosis w/ chest compressions, etc.), and trajectory after her AKA. Given this, he was planning to have further discussion with patient in AM about code status. Louis did express that if patient were to be ventilator dependent, she wishes to be kept alive until family could be present to transition to comfort measures at that time.
- **Decisions made during this meeting**: Continue full code, transition to CMO if patient becomes ventilator-dependent
- **Next steps:** Follow-up with Louis and Jeanne in AM after further discussions regarding code status
- Time: I spent 40 minutes face to face with the patient and family members (Louis) discussing advance care planning.

 # Advance Care Planning (ACP) / Goals of Care (GOC):

- Discussed goals of care with**: Louis Alloin**
- Name of LNOK or DPOA-HC: No Legal Next of Kin documented in EMR (LNOK)
- Patient/family communication preferences, if discussed**:** This was not discussed
- Patient/family understanding of medical situtation: Lois understands that his mom underwent an extensive surgery and her course is currently complicated by delirium and and high aspiration risk. He does note that there has been some improvement in her delirium over the last couple of days. But agrees that we are not sure if she has not developed new baseline. He also acknowledges that she is a moderate to high aspiration risk but restates that tube feeds are not within her goal. He does also understand that a major aspiration event can occur that could result in worsening respiratory distress and even possibly death.

Patient (continued)

Advance Care Planning (continued)

- Patient/family goals and values: Louis's overall goal is to eventually return to Bainbridge with his mother. He states that she has lived in Bainbridge all of her life. She was born in Bainbridge and he would like for her to pass away in Bainbridge as well. He is frustrated by the housing situation since last fall and feels that it contributed in her current medical presentation. He states that left for her to live another 10 years and continue to break the banana bread used to before her admission. And with this he would like to attempt for temporary rehab stay before he takes her back to Bainbridge Island.
- Patient's minimal acceptable quality of life, if discussed: Not discussed
- Decisions made during this meeting: We decided to proceed with evaluating for SNF placement. We also discussed in the context of her high aspiration risk, her medical frailty it would not be medically advisable for chest compressions and intubation if she were to code. He agreed to change her stat CODE STATUS to DNR/DNI. We did discuss that if her delirium were to worsen or if she would not be a rehab candidate that we would then consider possible SNF with hospice overlay while he works on the outpatient housing situation. However he would not agree if she were to need to pay through her Social Security
- Next steps: Discussed with social work for rehab referrals.
- Time: I spent 60 minutes face to face with the family members (Louis) discussing advance care planning.

ACP (Advance Care Planning) by Fancher-Dominguez, Alexandria Paige, MD at 2/23/2025 1748

Author: Fancher-Dominguez, Alexandria Paige, MD | Service: Internal Medicine | Author Type: Physician
Filed: 2/23/2025 5:54 PM | Date of Service: 2/23/2025 5:48 PM | Status: Signed
Editor: Fancher-Dominguez, Alexandria Paige, MD (Physician)

 # Advance Care Planning (ACP) / Goals of Care (GOC):

- Discussed goals of care with**:** Louis (son; POA)
- Patient/family goals and values: To get Jeanne nutrition no matter what the risks of having a tube placed. To see her get better. If she doesn't get better, for her to pass at home.
- I discussed pt's oxygen status and overall clinical trajectory with Louis. I expressed my worry that she is continuing to decline. Looking at the big picture, nutrition is not going to solve Jeanne's medical problems. She has ongoing aspiration despite being strict NPO that will not be addressed by enteral nutrition, but may in fact be made worse by reflux / aspiration of tube feeds. She has developed pulmonary edema due to the fluids, which I will stop and give her a 1x dose of lasix 20mg this evening as a temporizing measure. Louis understands and agrees.
- I discussed that given above clinical picture, I would recommend against intubation in the event that her respiratory status were to continue to decline. He agreed. When I asked if I could change her code status to include DNI, he said he would like to wait and see how things go. If they were to get worse then he would agree with the recommendation to not intubate and allow Jeanne to pass.
- He informed me that he told Jeanne's friends that she is dying and they are prepared for this, but he is still holding out hope that "getting a tube down her" and getting some nutrition will improve her clinical picture. I informed him that this is unlikely.
- Next steps:
  - If Jeanne were to worsen, physician should come to bedside to discuss official change of code status; recommend against intubation.
- Time: I spent 15 minutes face to face with the family members (Louis, son) discussing advance care planning.

Advance Care Planning (continued)

ACP (Advance Care Planning) by Bhandari, Shiv, MD at 2/23/2025 2055

Author: Bhandari, Shiv, MD | Service: Medicine | Author Type: Physician
Filed: 2/23/2025 10:35 PM | Date of Service: 2/23/2025 8:55 PM | Status: Signed
Editor: Bhandari, Shiv, MD (Physician)

Advance Care Planning (ACP) / Goals of Care (GOC):

- Discussed goals of care with: Louis (son), Olesya Mironchuk (MS4) and Nana Aidoo (RN) at bedside
- Louis was able to recall today's events, specifically that Jeanne's oxygen needs have increased due to fluid in her lungs, and that we are supporting her high oxygen needs currently while also diuresing. Louis reiterated the plan discussed with Dr. Fancher-Dominguez earlier today, specifically that we will continue monitoring Jeanne's oxygen needs, and if Jeanne desaturates on her current high HFNC needs, then discuss with Louis our recommendation to change her code status to DNI.
- I explained to Louis that if Jeanne desaturates overnight, we won't have much time to discuss making a change in her code status since she is already near maximum HFNC support. He was understanding. I explained that the risks of intubation are very high with her age and comorbidities, and gave my recommendation against intubation. He was understanding and in agreement. He explained that he still would like to monitor overnight and not make any changes right now to Jeanne's code status.
- Next steps:
  - Continue code status as DNR Intubation OK, for now
  - I have already alerted the MICU about this patient and relayed the above
  - Continue monitoring vitals q4h
  - Nana (RN) to page the primary contact Olesya Mironchuk (MS4) if Jeanne requires any more O2 support on HFNC
    - We will go to bedside and assess, and will continue recommending against intubation
    - In case Louis does not want to transition to DNR/DNI at that time, I will contact the MICU to request a joint GOC with Louis with our recommendation against intubation
- Time: I spent 25 minutes face to face with Louis (son) discussing advance care planning.

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Patient and Additional Contact Information (if any)

Patient Name (last, first, middle)	Date of Birth	Phone Number
Name of Guardian, Surrogate or other Contact Person	Relationship	Phone Number

D NON-EMERGENCY MEDICAL TREATMENT PREFERENCES

ANTIBIOTICS:
- [X] Use antibiotics for prolongation of life.
- [ ] Do not use antibiotics except when needed for symptom management.

MEDICALLY ASSISTED NUTRITION:
Always offer food and liquids by mouth if feasible.
- [ ] No medically assisted nutrition by tube.
- [ ] Trial period of medically assisted nutrition by tube. (Goal: _____)
- [X] Long-term medically assisted nutrition by tube.

ADDITIONAL ORDERS: (e.g. dialysis, blood products, implanted cardiac devices, etc. Attach additional orders if necessary.)

X Physician/ARNP/PA-C Signature	Date 06/06/18
X Patient or Legal Surrogate Signature	Date 6/4/2018

DIRECTIONS FOR HEALTH CARE PROFESSIONALS

NOTE: A person with capacity may always consent to or refuse medical care or interventions, regardless of information represented on any document, including this one.

Completing POLST
- Completing a POLST form is always voluntary.
- Treatment choices documented on this form should be the result of shared decision-making by an individual or their surrogate and medical provider based on the person's preferences and medical condition.
- POLST must be signed by a physician/ARNP/PA-C and patient, or their surrogate, to be valid. Verbal orders are acceptable with follow-up signature by physician/ARNP/PA-C in accordance with facility/community policy.

Using POLST

Any incomplete section of POLST implies full treatment for that section.

This POLST is valid in all care settings including hospitals until replaced by new physician's orders.

The POLST is a set of medical orders. The most recent POLST replaces all previous orders.

The POLST does not replace an advance directive. An advance directive is encouraged for all competent adults regardless of their health status. An advance directive allows a person to document in detail his/her future health care instructions and/or name a surrogate decision maker to speak on his/her behalf. When available, all documents should be reviewed to ensure consistency, and the forms updated appropriately to resolve any conflicts.

SECTIONS A AND B:
- No defibrillator should be used on a person who has chosen "Do Not Attempt Resuscitation."
- When comfort cannot be achieved in the current setting, the person should be transferred to a setting able to provide comfort (e.g., treatment of a hip fracture).
- An IV medication to enhance comfort may be appropriate for a person who has chosen "Comfort-Focused Treatment."
- Treatment of dehydration is a measure which may prolong life. A person who desires IV fluids should indicate "Selective" or "Full Treatment."

SECTION D:
- Oral fluids and nutrition must always be offered if medically feasible.

Reviewing POLST

This POLST should be reviewed periodically whenever:
(1) The person is transferred from one care setting or care level to another, or
(2) There is a substantial change in the person's health status, or
(3) The person's treatment preferences change.

To void this form, draw line through "Physician Orders" and write "VOID" in large letters. Any changes require a new POLST.

Review of this POLST Form

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Physician Orders for Life-Sustaining Treatment (POLST)

Last Name - First Name - Middle Name or Initial: Hoffman, Jeanne

Date of Birth: 1 6 25

Last 4 #SSN (optional): 4736

FIRST follow these orders, **THEN** contact physician, nurse practitioner or PA-C. The POLST is a set of medical orders intended to guide medical treatment based on a person's current medical condition and goals. Any section not completed implies full treatment for that section. Completing a POLST form is always voluntary. Everyone shall be treated with dignity and respect.

Medical Conditions/Patient Goals:

Agency Info/Sticker

A Check One — **CARDIOPULMONARY RESUSCITATION (CPR):** Person has no pulse and is not breathing.

- [x] **Attempt Resuscitation/CPR** — When not in cardiopulmonary arrest, go to part B.
- [ ] **Do Not Attempt Resuscitation/DNAR (Allow Natural Death)**
  Choosing DNAR will include appropriate comfort measures.

B Check One — **MEDICAL INTERVENTIONS:** Person has pulse and/or is breathing.

- [x] **FULL TREATMENT - primary goal of prolonging life by all medically effective means.**
  Includes care described below. Use intubation, advanced airway interventions, mechanical ventilation and cardioversion as indicated. **Transfer** *to hospital if indicated. Includes intensive care.*
- [ ] **SELECTIVE TREATMENT - goal of treating medical conditions while avoiding burdensome measures.**
  Includes care described below. Use medical treatment, IV fluids and cardiac monitor as indicated. Do not intubate. May use less invasive airway support (e.g. CPAP, BiPAP). **Transfer** *to hospital if indicated. Avoid intensive care if possible.*
- [ ] **COMFORT-FOCUSED TREATMENT - primary goal of maximizing comfort.**
  Relieve pain and suffering with medication by any route as needed. Use oxygen, oral suction and manual treatment of airway obstruction as needed for comfort. **Patient prefers no hospital transfer:** *EMS consider contacting medical control to determine if transport is indicated to provide adequate comfort.*

Additional Orders: (e.g. dialysis, etc.) _____

C — **SIGNATURES:** The signatures below verify that these orders are consistent with the patient's medical condition, known preferences and best known information. If signed by a surrogate, the patient must be decisionally incapacitated and the person signing is the legal surrogate.

Discussed with:
- [x] Patient
- [ ] Parent of Minor
- [ ] Guardian with Health Care Authority
- [ ] Spouse/Other as authorized by RCW 7.70.065
- [ ] Health Care Agent (DPOAHC)

PRINT — Physician/ARNP/PA-C Name: Ibrahima Toure-DNP — Phone Number: 206-744-5415

Washington POLST
Portable Orders for Life-Sustaining Treatment
A Participating Program of National POLST

LAST NAME / FIRST NAME / MIDDLE NAME/INITIAL: Hoffman, Jeanne Leonie
DATE OF BIRTH: 1/6/1925 | GENDER (optional): F | PRONOUNS (optional):

This is a medical order. It must be completed with a medical professional. Completing a POLST is always voluntary.
IMPORTANT: See page 2 for complete instructions.

MEDICAL CONDITIONS/INDIVIDUAL GOALS: R hip fracture, L AKA
AGENCY INFO / PHONE (if applicable):

A CHECK ONE — **Use of Cardiopulmonary Resuscitation (CPR):** When the individual has NO pulse and is not breathing.
- [X] **YES – Attempt Resuscitation / CPR** *(choose FULL TREATMENT in Section B)*
- [ ] **NO – Do Not Attempt Resuscitation (DNAR) / Allow Natural Death**

When not in cardiopulmonary arrest, go to Section B.

B CHECK ONE — **Level of Medical Interventions:** When the individual has a pulse and/or is breathing.
Any of these treatment levels may be paired with DNAR / Allow Natural Death above.
- [X] **FULL TREATMENT – Primary goal is prolonging life by all medically effective means.** Use intubation, advanced airway interventions, mechanical ventilation, and cardioversion as indicated. Includes care described below. *Transfer to hospital if indicated. Includes intensive care.*
- [ ] **SELECTIVE TREATMENT – Primary goal is treating medical conditions while avoiding invasive measures whenever possible.** Use medical treatment, IV fluids and medications, and cardiac monitor as indicated. ***Do not intubate.*** May use less invasive airway support (e.g., CPAP, BiPAP, high-flow oxygen). Includes care described below. *Transfer to hospital if indicated. Avoid intensive care if possible.*
- [ ] **COMFORT-FOCUSED TREATMENT – Primary goal is maximizing comfort.** Relieve pain and suffering with medication by any route as needed. Use oxygen, oral suction, and manual treatment of airway obstruction as needed for comfort. *Individual prefers no transfer to hospital. EMS: consider contacting medical control to determine if transport is indicated to provide adequate comfort.*

Additional orders (e.g., blood products, dialysis): _____

C **Signatures:** A legal medical decision maker *(see page 2)* may sign on behalf of an adult who is not able to make a choice. An individual who makes their own choice can ask a trusted adult to sign on their behalf, or clinician signature(s) can suffice as witnesses to verbal consent. A guardian or parent must sign for a person under the age of 18. Multiple parent/decision maker signatures are allowed but not required. Virtual, remote, and verbal consents and orders are addressed on page 2.

Discussed with:
- [ ] Individual
- [ ] Parent(s) of minor
- [ ] Guardian with health care authority
- [ ] Legal health care agent(s) by DPOA-HC
- [ ] Other medical decision maker by 7.70.065 RCW

X **SIGNATURE – MD/DO/ARNP/PA-C (mandatory)** | DATE (mandatory): 3/8/25
PRINT – NAME OF MD/DO/ARNP/PA-C (mandatory): James Byrne, MD | PHONE: 206 598 3300

X **SIGNATURE(S) – INDIVIDUAL OR LEGAL MEDICAL DECISION MAKER(S) (mandatory)** | RELATIONSHIP: Caregiver/Son | DATE (mandatory): 3/7/25
PRINT – NAME OF INDIVIDUAL OR LEGAL MEDICAL DECISION MAKER(S) (mandatory): Louis Chant Hoffman Allain | PHONE:

Individual has: [ ] Durable Power of Attorney for Health Care [ ] Health Care Directive (Living Will)
Encourage all advance care planning documents to accompany POLST.

Preference: Medically Assisted Nutrition (i.e., Artificial Nutrition) ☒ Check here if not discussed

This section is NOT required. This section, whether completed or not, does not affect orders on page 1 of form.
Preferences for medically assisted nutrition, and other health care decisions, can also be indicated in advance directives which are advised for all adults. The POLST does not replace an advance directive. When an individual is no longer able to make their own decisions, consult with the legal medical decision maker(s) regarding their plan of care, including medically assisted nutrition. Base decisions on prior known wishes, best interests of the individual, preferences noted here or elsewhere, and current medical condition. Document specific decisions and/or orders in the medical record.

Food and liquids to be offered by mouth if feasible and consistent with the individual's known preferences.

☐ Preference is to avoid medically assisted nutrition.
☐ Preference is to discuss medically assisted nutrition options, as indicated.*
Discuss short- versus long-term medically assisted nutrition (long-term requires surgical placement of tube).

* Medically assisted nutrition is proven to have no effect on length of life in moderate- to late-stage dementia, and it is associated with complications. People may have documents or known wishes to not have oral feeding continued; the directions for oral feeding may be subject to these known wishes.

Discussed with: ____ Individual ____ Health Care Professional ____ Legal Medical Decision Maker

Directions for Health Care Professionals

NOTE: An individual with capacity may always consent to or refuse medical care or interventions, regardless of information represented on any document, including this one.

Any incomplete section of POLST implies full treatment for that section. This POLST is valid in all care settings. It is primarily intended for out of hospital care, but valid within health care facilities per specific policy. The POLST is a set of medical orders. The most recent POLST replaces all previous orders.

Completing POLST
- Completing POLST is voluntary for the individual; it should be offered as appropriate but not required.
- Treatment choices documented on this form should be the result of shared decision making by an individual or their health care agent and health care professional based on the individual's preferences and medical condition.
- POLST must be signed by an MD/DO/ARNP/PA-C and the individual or their legal medical decision maker as determined by guardianship, DPOA-HC, or other relationship per 7.70.065 RCW, to be valid. Multiple decision maker signatures are allowed, but not required.
- Virtual, remote, and verbal orders and consents are acceptable in accordance with the policies of the health care facility. For examples, see FAQ at www.wsma.org/POLST.
- POLST may be used to indicate orders regarding medical care for children under the age of 18 with serious illness. Guardian(s)/parent(s) sign the form along with the health care professionals. See FAQ at www.wsma.org/POLST.

NOTE: This form is not adequate to designate someone as a health care agent. A separate DPOA-HC is required to designate a health care agent.

Honoring POLST
Everyone shall be treated with dignity and respect.
SECTIONS A AND B:
- No defibrillator should be used on an individual who has chosen "Do Not Attempt Resuscitation."
- When comfort cannot be achieved in the current setting, the individual should be transferred to a setting able to provide comfort (e.g., treatment of a hip fracture). This may include medication by IV route for comfort.
- Treatment of dehydration is a measure which may prolong life. An individual who desires IV fluids should indicate "Selective" or "Full Treatment."

Reviewing POLST
This POLST should be reviewed whenever:
- The individual is transferred from one care setting or care level to another.
- There is a substantial change in the individual's health status.
- The individual's treatment preferences change.

To void this form, draw a line across the page and write "VOID" in large letters. Notify all care facilities, clinical settings, and anyone who has a copy of the current POLST. Any changes require a new POLST.

Review of this POLST form: Use this section to update and confirm order and preferences.
This meets the requirement of establishing code status and basic medical guidance for admission to nursing and other facilities.

REVIEW DATE	REVIEWER	LOCATION OF REVIEW	REVIEW OUTCOME

LegalDescription (abbreviated): Power of Attorney
Addl'. legal is on page of Assessor's Property Tax Parcel/Account#

1. **DESIGNATION OF ATTORNEY-IN-FACT AS HEALTH CARE AGENT**
I Jean Leonie Caillet Allain Hoffman, 245 High School Rd NW-Apt 2, Bainbridge Island, WA-98110 (insert name, and address), do hereby designate and appoint Louis Charles Hoffmann Allain, 245 High School Rd, NW#2 Bainbridge Is WA-98110 (insert name, address, and telephone of designated health care agent), as my attorney-in-fact (agent), to make health care decisions for me as authorized in this document. For the purposes of this document, "health care decision" means consent, refusal of consent, or withdrawal of consent to any care, treatment, non-treatment, as provided in Chapter 7.70 RCW, service, or procedure to maintain, diagnose, or treat an individual's physical condition.
2. **CREATION OF DURABLE POWER OF ATTORNEY FOR HEALTH CARE**
By this document I intend to create a durable power of attorney for health care. This power of attorney shall not be affected by my disability or incompetence and shall continue in full force and effect until revoked or terminated as set forth in paragraph 9.
3. **GENERAL STATEMENT OF AUTHORITY GRANTED**
Subject to any limitations in this document, I hereby grant to my agent full power and authority to make health care decisions for me to the same extent that I could make such decisions for myself if I had the capacity to do so. In exercising this authority, my agent shall make health care decisions that are consistent with my desires as stated in this document or otherwise made known to my agent, including, but not limited to, my desires concerning obtaining or refusing or withdrawing life-prolonging care, treatment, services and procedures. Provided, however, my agent may not consent, without court approval, to any procedure referred to in R.C.W. 11.92.040(3) that requires court approval before a guardian may consent to such.
4. **STATEMENT OF DESIRES, SPECIAL PROVISIONS, AND LIMITATIONS**
In exercising the authority under this durable power of attorney for health care, my agent shall act consistently with my desires and is subject to the special provisions and limitations stated in any living will which I have executed.
5. **INSPECTION AND DISCLOSURE OF INFORMATION RELATING TO MY PHYSICAL OR MENTAL HEALTH**
Subject to any limitations in this document, my agent has the power and authority to do all of the following:
   a. Request, review, and receive any information, verbal or written, regarding my physical or mental health, including, but not limited to, medical and hospital records.
   b. Execute on my behalf any releases or other documents that may be required in order to obtain this information.
   c. Consent to the disclosure of this information.
   d. Consent to the donation of any of my organs for medical purposes.

6. **SIGNING DOCUMENTS, WAIVERS AND RELEASES**
Where necessary to implement the health care decisions that my agent is authorized by this document to make, my agent has the power and authority to execute on my behalf all of the following:
a. Documents titled or purporting to be a "Refusal to Permit Treatment" and "Leaving Hospital Against Medical Advice".
b. Any necessary waiver or release from liability required by a hospital or physician.
c. Any documents pursuant to the power of substitution in the premises, which I hereby grant to my agent subject to my choice of alternates below.

7. **DESIGNATION OF ALTERNATE AGENTS**
If the person designated as my agent in paragraph 1 is not available or becomes ineligible to act as my agent to make a health care decision for me or loses the mental capacity to make health care decisions for me, or if I revoke that person's appointment or authority to act as my agent to make health care decisions for me, then I designate and appoint the following persons to serve as my agent to make health care decisions for me as authorized in this document, such persons to serve in the order listed below:
a. First Alternate Agent: None At This Time.
(Insert name, address and telephone number of first alternate agent)
b. Second Alternate Agent: None At this Time
(Insert name, address and telephone number of second alternate agent)

8. **PRIOR DESIGNATIONS REVOKED**
I revoke any prior durable power of attorney for health care.

9. **TERMINATION**
This power of attorney may be terminated by written notice, court approval of revocation, recording a notice with the County Auditor/Recorder, and shall be automatically revoked upon my death but only upon actual notice or knowledge of such by my agent.

10. **APPLICABLE LAW**
The laws of the State of Washington of the United States of America shall govern this power of attorney.

Dated 5/29/13 J.L.H. Jeanne L Hoffman

ADVANCE BENEFICIARY NOTICE OF NONCOVERAGE (ABN)

NOTE: If Medicare doesn't pay for _____ below, you may have to pay. Medicare does not pay for everything, even some care that you or your health care provider have good reason to think you need. We expect Medicare may not pay for the _____ below.

Items or Services	Reason Medicare May Not Pay:	Estimated Cost
CPT Code(s): _____ CPT Description(s): office visit	☐ Medicare does not pay for experimental or research use tests/services ☐ Medicare does not pay for this test or service as often as this (denied as too frequent) ☒ Medicare does not pay for this test or service for your condition ☐ Other _____	$200 $50

WHAT YOU NEED TO DO NOW:

- Read this notice, so you can make an informed decision about your care.
- Ask us any questions that you may have after you finish reading.
- Choose an option below about whether to receive the _____ listed above.
  Note: If you choose Option 1 or 2, we may help you to use any other insurance that you might have, but Medicare cannot require us to do this.

OPTIONS: Check only one box. We cannot choose a box for you.

☑ **OPTION 1.** I want the _____ listed above. You may be ask to be paid now, but I also want Medicare billed for an official decision on payment, which is sent to me on a Medicare Summary Notice (MSN). I understand that if Medicare doesn't pay, I'm responsible for payment, but **I can appeal to Medicare** by following the directions on the MSN. If Medicare does pay, you will refund any payments I made to you, less co-pays or deductibles.

☐ **OPTION 2.** I want the _____ listed above, but do not bill Medicare. You may ask to be paid now as I am responsible for payment. **I cannot appeal if Medicare is not billed.**

☐ **OPTION 3.** I don't want the _____ listed above. I understand with this choice I am **not** responsible for payment, and **I cannot appeal to see if Medicare would pay.**

Additional Information:

This notice gives our opinion, not an official Medicare decision. If you have other questions on this notice or Medicare billing, call **1-800-MEDICARE** (1-800-633-4227/**TTY:** 1-877-486-2048). Signing below means that you have received and understand this notice. You also receive a copy.

Washington State Health Care Authority

Agreement to Pay for Healthcare Services

WAC 182-502-0160 ("Billing a Client")

This is an agreement between a "client" and a "provider," as defined below. The client agrees to pay the provider for healthcare service(s) that the Health Care Authority (HCA) will not pay. Both parties must sign this Agreement. For the purposes of this Agreement, "services" include but are not limited to healthcare treatment, equipment, supplies, and medications

Client - A recipient of Medicaid or other healthcare benefits through the HCA or a managed care organization (MCO) that contracts with the HCA.
Provider - An institution, agency, business, or person that provides healthcare services to HCA clients and has a signed agreement with the HCA or authorization from an MCO.

This Agreement and WAC 182-502-0160 apply to billing a client for covered and noncovered services as described in WAC 182-501-0050 through WAC 182-501-0070. Providers may not bill any HCA client (including those enrolled with an MCO that contracts with the HCA) for services which the HCA or an MCO that contracts with the HCA may have paid until the provider has completed all requirements for obtaining authorization.

Client's printed name	Hoffman, Jeanne Leonie	Client's ID number	100675002WA
Provider's printed name	Hanna, Sarah J	Provider number	1174628630

Directions:

- Both the provider and the client must fully complete this form **before** an HCA client receives any service for which this Agreement is required.
- You must complete this form no more than 90 calendar days before the date of the service. If the service is not provided within 90 calendar days, the provider and client must complete and sign a new form.
- **The provider and the client must complete this form only *after* they exhaust all applicable HCA or HCA-contracted MCO processes which are necessary to obtain authorization for the requested service(s). These may include the exception to rule (ETR) process for noncovered services as described in WAC 182-501-0160 or the administrative hearing process, if the client chooses to pursue these processes.**
- Limited English proficient (LEP) clients must be able to understand this form in their primary language. This may include a translated form or interpretation of the form. If the form is interpreted for the client, the interpreter must also sign and date the form. Both the client and the provider must sign a translated form.

Fully complete the table on back of this form. If needed, attach another sheet for additional services. The client, provider, and interpreter (if applicable) must sign and date each additional page.

Important Note from HCA:

- This agreement is void and unenforceable if the provider fails to comply with the requirements of this form and WAC 182-502-0160 or does not satisfy HCA conditions of payment as described in applicable Washington Administrative Code (WAC) and Billing Instructions. The provider must reimburse the client for the full amount paid by the client.
- See WAC 182-502-0160(9) for a list of services that cannot be billed to a client, regardless of a written agreement.
- Keep the original agreement in the client's medical record for 6 years from the date this agreement is signed. Give a copy of this completed, signed agreement to the client.
- Providers are responsible for ensuring that translation or interpretation of this form and its content is provided to LEP clients. Translated forms are available at http://hrsa.dshs.wa.gov/mpforms.shtml.

Washington State Health Care Authority

Agreement to Pay for Healthcare Services

WAC 182-502-0160 ("Billing a Client")

This is an agreement between a "client" and a "provider," as defined below. The client agrees to pay the provider for healthcare service(s) that the Health Care Authority (HCA) will not pay. Both parties must sign this Agreement. For the purposes of this Agreement, "services" include but are not limited to healthcare treatment, equipment, supplies, and medications

Client - A recipient of Medicaid or other healthcare benefits through the HCA or a managed care organization (MCO) that contracts with the HCA.
Provider - An institution, agency, business, or person that provides healthcare services to HCA clients and has a signed agreement with the HCA or authorization from an MCO.

This Agreement and WAC 182-502-0160 apply to billing a client for covered and noncovered services as described in WAC 182-501-0050 through WAC 182-501-0070. Providers may not bill any HCA client (including those enrolled with an MCO that contracts with the HCA) for services which the HCA or an MCO that contracts with the HCA may have paid until the provider has completed all requirements for obtaining authorization.

Client's printed name Hoffman, Jeanne Leonie	Client's ID number 100675202WA
Provider's printed name Neighbor, William	Provider number 1265518989

Directions:

- Both the provider and the client must fully complete this form **before** an HCA client receives any service for which this Agreement is required.
- You must complete this form no more than 90 calendar days before the date of the service. If the service is not provided within 90 calendar days, the provider and client must complete and sign a new form.
- **The provider and the client must complete this form only *after* they exhaust all applicable HCA or HCA-contracted MCO processes which are necessary to obtain authorization for the requested service(s). These may include the exception to rule (ETR) process for noncovered services as described in WAC 182-501-0160 or the administrative hearing process, if the client chooses to pursue these processes.**
- Limited English proficient (LEP) clients must be able to understand this form in their primary language. This may include a translated form or interpretation of the form. If the form is interpreted for the client, the interpreter must also sign and date the form. Both the client and the provider must sign a translated form.

Fully complete the table on back of this form. If needed, attach another sheet for additional services. The client, provider, and interpreter (if applicable) must sign and date each additional page.

Important Note from HCA:

- This agreement is void and unenforceable if the provider fails to comply with the requirements of this form and WAC 182-502-0160 or does not satisfy HCA conditions of payment as described in applicable Washington Administrative Code (WAC) and Billing Instructions. The provider must reimburse the client for the full amount paid by the client.
- See WAC 182-502-0160(9) for a list of services that cannot be billed to a client, regardless of a written agreement.
- Keep the original agreement in the client's medical record for 6 years from the date this agreement is signed. Give a copy of this completed, signed agreement to the client.
- Providers are responsible for ensuring that translation or interpretation of this form and its content is provided to LEP clients. Translated forms are available at http://hrsa.dshs.wa.gov/mpforms.shtml.

Washington State Health Care Authority

Agreement to Pay for Healthcare Services

WAC 182-502-0160 ("Billing a Client")

This is an agreement between a "client" and a "provider," as defined below. The client agrees to pay the provider for healthcare service(s) that the Health Care Authority (HCA) will not pay. Both parties must sign this Agreement. For the purposes of this Agreement, "services" include but are not limited to healthcare treatment, equipment, supplies, and medications

Client - A recipient of Medicaid or other healthcare benefits through the HCA or a managed care organization (MCO) that contracts with the HCA.
Provider - An institution, agency, business, or person that provides healthcare services to HCA clients and has a signed agreement with the HCA or authorization from an MCO.

This Agreement and WAC 182-502-0160 apply to billing a client for covered and noncovered services as described in WAC 182-501-0050 through WAC 182-501-0070. Providers may not bill any HCA client (including those enrolled with an MCO that contracts with the HCA) for services which the HCA or an MCO that contracts with the HCA may have paid until the provider has completed all requirements for obtaining authorization.

Client's printed name: Hoffman, Louis Charles	Client's ID number: 100675709WA
Provider's printed name: Neighbor, William	Provider number: 1265 5- 18989

Directions:

- Both the provider and the client must fully complete this form **before** an HCA client receives any service for which this Agreement is required.
- You must complete this form no more than 90 calendar days before the date of the service. If the service is not provided within 90 calendar days, the provider and client must complete and sign a new form.
- **The provider and the client must complete this form only *after* they exhaust all applicable HCA or HCA-contracted MCO processes which are necessary to obtain authorization for the requested service(s). These may include the exception to rule (ETR) process for noncovered services as described in WAC 182-501-0160 or the administrative hearing process, if the client chooses to pursue these processes.**
- Limited English proficient (LEP) clients must be able to understand this form in their primary language. This may include a translated form or interpretation of the form. If the form is interpreted for the client, the interpreter must also sign and date the form. Both the client and the provider must sign a translated form.

Fully complete the table on back of this form. If needed, attach another sheet for additional services. The client, provider, and interpreter (if applicable) must sign and date each additional page.

Important Note from HCA:

- This agreement is void and unenforceable if the provider fails to comply with the requirements of this form and WAC 182-502-0160 or does not satisfy HCA conditions of payment as described in applicable Washington Administrative Code (WAC) and Billing Instructions. The provider must reimburse the client for the full amount paid by the client.
- See WAC 182-502-0160(9) for a list of services that cannot be billed to a client, regardless of a written agreement.
- Keep the original agreement in the client's medical record for 6 years from the date this agreement is signed. Give a copy of this completed, signed agreement to the client.
- Providers are responsible for ensuring that translation or interpretation of this form and its content is provided to LEP clients. Translated forms are available at http://hrsa.dshs.wa.gov/mpforms.shtml.

ADVANCE BENEFICIARY NOTICE OF NONCOVERAGE (ABN)

NOTE: If Medicare doesn't pay for services below, you may have to pay. Medicare does not pay for everything, even some care that you or your health care provider have good reason to think you need. We expect Medicare may not pay for the services below.

Items or Services	Reason Medicare May Not Pay:	Estimated Cost
CPT Code(s): _____ CPT Description(s): Office Visit and all related services _____	☒ Medicare does not pay for experimental or research use tests/services ☐ Medicare does not pay for this test or service as often as this (denied as too frequent) ☒ Medicare does not pay for this test or service for your condition ☐ Other _____	$50 $50

WHAT YOU NEED TO DO NOW:

- Read this notice, so you can make an informed decision about your care.
- Ask us any questions that you may have after you finish reading.
- Choose an option below about whether to receive the _____ listed above.
  Note: If you choose Option 1 or 2, we may help you to use any other insurance that you might have, but Medicare cannot require us to do this.

OPTIONS: Check only one box. We cannot choose a box for you.

☐ **OPTION 1.** I want the _____ listed above. You may be ask to be paid now, but I also want Medicare billed for an official decision on payment, which is sent to me on a Medicare Summary Notice (MSN). I understand that if Medicare doesn't pay, I'm responsible for payment, but **I can appeal to Medicare** by following the directions on the MSN. If Medicare does pay, you will refund any payments I made to you, less co-pays or deductibles.

☐ **OPTION 2.** I want the _____ listed above, but do not bill Medicare. You may ask to be paid now as I am responsible for payment. **I cannot appeal if Medicare is not billed.**

☐ **OPTION 3.** I don't want the _____ listed above. I understand with this choice I am **not** responsible for payment, and **I cannot appeal to see if Medicare would pay.**

Additional Information:

This notice gives our opinion, not an official Medicare decision. If you have other questions on this notice or Medicare billing, call **1-800-MEDICARE** (1-800-633-4227/**TTY:** 1-877-486-2048). Signing below means that you have received and understand this notice. You also receive a copy.

VERIFICATION OF OVER-THE-COUNTER MEDICAL EXPENSES

TO: Dr. William Neighbors, Jr. FROM: Julie Combs

COMPANY: U.W. Medical Center DATE: 4/11/17

FAX NUMBER: 206 616-4683 TOTAL NO. OF PAGES, INCLUDING COVER:

PHONE NUMBER: UNIT NUMBER: #02

NAME: Jeanne L Hoffman

ADDRESS: 245 High School Rd NW, Bainbridge Is. Wa 98110 CLIENT #: 131-14-9826

The above person has applied for or is living at an affordable-housing apartment community which receives Rental Assistance through the USDA Rural Development Multi-Family Housing program. This agency requires the housing owner to verify all information that is used in determining this person's eligibility or level of benefits. We ask for your cooperation in providing the following information and returning it to the person listed at the top of the page. Your prompt return of this information will help to ensure timely processing of the application for assistance. The applicant/tenant has consented to this release of information as shown below.

REVOCATION: I understand that I may revoke this authorization at any time by notifying the Health Agency listed above in writing. I understand that the revocation will not apply to information that has already been released in response to this authorization.

RELEASE: I hereby authorize the release of the requested information. Information obtained under this consent is limited to information that is no older than 12 months. There are circumstances that would require the owner to verify information that is up to 5 years old, which would be authorized by me on a separate consent attached to a copy of this consent. I AUTHORIZE the above community to receive the above records, by Fax or Mail.

Jeanne L Hoffman 4/27/2017
Signature of Applicant/ Resident Date

Note to Applicant/Tenant: You do not have to sign this form if either the requesting organization or the organization supplying the information is left blank.

This institution is an equal opportunity provider and employer.

Housing Kitsap welcomes qualified tenants without regard to race, color, national origin, creed, religion, sex, marital status, familial status, disability or due to ownership of a service animal. Housing Kitsap provides reasonable accommodations to persons with disabilities. If you need this document in an alternate format, please contact Housing Kitsap Section 504 Coordinator, Leah Noldan at (360) 535-6174 or 345 6th Street, Suite 100 Bremerton, WA 98337.

Housing Kitsap Verification of Over the Counter Medical Expenses

PLEASE COMPLETE THE FOLLOWING:

In accordance with HUD Handbook 4350.3 Revision 1, Change 2, out of pocket medical expenses can be used to reduce the annual income for the household. USDA RD requires all OVER-THE-COUNTER medical items to have a doctor's note or prescription. The note must include the wording "Recommended for treatment of a medical condition." We do not want, or need, to know the medical condition only that the medication is needed for treatment. Please indicate if the over-the-counter purchases indicated are recommended by you to address a specific medical condition. **It is recommended that the above named tenant should take the listed over-the-counter items for the treatment of a "medical condition."**

RECEIPTS ARE REQUIRED FOR NON-PRESCRIPTION ITEMS

Name of Non-Prescription Item	Recommended – Yes or No	Dosage	Daily, Weekly, Monthly	To Treat a Specific Medical Condition – Yes or No
1. Vitamin B12	☑ Yes ☐ No	500mcg	☑ D ☐ W ☐ M	☑ Yes ☐ No
2.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No
3.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No
4.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No
5.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No
6.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No
7.	☐ Yes ☐ No		☐ D ☐ W ☐ M	☐ Yes ☐ No

Name and Title: William Neyfon MD

Firm/Organization and Phone Number: Hall Health, Univ. of Wash. 685-1045

PENALTIES FOR MISUSING THIS CONSENT:

"Title 18, Section 1001 of the U.S. Code states that a person is guilty of a felony for knowingly and willingly making false or fraudulent statements to any department of the United States Government. HUD and any owner (or any employee of HUD or the owner) may be subject to penalties for unauthorized disclosures or improper uses of information collected based on the consent form. Use of the information collected based on this verification form is restricted to the purposes cited above. Any person who knowingly or willingly requests, obtains or discloses any information under false pretenses concerning an applicant or participant may be subject to a misdemeanor and fined not more than $5,000. Any applicant or participant affected by negligent disclosure of information may bring civil action for damages and seek other relief, as may be appropriate, against the officer or employee of HUD or the owner responsible for the unauthorized disclosure or improper use. Penalty provisions for misusing the social security number are contained in the Social Security Act at 208 (a) (6), (7) and (8). Violations of these provisions are cited as violations of 42 USC. 408 (a) (6), (7) and (8).

Housing Kitsap does not discriminate on the basis of disability status in the admission or access to, or treatment or employment in, its federally assisted programs and activities. The person named below has been designated to coordinate compliance with the nondiscrimination requirements contained in the Department of Housing and Urban Development's regulations implementing Section 504 (24 CFR, part 8 dated June 2, 1988). We do business in accordance with the Federal Fair Housing Act and provide persons with disabilities reasonable accommodation upon request. TTY# (for hearing impaired) 711. Persons with language barriers may request or arrange interpretation alternatives or services based on the property's LEP Policy.

Scan (below)

CONSENT FOR TRANSFUSION OF BLOOD OR BLOOD COMPONENTS

The law in Washington gives you the right and the responsibility to make decisions about your health care. Health care professionals can give you information and advice. You or your legal representative must be part of the decision-making. This consent form:
- Proves that you had a part in making decisions about your health care.
- Shows that you gave permission for the treatment recommended by your health care professional.

The words "I", "my", in this form refer to the patient, no matter whether the patient or the patient's representative is signing the form. The term "health care professional" who may complete this form may mean doctor (including Attendings, Fellows, Residents), nurse practitioner, or physician's assistant who orders, performs all or part of, or is involved in explaining the procedure within the scope of their practice.

I understand that during the course of treatment for my medical condition, it may be necessary for me to receive transfusion with blood or a blood component (blood product). I understand that it is important to my medical management for me to let my health care professionals know now if I have religious or other reasons to refuse transfusion.

I understand that use of blood and blood components involves risks. The risks may include mild to life-threatening reactions, including allergic reactions, fever, hives, lung injury, and in rare cases, infectious diseases such as hepatitis and HIV/AIDS. I know that the blood bank screens donors and matches blood for transfusions to help lower risks.

I have been told about other treatment choices, that may include medical treatments or not having the transfusion. I have been told about what results to expect, which includes information about the chances for the expected results. I know that results cannot be guaranteed.

Indication for transfusion of blood or blood components (such as hemorrhage, symptomatic anemia, etc.):
anemia - Hgb if needed in setting of acute GI bleed

☐ **Interpreter** *(Print Name)* _____ ID # _____

I give permission to receive blood and/or blood components if the health care team decides it is needed.

This consent for blood and/or blood products expires (check appropriate box):
☒ **For hospitalized patients:** When the indication (above) for the transfusion has resolved or at the end of this hospitalization (whichever comes first).
☐ **For established Hematology/Oncology patients** who require recurrent transfusions for the same indication, one year from date of signature.
☐ **For outpatients** (not Hematology/Oncology) who require recurrent transfusions for the same indication, for outpatient transfusions only, one year from date of signature.

OR I understand that I am free to refuse or partially refuse my consent to any proposed blood or blood components transfusions.
(If you refuse or partially refuse consent, you will be asked to sign another form, Form UH2063).

Giving Consent **By signing below, you confirm that you have read the prior sections and that you have had 1) each item explained to you; 2) a chance to ask questions; and 3) all of your questions answered.**

SIGNATURE *(PATIENT OR PATIENT'S AUTHORIZED REPRESENTATIVE)*	PRINT NAME	DATE	TIME

☐ 2. Parent(s)	☐ 4. Holder of signed authorization from parent(s)	

WITNESS SIGNATURE *(WITNESS OPTIONAL UNLESS TELEPHONE CONSENT)*	PRINT NAME	☐ TELEPHONE MONITORED CONSENT *(No patient signature)*

HEALTH CARE PROFESSIONAL'S STATEMENT I have explained the treatment/procedure(s) stated on this form, including the possible risks, complications, alternative treatments (including non-treatment) and anticipated results to the patient and/or his/her representative before the patient and/or his/her representative consented. If only the patient has signed this form, in my clinical opinion, the patient is capable of making his/her own health care decisions. If in my clinical opinion, the (adult) patient has questionable ability to make his/her own health care decisions, I discussed the above with the patient and with the patient's legally authorized representative.

ADVANCE BENEFICIARY NOTICE OF NONCOVERAGE (ABN)

NOTE: If Medicare doesn't pay for Office visit below, you may have to pay. Medicare does not pay for everything, even some care that you or your health care provider have good reason to think you need. We expect Medicare may not pay for the Office visit below.

Items or Services	Reason Medicare May Not Pay:	Estimated Cost
CPT Code(s): Office Visit and all related services CPT Description(s):	☐ Medicare does not pay for experimental or research use tests/services ☐ Medicare does not pay for this test or service as often as this (denied as too frequent) ☑ Medicare does not pay for this test or service for your condition ☑ Other Office visit	$55 - $450

WHAT YOU NEED TO DO NOW:

- Read this notice, so you can make an informed decision about your care.
- Ask us any questions that you may have after you finish reading.
- Choose an option below about whether to receive the Office visit listed above.

  Note: If you choose Option 1 or 2, we may help you to use any other insurance that you might have, but Medicare cannot require us to do this.

OPTIONS: Check only one box. We cannot choose a box for you.

☑ **OPTION 1.** I want the Office visit listed above. You may be ask to be paid now, but I also want Medicare billed for an official decision on payment, which is sent to me on a Medicare Summary Notice (MSN). I understand that if Medicare doesn't pay, I'm responsible for payment, but **I can appeal to Medicare** by following the directions on the MSN. If Medicare does pay, you will refund any payments I made to you, less co-pays or deductibles.

☐ **OPTION 2.** I want the _____ listed above, but do not bill Medicare. You may ask to be paid now as I am responsible for payment. **I cannot appeal if Medicare is not billed.**

☐ **OPTION 3.** I don't want the _____ listed above. I understand with this choice I am **not** responsible for payment, and **I cannot appeal to see if Medicare would pay.**

Additional Information:

This notice gives our opinion, not an official Medicare decision. If you have other questions on this notice or Medicare billing, call **1-800-MEDICARE** (1-800-633-4227/**TTY:** 1-877-486-2048). Signing below means that you have received and understand this notice. You also receive a copy.

Dear Sir/Madam:

USDA requires verification of income, assets and expenses when computing rents. You will note that the resident has signed the attached release giving you permission to supply us with the requested information. This information will be used only in determining this household's rent.

IMPORTANT:

1. Please answer all questions; do not leave blank spaces.
2. For questions that you cannot answer, use the phrase "cannot disclose" or write "none" or "N/A."
3. Do not use the word "varies."
4. Please use only gross amounts.
5. If you need to change an answer please cross out the incorrect answer, write correct answer beside it and initial the change. ***Do not use whiteout***.

Please return as soon as possible by fax **(206) 855.4739,** email **CombsJ@HousingKitsap.org** or via mail to:

Rhododendron Apartments
235 High School Road NW
Bainbridge Island, WA 98110

Thank you for supplying the requested information for this household. If you have any questions, please call (206) 842.0724.

Best Regards,

Julie Combs, Site Manager

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Physician Orders for Life-Sustaining Treatment

Last Name - First Name - Middle Initial: Hoffman, Jean Leonie
Date of Birth: 1 6 1925 | Last 4 #SSN: _____ | Gender: M (F)

FIRST follow these orders, **THEN** contact physician, nurse practitioner or PA-C. The POLST form is always voluntary. The POLST is a set of medical orders intended to guide medical treatment based on a person's current medical condition and goals. Any section not completed implies full treatment for that section. Everyone shall be treated with dignity and respect.

Medical Conditions/Patient Goals:

Agency Info/Sticker

A Check One — **CARDIOPULMONARY RESUSCITATION (CPR):** Person has no pulse and is not breathing.

☒ CPR/Attempt Resuscitation ☐ DNAR/Do Not Attempt Resuscitation (Allow Natural Death)

Choosing DNAR will include appropriate comfort measures and may still include the range of treatments below. When not in cardiopulmonary arrest, go to part B.

B Check One — **MEDICAL INTERVENTIONS:** Person has pulse and/or is breathing.

☐ **COMFORT MEASURES ONLY** Use medication by any route, positioning, wound care and other measures to relieve pain and suffering. Use oxygen, oral suction and manual treatment of airway obstruction as needed for comfort. **Patient prefers no hospital transfer:** *EMS contact medical control to determine if transport indicated to provide adequate comfort.*

☐ **LIMITED ADDITIONAL INTERVENTIONS** Includes care described above. Use medical treatment, IV fluids and cardiac monitor as indicated. Do not use intubation or mechanical ventilation. May use less invasive airway support (e.g. CPAP, BiPAP). **Transfer** *to hospital if indicated. Avoid intensive care if possible.*

☒ **FULL TREATMENT** Includes care described above. Use intubation, advanced airway interventions, mechanical ventilation, and cardioversion as indicated. **Transfer** *to hospital if indicated. Includes intensive care.*

Additional Orders: (e.g. dialysis, etc.) _____

C **SIGNATURES:** The signatures below verify that these orders are consistent with the patient's medical condition, known preferences and best known information. If signed by a surrogate, the patient must be decisionally incapacitated and the person signing is the legal surrogate.

Discussed with:
☐ Patient ☐ Parent of Minor
☐ Guardian with Health Care Authority
☐ Spouse/Other as authorized by RCW 7.70.065
☐ Health Care Agent (DPOAHC)

PRINT — Physician/ARNP/PA-C Name | Phone Number

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Physician Orders for Life-Sustaining Treatment (POLST)

Last Name - First Name - Middle Name or Initial

Date of Birth Last 4 #SSN (optional)

FIRST follow these orders, **THEN** contact physician, nurse practitioner or PA-C. The POLST is a set of medical orders intended to guide medical treatment based on a person's current medical condition and goals. Any section not completed implies full treatment for that section. Completing a POLST form is always voluntary. Everyone shall be treated with dignity and respect.

Medical Conditions/Patient Goals:

Agency Info/Sticker

A Check One — **CARDIOPULMONARY RESUSCITATION (CPR):** Person has no pulse and is not breathing.

☐ **Attempt Resuscitation/CPR** When not in cardiopulmonary arrest, go to part B.

☑ **Do Not Attempt Resuscitation/DNAR (Allow Natural Death)**
Choosing DNAR will include appropriate comfort measures.

B Check One — **MEDICAL INTERVENTIONS:** Person has pulse and/or is breathing.

☐ **FULL TREATMENT - primary goal of prolonging life by all medically effective means.**
Includes care described below. Use intubation, advanced airway interventions, mechanical ventilation and cardioversion as indicated. **Transfer** *to hospital if indicated. Includes intensive care.*

☐ **SELECTIVE TREATMENT - goal of treating medical conditions while avoiding burdensome measures.**
Includes care described below. Use medical treatment, IV fluids and cardiac monitor as indicated. Do not intubate. May use less invasive airway support (e.g. CPAP, BiPAP). **Transfer** *to hospital if indicated. Avoid intensive care if possible.*

☑ **COMFORT-FOCUSED TREATMENT - primary goal of maximizing comfort.**
Relieve pain and suffering with medication by any route as needed. Use oxygen, oral suction and manual treatment of airway obstruction as needed for comfort. **Patient prefers no hospital transfer:** *EMS consider contacting medical control to determine if transport is indicated to provide adequate comfort.*

Additional Orders: (e.g. dialysis, etc.) _____

C **SIGNATURES:** The signatures below verify that these orders are consistent with the patient's medical condition, known preferences and best known information. If signed by a surrogate, the patient must be decisionally incapacitated and the person signing is the legal surrogate.

X Physician/ARNP/PA-C Signature	Date 3/10/18
X Patient or Legal Surrogate Signature: Jeanne L Hoffman	Date

DIRECTIONS FOR HEALTH CARE PROFESSIONALS

NOTE: A person with capacity may always consent to or refuse medical care or interventions, regardless of information represented on any document, including this one.

Completing POLST

- Completing a POLST form is always voluntary.
- Treatment choices documented on this form should be the result of shared decision-making by an individual or their surrogate and medical provider based on the person's preferences and medical condition.
- POLST must be signed by a physician/ARNP/PA-C and patient, or their surrogate, to be valid. Verbal orders are acceptable with follow-up signature by physician/ARNP/PA-C in accordance with facility/community policy.

Using POLST

Any incomplete section of POLST implies full treatment for that section.

This POLST is valid in all care settings including hospitals until replaced by new physician's orders.

The POLST is a set of medical orders. The most recent POLST replaces all previous orders.

The POLST does not replace an advance directive. An advance directive is encouraged for all competent adults regardless of their health status. An advance directive allows a person to document in detail his/her future health care instructions and/or name a surrogate decision maker to speak on his/her behalf. When available, all documents should be reviewed to ensure consistency, and the forms updated appropriately to resolve any conflicts.

SECTIONS A AND B:

- No defibrillator should be used on a person who has chosen "Do Not Attempt Resuscitation."
- When comfort cannot be achieved in the current setting, the person should be transferred to a setting able to provide comfort (e.g., treatment of a hip fracture).
- An IV medication to enhance comfort may be appropriate for a person who has chosen "Comfort-Focused Treatment."
- Treatment of dehydration is a measure which may prolong life. A person who desires IV fluids should indicate "Selective" or "Full Treatment."

SECTION D:

- Oral fluids and nutrition must always be offered if medically feasible.

Reviewing POLST

This POLST should be reviewed periodically whenever:
(1) The person is transferred from one care setting or care level to another, or
(2) There is a substantial change in the person's health status, or
(3) The person's treatment preferences change.

To void this form, draw line through "Physician Orders" and write "VOID" in large letters. Any changes require a new POLST.

Review of this POLST Form

Review Date	Reviewer	Location of Review	Review Outcome
			☐ No Change ☐ Form Voided ☐ New form completed
			☐ No Change ☐ Form Voided ☐ New form completed

FOR NEW PATIENT APPOINTMENTS

University of Washington Medical Center
Eye Center
Seattle, Washington
Patient History/General Health Questionnaire

Patient Name Jean Leonie Collret Allain Hoffman Date 10/10/19

At your initial visit, it can be valuable for your care to have a summary letter or copies of your ophthalmologist's office records, and any other relevant photographs or tests (for example: fluorescein angiogram, visual fields, CT/MRI scans, or contact lens information) or other medical records. We suggest that these records be brought in-person rather than mailed to ensure that they are present at your examination. Having this information will help to make your eye evaluation as thorough and complete as possible. Please contact your ophthalmologist's office directly for this purpose.

In order to carry out your first appointment as efficiently as possible, please fill out this form as completely as you can at home and **BRING THIS FORM WITH YOU TO YOUR APPOINTMENT**. Also, if you wear glasses, be sure to bring them.

Referring Ophthalmologist or Provider (name, address, and phone number)
Self

General M.D./Primary Care Provider (name, address, and phone number)
Kaiser Permanente

Vision Services Acknowledgement

Please check the box below to indicate the reason(s) for your visit today:

- ☐ Routine Eye Exam (generally not covered by medical insurance plans, unless vision benefits are specifically included)
- ☐ Routine Vision Service, for example contact lens fitting, new eyeglass prescription, refraction (typically not covered by medical insurance)
- ☒ Medical Eye Appointment (medical condition, disease of the eye or injury to the eye)
- ☐ Referral from Primary Care Physician (PCP) to see an Optometrist (does not guarantee coverage)

If you checked Medical Eye Appointment or Referral from PCP, please indicate your primary reason for the visit:

DIABETIC EXAM

Insurance coverage varies among individual insurers and policies, and vision coverage in particular can widely vary. Please call your insurance company before your visit to understand what they will cover, which providers and hospitals are in network, and what you will need to pay out of pocket.

Please be advised that any other issues or concerns that you would like to discuss with your provider today, such as new and/or existing medical conditions, laboratory or x-ray orders, or results or medication refills may result in additional charges.

UW Medicine / HMC Eye Institute makes every effort to accurately select billing codes based on the documentation of your visit, and to follow standard coding guidelines. If you believe there is a problem with the coding of your visit, please contact UW Physicians billing office at 206-520-9300.

By signing below, I understand the information provided regarding preventative care visits, and that additional charges may be applied for services rendered.

Patient (continued)

Documents (group 2 of 3) (continued) as of 4/29/2025

Reassured her that I did not see evidence of infection. I think it is reasonable to start with a second opinion from wound clinic. Explained that wound clinics typically deal with much more significant infections, ulcers but at least getting some sense whether she still has ulcer that is contributing to her pain and if so the most appropriate treatment seems reasonable. If that evaluation is normal then I think likely needs to be further addressed by podiatry. Declines need for pain medications.

Return to clinic: prn.

Precautions regarding medication and diagnosis are discussed. Patient verbalizes understanding of diagnosis and plan. See order summary for all orders and prescriptions written during this visit.

Subjective:

Nursing Notes:*New Problem Visit-Problem with small toe that I need her advice on appropriate treatment

Chief Complaint: TOE PAIN (podiatry switched to ARNP pus in the corn not healing right foot small toe)

HPI: Joan is a 81 y.o. female presents for evaluation of the above-noted concerns.

She has a long term callus vs corn on right foot. Following with Podiatry Dr. Lowinger who expressed concerns with possible ulcer and was sent to Cheryl Hahn ARNP. Found purulent ulcer without evidence of infection. She was treated with toe sleeve and dressings. She returned two weeks later and was told it looked better and only showed evidence of bleeding. She has difficulty putting on toe sleeve due to arthritis in hands and hammer toes. Causes significant pain while wearing as well therefore has not been using it. Using lambs wool and paper taper to be able to walk. Wonders her options for wound care. Has a lot of pain in that toe. Wondering whether she needs a different dressing or soak for this.

ROS: As noted above. All other review of systems is unremarkable.

Current Outpatient Prescriptions

Medication	Sig	Dispense	Refill
• chlorhexidine (AKA PERIDEX) 0.12% MM Mouthwash			0
• predniSONE (AKA DELTASONE) 1 mg Oral Tablet	3 mg every day.

THE POLYCLINIC **Northgate Plaza Internal Medicine Progress Note**

RE: Joan C Vandenburgh **MRN**: 1947751 **Age**: 81 y.o **DOB**: 10/31/1936 **SEX**: female

Assessment and Plan:

1. Skin ulcer of toe of right foot, limited to breakdown of skin (HCC)/corn right 4th toe
At this time at this time infection is not evident. Also no significant ulcer noticed although she does have a small scab that may be overlying a very superficial ulcer that he did not want to unroof today. It's unclear to me whether most of her pain is related to the corn itself or whether she still has significant wound underneath this. She seems to be having quite a bit of pain. We discussed potential approaches.

Dates of Service: 01/09/25-03/08/25

Dear Medical Records Personnel:
Molina Healthcare Inc. is committed to ensuring quality health care to our members. We received an inquiry regarding the above referenced member and need to review the following medical records:

- ☐ Entire Chart for Date of Service Above
- ☐ Communication log (phone and electronic)
- ☐ Physician/Practitioner Orders
- ☒ **Admission Assessment/Summary/Intake**
- ☒ **H&P**
- ☒ **Progress Notes**
- ☒ **Consults**
- ☒ **Fall Risk Assessments**
- ☒ **Fall Risk Care Plan / Fall Incident Notes**
- ☐ Laboratory Culture/Pathology Reports
- ☐ Operative Reports
- ☒ **Radiology Reports**
- ☐ Medication Administration Record (MAR)
- ☐ SW/Case Mgmt. Progress Notes
- ☒ **Nursing Progress Notes & Assessments**
- ☒ **OT/PT/ST Progress Notes & Flowsheets**
- ☒ **Discharge Summary & Instructions**
- ☐ Wound Care Orders and Documentation

This review is conducted for Quality Assurance purposes only. The review is conducted confidentially by Quality Improvement staff members under the direction of our Medical Director. Due to the time sensitivity in relation to Quality-of-Care cases, we prefer you fax medical records to us within **5 to 7 business days**.

Please keep in mind that per your contract with Molina Healthcare and Molina policy you are expected to comply with record requests involved in Quality Improvement activities. Thank you in advance for your prompt response and cooperation.

If you have any questions or need additional information, you may contact:
Jessica Grover, RN | Sr. Quality Improvement Specialist

Patient Information for Inclusion in the UW Medicine Inpatient Facility Directory

Please Read this Statement Carefully

I understand that I have a choice as to whether or not to be included in the UW Medicine entity's facility directory. My decision is indicated by marking a box and signing this form.

☒ **YES, please include me in the Inpatient Facility Directory.** The hospital has informed me that my name, location, and general health condition will be included in its inpatient facility directory. This information will be made available to people who ask for me by name such as my relatives, friends, and fellow employees.

- Harborview Medical Center
- Northwest Hospital and Medical Center
- University of Washington Medical Center / Seattle Cancer Care Alliance
- Valley Medical Center

If I have provided my religious affiliation to UW Medicine in the past or if I provide my religious affiliation to UW Medicine now, I authorize its disclosure to clergy of my religious affiliation. Disclosure of my religious affiliation may result in a visit from a clergy member of my affiliation while I am being treated at UW Medicine.

If you have provided your religious affiliation to UW Medicine in the past and do not want a visit from a clergy member of your affiliation, please inform the registration staff.

☐ **NO, please do not include me in the Inpatient Facility Directory.** I do not want my name, location and general health condition included in the UW Medicine entity's Inpatient Facility Directory. **If this is my choice, I understand it is my responsibility to notify family and friends of my location and phone number if I wish them to contact me. I also understand that by choosing not to be in the directory, UW Medicine will be unable to deliver items *(for example, flowers and gifts)* addressed to me.**

For Staff Use Only
☐ **ADMIN OPT-OUT:** Please provide reason for Administrative Opt-Out
☐ Crime Victim ☐ Employee ☐ Incarcerated Patient
☐ Involuntary Commitment ☐ Unable to Interview Patient ☐ Media Interest

By signing below, it shows that you have read this document. If there is any part of this form that is unclear, be sure to ask questions about it.

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 05/17/2017
Date of Discharge: 20170517
Dictating Physician: Raghu, MD, Prema

MR#: U8170135
Acct#: 1816189282

DATE OF SERVICE: 05/17/2017

PLACE OF SERVICE:
Northwest Hospital Wound Care Center.

REASON FOR CONSULTATION:
The patient has wounds on her left lower extremity.

HISTORY OF PRESENT ILLNESS:
The patient is a 92-year-old, Caucasian lady, who lives in Bainbridge Island, came to Wound Care Center with her son. She has history of varicose veins and ulcers in her leg. She had ulcers in her left leg that required skin grafting 20 years ago. At this time, she has had wounds for the last three months and they have been using more recently Medihoney and she was treated sometime in April with Keflex and doxycycline for cellulitis. She also has had some recent venous and arterial Doppler studies. She has monophasic waves and significant distal arterial insufficiency. She does have nighttime pain in her leg as well.

She is basically here for further management of her wounds.

REVIEW OF SYSTEMS:
Significant for some middle ear problems. She does not have history of diabetes or thyroid disorder. No history of heart disease. She denied any chest pain or shortness of breath. She had no GI or GU complaints. She does walk with a walker.

ALLERGIES:
No known allergies were mentioned.

CURRENT MEDICATIONS:
She is on:

1. Tylenol as needed.
2. Atorvastatin 20 mg per day.
3. Losartan 25 mg half tablet once a day.
4. Pentoxifylline extended release 400 mg 1 tablet 2 times a day.
5. Timolol eye drops.
6. Vitamin B12 supplements.
7. Coumadin as directed.

Northwest Hospital and Medical Center
Seattle, Washington 98133

Consultation

Page 1 of 3

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 05/17/2017
Date of Discharge: 20170517
Dictating Physician: Raghu, MD, Prema

MR#: U8170135
Acct#: 1816189282

PAST MEDICAL HISTORY:
Significant for a history of DVT in both legs. She is on Coumadin. She has history of hyperlipidemia, venous insufficiency, chronic leg ulcers in the left lower extremity in the past, requiring skin graft.

SOCIAL HISTORY:
She does not smoke or drink alcohol. Currently, lives in a facility, which is having financial difficulty.

FAMILY HISTORY:
Nothing of importance.

PHYSICAL EXAMINATION:
GENERAL: She appeared to be of her stated age. She was in no acute distress.
VITALS: She was afebrile, pulse 76 per minute, respirations 16 per minute, blood pressure 138/64 mmHg.
HEENT: PERRLA.
NECK: Supple. She had no lymphadenopathy or thyromegaly.
LUNGS: Clear.
CARDIAC: Normal.
ABDOMEN: Normal.
EXTREMITIES: Left lower extremity revealed three wounds. Left lateral calf wound measured 2.5 x 2.0 x 0.3 cm. Left lateral ankle wound measured 2.0 x 0.9 x 0.3 cm. Left medial ankle wound measured 0.7 x 1.4 x 0.3 cm. All these wounds were covered with thick slough. There was no evidence of acute infection. There was 1 to 2+ edema. She has chronic stasis changes.

ASSESSMENT AND PLAN:
Left lower extremity ulcers, history of venous insufficiency, chronic stasis dermatitis, history of deep venous thrombosis, PAD
We have advised the patient to continue using the Medihoney on a every other day basis and to check back with us in a week. We need to work on cleaning up the base of the wounds before we can heal them. She will not be a candidate for any compression because of her arterial insufficiency. We have just told her to keep her leg elevated as much as possible. She will continue her Coumadin as directed.

We thank you for the referral. We will keep you informed as to her progress.

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 02/01/2018
Date of Discharge: 20180204
Dictating Physician: Macnab, MD, Amie

MR#: U8170135
Acct#: 1823773755

DATE OF SERVICE: 02/04/2018

DISCHARGE DIAGNOSIS:
Cellulitis of left lower extremity in the setting of chronic lower extremity ulcers and peripheral vascular disease.

CONSULTANTS:
1. Dr. Seth Cohen, Infectious Disease.
2. Wound care.

IMAGING:
1. On 02/02/2018, lower extremity arterial Dopplers. In the right lower extremity ABIs are unreliable due to calcification. Mild arterial insufficiency at rest. Popliteal artery distal and tibial peroneal trunk with 20% to 49% stenosis. The posterior tibial artery distal suspected occlusion. Anterior tibial artery mid 20% to 49% stenosis. In the left lower extremity ABIs not obtained due to patient's inability to tolerate blood pressure cuff. Moderate arterial insufficiency at rest. Diffuse calcification throughout the femoral and popliteal arteries. Superficial femoral artery proximal with 20% to 49% stenosis, in the mid region 20% to 49% stenosis, in the distal region 20% to 49% stenosis. The posterior tibial artery with heavy calcification throughout the distal segment. Anterior tibial artery proximal 20% to 49% stenosis. See report for further details and this is based on a preliminary report.
2. Lower extremity Dopplers show in the left lower extremity in the common femoral vein proximal to distal there is chronic nonocclusive deep venous fibrotic changes. In the femoral vein proximal to mid there is chronic nonocclusive deep venous fibrotic changes. See report for further details. This is a preliminary report.

ADMISSION:
See dictated H and P for further details. Briefly, patient is a 93-year-old woman with history of chronic lower extremity wounds on the left leg which have been ongoing for about a year. She has chronic pain in this leg. Patient developed worsening pain and erythema earlier this month and wound cultures performed at the Wound Care Clinic grew MSSA and Enterobacter. She did not have any improvement with Levaquin for which she had been taking for 8 days so came to the emergency department due to worsening pain.

HOSPITAL COURSE BY PROBLEM:
1. Cellulitis of the lower leg in the setting of chronic lower extremity

Northwest Hospital and Medical Center

Page 1 of 4

Patient (continued)

Documents (group 3 of 3) (continued) as of 4/29/2025

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 02/01/2018
Date of Discharge: 20180204
Dictating Physician: Macnab, MD, Amie

MR#: U8170135
Acct#: 1823773755

wounds and peripheral vascular disease. The patient has been afebrile. Her white count has been normal. Her CRP was normal. ID was consulted. She was given cefepime IV for 2 days and then switched to oral doxycycline which she will continue until she follows up with Wound Care Clinic. She was continued on Trental. She was also seen by the Wound Care Clinic and had arterial and venous Dopplers performed with plan to follow up in Wound Care Clinic later this week. At time of discharge, patient's pain is significantly improved.
2. Dysmobility. Patient reported holding on to furniture at home to ambulate at baseline. She was seen by PT who felt that she could be discharged back to her previous home environment but recommend home health PT which has been arranged.
3. Chronic anticoagulation due to history of DVT. She has been continued on her warfarin. On day of discharge, her INR has decreased to 1.7. This is in setting of initially holding her warfarin due to it being supratherapeutic and also while taking doxycycline. Patient has been instructed to continue on 5 mg at night and home health nurse will check her INR either tomorrow or the following day.

DISPOSITION:
Patient will discharge home where she lives with her son.

FOLLOWUP INSTRUCTIONS:
Patient will follow up with the Wound Care Clinic later this week and has home health arranged for PT, wound care and INR checks.

DISCHARGE MEDICATIONS:
The patient is to continue her previous home medications including:

1. Acetaminophen/codeine 300/30 mg tablet quarter to 1 tablet twice a day as needed for pain.

2. Atorvastatin 10 mg daily.
3. Losartan 12.5 mg daily.
4. Pentoxifylline 400 mg extended release, 3 times a day.
5. Timolol 0.5% drop ophthalmic both eyes twice a day.
6. Warfarin has been changed to 5 mg daily with followup INR with wound care home nurse.
7. The patient has been given a prescription for doxycycline 100 mg twice a day to take until she follows up with Wound Care Clinic. She has been given a prescription for 7 days.

Date of Discharge: 20180204
Dictating Physician: Macnab, MD, Amie

MR#: U8170135
Acct#: 1823773755

PHYSICAL EXAMINATION:
VITAL SIGNS: On day of discharge, temperature 36.1, pulse 59, respiratory rate 18, blood pressure 114/52, satting 97% on room air.
GENERAL: Patient is awake, conversant, in no acute distress. She has no increased work of breathing and she is ambulatory with a walker. Yesterday when I examined her leg she had decreased erythema and tenderness. The patient's discharge was delayed until this morning due to transportation issues with her living on Bainbridge Island.

DATE OF SERVICE: 02/01/2018

CHIEF COMPLAINT:
The patient is a 93-year-old woman who came to the emergency department due to increased left lower extremity pain in the setting of chronic wounds.

HISTORY OF PRESENT ILLNESS:
The patient is a 93-year-old woman with history of chronic lower extremity wound on the left leg which has been ongoing for about a year. She has chronic pain in her leg for which she takes a quarter tablet of Tylenol with codeine and aspirin on a routine basis. The patient developed worsening pain and erythema and back on
January 11th had wound cultures performed at the Wound Care Clinic that grew MSSA and Enterobacter. She has been reportedly taking Levaquin for the last 8 days, but has not had any improvement in her leg symptoms. She says that a week ago the erythema was worse, but today the pain has increased. The patient denies any fevers or chills. No shortness of breath, chest pain, nausea, vomiting, diarrhea, or constipation. The patient says the pain is severe but is able to ambulate. In the emergency department, she was given cefepime and admitted for further treatment.

PAST MEDICAL HISTORY:
1. Chronic lower extremity ulcerations of her legs have been going on for the last year at least.
2. History of venous insufficiency.
3. Bilateral lower extremity DVT about 30 years ago and has since been on warfarin.
4. History of poor balance.
5. Chronic peripheral neuropathy.
6. History of right lower extremity fracture.

SOCIAL HISTORY:
She uses a walker for ambulation. Her son lives with her. She does not smoke or drink.

FAMILY HISTORY:
The patient denies known family history. Says mother died of old age.

REVIEW OF SYSTEMS:
See above HPI. Otherwise, complete review of systems is negative.

MR#: U8170135
Acct#: 1823773755

ALLERGIES:
1. TAPE causes rash.
2. PENICILLIN causes rash.
3. SULFA causes rash.
4. The patient also says she is very sensitive to NARCOTIC PAIN MEDICATIONS.

HOME MEDICATIONS:
1. Acetaminophen/codeine 300/30 mg quarter of a tablet twice a day as needed for pain.
2. Atorvastatin 10 mg daily.
3. Levofloxacin 500 mg daily started on 01/25.
4. Losartan 12.5 mg daily.
5. Pentoxifylline 400 mg 3 times a day.
6. Timolol 0.5% eye drops both eyes twice a day.
7. Warfarin 5 mg Monday, Tuesday, Wednesday, Friday and 2.5 mg Thursday and Sunday.

PHYSICAL EXAMINATION:
VITAL SIGNS: Temperature 36.8, pulse 87, respiratory rate 24, blood pressure 148/94, satting 100% on room air.
GENERAL: Patient is awake, conversant, appears to be in pain.
HEENT: Pupils equal. Oral mucous membranes moist.
NECK: Supple. No lymphadenopathy.
LUNGS: Clear to auscultation bilaterally.
CV: Regular rate and rhythm with no murmurs.
ABDOMEN: Soft, nontender.
EXTREMITIES: Her left lower leg is diffusely erythematous to below her knee. It is moderately edematous and tender to palpation. She has 3 ulcerations, 1 around her medial ankle, 1 on her lateral lower leg, and 1 on her foot. They are dry with no drainage. The patient also has tenderness to palpation over her right ankle as well with 1+ pitting edema with no significant erythema

noted on her right lower leg. She has dopplerable pulses in her bilateral dorsalis pedis.
SKIN: See extremity exam.
NEURO: Patient is awake, answering questions appropriately. Moving all 4 extremities though decreased movement in her left lower leg due to pain. The patient reports chronic neuropathy that is unchanged.

LABORATORY DATA:
White count is 6.7, hematocrit 35, platelets 201, INR 3. Chem 7 notable for a

BUN of 24, creatinine 1.08. LFTs within normal limits. CRP 1.9.

ASSESSMENT/PLAN:
1. Cellulitis in the setting of chronic wounds of the left lower leg. The patient did not have any improvement of her symptoms while on Levaquin. She is afebrile with a normal white count though has significant pain in her left leg. Will change antibiotics to cefepime. Will order request Infectious Disease consult and wound care. We will continue her Trental.
2. History of anticoagulation due to history of deep venous thrombosis. INR is therapeutic. We will continue warfarin.
3. Code status: The patient says she defers her code status to her son who will be here tomorrow, so for now will be FULL CODE.

Subject: Medicaid Hearing aid consultation

Comments:

Patient with profound hearing loss , right HA (Phonak Ambra SP BTE) needing repair to remove broken hook material caught in HA body and/or replacement. Patient is on Molina Health plan and meets Hearing loss criteria for Medicaid assistance. We are unable to see Medicaid patients at this clinic . Audiometric eval from 2019 available for your reference, and patient has been seen at UWMC prior to 2019.

AUDIOLOGICAL EVALUATION AND HEARING AID FITTING REPORT
Date of Hearing Aid Fitting: 06/05/2019
Make/Model/Serial #: R= Phonak Ambra BTE SP #11019H09F1
L=Phonak Naida S IX SP #1138H0CYM
Battery size: 13
Care Plan: expires 06/05/2020 (R HA only)

Date of Evaluation: June 5, 2019

BACKGROUND
Jean Hoffman, age 94, was seen at this Clinic for a hearing evaluation for her hearing aid fitting through the Hearing Aid Assistance Program (HAAP) to replace a lost hearing aid for the right ear. Her last hearing evaluation was in April 2018. Test results at that time indicated a severe to profound sensorineural hearing loss bilaterally. Her current hearing aid for her left ear (Phonak Naida S IX SP) was purchased here in August 2016 through the same program. Ms. Hoffman reported intermittent tinnitus which sounds like drums or choirs. She denied ear pain. She was accompanied to today's appointment by her son, Louis.

TEST RESULTS
Otoscopic examination revealed unoccluded external auditory canals and intact tympanic membranes bilaterally. Puretone air and bone conduction thresholds indicated a severe to profound loss in the left ear and a profound loss in the right ear. Speech reception thresholds were consistent with puretone average on both ears. Maximum word recognition scores obtained with recorded W-22 word lists at 110 dBHL were 52% for the right ear and 44% for the left ear. Immittance measures were not taken at today's appointment.

HEARING AID FITTING/ORIENTATION
Ms. Hoffman was fit with a Phoank Ambra BTE SP hearing aid in the right ear coupled to an acrylic earmold with a pressure vent. Probe microphone measures were obtained using the Audioscan Verifit2 real ear system. Programming and adjustments to both aids were based on SpeechMap/NAL-NL1 targets. Target gain was not met across the frequency range due to hearing aid limitations; however, audibility was achieved with speech passages at 75 dBHL and Ms. Hoffman showed noticeable improvement in speech understanding conversationally. Volume control was activated.

A hearing aid review followed the fitting session and covered care and maintenance of the instruments. The details of the HAAP program were discussed and a hearing aid contract was completed. Ms. Hoffman and her son were able to handle the basic functions of the hearing aids.

DOB: 01/06/1925

SUMMARY AND RECOMMENDATIONS

Today's test results showed a profound hearing loss in both ears, with fair to poor speech understanding. This evaluation revealed a decrease at 2 kHz and 4 kHz in the left ear and 4 kHz in the right ear from last year's evaluation, although word recognition scores remained stable. Ms. Hoffman and her son expressed interest in the CapTel program and were given an application to send in once they are settled in their new home.

Ms. H's hearing aids were programmed and found to provide benefit as stated by Ms. Hoffman and observed by clinicians. It was recommended that Ms. H:

1. Return for a hearing aid follow-up appointment in 3 weeks for any further changes to her hearing aid settings if desired.
2. Schedule a hearing aid check and cleaning in 6 months.
3. Return in 2 years for an audiometric evaluation to monitor the status of her hearing (or sooner should she note any significant changes).

CVS caremark™

Dear Dr. WILLIAM NEIGHBOR or appropriate staff,

This is a medication non-adherence therapy advisory. It is not a request for a prescription.

This is a medication non-adherence therapy advisory. It is not a request for a prescription.
We manage the prescription benefits for the health plan for your patient listed below. A review of your patient's retail and mail service prescription history indicates that they may have stopped using their medication.

Patient Information			
Name	JEANNE HOFFMAN	Birth Date	01/06/1925
LOSARTAN 25MG			

Consider discussing your patient's therapy with them as soon as possible. The full benefits of medication may not be seen if the patient is not taking it as prescribed. Some common reason why patients may stop taking their medication[1]:

- Can't afford it – consider a generic option, if available
- Forget to take it
- Don't like the side effects
- Are unclear about what medicine they are taking
- Don't understand the long-term consequence of not managing their condition

Please disregard this communication if you recently changed or plan to change the patient's medication therapy.

Sincerely,
Your Clinical Services Team

Plan member privacy is important to us. Our employees are trained regarding the appropriate way to handle members' private health information. This message is intended only for the use of the individual or entity to which it is addressed and may contain confidential and/or proprietary information. If you are not the intended recipient or the employee or agent responsible for delivering the message to the intended recipient, you are hereby notified that any dissemination, distribution or copying of this communication is strictly prohibited. If you received this communication in error, please contact us via fax at 1-866-310-4097 and then destroy this document immediately. Thank you, CVS Caremark.

Information disclosed to you pertaining to certain conditions, such as treatment for alcohol or drug abuse, HIV/AIDS and other sexually transmitted diseases, behavioral health and genetic marker information is protected by various federal and state laws that prohibit any further disclosure of this information by you without the written consent of the person to whom it pertains or as otherwise permitted by such laws. Any unauthorized further disclosure in violation of state or federal law may result in a fine or jail sentence or both. A general authorization for the release of medical or other information is NOT sufficient consent for release of these types of information. The federal rule at 42 CFR Part 2 restricts the use of the information disclosed to criminally investigate or prosecute any alcohol or drug abuse patient. The recipient of this fax may make a request to opt out of receiving telemarketing fax transmissions from CVS Caremark. There are numerous ways you may opt out: The recipient may call 877-265-2711 and/or fax the opt-out request to 401-652-0893, at any time, 24 hours a day/7 days a week. The recipient may also send an opt-out request via email to do_not_call@cvscaremark.com. An opt-out request is only valid if it (1) identifies the number to which the request relates, and (2) if the person/entity making the request does not, subsequent to the request, provide express invitation or permission to CVS Caremark to send facsimile advertisements to such person/entity at that particular number. CVS Caremark is required by law to honor an opt-out request within thirty days of receipt. *16929610725*

THERAPEUTIC RECOMMENDATIONS:

Melena, concerns for UGIB: Started pantoprazole 40 mg PO BID x 8-12 weeks before transitioning to daily

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

DISCHARGE MEDICATIONS:
Current Discharge Medication List

START taking these medications
Details
bisacodyl 10 MG suppository Unwrap and insert 1 suppository (10 mg) rectally daily as needed for constipation.
Qty: 7 suppository, Refills: 0

pantoprazole 40 MG EC tablet Take 1 tablet (40 mg) by mouth 2 times a day before meals.
Qty: 102 tablet, Refills: 0

polyethylene glycol 3350 17 GM/SCOOP oral powder Fill cap with powder to 17g line and dissolve in 4 to 8oz of water. Drink 1 time a day as needed for constipation. Hold for loose stool
Qty: 238 g, Refills: 0

senna 8.6 MG tablet Take 2 tablets (17.2 mg) by mouth daily as needed for constipation.
Qty: 60 tablet, Refills: 0

CONTINUE these medications which have CHANGED
Details
pentoxifylline ER 400 MG ER tablet Take 1 tablet (400 mg) by mouth 3 times a day. Take with food.
Qty: 90 tablet, Refills: 0

CONTINUE these medications which have NOT CHANGED
Details
acetaminophen 500 MG Oral Tab
1,000 mg = 2 tab, PO, TID, 48 tab, 0 Refills, 08/05/19 11:04:44, Tablet, Print Requisition

atorvastatin 10 MG tablet Take 1 tablet (10 mg) by mouth daily.
Qty: 90 tablet, Refills: 3
Associated Diagnoses: Hypercholesterolemia

Calcium Carbonate 500 MG Oral Chew Tab Chew and swallow 2 tablets (1,000 mg) by mouth 3 times a day as needed for indigestion/heartburn.

Cholecalciferol 1000 units Oral Tab Take 2 tablets (2,000 units) by mouth daily.

Patient (continued)

Documents (group 3 of 3) (continued) as of 4/29/2025

MULTIPLE VITAMIN OR Take by mouth.

nystatin 100000 UNIT/ML mouth/throat suspension Swish and swallow 5 mL 4 times a day.
Qty: 60 mL, Refills: 0
Comments: Please fill now
Associated Diagnoses: Thrush

ofloxacin 0.3 % ophthalmic solution Place 1-2 drops into left EYE 4 times a day.
Qty: 5 mL, Refills: 1
Associated Diagnoses: Acute bacterial conjunctivitis of left eye

timolol maleate 0.5 % ophthalmic solution instill 1 drop into both eyes twice a day
Qty: 10 mL, Refills: 6
Associated Diagnoses: Unspecified glaucoma(365.9)

triamcinolone 0.1 % cream Apply topically 2 times a day. Apply to both forearms.
Qty: 28.4 g, Refills: 1
Associated Diagnoses: Dermatitis

!! Wound Dressings (medihoney) topical gel Apply topically every other day. Apply to wound before applying dressing
Qty: 44 mL, Refills: 3
Associated Diagnoses: Lower extremity ulceration, left, limited to breakdown of skin (HCC)

!! Wound Dressings (medihoney) topical gel Apply topically daily. Apply to ulcerations on legs. Apply dressing over the Medi Honey.
Qty: 88 mL, Refills: 6
Associated Diagnoses: Lower extremity ulceration, left, limited to breakdown of skin (HCC)

!! - Potential duplicate medications found. Please discuss with provider.

STOP taking these medications

losartan 25 MG tablet Comments:
Reason for Stopping:

BRIEF ADMISSION HISTORY:
98 year old female with hx of chronic venous stasis ulcers in both legs and FTT who presents from wound clinic with c/f acute on chronic poor PO intake and malaise

PER H&P HPI 11/22:
"History obtained by son and DPOA Louis: Cell - 206-280-1287, landline: 206-780-6885

Per son, pt is very independent at baseline - cooks for herself, toilets independently, goes to cafe with friends, walks with walker, and is cognitively intact. However over the past 2 months or so patient has had gradually worsening PO intake, weakness, and spent more time in bed. spe resulting in patient becoming more weak and fatigue and no longer able to do activities that she used to be able to do.

Patient (continued)

Documents (group 3 of 3) (continued) as of 4/29/2025

Pt was evaluated for these concerns at NWH ED 10/17/23 and at that time found to have milk leukocytosis to 11.8, given gentle IVF with improvement and discharged empirically on 7 days of Keflex for possible cellulitis of known LE wounds (though no c/f for this noted on their exam). Pt completed this.

Shortly after that, son noted that her family doctor noted thrush in her mouth and she received nystatin swish and swallow, which cleared it up.

In the last 2 weeks, Lewis notes that the patient seems to have taken a turn for the worse. She has eaten very little, and been complaining of difficulty swallowing, and thus has been eating mostly soups and smashed food. She is also had new difficulty toileting by herself. Once last week, we was noted that she had a black stool in the toilet. 2 days ago, he noted that she had some bloody stool when he changed her. She has not had a BM since that time. She also has worsening pain of her R knee over the last few weeks, but denies a fall.

Per Louis, pt has not had const sx, confusion or agitation, chest pain or pressure, cough or shortness of breath, abdominal pain, nausea or vomiting, pain or difficulty urinating, or wounds or skin changes elsewhere on her body besides known chronic wounds of her left lower extremity (see photos under media).

Regarding sick contacts son Lewis had a cough and possible URI about 2 weeks ago. He did not test for COVID.

Hx of hardware including R femoral plate, R hip replacement. No hx of artificial heart valve. No hx of dental infection."

HOSPITAL COURSE:
Admitted to acute care medicine for CAP, possible UTI and c/f upper GI bleed. Sepsis ruled out. She received ceftriaxone (11/22-11/26) and azithromycin (11/22-11/24). UA suggest of UTI but she was inconsistent with endorsing urinary symptoms. Nonetheless, received CTX for the CAP which covered the possible UTI. She remained on room air without respiratory distress and weakness improved. TSH was normal. Hgb down tended from 10.3 on admission down to 8.1 but nadir was around 8.0-8.2. Remained hemodynamically stable. She was started on pantoprazole 40 mg BID on admission and remained on this throughout hospital course. GI was made aware of her but given her age, clinical stability, and Hgb with nadir 8.0-8.2 it was felt ok to manage pharmacologically. She did not require transfusions. Upon further questioning, son revealed she may be taking excessive amounts of NSAIDS. Both patient and son educated about bleeding risk of NSAIDS. PT/OT worked with her and felt that she required additional support on discharge. Patient and family not interested in SNF. Son felt that he could safely care for her at home, even though on discharge she was 1 person assist. Home health ordered and son felt comfortable with communicating with outpatient wound care team. Finally, given her age and initial thoughts of a possible EGD we discussed goals of care. She remains full code...

By individual problem below:

#CAP vs Aspiration PNA
Pt with leukocytosis and known sick contact son with URI found to have focal opacities in RML and RLL c/f CAP. Hx not c/w HAP picture. Unclear aspiration risk given hx dysphagia. She did not require supplemental oxygen
CURB 65: 1-2 pts (age +/- confusion, moderate risk) .
- urine legionella negative, S pneumo antigen negative
- viral resp panel negative
- Treated empirically for CAP:

Patient (continued)

Documents (group 3 of 3) (continued) as of 4/29/2025

-CTX 1g q24h x5-7 days (11/22 - 11/26)
- Azithromycin azithro 500mg PO q24h x 3d (11/22 - 11/24)

#Hematochezia
#Melena
#Constipation
Pt with witnessed episode of melena ~1 wk ago prior to admission. DRE in ED with dark stool c/f GIB. Hgb 10.3 on admission with drift down to 8.1, otherwise hemodynamically stable, with one small hard BM s/p enema c/w melena. Likely has slow occult bleed, CTM closely for acute progression.

- GI following, appreciate recs:
- most likely due to chronic NSAID vs malignancy, either way no role for scope and continue 8 wk empiric PPI, no role for GI follow up
- continue bowel regimen, discharge with good regimen
- s/p 80 pantoprazole IV, continue 40 BID

#Possible UTI
Pt with leukocytosis to 12 on admission with left shift, now resolved. UA with +Nitrites, LE, bacteria, and 50+ WBC. Pt asx at this time but inconsistent historian. Bladder scan on admission with no e/o retention.
- Blood cx x2 11/23 NGTD
- Ucx: 100K mixed flora GNRs
- Treated empirically with CTX for CAP

#Subacute progressive dysphagia
#Recent hx of oral thrush
Pt with unclear duration of difficulty swallowing, solids more than liquids, for the past weeks to months. Most c/f ulcer vs stricture vs mass. Could consider dysmotility picture though typically also sx with liquids. Also found to have thrush in early November, could consider esophageal candidiasis though this would typically present more with pain than difficulty swallowing, and exam today with no e/o thrush in oropharynx.
- continue home nystatin swish and swallow
- SLP following, appreciate recs:
- exam c/f mild dysphagia vs presbyphagia iso bad-fitting dentures, thrush
- thin liquids, soft-bite sized solds with son assisting OR self-selec softer solids
- 1:1 assist for all intake
- meds crushed or whole in puree
- if within GOC, consider further w/u including endoscopy

#C/f Malnutrition
#FTT
Pt with acute on chronic poor PO and FTT with decrease in ADLs from baseline, possibly iso infection vs malignancy per workup above.

#Mild macrocytic anemia
Pt with Hgb 10.3 on admission (stable 10-12 over last 3 years) and MCV 100 c/f macrocytic anemia. Likely multifactorial IDA vs ACD.
- iron studies: iron low at 14, TIBC low at 185, transferrin low 132, tsat low at 8, ferritin mild-elev to 211
- retic count wnl 1.6
- folate and B12 wnl
- TSH wnl 2.715 11/22
- IV iron x3 doses 11/24-11/26 for iron 14

Patient (continued)

Documents (group 3 of 3) (continued) as of 4/29/2025

#Chronic venous stasis ulcers of LLE
Several chronic LLE ulcers on L superior foot, ankle, and anterior shin. Low c/f cellulitis a this time, XR tibia fibula per PCP 11/15 for c/f osteo given persistent ulceration with no e/o bony involvement.
- wound care consult

Chronic/stable
#Subacute progressive R knee pain - Presenting in acute pain on admission, now much improved. XR negative for acute process. Likely 2/2 OA vs sciatica. Exam not c/f septic joint. Lidocaine patches, tylenol PRN.
#Hx recurrent DVT: Per chart review, not noted by patient. Son denies current AC, per brief chart review seems prior hx of warfarin not on currently.
#Sensorineural hearing loss R ear: home hearing aids
#HTN: Hold home losartan as pt normotensive
#HLD: Continue home atorvastatin
#Peripheral vascular disease: Continue home pentoxifylline

Discharge Instructions

Nguyen, Liem Hieu, MD - 11/27/2023 12:50 PM PST
Formatting of this note might be different from the original.
Dear Jeanne Leonie Hoffman,

You were admitted for difficulty eating, weakness, and mild confusion. You were found to have evidence of a urinary tract infection, possible pneumonia, and evidence of upper gastrointestinal bleed. You were treated with IV antibiotics and proton pump inhibitor, which have helped you improved significantly. Your GI bleed is slow and now has been stabilized and improved. We talked to our GI colleagues and they did not think that you need to be scoped or follow up outpatient.

New Medications
- please continue taking protonix twice per day for the next 7 weeks or so
- please continue taking senna and miralax to prevent constipation as needed and HOLD if loose stool

Other Instructions
- Very important is to limit tylenol (acetaminophen) to maximum 3g total / day. Avoid NSAIDs (like alleve, ibuprofen, advil)
- Continue with wound care, post-procedure

Follow up appointments
- follow up with primary care

PLEASE RETURN TO THE HOSPITAL IF:
- fever, chest pain, shortness of breath, confusion, red blood in stools, worsening abdominal pain

It was a pleasure being part of your care team.

Electronically signed by Nguyen, Liem Hieu, MD at 11/27/2023 2:07 PM PST

Member Medication Reconciliation Template (MRP)

Member Full Name: JEANNE HOFFMAN

Member DOB: 01/06/1925

Member ID: 8000880246486

Date of Medication Reconciliation: 12/12/2023

Inpatient Stay Admission Date: 11/22/2023

Inpatient Stay Discharge Date: 11/28/2023

Member PCP: William Neighbor

Primary Admission DX: Community acquired pneumonia

Inpatient facility (Hospital, SNF, Rehab, etc.) discharge medications were reconciled with the current outpatient medications:

Yes

Notes/Attachments:

Member has been able to obtain and fill all medications. Post discharge Medication reconciliation completed. Pre-admission medications reviewed and verified from CVS and reconciled against discharge summary medication list. Medication changes reviewed with caregiver, see chart below. Member had a post discharge follow up appointment on 12/6/2023 with Dr. William Neighbor.

Electronically signed by: Katrin Larusson , RN on 12/12/2023

COVID-19 Vaccine Intake Documentation

Name (First Last) Jeanne Hoffman DOB: 1/6/25

Pre-Vaccination Screening Questions:

1. Are you feeling sick today?	Yes	No X	Don't know
2. Have you ever received a dose of COVID-19 vaccine?	Yes X	No	Don't know
If yes, which vaccine product? ☐ Pfizer ☒ Moderna ☐ Another product			
3. Have you ever had a severe allergic reaction (e.g., anaphylaxis) to something? For example, a reaction for which you were treated with epinephrine or EpiPen® or for which you had to go to the hospital?	Yes	No X	Don't know
• Was the severe allergic reaction after receiving a COVID-19 vaccine?	Yes	No X	Don't know
• Was the severe allergic reaction after receiving another vaccine or another injectable medication?	Yes	No X	Don't know
4. Have you received passive antibody treatment (monoclonal antibodies or convalescent serum) as treatment for COVID-19?	Yes	No X	Don't know
5. Have you had another vaccine administered in the last 2 weeks?	Yes	No X	Don't know
6. Do you have a weakened immune system caused by something such as HIV infection or cancer, or do you take immunosuppressive drugs or therapies?	Yes	No X	Don't know
7. Do you have a bleeding disorder or are you taking a blood thinner?	Yes	No X	Don't know
8. Are you pregnant or breastfeeding?	Yes	No X	Don't know

Case #: UF25-00038
MRN: U8170135
Sex: female, DOB: 1/6/1925

Provisional Diagnosis
PROVISIONAL AUTOPSY REPORT:
I. Age related systems inefficiencies/failure:
- A. Severe malnourishment and deconditioning with cachexia (BMI 16.8), anemia and electrolyte disturbances.
- B. Circulatory:
  - Intermittent heart block and bradycardia.
    - Small heart with no definite anatomic abnormalities.
  - Limb ischemia with recent arterial occlusion, status post below the knee amputation.
  - Multiple venous stasis ulcers.
- C. Neural
  - Delerium (per clinical notes)
  - Difficulty swallowing (likely neural)
    - No anatomic findings.
  - Hard of hearing.

COMMENT:
100 year old woman who was initially admitted for 59 days at Montlake for acute limb ischemia. She is status-post amputation with postoperative bradycardia, intermittent Mobitz II heart block status-post permanent pacemaker placement, and recent right periprosthetic femur fracture. The hospital course was complicated by severe dysphagia and very high aspiration risk as well as a right periprosthetic femur fracture sustained after a ground level fall (03/05). After her left above the knee amputation, the post-op period was complicated by delirium, pulmonary edema and worsening respiratory status. The patient was in modified to comfort measures and subsequently discharged to a skilled nursing facility. She was admitted one day later to Harborview Medical Center, 3 days prior to death,for dysphagia and delirium. Patient has a past medical history significant for T2DM, hypertension, hyperlipidemia, seizure disorder, chronic venous disease, prior DVT (on anticoagulation), and peripheral vascular disease. There is an extensive documented history of the patient being intermittently homeless and being malnourished/deconditioned, dehydrated, fatigued, and anemic, which is a factor contributing to the worsening limb ischemia and malnourishment. Throughout the final hospital stay the patient was noninteractive, nonverbal, only expressing herself with moans and crying out. The son decided to transition to comfort directed care and the patient died on March 11, 2025 at 4:50 pm.

The most striking autopsy findings are related to deconditioing/malnourishment. The patient is small, in addition to cachectic. Her organs were small. There were prominent lymph nodes (which may be partially due to lack of adipose tissue) in the supraclavicular, subcarinal, and hilar lymph nodes, (with the largest being 3.4 cm) and lungs. The kidneys were small. The heart is small with no significant stenosis of the coronary arteries or other anatomic abnormalities and there was mild atherosclerotic changes of the aorta. The large bowel showed evidence of diverticular disease without diverticulosis and adhesions in the sigmoid colon, consistent with past medical history of hysterectomy with bilateral salpingo-oophorectomy.

Based on review of clinical findings and preliminary autopsy findings, the cause of death is cardiac rhythm disturbance due to eloctrolyte disturbances with severe malnutrition and contributing age related decline. Contributing factors include type 2 diabetes mellitus, and peripheral vascular disease. The manner of death is natural.

This provisional (preliminary) report is based on the initial observations made at autopsy. The final autopsy report will be completed within 12 weeks following the date of autopsy.

Attestation signed by Backlund, Brandon Heath, MD at 3/11/2025 3:10 PM

I saw and evaluated the patient. I have reviewed the resident's/fellow's findings and agree.

No Critical Care

CHIEF COMPLAINT

Chief Complaint

Patient presents with

- Leg Pain

HISTORY OF PRESENT ILLNESS AND REVIEW OF SYSTEMS

Patient is a 100 F Hx of HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by

ED Provider Note (continued)

post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium presenting 1 day after discharge for reevaluation due to concern for improperly applied brace.

Per chart review the patient had a long, tenuous and tumultuous admission 1/9/2025-3/8/2025 with multiple infections and incidents. Patient placed on comfort measures despite sons wishes to remain full code, ethics committee involved at multiple points. She had a fall in hospital suffering a right hip fracture
hip-spica brace now in place settings 0-60, slight abduction, can take off if uncomfortable and when needed (was not strictly recommended at this point by ortho, patient and son prefer it to be on).
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25
- concentrated oxycodone for pain (low dose 2.5 - 5 mg)

She is presenting today from her SNF after discharge yesterday from University of Washington Montlake at her son's request after he noticed her right hip brace to be loosely applied and was concerned that her right femur fracture has worsened.

He also reports that she was sent to SNF to be comfortable with morphine and they are not going to help her get better. He is worried she is dehydrated. He would like her admitted for further attempts at feeding tube, which was unsuccessful during admission at UWMC. He does not feel she should go back to her current SNF.

PAST MEDICAL AND SURGICAL HISTORY

Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018
• Thrombocytopenia (HCC)	11/2/2016
• Leg weakness, bilateral	1/6/2015
• Weakness of trunk musculature	1/6/2015
• Vertebral fracture *Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed*	12/13/2012

healed

- Thyroid nodule, uninodular 12/13/2012
  CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.
- Closed fracture of unspecified intracapsular section of neck of femur 5/1/2007
  Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.
- Unspecified vitamin B deficiency 5/1/2007
  Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency
- Impaired fasting glucose 3/22/2007
- Carpal tunnel syndrome 11/20/2006
  Carpal tunnel release right wrist in 1989
- DIAPHRAGMATIC HERNIA 11/20/2006
  CT of abdomen in 2006
- Esophageal reflux 11/20/2006
- Other convulsions 11/20/2006
  Petit Mal since 1975 Carbamazepine level 7.6 on Feb 2007 Discontinued based on ER neuro consult in early 2013 No recurrence
- Allergic rhinitis, cause unspecified 11/20/2006
- DVT, recurrent, lower extremity, chronic 11/20/2006
  Recurrent DVT and phlebitis since 1982 Per Vascular Surgery note 5/9/2006: continue warfarin 3/9/2010 Lower extremity arterial vascular ultrasound studies normal
- Diabetes mellitus (HCC)
- PAD (peripheral artery disease) (HCC)
- Ulcer of left lower extremity, limited to breakdown of skin (HCC)
  Chronic, Multiple sites of lower leg and ankle, with MSSA

IMAGING:

ED Provider Note (continued)

ED Wet Read -

XR Femur 2 Vw Right

Final Result

The bones are diffusely demineralized, which limits radiographic detection of nondisplaced fractures.

Redemonstrated perimplant fracture of the subtrochanteric femur, with similar varus angulation and mildly increased anterior and lateral displacement now up to 10 mm. Alignment is otherwise unchanged. Vascular calcifications.

ATTENDING FINAL REPORT

I agree with the preliminary report with the following comment(s).

-Slight differences in patient positioning may partially account for appearance of increased anterior lateral displacement described above.

I have personally reviewed the images and agree with the report (or as edited).

XR Pelvis 1-2 Vw

Final Result

The bones are diffusely demineralized, which limits radiographic detection of nondisplaced fractures. No acute pelvic fracture detected. Partially visualized right femur orthopedic hardware.

Alignment is unchanged.

No acute soft tissue abnormality. Vascular calcifications.

I have personally reviewed the images and agree with the report (or as edited).

XR Knee 4+ Vw Right

Final Result

The bones are diffusely demineralized, which limits radiographic detection of nondisplaced fractures.

No acute bone, joint, or soft tissue abnormality is seen. Similar appearance of right femur orthopedic hardware and healed fracture deformity of the distal metadiaphysis femur. There are no acute fractures or dislocations. Vascular calcifications are present.

I have personally reviewed the images and agree with

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

ED Provider Note (continued)

the report (or as edited).

XR Chest 1 Vw
Final Result

Lines and tubes: Similar position of left chest wall pacemaker lead.

Lungs: Interval decrease in mild patchy bibasilar pulmonary opacities, which may represent edema, atelectasis, and not excluded aspiration, and/or pneumonia.

Pleura: Interval decrease in small to moderate right and small left pleural effusions. No pneumothorax.

Heart and mediastinum: Unchanged.

Bones: No acute or suspicious abnormality.

I have personally reviewed the images and agree with the report (or as edited).

Radiology Final Result -
No image results found.

ED COURSE/MEDICAL DECISION MAKING

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

ED Provider Note (continued)

Patient is a 100 F Hx of HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium. She is now presenting 1 day after discharge for reevaluation due to concern by son for improperly applied brace.

I had a prolonged discussion with this patient's son about goals of care. She is severely dehydrated on exam, moaning in pain, deconditioned, and cachectic. She is hypernatremic, has had a 4 pt drop in her Hgb, and has a new leukocytosis. She is not necessarily acutely ill today, but is slowly decompensating.

I explained frankly that Louis' stated goal for the patient, to get back to the level /quality of life she had 3 months ago, at which time she was traveling and physically active, cannot be realistically expected given her level of deconditioning, lack of nutrition, age, AKA, and femur fracture, which portends a poor prognosis.

He would like her to be full code "if there is any possibility of a good prognosis." I explained that if his mother's heart were to stop, it is my clinical judgment that there is no chance of her achieving the goals that he would consider an acceptable outcome (futility), and that I would recommend maintaining DNR/DNI as the code status most aligned with the stated goals. Per review of previous documentation, this is in line with what was discussed during previous admission to Montlake and is reflected in the current ACP/code status in Epic. However, Louis continues to express a focus on longevity that leads me to believe that further discussion regarding GOC will be both necessary and important to care and will require time and discussion beyond the ED setting.

Louis presents seeking readmission for his mother today, noting desire for reassessment of her nutrition status and concern for management of her brace.

I discussed her brace with ortho, which per chart review, was placed for comfort and can be removed as desired by patient. Louis expresses concern that she needs a better solution to keep her leg immobilized sufficiently for pain control and that her toes need to be pointed toward the ceiling for the brace to be effective. Ortho to see patient. They were ok with deferring repeat XR as they would be unlikely to change management and would require full removal of brace, which is bulky, wraps around the torso, and would be likely to cause distress to patient in ED. Per discussion with ortho, they may consider transitioning to an alternative orthosis in inpatient setting.

D/w medicine re: son's desire for admission. In part, he expresses that his desire for admission is due to concern that her facility was managing her brace (which is not intended as a definitive treatment) incorrectly and "pumping her full of opioids" but not focused on helping her heal. Patient appears to be in significant distress on ED presentation, and, given her poor prognosis and clear distress, demonstrates a clinical need for ongoing pain management. Medicine agrees to admit for complex coordination of care needs.

Prior to sign out, attempted DRE but due to the limitations of her bulky brace and severe pain/agitation with attempts to role, was unable to perform DRE to evaluate for melena in setting of Hgb drop. No recent melena or blood in stool known to son. Dr. Barral has discussed Hgb drop and inability to check DRE in ED with admitting team. May benefit from ongoing monitoring of Bms for melena in inpatient setting at discretion of admitting

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

ED Provider Note (continued)

team.

I spoke to the physician taking over care at sign-out about the plan for this patient (Dr. Barral). The final disposition will depend on the results of any pending tests and this patient's condition upon re-evaluation. The original plan may be altered depending on the patient's needs. Decisions regarding the progression of care and interpretation of tests will be made at the discretion of the oncoming ED team.

Plan at time of signout:
[ ] f/u ortho recs
[ ] admit to medicine
[ ] XR and UA for infectious workup given new leukocytosis

H&P Notes

H&P by Asmeche, Habtam, MD at 3/9/2025 1920

History and Physical

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
PCP: Navalurkar, Reema, MD
Code Status: DNR DNR/DNI

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

H&P Notes (continued)

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a complex medical history who was recently admitted at Montlake, Med E medicine service from (1/9/2025 - 3/8/2025) for acute limb ischemia s/p L AKA, hospital course was complicated by postoperative bradycardia requiring PPM on 1/13, dysphagia, hospital related fall resulting in right periprosthetic femur fracture, and FTT, discharged to Bainbridge Island Health and Rehab SNF (on 3/8/25) and represents to HMC for placement on 3/9/25
Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Unable to obtain subjective information from patient due to patient presentation. Patient not following commands, she is also not verbally responsive or following verbal cues at the time of my assessment.

POA and son Louis is at bedside. He tells me that he is a certified geriatrician and toxicologist, but did not attend medical school. History was obtained from him and from chart review. Louis reports that he discharged his mother from the SNF due to concerns that staff at the Rehab center were being negligent and presented her to HMC. I discussed whether an ED to ED transfer to Montlake would be a reasonable/acceptable plan as her former team were more familiar with her, but he preferred that she be seen here at HMC instead citing negligent care at Montlake that led to a fall and subsequent femur fracture.

I had a prolonged conversation regarding goals of care and his expectation with this current admission.
I inquired if placement to a facility/SNF was still within her goals of and he said yes. He did not want to discuss placement to hospice as he envisions her recovering from her current ailments and getting back to a point where he can travel together stating that she is a "fighter"
On the question of diet, he thinks that micronutrients such as ensure should be given to the patient for sustenance at this time. He gave her a bottle this morning prior to admission. We evaluated her most recent CXR and I noted that she had signs suggestive of aspiration. I suggested that patient remain NPO for now except for medications. I reiterated that based on my exam and clinical assessment, it is likely that if fed, she will aspirate and overall, cause her more harm. We also decided on involving SLP in her care to get objective data.

Lastly, he was in agreement that she will be continued on comfort care with "modifications" per previous hospitalization (see discharge summary for more information) I discussed her code with her and he agreed upon DNR/DNI.

Due to the prolonged, recent hospital stay at Montlake and significant medical detail, I will include the hospital course in the discharge summary per Dr. Barnes, James below

"100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

Pt was admitted as above. She initially underwent L AKA on 1/9/25 with vascular surgery. She subsequently developed symptomatic bradycardia w/ 2nd degree heart block necessitating TVP and eventual PPM placement on 1/13.

Post-operatively, she developed significant acute pain related to her AKA. Her pain was initially managed by APS w/ nubain patch and nalbuphine + PRN tylenol.

She unfortunately developed progressive encephalopathy with at least a component of delirium. This waxed and waned throughout her hospitalization but overall worsened. Related to this, she had ongoing dysphagia and high aspiration risk. As a result, she developed aspiration pneumonitis. It is felt that her ongoing aspiration likely worsened her delirium, which in turn increased her aspiration risk. Because of this, she was made NPO initially. Palliative care was consulted for assistance with assessing goals of care for Jeanne. This primarily occurred through discussion with her son, Louis, who is her POA. He felt that Jeanne would want everything because she is a fighter. There was ongoing push to do everything possible to extend Jeanne's life despite high risks. After multidisciplinary meetings between providers involved in her care including ethics, it was determined that Louis is likely acting in accordance with Jeanne's wishes, as she had previously noted she would want to be full code, have enteral nutrition, etc.

Given the aforementioned aspiration risk, Jeanne was NPO. However, after a GOC conversation, Louis felt that Jeanne would want to continue to eat by mouth. She continued to have ongoing aspirations and worsening respiratory status until she was made NPO again after being placed on high flow oxygen. At this point, Louis felt that the team should do everything to pursue an NG tube. Multiple attempts with bedside nursing were made to place an NG tube, but Jeanne became very agitate and resisted all

H&P Notes (continued)

attempts. She was given minimal sedation with low-dose ativan and had attempted placement under fluoroscopy, which failed. At this point, the team was able to place a peripheral IV and the decision was made to trial ~48 hours of IV fluids with dextrose to see if this helped her perk up.

Over the time she was receiving IV fluids, Jeanne developed pulmonary edema and worsening respiratory status again. This was likely multifactorial related to pulmonary edema and aspiration. She required high flow. Louis was adamant that was must get a feeding tube in her to address her nutrition. This was discussed with GI who agreed that she was too high risk to undergo anesthesia to have an endoscopically placed NG tube. After multiple prolonged goals of care discussions with Louis, she was ultimately made comfort care. We expressed to him that we are unable to place an NG tube due to tenuous clinical status and that overall, even if we could, this may even lead to more harm than benefit regardless due to aspiration risk of tube feeds. Louis intermittently continued to request aggressive treatments despite risks being too high, stating "she's going to die anyway", and so felt that we might as well try even if she were to "die on the table". We expressed that this would be doing harm and would not be offered.

Despite the transition to comfort measures only, patient continued to do well. She was eventually transitioned only to blow-by oxygen and even that became no longer necessary. She would rapidly desaturate with movement however her oxygen monitoring remained only intermittent. Multiple conversations were had with her son regarding the appropriate course of care. Discussions included transitioning the patient back to full care and treatment however many aspects of this treatment plan were not in line with with the care team thought was appropriate and ethical for the patient as well as what Luis thought she could tolerate. Aggressive inpatient management including daily IV draws and having to address patient's feeding were not likely to be of benefit to her quality of life. While the patient did show some improvement over the last several days, her overall prognosis is still poor to fair and it was agreed upon with the healthcare team and with the patient's son that her best interest is found in staying a comfort measures only patient with some "out of the box "comfort measures care. As such, she became a modified comfort measures patient with a general approach of minimum necessary escalation of care. For example, while systemic antibiotics would be contraindicated, patient developed what appeared to be a infected left parotid gland likely from poor p.o. intake and a dry oral mucosa. It was reasonable within the goals of care to prescribe 5 days of oral antibiotics to treat this. She also had a very mild erythema present at a picked off the scab from her left AKA site and it was reasonable to provide basic wound care. DVT prophylaxis also was a reasonable minimal necessary escalation of care. Patient's son began requesting more and more things that were starting to borderline on some care package between comfort measures and full care and so each of these issues need to be dealt with on an as needed and as provider determined appropriate basis. This happened in conjunction with nursing staff. Due to patient's incredibly high aspiration risk, it was made clear to Lewis on a near daily basis that we did not recommend feeding her anything at all however, as long as Lewis excepted the risk, we stated that it was okay if he were to feed her, and so he has done so. In fact, it is likely Luis is persistent fluid administration 2 water bottles and straws that the patient managed to do so well. Ultimately, her plan was Bainbridge rehab and this was agreed upon by all parties. "

OUTPATIENT MEDICATIONS:

Current Outpatient Medications

Medication	Instructions
• acetaminophen (TYLENOL)	650 mg, Rectal, Every 6 hours PRN
• atropine 1% ophthalmic solution (for oral use)	2 drops, Sublingual, Every 4 hours PRN
• bisacodyl (DULCOLAX)	10 mg, Rectal, Daily PRN
• [START ON 3/11/2025] buprenorphine 5 MCG/HR patch	1 patch, Transdermal, Every 7 days scheduled
• camphor-menthol 0.5-0.5 % lotion	Topical, 2 times daily PRN
• carboxymethylcellulose 0.5 % ophthalmic solution	1 drop, Both EYES, Every 1 hour PRN
• enoxaparin (LOVENOX)	30 mg, Subcutaneous, Nightly
• lidocaine 4 % patch	1 patch, Transdermal, Every 24 hours, Apply to painful area for up to 12 hours in a 24 hour period.
• magnesium hydroxide 400 MG/5ML suspension	30 mL, Oral, 2 times daily PRN
• oxyCODONE CONCENTRATED 100 MG/5ML concentrate solution	2.5-5mg Oral, Every 4 hours PRN For pain
• phenol 1.4 % mouth/throat spray	1 spray, Mouth/Throat, Every 2 hours PRN
• psyllium 51.7 % packet	1 packet, Oral, 2 times daily, Mix in 8 oz of juice or water and drink.
• saliva substitute (Biotene Dry Mouth) liquid oral rinse	15 mL, Swish & Spit, 3 times daily
• scopolamine 1 MG/3DAYS patch	1 patch, Transdermal, Every 72 hours PRN, Apply to hairless area behind 1 ear.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a complex medical history who was recently admitted at Montlake, Med E medicine service from (1/9/2025 - 3/8/2025) for acute limb ischemia s/p L AKA, hospital course was complicated by postoperative bradycardia requiring PPM on 1/13, dysphagia, hospital related fall resulting in right periprosthetic femur fracture, and FTT, discharged to Bainbridge Island Health and Rehab SNF (on 3/8/25) and represents to HMC for placement on 3/9/25.

Goals of care
She appears frail and was in distress throughout my assessment. My clinical suspicion is that her groaning was due to ongoing pain. Summary of our discussion below:
- Tylenol IV 1000 mg 8hrs scheduled, Lidocaine patch to right hip. Can consider Nalbuphine vs Buprenorphine patch 5mcg q7 days
- Follow up with the Orthopedic team about plan: Operative vs. Non-operative plan.
- Continue modified comfort measures with "modifications" for now, will delineate this in the hours-days to come. Per prior hospitalization, nightly DVT ppx was reasonable.
- Palliative consult in the AM
- NPO except for medications
- SLP consult order: It is my clinical suspicion that patient wont be able to participate in a meaningful way, however, requested by POA.

 # Right hip fracture
- fall at Montlake hospital on 3/5 with R hip fracture, non -op management decided upon based on very high operative risks.
- patient's son reported he internally rotated her leg to "set it"
- brace placed by orthotics on 3/7 at request of son and with guidance from orthotics and ortho.
- NWB on Right leg
- Should limit motion of leg (ideally no ROM of R leg)
- abduction pillow
- log rolls for turning
- hip-spica brace now in place settings 0-60, slight abduction, can take off if uncomfortable and when needed (was not strictly recommended at this point by ortho, patient and son prefer it to be on)
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25

#Superficial infection of left stump site
#Mild parotitis
S/p 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time (completed).
- nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
At prior hospitalization, SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium

and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions.
\
- As above

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- Pharmacy guiding this on admission

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders. Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- NWB LLE per Vascular Surgery
- has outpatient f/u 4/2/25
- was on ASA 81 mg daily, atorvastatin 10 mg daily which was dc'd during transition to modified comfort care, may require ongoing discussions with son . Previously was on pentoxifylline at home, but was not recommended by vascular surgery at this point

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Possible **follow-up in rehab amputee clinic after discharge depending on GOC, referral placed**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is fully healed
- scheduled for f/u in EP clinic 3/21/25

H&P Notes (continued)

#T2DM
BG in low 100s, discontinued SSI since not triggering insulin

Prior to admission, was on:
- timolol 0.5% opth 1 drop both eyes bid (glaucoma)
- b12 PO daily (unckear dose)
- Vitamin d 2000 units daily
- multivitamin

Orthopaedic Surgery Consultation Note

Date of Service: 03/10/25
Reason for Consult: Right peri-implant proximal femur fracture
Attending of Record: Dr. Erika Roddy, MD
Referring Provider: Emergency Department
Ortho Services: HMC Ortho Blue
Other Consultants: Internal Medicine
Non-Orthopedic Injuries: None

HISTORY OF PRESENT ILLNESS
Jeanne Leonie Hoffman is a 100 year old female complex past medical and social history who sustained a right peri-implant proximal femur fracture. Patient had a ground-level fall on 3 5 while admitted to UW Montlake, which

orthopedics was consulted and recommended nonoperative management and hip spica brace. She was discharged from the hospital on 3/8 to a SNF approximately brought back to the ED via her son due to concerns of negligent care. In the same admission at Mon Lake she underwent an above-knee amputation for left lower extremity acute limb ischemia. Her course was complicated by progressive encephalopathy, heart block requiring a pacemaker, multiple aspirations complicated by pulmonary edema and malnutrition, and ultimately transition to palliative care.

Review of Systems
Pertinent positives as per HPI and otherwise negative.

Past Medical History
Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018
• Thrombocytopenia (HCC)	11/2/2016
• Leg weakness, bilateral	1/6/2015
• Weakness of trunk musculature	1/6/2015
• Vertebral fracture *Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed healed*	12/13/2012
• Thyroid nodule, uninodular *CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.*	12/13/2012
• Closed fracture of unspecified intracapsular section of neck of femur *Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.*	5/1/2007
• Unspecified vitamin B deficiency	5/1/2007

Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency

PHYSICAL EXAM
GEN: Frail elderly
RESP: Breathing comfortably on room air
CV: Extremities warm and well-perfused, regular rate and rhythm

MSK:
LEFT Upper Extremity Musculoskeletal Exam
Inspection: No gross deformity. Skin without blanching, tenting, or puckering.
Palpation: No tenderness noted on palpation throughout extremity.
Motor: Unable to be performed given patient's mentation sensory: Unable to be performed in patient's mentation vascular: 2+ radial pulse, fingers warm and well perfused.
Compartments: Forearm compartments are soft and compressible.

RIGHT Upper Extremity Musculoskeletal Exam
Inspection: No gross deformity. Skin without blanching, tenting, or puckering.
Palpation: No tenderness noted on palpation throughout extremity.
Motor: 5/5 wrist flexion/extension, forearm pronation/supination, elbow flexion/extension, shoulder abduction. Able to demonstrate thumb extension, thumb interphalangeal and index finger distal interphalangeal joint flexion, finger abduction, and cross fingers.
Sensory: Sensation intact to light touch in distribution of axillary, median, radial, and ulnar nerves.
Vascular: 2+ radial pulse, fingers warm and well perfused.
Compartments: Forearm compartments are soft and compressible.

LEFT Lower Extremity Musculoskeletal Exam
Inspection: No gross deformity. Skin without blanching, tenting, or puckering.
Palpation: No tenderness noted on palpation throughout extremity.
Sensory: Sensation intact to light touch in distribution of deep peroneal, superficial peroneal, tibial, sural, and saphenous nerve distributions.
Motor: 5/5 extensor hallicus longus /flexor hallicus longus/ gastroc-soleus/tibialis anterior
Vascular: 2+ dorsalis pedis and posterior tibialis pulses, toes warm and well perfused.
Compartments: Anterior, lateral, and superficial posterior compartments are soft and compressible.

RIGHT Lower Extremity Musculoskeletal Exam
Inspection: No gross deformity. Skin without blanching, tenting, or puckering.
Palpation: No tenderness noted on palpation throughout extremity.
Sensory: Sensation intact to light touch in distribution of deep peroneal, superficial peroneal, tibial, sural, and saphenous nerve distributions.
Motor: 5/5 extensor hallicus longus /flexor hallicus longus/ gastroc-soleus/tibialis anterior

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

H&P Notes (continued)

Vascular: 2+ dorsalis pedis and posterior tibialis pulses, toes warm and well perfused.
Compartments: Anterior, lateral, and superficial posterior compartments are soft and compressible.

Radiology

Reviewed imaging which demonstrates right peri-implant fracture with loose plate for distal femur, and sliding hip screw for

ASSESSMENT

Jeanne Leonie Hoffman is a 100 year old female who sustained a right peri-implant fracture, orthopedic team is being consulted for management of fracture. Patient has previously been on comfort care while at UWMC for this same injury. Operative fixation with injury like this would come with significant mortality risk for the patient patient would unlikely be able to withstand the morbidity associated with this procedure. Post we recommend patient should continue nonoperative management session given patient's DNR/DNI status and comfort care measures previously mentioned and recommended palliative care consult and goals of care discussion with her son.

PLAN

Right peri-implant proximal femur fracture
-Plan for nonoperative management
-Pending discussion with palliative care, and goals of care discussions
-Nonweightbearing
- Team: Orthopaedic Surgery Blue

- This plan was discussed with Dr. Joseph Sliepka, MD, the Orthopaedic Trauma Chief on-call who is in agreement

Discharge Summary Note

Discharge Summary by Bann, Maralyssa Angelique, MD at 3/11/2025 1706

Deceased Discharge Summary

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Discharge Summary Note (continued)

Gender Identity: Female Pronouns: she/her/hers
PCP: Navalurkar, Reema, MD
Code Status: DNR DNR/DNI

DATE OF ADMISSION: 3/9/2025
DATE OF DEATH: 3/11/2025
DISCHARGE TEAM & ATTENDING: Medicine Hospitalist Overflow Adult & Bann, Maralyssa Angeliqu*

ADMISSION DIAGNOSIS: Inability to swallow, maintain hydration/nutrition secondary to severe encephalopathy and dysphagia

PRELIMINARY CAUSE OF DEATH: Cardiac arrest secondary to severe protein/calorie malnutrition, inability to swallow/maintain hydration/nutrition, severe encephalopathy, dysphagia

REASON FOR ADMISSION:
Pt had recent prolonged hospital course at OSH 1/9/25-3/8/25 for acute limb ischemia s/p amputation with postoperative bradycardia and intermittent Mobitz II heart block s/p PPM. Hospital course was complicated by severe dysphagia and very high aspiration risk as well as frailty with R periprosthetic femur fracture sustained after a fall. Several goals of care conversations were held with the patient's LNOK, son Louis. She was managed on "modified comfort measures" and discharged to SNF. Her son then brought her to HMC 3/9.

HOSPITAL COURSE:
Patient was evaluated on admission here for several issues that had been identified at previous hospital including fracture (Orthopedics recommended non-operative management) and severe aspiration risk from dysphagia and encephalopathy (SLP evaluation noted no palpable swallow when puree placed in her mouth). Throughout this hospital stay, the patient remained noninteractive, did not respond to questions or commands, only moaning and crying out intermittently. Based on patient condition, comfort-directed therapy was recommended, to which patient's son Louis assented on 3/10. She passed peacefully on 3/11.

CONSULTS COMPLETED:
IP CONSULT TO PALLIATIVE CARE

UW Medicine physicians mentioned in this note can be reached by calling the UW Medicine Paging Operator at 206-520-3000. If any part of this transcript is missing or to request other transcripts for this patient call 206-744-9000. For online access to patient records enroll in EpicCare Link at okta.uwmedicine.org.

Consult Orders
1. Inpatient Consult to Palliative Care [372904726] ordered by Bann, Maralyssa Angelique, MD

Attestation signed by Merel, Susan Eva, MD at 3/11/2025 7:50 AM

Date of Service: 3/10/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.

I spent a total of 65 minutes for the patient's care on the date of the service.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Clinical Notes (continued)

PALLIATIVE CARE SERVICE: INITIAL CONSULT

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 3/9/2025
PCP: Navalurkar, Reema, MD
Code Status: DNR DNR/DNI

Inpatient Consult to Palliative Care
Consult performed by: Navalurkar, Reema, MD
Consult ordered by: Bann, Maralyssa Angelique, MD

ID/CC/REASON FOR CONSULT:
Jeanne Hoffman is a 100yo woman well known to me (as her PCP, currently on palliative care consult service) with HTN and PAD with recent prolonged hospitalization at UWMC Montlake (1/9-3/8/2025) for critical limb ischemia now s/p L AKA; this hospitalization was c/b delirium, Mobitz II heart block requiring PPM placement, fall resulting in R peri-prosthetic femur fracture. She discharged to a SNF on Bainbridge Island and presented to HMC ED after 1 day at her son/primary caregiver's request.

We appreciate the consult request from Dr. Maralyssa Bann, attending physician of hospital medicine service.

HPI:
Please see Dr. Barne's 3/8 discharge summary for recap of recent UWMC hospitalization.

Ms. Hoffman presented to HMC ED on 3/9 PM; her son told ED providers he was worried about her R femur fracture worsening because he felt her brace was poorly applied. Ms. Hoffman is nonverbal, rocking back and forth on her bed clearly uncomfortable. Her son Louis is teary with tangential speech that is difficult to interrupt/redirect. Today, he tells us that he is upset with the care provided to his mother at Montlake and her SNF, citing his own experience as a "toxicologist and geriatrician," though he did not attend medical school. As previously extensively documented, he has strongly held beliefs about he/his mother being persecuted at the hands of white supremacists on Bainbridge Island. We attempted to (1) acknowledge his distress ("It sounds like the last few months have been very stressful!") and (2) redirect to his mother's current circumstance ("She is safe in this hospital and we are working hard to make her comfortable"). I inquired whether he feels safe currently and whether he has others for support during this difficult time - he says he does not feels safe but he has a friend named Josh is coming to visit them later today. He states that he's been told by many providers that she is dying of dehydration/starvation; he voices anger and frustration about our "letting her die" (specifically that we are not offering operative femur repair or placing an NGT under anesthesia despite several failed attempts at placing an NGT at Montlake and her clinical status being deemed too tenuous to withstand anesthesia).
We reiterated that we are worried about her and our priority is to have her pain better controlled. We do think that her presentation means time is short. Louis states that if that's the case, "I'm going to leave, pack up her things, and not come back."
He returned to her bedside later this afternoon with his friend Josh; they accepted a visit with Regina (Pall Care Spiritual Care Provider). I ran into him in the hallway and he again stated he'd like the surgery to fix his mother's femur, insisting that he signed the form with surgeons yesterday. I told him that I can see his loves his mother very much and unfortunately surgery is longer being offered due to the high level of risk. He agreed that his mother looks more comfortable since starting morphine today.

SYMPTOM SCREENING AND ASSESSMENT:
Modified-ESAS not able to be completed due to patient unable to communicate.
I clinically assessed for evidence of shortness of breath and pain:
Shortness of breath was present? No
Pain was present? Yes

PHYSICAL EXAM:
General: frail, very thin woman lying in bed, moaning and reaching out with both arms, brow furrowed and eyes open; no consistent eye contact. very distressed.
HEENT: dry mucous membranes.
CV: regular rate and rhythm, 2+ radial pulses; WWP.
Resp: normal effort on room air.
Ext: LLE surgically absent; RLE with femur brace present.
Neuro: not answering questions, moving extremities spontaneously, not following commands.

IMPRESSION:

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Clinical Notes (continued)

Jeanne Hoffman is a 100yo woman with HTN and PAD with recent prolonged hospitalization at UWMC Montlake (1/9-3/8/2025) for critical limb ischemia now s/p L AKA; this hospitalization was c/b delirium, Mobitz II heart block requiring PPM placement, fall resulting in R peri-prosthetic femur fracture. She discharged to a SNF on Bainbridge Island and presented to HMC ED after 1 day at her son/primary caregiver's request.
Her care for the past several months has been very challenging because she is very hard of hearing and defers medical decisions to her son. In the outpatient setting, despite some bizarre beliefs about their neighborhood and healthcare system, he appeared to be caring for her adequately, managing all ADLs/IADLS for the past several months to years. Since her hospitalization in Jan 2025, he has demonstrated little understanding/insight re: her decline and medical complexity, causing much distress among several healthcare providers both at Montlake and HMC. Today, his persecutory delusions are evidently impacting his ability to discuss her care/goals. He does consistently state that he wishes she can return to Bainbridge island but does not want her to return to the Bainbridge SNF. She is now nonverbal, bedbound, and unable to tolerate PO.
Thus, with her poor prognosis on the order of days, our focus will be to optimize her comfort. Her son Louis has assented to this.

Goals of Care: comfort measures only;
Discussed with nursing
Discussed with primary team

Palliative Performance Score:

10%	Totally bedbound	Unable to do any activity / Extensive disease	Total care	Mouth care only	Full or drowsy +/- confusion

PALLIATIVE CARE INTERDISCIPLINARY CARE PLAN AND RECOMMENDATIONS:
- continue Butrans patch 5mcg/hr q7 days
- continue concentrated morphine solution PO 5-10mg q2h PRN for pain
- agree with tylenol PR or IV as adjunct analgesia
- her pain currently appears to be the primary driver of her agitation so would prioritize addressing her pain if she seems to be distress. however, given age, recent surgery and fracture, dehydration, and unfamiliar environment, she remains at high risk for hospital-acquired delirium. if pain appears to be well controlled but she develops agitation/hyperactive delirium in spite of the following usual delirium de-escalation strategies and she poses a risk to her own safety or to staff safety, we recommend haloperidol IV 0.5mg q4 PRN
- if son is again witnessed to engage in inappropriate/harmful physical or verbal behavior (such as forcibly trying to feed her, shaking her, yelling at her, or manipulating her RLE), please call security and document this event.
- I asked son if he'd like to be called with medical updates and he did not directly say yes or no; he seemed overwhelmed. I would therefore reserve phone calls for decision-making or in the event of her passing.
- Spiritual/Existential: Our team chaplain is available for visits to Jeanne and her son Louis as needed.

Advance Directives/POLST
1) SURROGATE DECISION MAKER:
Louis (son), ph# 206-780-6885

2) Advance Directives: none

3) CODE STATUS: DNAR/DNI

Disposition: inpatient end-of-life care with CMO order set

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

- Form of Contact: In person
- Present at Encounter: Patient and caregivers
- Visit Type: Comfort care Initial
- Location: HMC 7E
- Spiritual Preference:
- Psycho/Social History:

3.

4. Narrative of Spiritual Encounter

5. Palliative Care Chaplain provided supportive visit to Jeanne and her son Louis. Their friend Josh was also visiting. Jeanne does not look comfortable and expresses pain through her reaching out and moaning. Louis is in tears as he grieves the end of his mother's life. Tears fall down Louis' face as he shares how he feels he has failed his mother, how she is his best friend, how he feels their community has abandoned them. I listen patiently because interjections have no impact on Louis. He tells his friend Josh and I that this is goodbye and he will not return. He tells his mom that he is leaving and he will see her on the train.

6. Josh places his hand on Jeanne's forehead to help calm her and help her feel connected but this does not settle her.

7. After Louis and Josh take their leave, Jeanne continues to thrash and moan and so I stay to continue to offer supportive presence, care and comfort. At times we clasp hands, at times I stroke her forehead, and at times Jeanne will settle but it is intermittent and she is clearly not comfortable yet. I would also offer her words of comfort letting her know that the care team is doing their best to help her feel comfortable.

8. An RN who was filling in while her nurse was on break came to offer pain medication with the hopes that it would help her. The medicine was concentrated and we hoped it would be enough to help relieve and calm her but it did not in the time that I spent with her.

9. I left after I let Jeanne know that the care team would continue to work to help get her to a place of comfort and rest. I wished her peace and that she would know she was safe.

Nursing Note

Westerman, Jordan M, RN at 3/10/2025 0657

Patient Summary
100YO admitted from Rehab facility, after recent admin as Montlake. 1/9-3/8

Hx of HTN, T2DM, HLD, DVT, PAD, From Montlake admin- L AKA, Mobitz II heart block requiring PPM 1/13, Fall 3/4 resulting in R hip fx

Assumed care of pt 2100 from ED. VSS on RA. Resp 18-22. Pt AOx0, does not follow commands, intermittently tracking. Extremely dry mucus membranes, mouth breather, oral completed x2 overnight. No BM overnight. Minimal UOP via purewick. PIV x1- all meds IV. Pt unable to tolerate PO, coughing with small intake, NPO. RLE KI in place for comfort. Pt moaning, wailing, and groaning through out shift, pain meds given when available. Q2 turns performed overnight. Sensitive BA on for safety, pt rounded on regularly.

Patient Summary
100YO admitted from Rehab facility, after recent admin as Montlake. 1/9-3/8

Hx of HTN, T2DM, HLD, DVT, PAD, From Montlake admin- L AKA, Mobitz II heart block requiring PPM 1/13, Fall 3/4 resulting in R hip fx, non operative.

Patient arouses to voice. Does not track RN in room, rarely opens eyes. Does not follow commands. Makes incomprehensible noises, moaning in pain. Son states, "Only I can communicate and know what she's saying. She uses tactile communication! When she grabs her stomach that means she's hungry." VSS, sating 92% on RA this morning when vitals taken. RR 16-20. After discussion with primary team, palliative, and son, patient transitioned to

Clinical Notes (continued)

comfort care. Son then grabbed patient's face with both hands and yelled, "you're dying mom you're dying mom they want you to die!" Provider and RN tell son not to grab the patient, that she will benefit from a calm environment. SLP consulted and recommended therapeutic feeding tray. Son stated, "she's just hungry! That's all that's wrong with her. Her organs are fine she can live longer but you're starving her!" Patient without swallow reflex according to SLP, does not close mouth when food is inserted, and becomes increasingly agitated pushing food away. Patient is in obvious distress and son states, "it's because you gave her pain meds now she doesn't want to eat!" Patient moaning in the room, arms grasping the air and rolling in bed in the morning. Patient appeared in severe pain to nursing staff and primary team. Once comfort measures initiated patient started on oral morphine concentrate. Resting and appears much more comfortable this afternoon. Last BM PTA. Incontinent of urine. Unable to take in any PO intake. PIV x1 to L hand. L AKA. R knee immobilizer per son request. Rounded on regularly.

Son pulled RN aside in hallway and started speaking about "the hatred circle" and "white supremacy" and said, "now they're going to come after me and take my home away. I've already disguised it as best as I could but they might find me. I'm in just as much danger as her!" Son states he doesn't want to see his mom die and that he is going to leave and not return.

Action Items

Clinical Notes (continued)

Comfort care

Situational Awareness

- Louis (son) at bedside; can be difficult to give education - has cared for her and other family members for some time. Dictates most of pt's care, only calls when additional help required. Wants aggressive measures and has difficulty comprehending probability of pt's condition improving is unlikely.
- Recently removed from housing (October), now lives in tent with son. SW aware and addressing
- Severe HOH, use whiteboard to communicate
-*pt son rotated pt's leg after fall 3/5, he did it again w/ doctor present on 3/6, MD enforced education about not doing that again or he may be kicked out of the room.

Electronically signed by Anderson, Noah R, RN at 3/11/2025 6:02 AM

Bloom, Shannon K, RN at 3/11/2025 1734

Comfort measures only. Patient restless at beginning of shift, thrashing arms, RR 20-22. PRN morphine solution and IV dilaudid given with good effect. Patient appears comfortable with RR ~18 when rounding. Incontinent x1. Son at bedside, frequently requesting for NG tube placement, lab draws, vital checks. Comfort measures reinforced with son, MD notified.

1635: Patient noted with RR = 0, Dr. Bann notified. Patient's son at bedside, visibly distraught. Emotional support provided, spiritual care visit offered to patient's son but he declined. Patient's son stated "I'm going now that she's dead" and left the unit. Dr. Bann came to bedside to call TOD.

HMC ED SOCIAL WORK PSYCHOSOCIAL ASSESSMENT

ID / CC / Reason For Referral: Pt is 100 year old female BIB medics from SNF d/t concerns for leg splint placement. SW follows case upon arrival to gather information and provide support.

ED Referral Source: Self referral (case-finding)

Social Work Summary:
HPI: Per report, Pt was d/c from UW Montlake yesterday to SNF for rehab. Today, pt's son noticed that her splint had not been placed correctly. He also identified other concerns for care, so he asked for her to come to HMC. Pt arrives A&O x0 and unable to follow commands. Pt's son accompanies her as a care advocate and provides hx to medical team.

SW meets with pt's son at bedside to introduce self and role. He shares concern that pt is not being treated d/t her

Clinical Notes (continued)

age. He expresses that prior to this injury she was very healthy and able to participate fully in her life. He shares that he feels that after this recent admission, her care team was pushing for comfort measures while he continues to advocate for rehabilitation. He reports that he believes that she was sent to SNF be given morphine and they are not actually going to help her get better. He reports that he is pt's medical DPOA and they have had many conversations about her medical wishes. He advocates that she would prefer to try every intervention rather than to "suffer" in pain. He expresses they would be open to surgery for her current injury, even if it meant pt would require a wheelchair to get around. SW provides him with supportive listening and validation. SW encourages him to continue to communicate with medical team to advocate his wishes and to get a good understanding of her prognosis for future care planning.

SW remains available for additional support, as needed.

Patient/Social History:
Language: English
Information Obtained From : Children
Living situation prior to admit : Skilled Nursing Facility
PTA-Name of Facility :Bainbridge Island Health and Rehab

Healthcare Advanced Directive/Decision Making: Pt son reports that he is medical DPOA.
Contact in Following Order for Legal Next of Kin Decision Making:
1. Patient as able
2. Louis Charles Hoffmann Alloin, son: 206-780-6885

Impression: Pt is awake but unable to communicate with medical team. Pt appears well supported by son, who is a strong advocate for pt's quality of life.
Plan: Pt will be admitted to HMC.

ORTHOPEDIC SURGERY DAILY PROGRESS NOTE

ADMIT DATE: 3/9/2025

PROCEDURES:
None

ASSESSMENT:
100 year old female who was recently admitted to UWMC Montlake for acute limb ischemia s/p L AKA and a R inter-implant proximal femur fracture who was transferred to HMC for ongonig discussions of GOC in the setting of her multiple injuries.

PLAN:
Activity / WB status: NWB RLE in abduction brace for comfort
Antibiotics: No antibiotics indicated for their orthopedic injury(ies)
Anticoagulation plan: Defer to primary, but recommending Enoxaparin 30mg BID x6 weeks as it is the standard of care for DVT prophylaxis in adult trauma patients
Dispo: Pain control, comfort

Follow up: Follow-up pending clinical course.

#R inter-implant proximal femur fracture
- in abduction brace for comfort as above
- Will need to discuss with son (Louis) regarding ongoing care, but for now we do not have any OR plans for Jeanne given her prolonged hospital course at UWMC
- May have regular diet

PROBLEM LIST:

Patient Active Problem List

Diagnosis

- Osteoporosis, unspecified
- Adult failure to thrive syndrome
- Type 2 diabetes mellitus without complication (HCC)
- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Failure to thrive in adult
- Abdominal pain
- Acute lower limb ischemia
- Bradycardia
- Housing instability
- Advanced care planning/counseling discussion
- Reduced vision
- Community acquired bacterial pneumonia
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Primary open angle glaucoma (POAG) of both eyes
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Vitamin D deficiency
- Primary osteoarthritis of both hips
- Imbalance
- History of recurrent deep vein thrombosis (DVT)
- Pseudophakia, both eyes
- Urine incontinence
- Osteoarthritis of lumbar spine

SUBJECTIVE:
Examined at bedside this AM, patient is in some distress due to pain.

VITALS: *(Most recent and 24 hour range.)*
Temp: [36.3 °C-36.6 °C] 36.6 °C
Pulse: [78-102] 102
Resp: [9-28] 22
BP: (102-156)/(42-81) 138/67

Height: [5' (152.4 cm)] 5' (152.4 cm)
Weight: [46.8 kg (103 lb 2.8 oz)] 46.8 kg (103 lb 2.8 oz)

PHYSICAL EXAM:
General: Frail appearing. Moderate distress in setting of pain. Appears older than stated age. Lying in bed.
Respiratory: Breathing comfortably on room air. and Bilateral symmetric chest rise. No extra work of breathing.
Neuro: A&O x0, does not follow commands or answer questions.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Clinical Notes (continued)

Left Lower Extremity
Inspection: Prior AKA with mepilex overlying distal stump, no erythema or open wounds
Palpation: No apparent tenderness to palpation over bony surfaces throughout extremity.
Range of Motion (Nested ROM): No pain with log roll
Sensory: Noncompliant with exam
Motor: Noncompliant with exam
Vascular: warm and well perfused and capillary refill < 2s

Right Lower Extremity
Inspection: No gross deformity. No open wounds. Knee immobilizer in place to the RLE.
Palpation: Deferred over known injury location; no tenderness to palpation along the remainder of the extremity.
Range of Motion (Nested ROM): Deferred
Sensory: Noncompliant with exam
Motor: Noncompliant with exam but seen volitionally plantar and dorsiflexing at the R ankle
Vascular: warm and well perfused and capillary refill < 2s

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 3/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with complex medical history who was recently admitted at Montlake, Med E medicine service from (1/9/2025 - 3/8/2025) for acute limb ischemia s/p L AKA, hospital course was complicated by postoperative bradycardia requiring PPM on 1/13, dysphagia, hospital related fall resulting in right periprosthetic femur fracture, and FTT, discharged to Bainbridge Island Health and Rehab SNF (on 3/8/25) and represents to HMC on 3/9/25
Subjective

SUBJECTIVE

INTERVAL HISTORY:

Clinical Notes (continued)

-Admitted overnight
-Pt was just discharged from UWML to SNF and son (Louis) brought her here; per report he declined return to the SNF or transfer back to UWML from the ED
-Received report that overnight pt was having severe distress, writhing in pain, crying out
-SLP saw pt this morning, very poor function (no palpable swallow per therapist note but open mouth posture, frequent moaning, no command following)

I met Louis this morning at the patient's bedside. Before able to introduce myself he said "I need to know how to get security to check out a visitor. There's someone coming who I don't want to come to this room because they hate her." I asked for clarification and he had quite a long response at times tangential including references to "white supremacists who put their hatred on her and who want her to die." He gave many details about what sound like previous conversations related to housing options and navigating different resources. At one point, he said "They took away her housing so that she would just die. They said 'You're 100. It's time to go.'" I was unable to ascertain who exactly might be coming to visit but perhaps a case manager or housing resource support person?

I redirected our conversation to the patient's current health status and began by introducing myself. Louis introduced himself as the patient's "business partner, best friend, and son." He then said "I'm also what you'd call a doctor." I tried to inquire what his understanding is of his mother's illness and current medical condition. Louis again gave a confusing response that I believe referenced some of the events from the recent hospitalization at Montlake. During his recap, as he demonstrated what he believed to be incorrect cares delivered by previous staff (such as failed attempts at NGT placement) he shook the patient causing her to cry out. I instructed him to stop doing this as it appeared to be causing her distress. I told him what we had noted on the swallow evaluation earlier in the morning to which he responded multiple times that "She's starving. She's starving." He became more animated at this point, raising his voice. Around this time the patient then also began crying out again and raising her arms towards the sky. Louis said "See, this is her starving." I expressed to Louis that it is hard to see our loved ones suffer but that we do not have a fix for what is going on in her body.

I explained to Louis that given everything that we are seeing including his mother's frailty, her inability to meet her nutritional needs, and her overall condition, I believe her to be nearing the end of her life. He again had a long response to this which included some references to "reports made to many different bodies including the Human Rights Commission about her situation." I told him that I would recommend that we focus on her comfort. I said explicitly that I think she is in the dying process and that her body is shutting down. He said "If you think she's dying then I'll just get my things and leave and never come back." I told him if he felt he needed to do that, that was OK. He then grabbed the patient's face and shouted at her repeatedly "Mom, you're dying. Mom, you're dying." He then asked in what time frame her death might occur. I estimated that she may have on the order of days to weeks left to live. He then said "OK, I'm going to leave then." (Although, did not leave the room at this time.) I told him that given everything we are seeing and what we had discussed, I would plan to stop vital sign checks, stop lab checks, deliver medications for the symptoms that we see her display, and to limit her suffering. He nodded to this and said again "OK, I'm going to go." The patient's nurse inquired if he would like phone call updates or any other form of communication and he said "No."

Louis remained in the room for a period of time after this conversation. I stepped out to discuss the case with consulting Palliative Care team who had arrived on the floor. Please see separate documentation for other provider conversations.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 40 mg, q HS
- lidocaine, 1 patch, q24h

INFUSED MEDICATIONS:

Physical Exam

Pt sitting with head elevated in hospital bed, somewhat slumped over. Cachectic.
Eyes closed and intermittently groaning, raising her arms towards the ceiling.
Does not respond to verbal questions. When I hold her hand gently, she begins moaning but does not interact.
Mouth open. Very dry with no teeth and visible patches of blackened and dried mucosa across roof of mouth.
Breathing rapidly and shallowly. No cough appreciated.
Regular rapid heart rate. No edema noted.
Skin is dry and warm. RLE in splint. Dressing to L stump site.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a complex medical history who was recently admitted at Montlake, Med E medicine service from (1/9/2025 - 3/8/2025) for acute limb ischemia s/p L AKA, hospital course was complicated by postoperative bradycardia requiring PPM on 1/13, dysphagia, hospital related fall resulting in right periprosthetic femur fracture, and FTT, discharged to Bainbridge Island Health and Rehab SNF (on 3/8/25) and represents to HMC on 3/9/25.

Pt brought to HMC almost immediately following discharge from UW Montlake to SNF yesterday. Patient is cachectic, unable to safely swallow or meet hydration/nutrition needs by mouth, and unable to communicate. She is distressed-appearing and appears to be in pain. Recommend transition to Comfort Measures Only.

I have relayed my assessment that Ms Hoffman is nearing end of life to her son, Louis. See details of our conversation above. Today, he was often tangential with somewhat pressured speech and some paranoid thought process displayed. While he seemed to grasp the general understanding that she is unable to safely swallow and cannot meet her nutritional needs, his thought process would sometimes pivot to thoughts of persecution and hatred directed towards her by "people who want her dead." It is hard to know whether these concerns reflect specific past events as at times he seemed to mention general groups ("white supremacists" and "people on Bainbridge" coming after her) while at others specific individuals (at least one of whom may have been a housing case worker involved in some kind of housing resource discussion). His ability to participate in nuanced discussion of her medical history was inconsistent and frequently tangential. It is very difficult to engage in any kind of complicated

Clinical Notes (continued)

decision-making with him. However, when we focused on the specific issues at hand in this moment, seemed to understand that his mother is in the dying process and indicated that he cannot be present while she passes. He agreed that she should not be in pain and assented to Comfort Measures Only plan.

Based on our conversation, I believe Louis to be in the grieving process and have asked Palliative Care team including social work, spiritual care, etc to see if we can help brainstorm the best way to support him. I also worry about some of the behaviors I witnessed in the room today (intermittently shaking her, yelling at her, and seeming not to interpret her signs of distress when doing so) and behaviors that I have heard report of from current and previous staff (forcibly trying to feed her, manipulating her leg with the broken hip despite instructions not to, preventing care teams from delivering care). As of now, he has told our care teams that he is leaving the hospital and does not plan to return. I am not certain if this will be true or not. Should he return, nursing team and I have discussed making sure that we provide clear boundaries and expectation-setting. We began this process today by instructing him not to forcibly touch his mother and not to raise his voice at her or at staff. If he harms his mother or prevents necessary caregiving, security will be called.

- Comfort Measures Only: no vital signs, lab draws, focus on symptom management, DNR/DNI
- Palliative Care has consulted: appreciate management recommendations as well as support and assistance for care teams and patient/family

Pain:
- Butrans patch 5mcg/hr
- Concentrated morphine solution PO 5-10mg q2hrs for pain
- Tylenol PR PRN for pain or fever
- Lidocaine patch PRN pain

Aspiration:
- Maintain NPO status here unless patient herself requests (seems unlikely); if Louis requests to try feeding her would only engage in this with direct supervision and stop if the patient seems distressed at any point

Mobility/ROM:
- NWB RLE, limit motion of leg as much as possible; abduction pillow, log rolls
- Hip-spica brace in place; remove if uncomfortable (not strictly recommended by Ortho)

Other Management:
- Will need to consider management of her pacemaker as this was not explicitly discussed today

Problem List:
#Severe aspiration risk, ongoing
#Severe protein-calorie malnutrition POA
#Right hip fracture, managed non-operatively
#Acute limb ischemia s/p L AKA with superficial infection of left stump site
#s/p PPM placement for symptomatic bradycardia and 2nd degree AV block
#Chronic bilateral pleural effusions
#Mild parotitis

I spent a total of 120 minutes for the patient's care on the date of the service.

SLP Assessment

Assessment

Pt presents w/ increased risk for aspiration related complication given advanced age, failure to thrive, dependence on others for oral feeding/oral care, reduced mobility, and alterted mental status. On this date, Pt demonstrated limited reception to PO, reduced oral manipulation, and no palpable swallow despite use of family-reported strategies w/ family

	assist to trial 1:1 feeding w/ upright position, verbal/visual cues, and max encouragement. Given overall clinical picture and ongoing GOC discussions, will defer diet recommendations to pt, family, and interdisciplinary team. May consider family endorsed strategies to optimize PO intake/reception including: use of familiar items (ensure, apple sauce, mashed potatoes), use of lid cup + straw, use of whiteboard to label items and include written visual cues to swallow. Nutrition/dietary, palliative, and spiritual care consults would be appreciate. Acute SLP will continue to follow for Pt/family education, re-assessment, as needed and if service remains within GOC.
Evaluation/Treatment Tolerance	Treatment limited secondary to agitation
Plan	
SLP Plan	Skilled SLP
Treatment/Interventions	Swallow treatment;Patient/family education
SLP Frequency	1-3x/week
SLP Discharge Recommendations	Follow up with SLP at next level of care;Assistance with;Supervision with
Assistance with Details	IADLS;Eating;Drinking
Supervision with Details	IADLS;Eating;Drinking
Goals	STG 1;STG - Education
Swallow Recommendations	
Diet Recommendations	Other *(Defer to interdisciplinary team pending GOC discussion: can consider 4/0 vs 5/0 given no NGT/PEG not within prior stated goals with careful hand feeding strategies and aspiration precautions)* Careful Hand Feeding Careful hand feeding means giving someone small amounts of food and drink when they are no longer able to feed themselves. Careful hand feeding can work as long as a person is comfortable and wants to be fed. Patients are never force fed food. General Precautions: • Only feed when awake, alert, and accepting of intake • Sit as upright as able during & 30 minutes after meal • Small bites/sips one at a time via spoon at a slow rate • Encourage independence (as able) by using handover-hand feeding: put a utensil in the person's hand, place your hand around theirs and lift both of your hands to the person's

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Clinical Notes (continued)

	mouth for a bite • Reduce distractions at mealtimes • Make sure the patient swallows a bite or sip before giving the next bite or sip • Promote good oral hygiene, check for residue in the person's mouth after meals. If it's difficult to use a toothbrush, try oral swabs • Stop if person is declining (turning away, not willingly opening their mouth, spitting food out), there is significant residue in their mouth, or overt signs of coughing and choking leading to discomfort are present
Medication Administration Recommendations	Other *(Pending GOC: can consider IV vs crushed in puree)*
Oral care	Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette
Aspiration Precautions	As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time;1:1 feeding;Upright for 30 minutes after eating
Swallow Recovery	Medically Complex: unable to assess prognosis.

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 3/9/2025
Code Status: DNR DNR/DNI

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: 100 yo woman recently unhoused, living in tent with her son on Bainbridge, at ML 1/9-3/8 after LAKA for acute limb ischemia, also recent R periprosthetic femur fracture

INTERVAL HISTORY:
Per RN, seems to calm somewhat iwith IV HM and liquid morphine concentrate, but got 10 mg of morphine just under 2 hours ago and is still agitated. Jeanne looks slightly calmer than yesterday and is not calling out, but still has open mouth, wide awake, furrowed brow, rhythmic movements.

Louis was at bedside. Did not mention that he had not planned to visit (told nurse he had an ophthalmology appt nearby). He was massaging her shoulders and using the mouth swab with water. When I said I though she looked uncomfortable and needed more medication, he vaguely disagreed with this but didn't argue with me about pain medications. He has heard she could go back to the SNF and is fine with this, wants her to ride in a wheelchair on the ferry.

SCHEDULED MEDICATIONS
buprenorphine, 1 patch, Transdermal, q7 days SCH
lidocaine, 1 patch, Topical, q24h

INFUSED MEDICATIONS

PRN MEDICATIONS
PRN medications: acetaminophen, [Held By Provider] atropine, bisacodyl, glycopyrrolate, haloperidol lactate, HYDROmorphone, morphine CONCENTRATED, petrolatum

PHYSICAL EXAM:

IMPRESSION AND RECOMMENDATIONS:
100 yo woman, recently unhoused, son who is LNOK with some fixed ideas about her care, recent discharge from UWMC after prolonged hospitalization, now on comfort-focused care.

Appearing calmer than yesterday - I do think agidation may be driving by pain.
Change morphine to 10-20 mg of the concentrated solution q 2 hours prn pain.
Ok to continue current PRN HM order, but try to avoid using it as she may be able to discharge back to SNF.
Primary team to do new POLST with Louis (DNR/comfort only/no transfer) but let us know if you need help with us.
Louis appears to plan to continue to be involved in his mother's care, despite what he said yesterday.

Goals of Care: comfort
Palliative Performance Score 20%
Estimated Prognosis: days to weeks

Advance Directives/POLST
1) SURROGATE DECISION MAKER:
Louis (son), ph# 206-780-6885

2) Advance Directives: none

3) CODE STATUS: DNAR/DNI

Disposition: inpatient end-of-life care with CMO order set

Code Status: DNR

Disposition: comfort care here, possible transfer back to SNF

[x_] patient discussed with nursing
[x_] discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 32 minutes for the patient's care on the date of the service.

Discharge Planning Assessment

CM performed chart review as patient at end of life. Palliative following for CMO. Patient was discharged to Bainbridge Island Health and Rehab Center on 3/8. Her son, Louis, discharged her from the facility and presented to HMC ED.

Patient aroused to voice, does not follow commands. Per provider, likely imminent and needs comfort measure.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Clinical Notes (continued)

CCN completed chart review, engaged in multidisciplinary huddle, and screened this patient for care coordination needs. CCN will remain available should needs arise. Please consult CCN as indicated.

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 3/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with complex medical history who was recently admitted at Montlake, Med E medicine service from (1/9/2025 - 3/8/2025) for acute limb ischemia s/p L AKA, hospital course was complicated by postoperative bradycardia requiring PPM on 1/13, dysphagia, hospital related fall resulting in right periprosthetic femur fracture, and FTT, discharged to Bainbridge Island Health and Rehab SNF (on 3/8/25) and represents to HMC on 3/9/25, now CMO

Subjective

SUBJECTIVE

INTERVAL HISTORY:
-Son Louis was at bedside this morning, he was teary when reporting that "She's at the end of her life"; he requested wheelchair to be able to take her in private transportation back to SNF because he would like to visit several meaningful places that she thinks he would like to visit before she passes
-I let Louis know we've reached out to the SNF to see if she can return but that for now she was also getting IV medications for some of her symptoms
-He asked if her organs are shutting down and I said I thought that is likely; he wondered about checking her labs but I told him that would not really be helpful because we can't fix those issues and would expose her to another poke/discomfort without much benefit
-Pt was quiet, noninteractive for much of the conversation, then became more agitated moaning and raising her arms towards the end of us talking at bedisde

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- lidocaine, 1 patch, q24h

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] atropine, 2 drop, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- glycopyrrolate, 0.2 mg, q4h PRN

Last weight: 46.8 kg (103 lb 2.8 oz) (03/09/25 2200)

I&Os: No intake or output data in the 24 hours ending 03/11/25 1505

Physical Exam

Mouth open. Very dry MM.
Eyes closed. Noninteractive. Did not track.
Occasionally moaned. Once cried out and raised her arms upwards. Otherwise minimal movements.
No work of breathing noted.
Thin extremities with temporal wasting. Cachectic.
RLE in splint. Dressing to L stump site.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Hoffman is a 100 year old woman with recent prolonged hospitalization at UWML who was brought to HMC by son (LNOK). Pt has very poor swallow, unable to maintain nutrition/hydration, not a candidate for NGT or PEG.

- Comfort Measures Only: no vital signs, lab draws, focus on symptom management, DNR/DNI
- Palliative Care has consulted: appreciate management recommendations as well as support and assistance for care teams and patient/family

Pain:
- Butrans patch 5mcg/hr
- Concentrated morphine solution PO 10-20mg q2hrs for pain; hydromorphone IV PRN breakthrough
- Tylenol PR PRN for pain or fever

Agitation:
- Seems likely driven by pain or stimuli in the room; work on pain control first when appears agitated
- Haldol 0.5-2mg IV q4hrs PRN

Aspiration:
- Maintain NPO status here unless patient herself requests (seems unlikely); if Louis requests to try feeding her would only engage in this with direct supervision and stop if the patient seems distressed at any point

Mobility/ROM:
- NWB RLE, limit motion of leg as much as possible; abduction pillow, log rolls
- Hip-spica brace in place; remove if uncomfortable (not strictly recommended by Ortho)

Other Management:
- Note that pt has pacemaker in place (Boston Scientific RV single lead PPM); given son/LNOK difficulty in processing new information we have not yet discussed the possibility of turning off the pacemaker with him

See documentation 3/10 related to son/LNOK Louis' behaviors. I have had concerns about his understanding of his mother's medical condition and his ability to adhere to appropriate recommended care for her. He visited 3/11 and seems to be processing/grieving her impending death. Would maintain high vigilance for any inappropriate behaviors.

Problem List:
#Severe aspiration risk, ongoing
#Severe protein-calorie malnutrition POA
#Right hip fracture, managed non-operatively

Clinical Notes (continued)

#Acute limb ischemia s/p L AKA with superficial infection of left stump site
#s/p PPM placement for symptomatic bradycardia and 2nd degree AV block
#Chronic bilateral pleural effusions
#Mild parotitis

Filed by: Uw Lab Results Interface, User 03/10/25 1120
Resulting lab: UW MEDICINE CENTRAL LAB - ANNEX
Order status: Completed
Collected by: Westerman, Jordan M, RN 03/09/25 2311

Components

Component	Value	Reference Range	Flag	Lab
Candida auris Qualitative PCR Specimen Comment: Axilla/Groin	Swab	—	—	HMC
Candida auris Qualitative PCR Result	None detected	NDET	—	CL
Candida auris Qualitative Interpretation Comment: This is a negative result. The assay utilizes target specific forward and reverse primers for the C. auris ITS2 gene. The lower limit of detection, LoD (the minimum CFU level that gives a positive result in 95% of replicates), confirmed at 30 CFU/mL. This test was developed and its performance characteristics determined by the University of Washington Department of Laboratory Medicine and Pathology. It has not been cleared or approved by the US Food and Drug Administration. This laboratory is certified under the Clinical Laboratory Improvement Amendments (CLIA) as qualified to perform high complexity clinical laboratory testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.	SEE NOTES	—	—	CL

XR Chest 1 Vw Resulted: 03/09/25 1929, Result status: Final result

Ordering provider: Barral, Ernest Neil, MD 03/09/25 1823
Order status: Completed
Resulted by:
Medverd, Jonathan Russell, MD
Chen, Eric, MD
Filed by: Interface, Radiology Results In 03/09/25 1932
Performed: 03/09/25 1835 - 03/09/25 1835
Accession number: 48332311
Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
XR CHEST 1 VIEW

CLINICAL INDICATION:
r/o infection

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Imaging (continued)

COMPARISON:
2/23/2025.

FINDINGS AND
Impression:

Lines and tubes: Similar position of left chest wall pacemaker lead.

Lungs: Interval decrease in mild patchy bibasilar pulmonary opacities, which may represent edema, atelectasis, and not excluded aspiration, and/or pneumonia.

Pleura: Interval decrease in small to moderate right and small left pleural effusions. No pneumothorax.

Heart and mediastinum: Unchanged.

Bones: No acute or suspicious abnormality.

I have personally reviewed the images and agree with the report (or as edited).

Venugopal, Nitin, MD
Filed by: Interface, Radiology Results In 03/09/25 2204
Performed: 03/09/25 1952 - 03/09/25 2028
Accession number: 48332752
Resulting lab: UW RADIOLOGY
Narrative:
EXAMINATION:
XR FEMUR 2 VW RIGHT

CLINICAL INDICATION:
Known R hip fracture, has been intermittently adherent with leg brace, assess current alignment

COMPARISON:
Femur radiograph 3/6/2025

FINDINGS AND
Impression:
The bones are diffusely demineralized, which limits radiographic detection of nondisplaced fractures.

Redemonstrated perimplant fracture of the subtrochanteric femur, with similar varus angulation and mildly increased anterior and lateral displacement now up to 10 mm. Alignment is otherwise unchanged. Vascular calcifications.

ATTENDING FINAL REPORT

I agree with the preliminary report with the following comment(s).

-Slight differences in patient positioning may partially account for appearance of increased anterior lateral displacement described above.

I have personally reviewed the images and agree with the report (or as edited).

Medication Administrations

acetaminophen (Ofirmev) IV 1,000 mg [372828142]

Ordering Provider: de Monnin, Karlee, MD
Status: Completed (Past End Date/Time)
Ordered On: 03/09/25 1354
Starts/Ends: 03/09/25 1355 - 03/09/25 1809
Ordered Dose (Remaining/Total): 1,000 mg (0/1)
Route: Intravenous
Frequency: Once
Ordered Rate/Order Duration: 400 mL/hr / 15 Minutes
Admin Instructions: Do NOT refrigerate.

Question	Answer	Comment
How does patient meet IV acetaminophen usage criteria?:	One-time dose for use in the ED	—
Is patient NPO including medication(s)? Note: acetaminophen tablets can be given with small amounts of water or in liquid form to most patients who are NPO.:	Yes	—
Are Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) contraindicated OR have NSAIDs been given without adequate analgesia?:	Yes	—
Is rectal administration of acetaminophen contra-indicated (i.e. patient is neutropenic)?:	Yes	—

Observations	Pt w/ open mouth posture, frequent moaning, no command following during oral mech exam. [N1]
Temperature	Afebrile [N1]
Respiratory Status	Room air [N1]
Behavior/Cognition	Agitated;No command following [N1]
Patient Positioning	Upright in bed [N1]
Consistencies Assessed	0-Thin Liquids;4-Pureed [N1]
0-Thin Liquids - Presentation	Spoon;Straw [N1]

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Flowsheets (continued)

4 Pureed - Presentation	Spoon [N1]
Consistencies Assessed Comment	Pt fed by SLP or son given reduced ability to hold utensils independently. Pt w/ limited reception frequently averting mouth away from utensil despite gentle modes of PO presentation. Puree placed in oral cavity by family, no palpable swallow by this writer. Small volume PO suctioned from oral cavity. [N1]
Signs/Symptoms of Penetration/Aspiration	None [N1]
Patient/Caregiver Training	SLP provided edu regarding role of SLP, aspiration risks given advanced age, AMS, FTT, reduced oral care, need for assistance w/ feeding/oral care/iADLS, emphasis on ongoing GOC discussions between Pt, family, interdisciplinary team given complex bioethical decision regarding nutrition/hydration plan in this pt population. Emphasis on oral care and 1:1 careful hand feeding provided. Please see the following factors in regards to pillars of aspiration PNA development: *** [N1]
Assessment	Pt presents w/ increased risk for aspiration related complication given advanced age, failure to thrive, dependence on others for oral feeding/oral care, reduced mobility,

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Flowsheets (continued)

	and alterted mental status. On this date, Pt demonstrated limited reception to PO, reduced oral manipulation, and no palpable swallow despite use of family-reported strategies w/ family assist to trial 1:1 feeding w/ upright position, verbal/visual cues, and max encouragement. Given overall clinical picture, will defer diet recommendations to pt, family, and interdisciplinary team. Nutrition/dietary, palliative, and spiritual care consults would be appreciate. Acute SLP will continue to follow for Pt/family education, re-assessment, as needed and if service remains within GOC. [N1]
Evaluation/Treatment Tolerance	Treatment limited secondary to agitation [N1]

SLP Note

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Today's Date: 3/10/2025

Patient Active Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome

- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion
- Acute lower limb ischemia
- Bradycardia
- Abdominal pain
- Failure to thrive in adult

Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018
• Thrombocytopenia (HCC)	11/2/2016
• Leg weakness, bilateral	1/6/2015
• Weakness of trunk musculature	1/6/2015
• Vertebral fracture	12/13/2012

Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed healed

- Thyroid nodule, uninodular 12/13/2012
  CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.
- Closed fracture of unspecified intracapsular section of neck of femur 5/1/2007
  Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.
- Unspecified vitamin B deficiency 5/1/2007
  Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency
- Impaired fasting glucose 3/22/2007
- Carpal tunnel syndrome 11/20/2006
  Carpal tunnel release right wrist in 1989
- DIAPHRAGMATIC HERNIA 11/20/2006
  CT of abdomen in 2006
- Esophageal reflux 11/20/2006
- Other convulsions 11/20/2006
  Petit Mal since 1975 Carbamazepine level 7.6 on Feb 2007 Discontinued based on ER neuro consult in early 2013 No recurrence
- Allergic rhinitis, cause unspecified 11/20/2006
- DVT, recurrent, lower extremity, chronic 11/20/2006
  Recurrent DVT and phlebitis since 1982 Per Vascular Surgery note 5/9/2006: continue warfarin 3/9/2010 Lower extremity arterial vascular ultrasound studies normal
- Diabetes mellitus (HCC)
- PAD (peripheral artery disease) (HCC)
- Ulcer of left lower extremity, limited to breakdown of skin (HCC)
  Chronic, Multiple sites of lower leg and ankle, with MSSA

Lingual ROM	Uncoordinated
Vocal Quality	WFL
Observations	Pt w/ open mouth posture, frequent moaning, no command following during oral mech exam.
Patient Information	
Temperature	Afebrile *(WBC: 12.66 (elevated))*
Respiratory Status	Room air
Behavior/Cognition	Agitated;No command following
Patient Positioning	Upright in bed
Objective	
Consistencies Assessed	0-Thin Liquids;4-Pureed
0-Thin Liquids - Presentation	Spoon;Straw
4 Pureed - Presentation	Spoon
Consistencies Assessed Comment	Pt fed by SLP or son given reduced ability to hold utensils independently. Pt w/ limited reception frequently averting mouth away from utensil despite gentle modes of PO presentation. Puree placed in oral cavity by family, no palpable swallow by this writer. Pt w/ expectoration attempts. Small volume PO suctioned from oral cavity.
Signs/Symptoms of Penetration/Aspiration	None *(No palpable swallow.)*
Swallowing Treatment	
Patient/Caregiver Training	SLP provided edu regarding role of SLP, aspiration risks given advanced age, AMS, FTT, reduced oral care, need for assistance w/ feeding/oral care/iADLS, emphasis on ongoing GOC discussions between Pt, family, interdisciplinary team given complex bioethical decision regarding nutrition/hydration plan in this pt population. Emphasis on oral care and 1:1 careful hand feeding provided. Please see the following factors in regards to pillars of aspiration PNA development:

Scenario	Health/Immune System	+	Oral Health Status	+	Laryngeal Valve Protection	=	Predicted Outcome

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Flowsheets (continued)

	Status				Status		
1	Normal	+	Healthy	+	No Aspiration	=	No Pneumonia
2	Normal	+	Poor	+	No Aspiration	=	No Pneumonia
3	Normal	+	Poor	+	Aspiration	=	No Pneumonia
4	Normal	+	Healthy	+	Aspiration	=	No Pneumonia
5	Compromised	+	Healthy	+	No Aspiration	=	No Pneumonia
6	Compromised	+	Poor	+	No Aspiration	=	No Pneumonia
7	Compromised	+	Healthy	+	Aspiration	=	Lower Risk-Pneumonia
8	Compromised	+	Poor	+	Aspiration	=	High Risk-Pneumonia

Ashford, J. R. (2024). *Pneumonia "risk" predictor.* SA Swallowing Services, PLLC. https://www.sasspllc.com/pneumonia-risk-predictor

SLP Assessment

Assessment	Pt presents w/ increased risk for aspiration related complication given advanced age, failure to thrive, dependence on others for oral feeding/oral care, reduced mobility, and alterted mental status. On this date, Pt demonstrated limited reception to PO, reduced oral manipulation, and no palpable swallow despite use of family-reported strategies w/ family assist to trial 1:1 feeding w/ upright position, verbal/visual cues, and max encouragement. Given overall clinical picture and ongoing GOC discussions, will defer diet recommendations to pt, family, and interdisciplinary team. May consider family endorsed

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Flowsheets (continued)

	strategies to optimize PO intake/reception including: use of familiar items (ensure, apple sauce, mashed potatoes), use of lid cup + straw, use of whiteboard to label items and include written visual cues to swallow. Nutrition/dietary, palliative, and spiritual care consults would be appreciate. Acute SLP will continue to follow for Pt/family education, re-assessment, as needed and if service remains within GOC.
Evaluation/Treatment Tolerance	Treatment limited secondary to agitation
Plan	
SLP Plan	Skilled SLP
Treatment/Interventions	Swallow treatment;Patient/family education
SLP Frequency	1-3x/week
SLP Discharge Recommendations	Follow up with SLP at next level of care;Assistance with;Supervision with
Assistance with Details	IADLS;Eating;Drinking
Supervision with Details	IADLS;Eating;Drinking
Goals	STG 1;STG - Education
Swallow Recommendations	
Diet Recommendations	Other *(Defer to interdisciplinary team pending GOC discussion: can consider 4/0 vs 5/0 given no NGT/PEG not within prior stated goals with careful hand feeding strategies and aspiration precautions)* Careful Hand Feeding Careful hand feeding means giving someone small amounts of food and drink when they are no longer able to feed themselves. Careful hand feeding can work as long as a person is comfortable and wants to be fed. Patients are never force fed food. General Precautions: • Only feed when awake, alert, and accepting of intake • Sit as upright as able during & 30 minutes after meal • Small bites/sips one at a time via spoon at a slow rate • Encourage independence (as able) by using handover-hand feeding: put a utensil in the person's hand, place your hand around theirs and lift both of your hands to the person's mouth for a bite • Reduce distractions at mealtimes • Make sure the patient swallows a bite or sip before giving the next bite or sip • Promote good oral hygiene, check for residue in the

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Flowsheets (continued)

	person's mouth after meals. If it's difficult to use a toothbrush, try oral swabs • Stop if person is declining (turning away, not willingly opening their mouth, spitting food out), there is significant residue in their mouth, or overt signs of coughing and choking leading to discomfort are present
Medication Administration Recommendations	Other *(Pending GOC: can consider IV vs crushed in puree)*
Oral care	Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette
Aspiration Precautions	As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time;1:1 feeding;Upright for 30 minutes after eating
Swallow Recovery	Medically Complex: unable to assess prognosis.
Short Term Goal	
Short Term Goal	Tolerate least restrictive diet
Estimated Completion Date	03/31/25
Goal Status	Updated
Short Term Goal - Education	
Patient/caregiver will participate in education regarding	Dysphagia
Estimated Completion Date	03/31/25
Goal Status	Updated

Topic: Misc Nursing (Not Started)

Point: Skin Care/Pressure Ulcer Prevention (In Progress)

Description:
Instruct learner(s) on the need to keep skin clean and dry, the use of film barriers to prevent injury from urine and/or stool (if indicated), and the need to moisturize skin if dry or to prevent dryness.
For pressure ulcer prevention, instruct learner(s) on the need to change position at least every two hours and to request assistance as needed.

Patient Friendly Description: When you're in a hospital bed all day, it can be hard to keep your skin healthy, but it's very important. We'll work with you to keep your skin clean and dry, but if your skin gets too dry, let us know.
Also, if you lie in one position for too long, sores can form. Try to change your position at least every two hours, and ask us for help if you need it.

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Pantoprazole Sodium (In Progress)

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Scopolamine Base (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: LORazepam (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Haloperidol Lactate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: QUEtiapine Fumarate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: OLANZapine (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Aspirin (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Acetaminophen (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: HYDROmorphone HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Morphine Sulfate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: oxyCODONE HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Nalbuphine HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: ROPivacaine HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Thiamine HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Thiamine Mononitrate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Ascorbic Acid (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Prenatal Vit-Fe Fumarate-FA (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Magnesium Oxide (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Magnesium Sulfate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Point: Potassium & Sodium Phosphates (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: K Phos Mono-Sod Phos Di & Mono (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Potassium Chloride (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Potassium Chloride Crys ER (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Sodium Chloride (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Zinc Sulfate (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Lactated Ringers (In Progress)

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Dextrose-Sodium Chloride (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Dextrose in Lactated Ringers (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: KCl in Dextrose-NaCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Dextrose (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Cyanocobalamin (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Heparin Sodium (Porcine) (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Point: White Petrolatum (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Hyaluronidase Human (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Ondansetron HCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Misc. Devices (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Buprenorphine (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: dexmedeTOMIDine HCl in NaCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Potassium Phosphates (In Progress)

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Glucagon HCl (Diagnostic) (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Calcium Gluconate-NaCl (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Sodium Phosphates (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: DOPamine in D5W (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: EMPTY BAG (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: PERIPHERAL NERVE CATHETER CLINICIAN BOLUS (In Progress)

Description:
Instruct learners on name and purpose of medications and possible side effects. If appropriate, include food/drug interactions, reporting of efficacy, and symptoms to report.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Title: PT OT SLP Therapies ()

Topic: Speech Therapy (In Progress)

Point: Swallow Training (In Progress)

Description:
Instructed learner(s) on diet texture/liquid modification and the established safe swallow guidelines.

Patient Friendly Description: With a new diet and careful eating habits, you'll be able to swallow safely.

1. Follow your instructions about your new diet carefully.

2. Eat very small bites - smaller than you think you need to.

3. Eat slowly.

4. If one side of your mouth is weaker than the other, put the food on the strong side of your mouth.

5. Don't talk while you are eating

6. After you eat, sit upright for at least 30 minutes. If your doctor says it is okay, go for a short walk.

7. Don't use a straw unless your therapist says it's okay.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Cognition (In Progress)

Description:
Instruct learner(s) on cognitive aspects of communication (e.g. attention, memory, problem-solving, and executive function).

Patient Friendly Description: Our brains have a big effect on how we can communicate with others. The brain is responsible for taking thoughts and turning them into meaningful speech, words, and gestures.
For example, you might find it hard to say words correctly, even though you know the words. Some words might come out more loudly than others, or you might have trouble putting all the sounds together the way you know they should go.

Sometimes, a stroke can affect the part of your brain that is responsible for language and speech.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Speech/Language (In Progress)

Description:
Instruct learner(s) on functional aspects of communication (verbal/written expression, auditory/reading comprehension)

Patient Friendly Description: Understanding speech and language has many different parts. There's the way you say things about yourself, or the way you write things. There's also how well you understand when people speak to you or when you read.
You might find that some of these things are easier than others.

03/09/2025 - ED to Hosp-Admission (Discharged) in 7E SURGERY (continued)

Patient Education (continued)

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Communication (In Progress)

Description:
Instruct learner(s) on augmentative and alternative communication (AAC) strategies and/or AAC equipment (e.g., communication boards, speech generating devices).

Patient Friendly Description: There are many tools you can use to communciate. You might use gestures, pictures, word lists or an electronic device. A speech language pathologist can help you establish a system that works for you.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Respiratory Impairment and Communication/Swallow (In Progress)

Description:
Instruct learner(s) on impact of respiratory impairment on speech/swallow

Patient Friendly Description: Your breathing impacts both your ability to communicate and to eat and drink safely. Your speech language pathologist may provide you with exercises and/or recommendations.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Point: Caregiver Training (In Progress)

Description:
Train caregiver(s) in how to assist the patient in activities for a safe discharge.

Patient Friendly Description: A speech language pathologist will work with you and your caregivers to establish discharge recommendations to promote safety at your next level of care.

Learning Progress Summary

Patient	Nonacceptance, Explanation, Unable to understand by NA at 3/10/2025 2021

Document (below)

EMS CARE SUMMARY

Bainbridge Island Fire Department Incident **F250009428** Run **OBI25000716** Date **03/09/2025**

PATIENT
JEANNE HOFFMAN
Female, 100 Years
DOB 1925-01-06

ADDRESS
835 Madison AVE N
Bainbridge Island, WA 98110

PAST HISTORY
Pacemaker/AICD, Hyperlipidemia

LAST ORAL INTAKE

ALLERGIES
Aspirin, Penicillin allergy

MEDS
Atorvastatin

IMMUNIZATIONS

INCIDENT LOCATION
835 Madison AVE N
Bainbridge Island, 98110

DISPATCH REASON
No Other Appropriate Choice

DISPOSITION
Transported No Lights/Siren

PERSONNEL
DAG LILJEQUIST, CONNOR BASS, JAMES MULLANEY

UNIT
A21

TRANSFERRED TO UNIT
Emergency Room

TRANSPORTED TO
HARBORVIEW

COMPLAINT
Primary: Broken femur

ONSET TIME

LAST KNOWN WELL

NARRATIVE
S: A21 dispatched to a 100 y/o female for complications from a broken femur suffered on March 5th. Pt.'s son stated pt. was at UW Montlake when she fell out of bed onto the floor, breaking her femur. Pt.'s son stated pt.'s leg was splinted but the leg has become misaligned and needs to be realigned. Pt.'s son also stated pt. has not been able to eat and needs an NG tube placed.

O: Upon arrival, pt. was laying in bed, ABCs intact. Pt. had a patent airway, has breathing normally, and had a strong radial pulse. Pt.'s right leg had a splint on the thigh. Pt.'s right leg was rotated laterally.

A: Complications from a broken femur

P: Pt. contact. Pt. exam to include vitals. Air splint placed on pt.'s right leg. Pt. taken to A21 for transport to HMC. Pt. history. Exam and vitals continued throughout transport. Once at HMC pt. was taken to the ER were pt. care was transferred to an RN.

James Mullaney 165

Narrative

S: A21 dispatched to a 100 y/o female for complications from a broken femur suffered on March 5th. Pt.'s son stated pt. was at UW Montlake when she fell out of bed onto the floor, breaking her femur. Pt.'s son stated pt.'s leg was splinted but the leg has become misaligned and needs to be realigned. Pt.'s son also stated pt. has not been able to eat and needs an NG tube placed.

O: Upon arrival, pt. was laying in bed, ABCs intact. Pt. had a patent airway, has breathing normally, and had a strong radial pulse. Pt.'s right leg had a splint on the thigh. Pt.'s right leg was rotated laterally.

A: Complications from a broken femur

P: Pt. contact. Pt. exam to include vitals. Air splint placed on pt.'s right leg. Pt. taken to A21 for transport to HMC. Pt. history. Exam and vitals continued throughout transport. Once at HMC pt. was taken to the ER were pt. care was transferred to an RN.

Section I - Patient / Parent of Minor Authorization Signature

Privacy Practices Acknowledgement: by signing below, the signer acknowledges that Bainbridge Island Fire Department (BIFD) provided a copy of its Notice of Privacy Practices to the patient or other party with instructions to provide the Notice to the patient. I authorize the submission of a claim for payment to Medicare, Medicaid, or any other payer for any services provided to me by BIFD now, in the past, or in the future, until such time as I revoke this authorization in writing. I agree to immediately remit to BIFD any payments that I receive directly from insurance or any source whatsoever for the services provided to me and I assign all rights to such payments to BIFD. I authorize BIFD to appeal payment denials or other adverse decisions on my behalf without further authorization. I authorize and direct any holder of medical information or other relevant documentation about me to release such information to BIFD and its billing agents, the Centers for Medicare and Medicaid Services, and/or any other payers or insurers, and their respective agents or contractors, as may be necessary to determine these or other benefits payable for any services provided to me by BIFD, now, in the past, or in the future.

☐ **Interpreter** *(Print Name)* _____ ID # _____

I understand that nerve damage may occur from how anesthesia equipment is placed or how my body must be positioned during a procedure.

I understand that I am free to refuse consent to any proposed procedure.

BLOOD: I have been told whether I am having a procedure where blood or blood components *(products)* may need to be used *(also known as transfused)*. **If I am having this kind of procedure**, I have been told about side effects, risks and other choices about transfusion, including **not** getting a transfusion.

I give permission to receive blood and/or blood components if the health care team decides it is needed during or after the procedure and throughout the current hospitalization. I understand possible reasons for needing a transfusion include bleeding, symptomatic or severe anemia, and abnormal coagulation. I understand that the use of blood and blood components involves risks. The risks may include reactions, including allergic reactions, fever, hives, lung injury, and in rare cases, infectious diseases such as sepsis, hepatitis and HIV/AIDS. I know that the blood bank screens donors and matches blood for transfusions to help lower risks.

OR *(Please initial)*
_____ **I refuse** ***(or partially refuse)*** **permission for blood and blood components.** *(You will be asked to sign Form U2063 for refusal/partial refusal or Form U1148 for a separate blood consent).*

Giving Consent
By signing below, I confirm that I have read the sections above and that I have had 1) each item explained to me; 2) a chance to ask questions; and 3) all of my questions answered.

FULL NAME OF PROCEDURE(S)	Right femur operative fixation, possible removal of hardware
Health Care Professional(s) Performing Procedure	Barei, Beingessner, Roddy, Davies, Kleweno, Nork, Taitsman, Dunbar, Firoozabadi, Githens

SIGNATURE *(PATIENT OR PATIENT'S AUTHORIZED REPRESENTATIVE)*	PRINT NAME	DATE	TIME
x [signature]	Leah Charles Hoffman Adam	10 MAR 25	0230

IF SIGNED BY PERSON OTHER THAN THE PATIENT, CHECK RELATIONSHIP TO PATIENT:

- ☐ 1. Court-appointed Guardian
- ☒ 2. Durable Healthcare Power of Attorney
- ☐ 3. Spouse/registered domestic partner
- ☐ 4. Adult Child(ren)
- ☐ 5. Parent(s)
- ☐ 6. Adult Brother(s)/Sister(s)
- ☐ 7. Adult Grandchild(ren)
- ☐ 8. Adult Niece(s)/Nephew(s)
- ☐ 9. Adult Aunt(s)/Uncle(s)
- ☐ 10. Adult Friend with executed Declaration per RCW 7.70.065

FOR MINOR PATIENTS:

- ☐ 1. Guardian/legal custodian
- ☐ 2. Court-authorized person for child in out-of-home placement
- ☐ 3. Parent(s)
- ☐ 4. Holder of signed authorization from parent(s)
- ☐ 5. Adult representing self to be a relative responsible for the minor's health

WITNESS SIGNATURE *(WITNESS OPTIONAL UNLESS TELEPHONE CONSENT)*	PRINT NAME	☐ TELEPHONE MONITORED CONSENT *(No patient signature)*

Note *This consent is valid for 90 days. If there has been a change in the patient's condition or procedure performed, please use a new consent.*

HEALTH CARE PROFESSIONAL'S STATEMENT: I explained the treatment/procedure(s) stated on this form, including the possible risks, complications, alternative treatments *(including non-treatment)* and anticipated results to the patient and/or his/her representative before the patient and/or his/her representative consented. If only the patient has signed this form, in my clinical opinion, the patient is capable of making his/her own health care decisions. If in my clinical opinion, the *(adult)* patient has questionable ability to make his/her own health care decisions, I discussed the above with the patient and with the patient's legally authorized representative.

SPECIAL CONSENT FOR PROCEDURAL TREATMENT AND BLOOD TRANSFUSION
(DIAGNOSTIC & SURGICAL PROCEDURES, BLOOD TRANSFUSION & OTHER INVASIVE PROCEDURES)

The law in Washington gives you the right and the responsibility to make decisions about your health care. Health care professionals can give you information and advice. You or your legal representative must be part of the decision-making. This consent form:
- Proves that you had a part in making decisions about your health care.
- Shows that you gave permission for the treatment recommended by your health care professionals.

The words "I", "my", etc., in this form mean the patient, no matter whether the patient or the patient's representative is signing the form. The term "health care professional" may mean the attending physician, but in addition may mean a different doctor (including a resident), nurse practitioner, or physician's assistant, who orders, performs all or part of, or is involved in explaining the procedure.

I give permission to my health care professional(s) who are listed on the back of this form as the performing provider(s), to do the procedure(s) listed on the back of this form, with anesthesia and/or sedation if that is needed. Anesthesia or sedation medicine will be given by the health care professional, anesthesiologist, or other trained health care staff who work under appropriate supervision.

I understand that the attending physician may need to perform other urgent procedures due to an emergency that may occur while I am sedated or otherwise not able to give consent. The attending physician or designee will talk with my legally authorized representative if possible.

I understand that the attending physician may choose assistants, including other health care professionals and residents *(physicians who have finished medical school, but are getting more training)*, to be part of the team performing my procedure. The assistants may suture; harvest grafts; dissect, remove or alter tissue; implant devices; or do other tasks that the attending physician has deemed appropriate. If known, the attending physician has discussed with me whether there will be assistants and whom s/he expects the assistants to be. I understand that during the procedure, the attending physician may need to choose different assistants or have them do different tasks. I understand that for some kinds of medical equipment used during procedures, a representative from the equipment manufacturer may be there, doing things like providing consultation or running checks on the equipment.

I understand the attending physician may participate in care involving overlapping procedures or oversee other urgent medical responsibilities and may not be present in the room at all times. During this time, the skilled team of assistants may perform portions of my procedure which the attending physician has determined they are proficient to perform. If an overlap is anticipated or planned, I will be notified prior to surgery. The attending physician will be present for the key and critical portions of the procedure, and either he/she or a designated attending physician will be available to the procedure team at all times.

The hospital or health care professional will dispose of any removed tissues or parts.

I understand what procedure(s) will be done. I have been told about the risks and benefits. I have been told about other treatment choices and about their risks and benefits, including not having the procedure. I have been told about what results to expect, which includes information about the chances for the expected results. I know that results cannot be guaranteed. I have been told about potential problems that may occur during recuperation.

I understand that there are risks for all kinds of surgery and for "invasive procedures" *(procedures where a blood vessel, body cavity, or other internal tissue is entered with a needle, tube, or similar device)*. These risks, which can be serious, include device failure, bleeding, infection, and damage to nearby tissues, vessels, nerves, or organs. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I have received this added detailed information and/or patient information materials about the procedure(s):

_____

Print added information or title of information materials

I understand whether I will receive either anesthesia or sedation medicine, or both. I have been told about my choices for anesthesia and sedation and about their risks and benefits. I have been told about side effects of the medicine(s) and problems they may cause with recovery.

I understand that anesthesia and sedation medicines used for procedures involve risks. These risks can be serious. They may include damage to vital organs such as the brain, heart, lungs, liver, and kidneys. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I understand that the anesthesia equipment may damage my teeth or cause other dental damage.

Patient Property Waiver - Scan on 3/10/2025 9:46 PM (effective from 3/10/2025)

Scan (below)

PATIENT PROPERTY NOTICE, WAIVER AND ASSUMPTION OF RISK

Patients are responsible for their personal belongings. This includes, but is not limited to dentures, eyeglasses, crutches, wheelchairs, and personal items such as jewelry. The Medical Center is not responsible if these items are damaged or misplaced while here. To minimize potential harm to personal property including lost, misplaced, stolen or damaged items, the following practices will be observed:

HMC has two choices for storing personal property of patients during hospitalization:	**1**	**One choice is placing items in the HMC "Valuables and Property Storage System". This choice involves HMC placing valuables (examples: watch, jewelry, dentures, glasses) or property into a secure area. This "Valuables and Property Storage System" is generally for nonessential items and access to this may be limited by hours of operation.**
	2	**Another choice for storing property is in the patient's room. The patient is responsible for these items and these items are accessible to the patient. HMC may provide limited locked storage spaces for patient storage of personal property in the hospital room during hospitalization.**

- Patients are strongly encouraged to leave and/or send all nonessential belongings and valuables home.
- Biohazards or severely damaged clothing are generally discarded immediately unless required for forensic evidence. (Biohazards means: clothing or other items are contaminated in the judgment of medical staff and presents a health risk.)
- HMC will dispose of unclaimed patient belongings as allowed by law after proper notice and time period for retrieval of items. When patient belongings are not claimed after 30 days, notice will be given and if such property remains unclaimed for an additional 60 days then it shall be disposed of as allowed by law.
- Further information about HMC's property policies and procedures will be provided as needed or requested to the patient or patient's authorized representative.

Patient's Personal Property Liability Agreement

I, the undersigned, have read or have been informed about the above policy. I/patient understand that I/patient am responsible for all property brought to Harborview Medical Center. I/patient understand that the hospital recommends all nonessential items be left at home or be sent home with family or friends.

I/patient understand that the hospital provides a "Valuable and Property Storage System" for important personal property and that access to this area may be limited by hours of operation.

I/patient agree to hold the hospital and its employees harmless from liability for my/patient's property if it is lost, misplaced, stolen or damaged when such property is in the Medical Center. I/patient further acknowledge the potential harm to property maintained by the hospital due to circumstances beyond the hospital's control (e.g. fire, earthquake) and hereby release the hospital from any liability in such circumstances.

Important Message From Medicare - Scan on 3/10/2025 9:47 PM (effective from 3/10/2025)

Scan (below)

AN IMPORTANT MESSAGE FROM MEDICARE ABOUT YOUR RIGHTS

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-1019

YOUR RIGHTS AS A HOSPITAL INPATIENT:

- You can receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- You can be involved in any decisions about your hospital stay.
- You can report any concerns you have about the quality of care you receive to your QIO at: KEPRO 1-888-305-6759. The QIO is the independent reviewer authorized by Medicare to review the decision to discharge you.
- You can work with the hospital to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.
- You can speak with your doctor or other hospital staff if you have concerns about being discharged.

YOUR RIGHT TO APPEAL YOUR HOSPITAL DISCHARGE:

- You have the right to an immediate, independent medical review (appeal) of the decision to discharge you from the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you choose to appeal, the independent reviewer will ask for your opinion. The reviewer also will look at your medical records and/or other relevant information. You do not have to prepare anything in writing, but you have the right to do so if you wish.
- If you choose to appeal, you and the reviewer will each receive a copy of a detailed explanation about why your covered hospital stay should not continue. You will receive this detailed notice only after you request an appeal.
- If the QIO finds that you are not ready to be discharged from the hospital, Medicare will continue to cover your hospital services.
- If the QIO agrees services should no longer be covered after the discharge date, neither Medicare nor your Medicare health plan will pay for your hospital stay after noon of the day after the QIO notifies you of its decision. If you stop services no later than that time, you will avoid financial liability.
- If you do not appeal, you may have to pay for any services you receive after your discharge date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206-744-9535

Please sign below to indicate you received and understood this notice.

I have been notified of my rights as a hospital inpatient and that I may appeal my discharge by contacting my QIO.

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
  - Here is the contact information for the QIO:
    KEPRO:
    Toll-free Phone: 1-888-305-6759
    Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.
- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☑ HMC: Medicare Provider Number ☑ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO REQUEST AN APPEAL, YOU MAY HAVE OTHER APPEAL RIGHTS:
- If you have Original Medicare: Call the QIO listed on Page 1.
- If you belong to a Medicare health plan, call your plan at: Molina (plan name) 800-869-7175 (plan phone number)

You have the right to get Medicare information in an accessible format, like large print, Braille, or audio. You also have the right to file a complaint if you feel you've been discriminated against. Visit Medicare.gov/about-us/accessibility-nondiscrimination-notice, or call 1-800-MEDICARE (1-800-633-4227) for more information. TTY users can call 1-877-486-2048.

Consent-Treatment Procedural UWM - Scan on 3/12/2025 4:06 PM: U0173 ; SPECIAL CONSENT FOR PROCEDURAL TREATMENT AND BLOOD TRANSFUSION

Scan (below)

SPECIAL CONSENT FOR PROCEDURAL TREATMENT AND BLOOD TRANSFUSION
(DIAGNOSTIC & SURGICAL PROCEDURES, BLOOD TRANSFUSION & OTHER INVASIVE PROCEDURES)

The law in Washington gives you the right and the responsibility to make decisions about your health care. Health care professionals can give you information and advice. You or your legal representative must be part of the decision-making. This consent form:
• Proves that you had a part in making decisions about your health care.
• Shows that you gave permission for the treatment recommended by your health care professionals.
The words "I", "my", etc., in this form mean the patient, no matter whether the patient or the patient's representative is signing the form. The term "health care professional" may mean the attending physician, but in addition may mean a different doctor (including a resident), nurse practitioner, or physician's assistant, who orders, performs all or part of, or is involved in explaining the procedure.

I give permission to my health care professional(s) who are listed on the back of this form as the performing provider(s), to do the procedure(s) listed on the back of this form, with anesthesia and/or sedation if that is needed. Anesthesia or sedation medicine will be given by the health care professional, anesthesiologist, or other trained health care staff who work under appropriate supervision.

I understand that the attending physician may need to perform other urgent procedures due to an emergency that may occur while I am sedated or otherwise not able to give consent. The attending physician or designee will talk with my legally authorized representative if possible.

I understand that the attending physician may choose assistants, including other health care professionals and residents *(physicians who have finished medical school, but are getting more training)*, to be part of the team performing my procedure. The assistants may suture; harvest grafts; dissect, remove or alter tissue; implant devices; or do other tasks that the attending physician has deemed appropriate. If known, the attending physician has discussed with me whether there will be assistants and whom s/he expects the assistants to be. I understand that during the procedure, the attending physician may need to choose different assistants or have them do different tasks. I understand that for some kinds of medical equipment used during procedures, a representative from the equipment manufacturer may be there, doing things like providing consultation or running checks on the equipment.

I understand the attending physician may participate in care involving overlapping procedures or oversee other urgent medical responsibilities and may not be present in the room at all times. During this time, the skilled team of assistants may perform portions of my procedure which the attending physician has determined they are proficient to perform. If an overlap is anticipated or planned, I will be notified prior to surgery. The attending physician will be present for the key and critical portions of the procedure, and either he/she or a designated attending physician will be available to the procedure team at all times.

The hospital or health care professional will dispose of any removed tissues or parts.

I understand what procedure(s) will be done. I have been told about the risks and benefits. I have been told about other treatment choices and about their risks and benefits, including not having the procedure. I have been told about what results to expect, which includes information about the chances for the expected results. I know that results cannot be guaranteed. I have been told about potential problems that may occur during recuperation.

I understand that there are risks for all kinds of surgery and for "invasive procedures" *(procedures where a blood vessel, body cavity, or other internal tissue is entered with a needle, tube, or similar device)*. These risks, which can be serious, include device failure, bleeding, infection, and damage to nearby tissues, vessels, nerves, or organs. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I have received this added detailed information and/or patient information materials about the procedure(s):

_____

_____
Print added information or title of information materials

I understand whether I will receive either anesthesia or sedation medicine, or both. I have been told about my choices for anesthesia and sedation and about their risks and benefits. I have been told about side effects of the medicine(s) and problems they may cause with recovery.

I understand that anesthesia and sedation medicines used for procedures involve risks. These risks can be serious. They may include damage to vital organs such as the brain, heart, lungs, liver, and kidneys. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I understand that the anesthesia equipment may damage my teeth or cause other dental damage.

Documents (continued)

☐ **Interpreter** *(Print Name)* _____ ID # _____

I understand that nerve damage may occur from how anesthesia equipment is placed or how my body must be positioned during a procedure.

I understand that I am free to refuse consent to any proposed procedure.

BLOOD: **I have been told** whether I am having a procedure where blood or blood components *(products)* may need to be used *(also known as transfused)*. **If I am having this kind of procedure**, I have been told about side effects, risks and other choices about transfusion, including **not** getting a transfusion.

I give permission to receive blood and/or blood components if the health care team decides it is needed during or after the procedure and throughout the current hospitalization. I understand possible reasons for needing a transfusion include bleeding, symptomatic or severe anemia, and abnormal coagulation. I understand that the use of blood and blood components involves risks. The risks may include reactions, including allergic reactions, fever, hives, lung injury, and in rare cases, infectious diseases such as sepsis, hepatitis and HIV/AIDS. I know that the blood bank screens donors and matches blood for transfusions to help lower risks.

OR *(Please initial)*
_____ **I refuse *(or partially refuse)* permission for blood and blood components.** *(You will be asked to sign Form U2063 for refusal/partial refusal or Form U1148 for a separate blood consent).*

Giving Consent

By signing below, I confirm that I have read the sections above and that I have had 1) each item explained to me; 2) a chance to ask questions; and 3) all of my questions answered.

FULL NAME OF PROCEDURE(S)	Right femur operative fixation, possible removal of hardware

Documents

Consent-General - Scan on 3/17/2025 11:49 AM: U0430 ; CONSENT/AUTHORIZATION FOR AUTOPSY

Scan (below)

CONSENT FOR AUTOPSY

I, ~~James~~ Louis Hoffmann Allain, the son of the patient

Jeanne Hoffman, authorize and request an autopsy on the body of the above-named patient by the pathologists at the University of Washington Medical Center (UWMC). The standard autopsy procedure may include the removal of organs, tissues, and body fluids, including the brain and eyes. They may be retained and/or used for educational and research purposes, including development of diagnostic or therapeutic products or genetic testing.

Potential use, site of educational activities, distribution, and disposal of tissues and organs will be at the discretion of UWMC medical staff.

I understand and agree to an autopsy procedure as follows:

- ☐ Full autopsy examination (brain examination at the discretion of Autopsy Directors unless otherwise specified) _____
- ☐ Limited autopsy examination with these restrictions: No brain exam

I consent for the use of autopsy tissues in:

- ☒ Education
- ☒ Research including genomic testing
- ☐ Research use (but not genomic testing)

[If permission for research is given]
Samples from the patient can be used for research, including sequencing of genes (DNA), RNA, and other molecules. Genomic data generated in this research and information about the patient's medical conditions may be shared with public data repositories, including some regulated by the National Institutes of Health (NIH). The NIH stores de-identified genomic information that might be used by anyone for studies on any topic and may potentially benefit individuals with the same health conditions in the future. There is a theoretical risk of loss of confidentiality and privacy because it might be possible to re-identify the individual based on genomic data. There may be unknown risks associated with this re-identification, including the possibility of discrimination. However, this risk is very low because the NIH-regulated databases do not contain any personal identifiers. This consent permission can be withdrawn upon request, but data already distributed cannot be retrieved.

My reason for requesting an autopsy is: discern cause of death

Specific questions I would like the autopsy to address: _____

lidocaine 4 % patch

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Apply 1 patch onto the skin every 24 hours. Apply to painful area for up to 12 hours in a 24 hour period.
Authorized by: Nguyen, My-Linh Trinh, MD
Ordered on: 1/18/2024
Start date: 1/18/2024
End date: 3/14/2025
Quantity: 15 each
Refill: No refills remaining

acetaminophen 650 MG suppository

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Unwrap and insert 1 suppository (650 mg) rectally every 6 hours as needed for mild pain, moderate pain or severe pain.
Authorized by: Barnes, James Irvin, MD
Ordered on: 3/8/2025
Start date: 3/8/2025
End date: 3/14/2025

atropine 1% ophthalmic solution (for oral use)

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 2 drops under the tongue every 4 hours as needed for secretions.
Authorized by: Barnes, James Irvin, MD
Ordered on: 3/8/2025
Start date: 3/8/2025
End date: 3/14/2025

bisacodyl 10 MG suppository

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Unwrap and insert 1 suppository (10 mg) rectally daily as needed for constipation.
Authorized by: Barnes, James Irvin, MD
Ordered on: 3/8/2025
Start date: 3/8/2025
End date: 3/14/2025

camphor-menthol 0.5-0.5 % lotion

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Apply topically 2 times a day as needed for itching.
Authorized by: Barnes, James Irvin, MD
Ordered on: 3/8/2025
Start date: 3/8/2025
End date: 3/14/2025

carboxymethylcellulose 0.5 % ophthalmic solution

Discontinued by: Discharge Provider, Automatic
Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 drop in each EYE every hour as needed for dry eyes.
Authorized by: Barnes, James Irvin, MD
Ordered on: 3/8/2025
Start date: 3/8/2025
End date: 3/14/2025

enoxaparin 30 MG/0.3ML prefilled syringe

Discontinued by: Discharge Provider, Automatic

Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Inject 0.3 mL (30 mg) under the skin at bedtime.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

magnesium hydroxide 400 MG/5ML suspension

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Take 30 mL by mouth 2 times a day as needed for constipation.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

phenol 1.4 % mouth/throat spray

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 spray to the mouth or throat every 2 hours as needed for sore throat.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

psyllium 51.7 % packet

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Take 1 packet by mouth 2 times a day. Mix in 8 oz of juice or water and drink.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

saliva substitute (Biotene Dry Mouth) liquid oral rinse

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Swish and spit 15 mL 3 times a day.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

scopolamine 1 MG/3DAYS patch

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 patch on the skin every 72 hours as needed for other (for secretions if atropine, glycopyrrolate are insufficient). Apply to hairless area behind 1 ear.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

oxyCODONE CONCENTRATED 100 MG/5ML concentrate solution

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: 2.5-5mg Oral, Every 4 hours PRN For pain
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — Quantity: 30 mL
Refill: No refills remaining

buprenorphine 5 MCG/HR patch

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 patch on the skin every 7 days.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/11/2025 — Quantity: 2 patch
Refill: No refills remaining

Last Read in MyChart		
Not Read		

Hello Jeanne,

We hope you are recovering well after your Pacemaker (PPM or CRT-P) implant.

At the request of your electrophysiology (EP) provider, Nazem Akoum, MD, you are now enrolled in remote monitoring with the University of Washington for your Boston Scientific Pacemaker (PPM or CRT-P).

Please send a manual/patient-initiated transmission to us by following the instructions in the manual that accompanies your home monitor. This is to ensure that your data is being received and that the measurements of your device remain stable. **Please reply to this message or call us at 206-598-3795 to let us know you have sent a transmission.**

It is recommended that you keep your monitor plugged in and within close proximity to where you sleep at night. Ideally, no more than 6 feet. We ask that you check your monitor on a regular basis for connectivity.

Remote monitoring process at UW

-The device clinic schedules remote checks every 3 months, or more frequently if requested by your provider. However, you will only be billed once in a 91 day period for remote monitoring irrespective of the number of transmissions received during this period. The results will be available on your mychart once the physician has signed the report.

-It is very important to note that remote monitoring is not an emergency service. It will notify us of any implanted device issues, but is not a continuous 24 hour a day monitoring or alarm service. In an emergency you must seek the appropriate medical care.

-Remote monitoring appointments are completed from your home monitor and you are not required to be available on the appointment day. A member of our collaborative group may contact you requesting a transmission a few days prior to your appointment or if your monitor is not connecting.

- If you are experiencing symptoms, please send a transmission from your home monitor and contact us on 206-598-3795 so we can expedite review of your data.
If you are experiencing an emergency and require immediate assistance, please call 911. Your monitor is utilized as a tool to observe changes on your device and arrhythmias, it is not to be used for emergent situations.

We will contact you via MyChart when a report is created or if there are any episodes or measurement changes of concern.

We ask that you notify us as soon as possible if you are transferring device care to a different facility or moving out of state.

If you are experiencing difficulties, please contact Boston Scientific, the makers of your Pacemaker (PPM or CRT-P), for assistance:

Boston Scientific LATITUDE™ Home Monitoring System Support
Phone: 866-484-3268 (Monday-Friday 8:00AM - 5:00PM Central)

We can be reached by telephone with any questions.

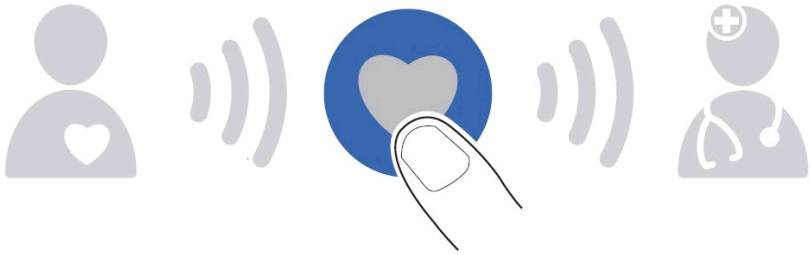
Thank you,

Cardiac Device Clinic
UW Cardiac Electrophysiology (EP) - Montlake Campus
phone: 206-598-3795*
fax: 206-598-4669

**All phone, MyChart messaging and remote monitoring is observed Monday - Friday 8AM - 4:30PM. Please leave a message. We make every effort to return calls within the same business day.*
For assistance after hours, weekends, and holidays please call 206-598-4300

How to Manually Send A Remote Transmission from your Boston Scientific LATITUDE™ System

01/14/2025 - Telephone in Heart Institute at University of Washington Medical Center (continued)



Messages (continued)

STOP!

If you are experiencing persistent chest pain or persistent shortness of breath, *CALL 911*

If you are experiencing SYMPTOMS you suspect are related to your heart or device, please send a remote transmission and call the UWHI Device Clinic at 206-598-3795.

1. **Make sure your device is plugged in and turned ON.** Press the heart button and stay within arm's reach of the Communicator while it completes the interrogation.

2. When all the waves light solid green and the doctor icon lights blue as shown below for two minutes, the Communicator has successfully sent your data.

Important!

Normal use of the LATITUDE system has been accounted for in the projected battery life of your implanted device. **Pressing the heart button more often than when the heart button flashes or more often than instructed by your healthcare provider may lead to a decrease in the battery life of your device!**

What Do the Lights Mean?

01/14/2025 - Telephone in Heart Institute at University of Washington Medical Center (continued)

Messages (continued)

If you see...	This means...	What to do...
 Flashing Heart button	The Communicator needs help completing a previously scheduled device check. ***Note:*** *This does not indicate a problem with your implanted device.*	Press the Heart button. Stay next to the Communicator until data is sent.
	Data from your implanted device has been sent to the LATITUDE system.	No action needed.
 OR	There is a potential problem that needs to be addressed by your health care provider.	Call your health care provider.
 Yellow Waves	Your Communicator is having a problem connecting.	Refer to the Troubleshooting section of your patient manual.

Something Not Working?

Contact Boston Scientific LATITUDE™ Home Monitoring System Support
Phone: **866-484-3268** (Monday-Friday 8:00AM - 5:00PM Central)

saliva substitute (Biotene Dry Mouth) liquid oral rinse

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Swish and spit 15 mL 3 times a day.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

scopolamine 1 MG/3DAYS patch

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 patch on the skin every 72 hours as needed for other (for secretions if atropine, glycopyrrolate are insufficient). Apply to hairless area behind 1 ear.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

white petrolatum gel

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Apply topically as needed for dry skin.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — End date: 3/14/2025

oxyCODONE CONCENTRATED 100 MG/5ML concentrate solution

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: 2.5-5mg Oral, Every 4 hours PRN For pain
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/8/2025 — Quantity: 30 mL
Refill: No refills remaining

buprenorphine 5 MCG/HR patch

Discontinued by: Discharge Provider, Automatic — Discontinued on: 3/14/2025
Reason for discontinuation: System automatic cancellation for deceased patient
Instructions: Place 1 patch on the skin every 7 days.
Authorized by: Barnes, James Irvin, MD — Ordered on: 3/8/2025
Start date: 3/11/2025 — Quantity: 2 patch
Refill: No refills remaining

ED Provider Note

ED Provider Notes by Song, Chris, MD at 1/9/2025 1656

Attestation signed by Vrablik, Marie Clougherty, MD at 1/12/2025 9:13 AM

I saw and evaluated the patient. I have reviewed the resident's/fellow's findings and agree.

Yes - I provided critical care for this patient. Critical care was necessary because there was a high probability of imminent or life-threatening deterioration and this patient required continuous observation and interventions to respond to emergent changes in their medical condition and prevent further deterioration in their clinical state. The critical care I provided included:
managing hypotension or other hemodynamic instability, consultation with specialists, talk with family member making medical care decisions, talk with family/surrogate re: patient history, and review patient condition/progress with patient family/surrogate

Critical Care Time:
I spent a total of (30-74 minutes) 35 minutes personally providing critical care to Jeanne Leonie Hoffman. This does not include time spent teaching or performing any separately billable procedures.

CHIEF COMPLAINT

Chief Complaint

Patient presents with

- Infection
- Bradycardia

HISTORY OF PRESENT ILLNESS AND REVIEW OF SYSTEMS

Ms. Hoffman is a 100 year old woman with history of HTN, HLD, prior DVT (not on AC), who presents with one day of severe L lower extremity pain and dark discoloration. Her son, Louis, provides much of the history.

She has been living with her son over the past 2 weeks, which reportedly has heat source. They were previously living in a house but were kicked out of their housing. Gathering from 12/10 SW note, Louis did not want to move his mother into a nursing home, felt pride in taking care of her, and had goal of finding housing on Bainbridge Island. He reports the house has running water, heat, and he has been doing daily wound care on her L venous ulcers. He has noted her feet have ben numb for the past 24-72 hours. Over the past 6 hours prior to presentation, her feet became blue/purple,

and she has had significantly increased pain.

PAST MEDICAL AND SURGICAL HISTORY

Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018
• Thrombocytopenia (HCC)	11/2/2016
• Leg weakness, bilateral	1/6/2015
• Weakness of trunk musculature	1/6/2015
• Vertebral fracture *Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed healed*	12/13/2012
• Thyroid nodule, uninodular *CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.*	12/13/2012
• Closed fracture of unspecified intracapsular section of neck of femur *Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.*	5/1/2007
• Unspecified vitamin B deficiency *Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency*	5/1/2007
• Impaired fasting glucose	3/22/2007
• Carpal tunnel syndrome *Carpal tunnel release right wrist in 1989*	11/20/2006

- DIAPHRAGMATIC HERNIA 11/20/2006
  CT of abdomen in 2006
- Esophageal reflux 11/20/2006
- Other convulsions 11/20/2006
  Petit Mal since 1975 Carbamazepine level 7.6 on Feb 2007 Discontinued based on ER neuro consult in early 2013 No recurrence
- Allergic rhinitis, cause unspecified 11/20/2006
- DVT, recurrent, lower extremity, chronic 11/20/2006
  Recurrent DVT and phlebitis since 1982 Per Vascular Surgery note 5/9/2006: continue warfarin 3/9/2010 Lower extremity arterial vascular ultrasound studies normal
- Diabetes mellitus (HCC)
- PAD (peripheral artery disease) (HCC)
- Ulcer of left lower extremity, limited to breakdown of skin (HCC)
  Chronic, Multiple sites of lower leg and ankle, with MSSA

Physical Exam
General: Frail, very uncomfortable appearing, moderate distress. Very hard of hearing
HEENT: No scleral icterus, conjunctival injection
Cardiac: Bradycardic, normal S1/S2
Pulmonary: Normal work of breathing; Clear anteriorly
Abdomen: Soft, nontender, nondistended. No palpable masses
Extremities: No lower extremity edema.

ED Provider Note (continued)

Left Leg: Very cold, dark purple skin from foot-upper anterior shin (see media). Areas of purple/black discoloration over the lateral anterior shin and foot. DP pulses not obtained with Doppler. Exquisitely tender to light palpation. Not moving L extremity, remains plantarflexed.
Right Leg: No discoloration. Not cool to touch. No DP pulses palpated.
Neuro: responding appropriately to questions. Very hard of hearing.

IMAGING:

ED Wet Read -

CTA Abdomen Angio

Final Result

Occlusion of the left lower extremity vasculature beginning at the left external iliac artery. There is associated skin thickening/swelling of the distal left lower extremity which likely represents edema. No associated subcutaneous emphysema or definitive evidence of necrotizing soft tissue infection.

XR Chest 1 View

Final Result

Lines and tubes: None.

Lungs: Clear.

Pleura: No effusion. No pneumothorax.

Heart and mediastinum: Unremarkable.

Bones: No acute or suspicious abnormality.

Radiology Final Result -

No image results found.

ED COURSE/MEDICAL DECISION MAKING

Ms. Hoffman is a 100 year old woman with history of HTN, HLD, prior DVT (not on AC), who presents with one day of severe L lower extremity pain and dark discoloration. Initial concern for acute critical limb ischemia vs. Necrotizing fasciitis. CTA was obtained, notable for L lower extremity occlusion of the L external iliac artery w/o collaterals. No evidence of necrotizing soft tissue infection. She was started on a Heparin GTT, Aspirin, and Vascular Surgery was consulted, and expedited the patient to the OR for above-knee amputation.

On arrival, she was bradycardic into the 30-40s, with a new RBBB. She did not endorse chest pain, had a negative Troponin. She was normotensive, and otherwise asymptomatic. Given her critical condition, discussion was had with her son, LNOK, around her code status. Recommendation was made for DNR/DNI, with rationale provided of likely poor neurologic outcome even if she was to regain a pulse. Her son appeared to understand the severity and acuity of her situation, including possible death, given her significant bradycardia, and wanted to have the patient remain Full Code, given prior discussions he has had with her, which focused on life sustaining treatments, and this is consistent with a POLST, last updated 2018. He was focused on finding her a place to live (currently living in a tent after recently being removed from prior housing).

Medications Given in the ED:

Medications
heparin 25,000 units in D5W 250 mL (100 units/mL) infusion (premix) (0 Units/kg/hr × 45.5 kg (Dosing Weight) Intravenous Stopped 1/9/25 1434)

H&P Notes

H&P by Schwarz, Samuel, MD at 1/9/2025 1414

History and Physical

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Pronouns: she/her/hers, patient's name
PCP: Navalurkar, Reema, MD
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin)

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
100F w/h/o hx of HTN, T2DM, HLD, prior DVT (previously on warfarin), chronic venous disease (s/p prior saphenous stripping), and known PAD without known history of arterial intervention.

She lives with her son, who notes that the chronic wounds at her LLE blackened ~2 days ago and she endorses increased pain in the leg around this time period. Subsequent symptom progression is unclear but her son notes that he noticed the leg was normal at around 6AM but had grown acutely discolored at 0730. He brought her directly to the ED. On arrival is bradycardic to the low 40s with EKG showing new RBBB but normal troponins. Normal range BP and mentating at baseline - able to answer questions appropriately. Labs notable for Cr 1.1, WBC 13.8, venous lactate 1.6; normal range trops, INR 1.1. On initial ED evaluation was noted to have no pulses so got CTA and consulted our service for evaluation.

The CTA demonstrated acute occlusion of the L EIA through the entire axial arterial system to the foot - PFA remains open via collaterals through the hypogastric. There is no occlusion of the RLE. She has no sensation from toes through mid/upper shin, foot is in fixed plantar-flexion, skin is cold and mottled. She has tenderness to palpation of the upper calf region.

HISTORY

Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence

- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion
- Acute lower limb ischemia

Past Surgical History:

Procedure	Laterality	Date
• PR TOTAL ABDOMINAL HYSTERECT W/WO RMVL TUBE OVARY		

Social History

Physical Exam

General: Older woman sitting in bed in some pain but relatively calm and conversant, though exceptionally hard of hearing
Neuro: Patient is very hard of hearing but responds to questions appropriately; she has no sensation in the LLE from mid/upper shin on through the toes; her L foot is in fixed plantarflexion without ability to wiggle toes; RLE has normal strength and sensation
HEENT: Normocephalic; absent dentition
Cardiac: Bradycardic to 40s; no chest pain; no peripheral edema
Pulm: Equal bilateral chest rise; quiet WOB on RA
Abd: Non-distended
MSK: Extremities grossly atraumatic
Skin: Cold, mottled skin over the LLE from toes through upper calf
Vasc: No doppler signals or palpable pulses in the LLE in the foot or pop; monophasic signal at fem location; RLE with palpable fem, biphasic popliteal signal; monophasic DP and PT

Assessment/Plan

ASSESSMENT/PLAN

Our patient is a 100 y/o female with rutherford 3 acute limb ischemia. On extensive discussion with her and her son, we talked about management options being amputation vs observation. She is not acutely ill, but we shared with them the natural history of ischemic limbs being tissue necrosis and ultimate infection, which would ultimately kill her. She has previously had extensive discussion regarding goals of care and code status. She remains full code today after discussion with son and they would both like to move forward with amputation.

Plan:
-We will take patient urgently to OR
-Disposition will likely be ICU post-op pending patient's stability

This patient was discussed with Dr. Smith, attending vascular surgeon.

Electronically signed by Smith, Matthew C, MD at 1/10/2025 5:35 PM

H&P by Grabar, Christina, MD at 1/10/2025 0148

Attestation signed by Nikravan, Sara, MD at 2/7/2025 6:02 PM

Date of Service: 01/10/2025

While not critically ill, this patient requires therapies or monitoring only available in an ICU setting.
I am treating conditions outside the scope of care typically provided by the surgical or procedural team(s) for this type of ICU patient.

I saw and evaluated this patient today with the resident(s)/fellow(s). I have reviewed their findings and agree with it.

H&P Notes (continued)

History and Physical - Critical Care

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
PCP: Navalurkar, Reema, MD
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:

Per H&P by Dr. Schwarz:

100F w/h/o hx of HTN, T2DM, HLD, prior DVT (previously on warfarin), chronic venous disease (s/p prior saphenous stripping), and known PAD without known history of arterial intervention.

She lives with her son, who notes that the chronic wounds at her LLE blackened ~2 days ago and she endorses increased pain in the leg around this time period. Subsequent symptom progression is unclear but her son notes that he noticed the leg was normal at around 6AM but had grown acutely discolored at 0730. He brought her directly to the ED. On arrival is bradycardic to the low 40s with EKG showing new RBBB but normal troponins. Normal range BP and mentating at baseline - able to answer questions appropriately. Labs notable for Cr 1.1, WBC 13.8, venous lactate 1.6; normal range trops, INR 1.1. On initial ED evaluation was noted to have no pulses so got CTA and consulted our service for evaluation.

The CTA demonstrated acute occlusion of the L EIA through the entire axial arterial system to the foot - PFA remains open via collaterals through the hypogastric. There is no occlusion of the RLE. She has no sensation from toes through mid/upper shin, foot is in fixed plantar-flexion, skin is cold and mottled. She has tenderness to palpation of the upper calf region.

Patient arrived to the CTICU with HR in the high 20s, normotensive, saturating well on RA. Patient denied chest pain, SOB, HA or dizziness. AKA site without strikethrough.

HISTORY

Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves

(HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion
- Acute lower limb ischemia

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

#Acute limb ischemia
#S/p L AKA
- Bed rest overnight; will be NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for CLD, will advance in AM
- Insulin gtt for BG management; ok to transition to SQI once up in ICU
- SBP 100-160
- Cardiology consulted for bradycardia to 20s with 2nd degree AVB
- TTE needed for completion of embolic workup; ok to be done in AM unless cardiology would like it done sooner
- Hold AC until tomorrow AM at which point Hep gtt will resume

#Sinus Bradycardia
#2:1 AV Block
Cardiology consulted, appreciate recommendations:
- Potentially vagally mediated after her surgery, I recommended 1mg of atropine and heart rate improved from high 20s to low 40s. Has some underlying conduction system disease given baseline 1st degree AV block and RBBB
- Telemetry
- Keep pacing pads on
- TSH, BMP to evaluate for hyperkalemia after surgery
- Atropine PRN for HR<25
- If patient develops acute symptomatic bradycardia (hypotension, altered mental status), recommend starting dopamine drip
- If significant arrhythmias on dopamine drip or does not respond rapidly, contact our cardiology team for consideration of TVP
- I discussed goals of care and patient's quality of life with son at bedside (patient is profoundly hard of hearing) and he reported that permanent pacer would be within goals of care (would have to discuss with EP) if it were indicated. States that she has good quality of life and is longevity focused

CHRONIC/STABLE/RESOLVED ISSUES

CTICU CHECKLIST:
- Tubes/lines/drains: PIV, voley
- Nutrition/IVF: Pending swallow eval
- Analgesia/sedation: acetaminophen and PNC
- Anti-infectives: not indicated
- Daily mobility goal: bedrest due to invasive lines/devices
- Glycemic control: subQ insulin
- GI ppx: not indicated
- Bowel regimen/last BM: senna and miralax per protocol / PTA
- VTE ppx: SCDs, Resume POD1
- Anti VAP care: not indicated
- Code status: ACLS
- Date next Interim Summary due: 1/17/24
- Family contact: Louis (206) 780-6885

H&P Notes (continued)

The patient was seen on multidisciplinary rounds and the plan was discussed and developed in conjunction with Critical Care Attending, Vascular Surgery

DISPOSITION
ICU level care is necessary because the patient requires continuous physician/advanced practice provider observation and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Pain Management

Consult performed by: Gicheru, Florence W, ARNP
Consult ordered by: Smith, Matthew C, MD
Reason for consult: Complex postoperative pain management requiring PNC for pain medication administration

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27.
APS is consulted for complex post-operative pain management, including PNC management
Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Per Dr. Sonderman's note dated 1/9/25:
Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB. Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of

syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

PAIN ASSESSMENT:
Pain Location:
surgical site: Left lower extremity above the knee amputation site
Pain Severity:
Worst Pain: 0
Least Pain: 0
Pain Intensity and Patient Reported Outcomes:
Pain control: well controlled
Patient Reported Treatment Side Effects:
No Nausea:
No itching

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

HISTORY REVIEWED:
I have reviewed the patient's social history with the patient.

Past Pain/Substance Use History: Notable opioid related events Multiple narcan events at home and inpatient per family

Up to date information could not be retrieved from the PDMP.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

APS is consulted for complex post-operative pain management, including PNC management

H&P Notes (continued)

Pt. Seen at this time in the ICU. She is inially sleeping but later wakes up. She is HOH but responds appropriately to simple questions written on a board. Her son, also her caregiver, is at bedside and a good historian. Son reports that in 2023, pt. Was on opioids for chronic pain but had a number of narcan events at home, at which point all opioids were discontinued. She also had a narcan event during her most recent hospitalization. Pt. Consequently started using Tylenol but must have taken "one too many," which resulted in Acetaminophen toxicity per son. She has since been using positioning and activity to help with the pain.

Pt. Denies any pain at this time. She is on a PNC Ropivacaine 0.2% continuous infusion at 8ml/hr for pain. Per RN, she was unable to swallow any medications this evening hence low dose Acetaminophen IV ordered. Contacted the primary team to determine if the pt. Is a candidate for NSAIDS for pain management for which she is not due to a drop in HCT, currently 32% per lab review. Pt. Discussed with attending due to the significant hx. Of opioid adverse effects and limitation of non-opioid medications due to her hx. And labs. Plan at this time is to cautiously and use low dose opioids for pain and make adjustments as needed for pain and safety. HM 0.1mg IV q2hrs PRN ordered. Pt. Is not a candidate for PCA at this time.

Pt. Sleeping when checked on overnight. Pain appears to be well controlled with no PRN use/administered thus far

0430: Pain remains well controlled with PNC Ropivacaine@8ml/hr. Has not required PRN pain medication.

Today's Plan (Changes in bold):

01/09/25: Left Femoral PNC, 15cm @skin

CONT:
Ropivacaine 0.2% @8ml/hr

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: Pt. Family, RN, primary team and APS attending

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Pain Management
Consult performed by: Gicheru, Florence W, ARNP
Consult ordered by: Smith, Matthew C, MD
Reason for consult: Complex postoperative pain management requiring PNC for pain medication administration

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27.
APS is consulted for complex post-operative pain management, including PNC management

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Per Dr. Sonderman's note dated 1/9/25:
Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB. Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

PAIN ASSESSMENT:
Pain Location:
surgical site: Left lower extremity above the knee amputation site
Pain Severity:
Worst Pain: 0
Least Pain: 0
Pain Intensity and Patient Reported Outcomes:
Pain control: well controlled
Patient Reported Treatment Side Effects:
No Nausea:
No itching

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

HISTORY REVIEWED:
I have reviewed the patient's social history with the patient.

Past Pain/Substance Use History: Notable opioid related events Multiple narcan events at home and inpatient per family

Up to date information could not be retrieved from the PDMP.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

APS is consulted for complex post-operative pain management, including PNC management

Pt. Seen at this time in the ICU. She is inially sleeping but later wakes up. She is HOH but responds appropriately to simple questions written on a board. Her son, also her caregiver, is at bedside and a good historian. Son reports that in 2023, pt. Was on opioids for chronic pain but had a number of narcan events at home, at which point all opioids were discontinued. She also had a narcan event during her most recent hospitalization. Pt. Consequently started using Tylenol but must have taken "one too many," which resulted in Acetaminophen toxicity per son. She has since been using positioning and activity to help with the pain.

Pt. Denies any pain at this time. She is on a PNC Ropivacaine 0.2% continuous infusion at 8ml/hr for pain. Per RN, she was unable to swallow any medications this evening hence low dose Acetaminophen IV ordered. Contacted the primary team to determine if the pt. Is a candidate for NSAIDS for pain management for which she is not due to a drop in HCT, currently 32% per lab review. Pt. Discussed with attending due to the significant hx. Of opioid adverse effects and limitation of non-opioid medications due to her hx. And labs. Plan at this time is to cautiously and use low dose opioids for pain and make adjustments as needed for pain and safety. HM 0.1mg IV q2hrs PRN ordered. Pt. Is not a candidate for PCA at this time.

Pt. Sleeping when checked on overnight. Pain appears to be well controlled with no PRN use/administered thus far

0430: Pain remains well controlled with PNC Ropivacaine@8ml/hr. Has not required PRN pain medication.

Today's Plan (Changes in bold):

01/09/25: Left Femoral PNC, 15cm @skin

CONT:
Ropivacaine 0.2% @8ml/hr

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: Pt. Family, RN, primary team and APS attending

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Home Medications

Prescriptions

Cholecalciferol 1000 units Oral Tab
Sig: Take 2 tablets (2,000 units) by mouth daily.

Cyanocobalamin (VITAMIN B-12 OR)
Sig: Take 1 tablet by mouth daily.

MULTIPLE VITAMIN OR
Sig: Take 1 tablet by mouth daily.

Wound Dressings (medihoney) topical gel
Sig: Apply topically daily. Apply to ulcerations on legs. Apply dressing over the Medi Honey.

Wound Dressings (medihoney) topical gel
Sig: Apply topically every other day. Apply to wound before applying dressing

atorvastatin 10 MG tablet
Sig: Take 1 tablet (10 mg) by mouth daily.

lidocaine 4 % patch
Sig: Apply 1 patch onto the skin every 24 hours. Apply to painful area for up to 12 hours in a 24 hour period.

pentoxifylline ER 400 MG ER tablet
Sig: Take 1 tablet (400 mg) by mouth 3 times a day. Take with food.

timolol maleate 0.5 % ophthalmic solution
Sig: instill 1 drop into both eyes twice a day

Additional Comments: None

Follow up

PENDING RESULTS THAT REQUIRE FOLLOW-UP (*as of this summary*)**:**

Pending Labs

Order	Current Status
1st Extra Urine Tube	In process

F/U recommended
- Ongoing goals of care discussion

- f/u with cardiology EP
- f/u with rehab medicine
- f/u with orthopedics surgery
- f/u with vascular surgery

THERAPEUTIC RECOMMENDATIONS:
- we have recommended limited interventions, as below. Remains on lovenox for dvt prophylaxis and other meds as below. Some meds such as asa and atorvastatin have been stopped at this point and if she can tolerate po this may need to be revisited depending on GOC, Rectal tylenol and high concentration oxycodone PO for pain

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

DISCHARGE MEDICATIONS:
Current Discharge Medication List

START taking these medications

	Details
acetaminophen 650 MG suppository	Unwrap and insert 1 suppository (650 mg) rectally every 6 hours as needed for mild pain, moderate pain or severe pain.
atropine 1% ophthalmic solution (for oral use)	Place 2 drops under the tongue every 4 hours as needed for secretions.
bisacodyl 10 MG suppository	Unwrap and insert 1 suppository (10 mg) rectally daily as needed for constipation.
buprenorphine 5 MCG/HR patch	Place 1 patch on the skin every 7 days. *Qty:* 2 patch, *Refills:* 0
camphor-menthol 0.5-0.5 % lotion	Apply topically 2 times a day as needed for itching.
carboxymethylcellulose 0.5 % ophthalmic solution	Place 1 drop in each EYE every hour as needed for dry eyes.
enoxaparin 30 MG/0.3ML prefilled syringe	Inject 0.3 mL (30 mg) under the skin at bedtime.
magnesium hydroxide 400 MG/5ML suspension	Take 30 mL by mouth 2 times a day as needed for constipation.
oxyCODONE CONCENTRATED 100 MG/5ML concentrate solution	2.5-5mg Oral, Every 4 hours PRN For pain *Qty:* 30 mL, *Refills:* 0
phenol 1.4 % mouth/throat spray	Place 1 spray to the mouth or throat every 2 hours as needed for sore throat.
psyllium 51.7 % packet	Take 1 packet by mouth 2 times a day. Mix in 8 oz of juice or water and drink.
saliva substitute (Biotene Dry Mouth) liquid oral rinse	Swish and spit 15 mL 3 times a day.
scopolamine 1 MG/3DAYS patch	Place 1 patch on the skin every 72 hours as needed for other (for secretions if atropine, glycopyrrolate are insufficient). Apply to hairless area behind 1 ear.
white petrolatum gel	Apply topically as needed for dry skin.

CONTINUE these medications which have NOT CHANGED

	Details
lidocaine 4 % patch	Apply 1 patch onto the skin every 24 hours. Apply to painful area for up to 12 hours in a 24 hour period. *Qty:* 15 each, *Refills:* 0

HOSPITAL COURSE:
Brief Admission History:
Per 1/9 admit note by Dr. Schwarz: *"100F w/h/o hx of HTN, T2DM, HLD, prior DVT (previously on warfarin), chronic venous disease (s/p prior saphenous stripping), and known PAD without known history of arterial intervention.*
She lives with her son, who notes that the chronic wounds at her LLE blackened ~2 days ago and she endorses increased pain in the leg around this time period. Subsequent symptom progression is unclear but her son notes that he noticed the leg was normal at around 6AM but had grown acutely discolored at 0730. He brought her directly to the ED. On arrival is bradycardic to the low 40s with EKG showing new RBBB but normal troponins. Normal range BP and mentating at baseline - able to answer questions appropriately. Labs notable for Cr 1.1, WBC 13.8, venous lactate 1.6; normal range trops, INR 1.1. On initial ED evaluation was noted to have no pulses so got CTA and consulted our service for evaluation.
The CTA demonstrated acute occlusion of the L EIA through the entire axial arterial system to the foot - PFA remains open via collaterals through the hypogastric. There is no occlusion of the RLE. She has no sensation from toes through mid/upper shin, foot is in fixed plantar-flexion, skin is cold and mottled. She has tenderness to palpation of the upper calf region."

Hospital Course:

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Discharge Summary Note (continued)

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

Pt was admitted as above. She initially underwent L AKA on 1/9/25 with vascular surgery. She subsequently developed symptomatic bradycardia w/ 2nd degree heart block necessitating TVP and eventual PPM placement on 1/13.

Post-operatively, she developed significant acute pain related to her AKA. Her pain was initially managed by APS w/ nubain patch and nalbuphine + PRN tylenol.

She unfortunately developed progressive encephalopathy with at least a component of delirium. This waxed and waned throughout her hospitalization but overall worsened. Related to this, she had ongoing dysphagia and high aspiration risk. As a result, she developed aspiration pneumonitis. It is felt that her ongoing aspiration likely worsened her delirium, which in turn increased her aspiration risk. Because of this, she was made NPO initially. Palliative care was consulted for assistance with assessing goals of care for Jeanne. This primarily occurred through discussion with her son, Louis, who is her POA. He felt that Jeanne would want everything because she is a fighter. There was ongoing push to do everything possible to extend Jeanne's life despite high risks. After multidisciplinary meetings between providers involved in her care including ethics, it was determined that Louis is likely acting in accordance with Jeanne's wishes, as she had previously noted she would want to be full code, have enteral nutrition, etc.

Given the aforementioned aspiration risk, Jeanne was NPO. However, after a GOC conversation, Louis felt that Jeanne would want to continue to eat by mouth. She continued to have ongoing aspirations and worsening respiratory status until she was made NPO again after being placed on high flow oxygen. At this point, Louis felt that the team should do everything to pursue an NG tube. Multiple attempts with bedside nursing were made to place an NG tube, but Jeanne became very agitate and resisted all attempts. She was given minimal sedation with low-dose ativan and had attempted placement under fluoroscopy, which failed. At this point, the team was able to place a peripheral IV and the decision was made to trial ~48 hours of IV fluids with dextrose to see if this helped her perk up.

Over the time she was receiving IV fluids, Jeanne developed pulmonary edema and worsening respiratory status again. This was likely multifactorial related to pulmonary edema and aspiration. She required high flow. Louis was adamant that was must get a feeding tube in her to address her nutrition. This was discussed with GI who agreed that she was too high risk to undergo anesthesia to have an endoscopically placed NG tube. After multiple prolonged goals of care discussions with Louis, she was ultimately made comfort care. We expressed to him that we are unable to place an NG tube due to tenuous clinical status and that overall, even if we could, this may even lead to more harm than benefit regardless due to aspiration risk of tube feeds. Louis intermittently continued to request aggressive treatments despite risks being too high, stating "she's going to die anyway", and so felt that we might as well try even if she were to "die on the table". We expressed that this would be doing harm and would not be offered.

Despite the transition to comfort measures only, patient continued to do well. She was eventually transitioned only to blow-by oxygen and even that became no longer necessary. She would rapidly desaturate with movement however her oxygen monitoring remained only intermittent. Multiple conversations were had with her son regarding the appropriate course of care. Discussions included transitioning the patient back to full care and treatment however many aspects of this treatment plan were not in line with with the care team thought was appropriate and ethical for the patient as well as what Luis thought she could tolerate. Aggressive inpatient management including daily IV draws and having to address patient's feeding were not likely to be of benefit to her quality of life. While the patient did show some improvement over the last several days, her overall prognosis is still poor to fair and it was agreed upon with the healthcare team and with the patient's son that her best interest is found in staying a comfort measures only patient with some "out of the box "comfort measures care. As such, she became a modified comfort measures patient with a general approach of minimum necessary escalation of care. For example, while systemic antibiotics would be contraindicated, patient developed what appeared to be a infected left parotid gland likely from poor p.o. intake and a dry oral mucosa. It was reasonable within the goals of care to prescribe 5 days of oral antibiotics to treat this. She also had a very mild erythema present at a picked off the scab from her left AKA site and it was reasonable to provide basic wound care. DVT prophylaxis also was a reasonable minimal necessary escalation of care. Patient's son began requesting more and more things that were starting to borderline on some care package between comfort measures and full care and so each of these issues need to be dealt with on an as needed and as provider determined appropriate basis. This happened in conjunction with nursing staff. Due to patient's incredibly high aspiration risk, it was made clear to Lewis on a near daily basis that we did not recommend feeding her anything at all however, as long as Lewis excepted the risk, we stated that it was okay if he were to feed her, and so he has done so. In fact, it is likely Luis is persistent fluid administration 2 water bottles and straws that the patient managed to do so well. Ultimately, her plan was Bainbridge rehab and this was agreed upon by all parties.

 # By problem

 # Right hip fracture
- fall in hospital on 3/5 with R hip fracture, non -op management decided upon based on very high operative risks.
- patient's son reported he internally rotated her leg to "set it" and we will repeat 2V femur xray - d/w orthoi and looks like there is no intervention needed after this manipulation by son
 - I have reiterated that he should not do this. If he does this again I think we need to have a discussion about him not being in her room. He reported he would not do this again.
- brace placed by orthotics on 3/7 at request of son and with guidance from orthotics and ortho.
- NWB on Right leg
- Should limit motion of leg (ideally no ROM of R leg)
- abduction pillow
- log rolls for turning
- hip-spica brace now in place settings 0-60, slight abduction, can take off if uncomfortable and when needed (was not strictly recommended at this point by ortho, patient and son prefer it to be on)
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25 (ordered as outpatient in case it needs to be done here vs at SNF)
- concentrated oxycodone for pain (low dose 2.5 - 5 mg)
- will continue lovenox for now

#Superficial infection of left stump site
#Mild parotitis
Will provide patient with 5-day course of crushable p.o. antibiotic to cover for parotitis infection which is limiting patient's quality of life at this time (completed). Also will instruct nursing staff to perform basic wound care on left stump site such as Betadine antiseptic and bandage care. Adhering to minimum necessary escalation of care

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite.
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders. Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- NWB LLE per Vascular Surgery
- has outpatient f/u 4/2/25
- was on ASA 81 mg daily, atorvastatin 10 mg daily which was dc'd during transition to modified comfort care, may require ongoing discussions with son . Previously was on pentoxifylline at home, but was not recommended by vascular surgery at this point
Per PMR

- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Possible **follow-up in rehab amputee clinic after discharge depending on GOC, referral placed**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is fully healed
- scheduled for f/u in EP clinic 3/21/25

#T2DM
BG in low 100s, discontinued SSI since not triggering insulin

Prior to admission, was on:
- timolol 0.5% opth 1 drop both eyes bid (glaucoma)
- b12 PO daily (unckear dose)
- Vitamin d 2000 units daily
- multivitamin

GOC note from palliative care discussion:
"INTERVAL HISTORY:
-Discussed case with Dr. Barnes. Jeanne had R femur fracture in the setting of a fall. No surgical intervention, is non-weightbearing. Plan was for Jeanne to d/c to SNF today for rehab, however, she required SQ hydromorphone overnight. Is now transitioned to an oral regimen.
-Per discussion with Dr. Barnes, son Louis expressed desire for Jeanne to be full code upon discharge. This topic came up with completing POLST. Dr. Barnes and I made plans to follow up for further discussion. Jeanne has been more somnolent this morning.
-Dr. Barnes and I discussed case with bedside RN Rosalie and charge RN Alex. Rosalie shared that Louis has been requesting a brace for Jeanne's leg to help stabilize it. Per discussion with Dr. Barnes, Louis manipulated Jeanne's leg trying to "set it".

Dr. Barnes, Rosalie Puleo RN, and I met bedside with Louis. Initially, Louis shared a desire for his mom to have a brace placed to stabilize her leg. He had done some research on is own and had some ideas about possible options. Louis shared worry that if her leg is not stabilized she will have severe pain with turns, which she will need to have for things such as toileting. He shared that she is quite sensitive to pain medications. If she becomes sedated from pain medications then she will not eat and then will eventually starve to death. I reflected to Louis that we were facing her decreased intake weeks ago and that it seems like this has

Discharge Summary Note (continued)

been up and down. Louis shared that he wants to give his mom a chance to recover.

We shared worry with Louis that Jeanne will continue to have complications and may not be able to recover and may be close to EOL. He shared that he knows that she will survive and will be able to get better.

We discussed with Louis standard of care and ortho recs for no brace, log roll turns. Louis shared how important it is to him for Jeanne to have her leg as stable as possible to have the best chance at recovery. We discussed that pain management will still be necessary as part of her care plan. He was accepting of this and expressed a desire to minimize opioids as much as possible.

We then addressed code status. Shared with Louis our perspective that providing interventions such as CPR or a breathing tube are unlinely to be helpful to Jeanne given her comorbidities and current clinical situation. Louis shared a hope for peace at EOL and also does not want to take things off of the table when she leaves the hospital. Shared that a peaceful EOL for Jeanne would not involve CPR. We asked Louis what his plan would be if his mom does not improve and continues to worsen. Louis shared taht eh would be willing to re-evaluate in the moment and make the decision.
...

IMPRESSION: Jeanne remains hospitalized and has been stable on comfort care for the past few weeks. She recently sustained a femur fracture which has increased her pain. Her son Louis has concerns about ongoing pain and has requested a brace to support her leg. At this time his is hoping for recovery and would like for his mom to remain full code. If things chance and his mom is clearly declining, then he is willing to consider changing her code status to DNR/ DNI. At this time Louis hopes for rehab oriented care for his mom.

RECOMMENDATIONS:
-Continue with current level of care. Louis would like code status changed to full code upon discharge from the hospital. Will leave code status as DNR/DNI and continue with comfort oriented care. Dr. Barnes and I are in agreement that full code status would not be medically appropriate at this time.
-Appreciate orthotics support with getting a brace for Jeanne if possible.
-Recommend trial of scheduled tylenol suppository (recommend Q8 hour dosing with turns).
-Recommend oxycodone 2.5-5mg PO Q8 hours PRN pain. Will be helpful to premedicate before turns.
-Louis is willing to reconsider POLST and changing code status in the future should Jeanne continue to clinically declline or not tolerate rehab oriented care.

Patient discussed with nursing and Discussed with primary team"

Key Diagnostic Studies:

XR Femur 2 Vw Right

Final Result by Rehwald, Christine Marie, MD (03/07 1805)

Redemonstration of the peri-implant femur fracture with decreased angulation. Similar shortening and anterior translation by one half shaft width. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Prominent screw head of the proximal most lateral femoral plate. Diffuse osseous demineralization. Vascular calcifications.

I have personally reviewed the images and agree with the report (or as edited).

XR Femur 2 Vw Right

Final Result by Rich, Natalie, MD (03/06 1011)

PELVIS: Acute comminuted impacted peri-implant right femur fracture with varus angulation. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Moderate left hip osteoarthritis. Diffuse osseous demineralization limits evaluation for nondisplaced fractures. Vascular calcifications.

RIGHT FEMUR: Acute comminuted peri-implant femur fracture with varus angulation and up to 8 cm of impaction. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Diffuse osseous demineralization. Vascular calcifications. Limited evaluation of the contralateral left lower extremity demonstrates an above knee amputation.

XR Pelvis 1-2 Vw

Final Result by Rich, Natalie, MD (03/06 1011)

PELVIS: Acute comminuted impacted peri-implant right femur fracture with varus angulation. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Moderate left hip osteoarthritis. Diffuse osseous demineralization limits evaluation for nondisplaced fractures. Vascular calcifications.

RIGHT FEMUR: Acute comminuted peri-implant femur fracture with varus angulation and up to 8 cm of impaction. Prior ORIF of the right femoral neck and plate and screw fixation of the right femoral shaft. Diffuse osseous demineralization. Vascular calcifications. Limited evaluation of the contralateral left lower extremity demonstrates an above knee amputation.

XR Chest 1 View

Final Result by Chalian, Hamid, MD (02/23 1201)

FINDINGS AND IMPRESSION:

Support apparatus: No significant interval change in position.

Heart and mediastinum: Cardiomediastinal silhouette is obscured

Lungs and pleura: Interval increase in bilateral pleural effusions and findings suggestive of pulmonary edema. Superimposed infection or aspiration cannot be excluded. No pneumothorax

Bones/soft tissue: Unchanged.

XR GI Tube Intro W Fluoro

Final Result by Dhyani, Manish, MD (02/20 1710)

Using guide wire and fluoroscopy, a weighted 10 French feeding tube was placed transnasally, however despite multiple attempts and lack of patient's cooperation, repeated attempts resulted in tracheal placement. After multiple attempts, and patient's inability to cooperate, the study was stopped without placement of tube.

Fluoroscopy time was 214 seconds.

PRESENCE STATEMENT:
I, Manish Dhyani, was present during the entire procedure, reviewed the images and agree with the report above.

CT Abdomen And Pelvis wo Contrast

Final Result by Dighe, Manjiri Kiran, MD (02/19 1314)

* Gallbladder distention without pericholecystic inflammation. Gallbladder ultrasound could be helpful for further evaluation, if clinically indicated.
* New bilateral moderate-volume pleural effusion and new reticular pulmonary parenchymal changes, which could suggest pneumonia in proper clinical settings.

I have personally reviewed the images and agree with the report (or as edited).

XR Abdomen 1 View

Final Result by Bhargava, Puneet, MD (02/18 1552)

Weighted enteric tube tip is in the lower third of the esophagus. Tube could be advanced further by 10 cm.

Lung findings are unchanged.

XR Chest 1 View
Final Result by Santos Lima, Ana Paula, MD (02/16 1033)

Lines and tubes: Unchanged.

Lungs: Decreased lung volume with bibasilar and perihilar consolidations likely atelectasis or aspiration. Superimposed edema is also conceivable.

Pleura: Increased bilateral small pleural effusions. No pneumothorax.

Heart and mediastinum: Unchanged.

XR Chest 1 View
Final Result by Gulhane V, Avanti, MD (02/03 1440)

Lines and tubes: Pacemaker electrode is unchanged in position.

Lungs: Pulmonary edema and bibasilar atelectasis persists.

Pleura: Moderate bilateral pleural effusions persist. No pneumothorax.

Heart and mediastinum: Unchanged.

XR Chest 1 View
Final Result by Godwin II, J David, MD (01/27 1008)
Compared to 1/25/2025, lung volume is even lower. Consolidation persists in midlungs and bases.

There are bilateral pleural effusions.

Heart size is unchanged. Pacemaker electrode position is unchanged, given different rotation.

XR Chest 1 View
Final Result by Cham, Matthew D, MD (01/25 1037)

Compared to 1/19/2025, lung volumes remain low. Increased bilateral mid and lower lung consolidation, likely edema superimposed with is basal atelectasis or aspiration.

Increased small pleural effusions. No pneumothorax.

Heart and mediastinum are unchanged.

I have personally reviewed the images and agree with the report (or as edited).

Vascular US Venous Duplex for DVT or Venous Obstruction Lower Extremity Right
Final Result by Zierler, Robert Eugene, MD (01/22 0921)

XR Chest 1 View
Final Result by Ordovas, Karen Gomes, MD (01/19 1218)

Lung volumes remain low with similar mild diffuse lung disease. Superimposed basal atelectasis or aspiration persists, but aeration of the bases is slightly improved.

Small pleural effusions persist. No pneumothorax.

Heart and mediastinum are unchanged.

I have personally reviewed the images and agree with the report (or as edited).

XR Chest 1 View
Final Result by Santos Lima, Ana Paula, MD (01/17 1314)

Lines and tubes: Right IJ central venous catheter has been removed

Lungs: Similar low lung volume with bibasilar atelectasis or aspiration.

Pleura: Small bilateral pleural effusions. No pneumothorax.

Heart and mediastinum: Unchanged.

XR Chest 2 View
Final Result by Godwin II, J David, MD (01/14 1056)
Compared to 1/13/2025, pacemaker electrode position is unchanged. Heart size is unchanged.

Lung volume is lower. Basal atelectasis or aspiration and bilateral pleural effusions persist.

XR Chest 1 View
Final Result by Godwin II, J David, MD (01/14 1003)
Compared to 1/12/2025, a pacemaker has been placed from the left subclavian vein with electrode in the right ventricular apex, as expected.

Heart size is normal and unchanged. Aorta is calcified, indicating atherosclerosis.

Lung volume is low. There is basal atelectasis or aspiration and there are bilateral pleural effusions.

No pneumothorax.

Electrophysiology procedure
Final Result by Akoum, Nazem Walid, MD (01/13 2118)

XR Chest 1 View
Final Result by Chalian, Hamid, MD (01/12 1322)
FINDINGS AND IMPRESSION:

Support apparatus: No significant interval change in position.

Heart and mediastinum: Cardiomediastinal silhouette is unchanged.

Lungs and pleura: Slight interval increase in left pleural effusion. Findings suggestive of pulmonary edema with a slight interval increase. Trace right pleural effusion. No pneumothorax.

Bones/soft tissue: Unchanged.

TransTHORACIC echo (TTE) complete
Final Result by Otto, Catherine M, MD (01/10 1826)

Cardiac catheterization
Final Result by Ayyoub, Alaa Samih, MD (01/10 1710)

Electrophysiology procedure
Final Result by Ayyoub, Alaa Samih, MD (01/10 1716)

XR Chest 1 View
Final Result by Santos Lima, Ana Paula, MD (01/10 1601)

Lines and tubes: Transvenous pacing wire tip terminates in the right ventricle.

Lungs: The lung volumes persist. Similar bibasilar consolidations, likely atelectasis or aspiration.

Pleura: Small left pleural effusion. No pneumothorax.

Heart and mediastinum: Unchanged.

I have personally reviewed the images and agree with the report (or as edited).

Cardiac catheterization
Final Result by Ayyoub, Alaa Samih, MD (01/10 1323)

CTA Abdomen Angio
Final Result by Hartman, Jason Brett, MD (01/09 1228)
Occlusion of the left lower extremity vasculature beginning at the left external iliac artery. There is associated skin thickening/swelling of the distal left lower extremity which likely represents edema. No associated subcutaneous emphysema or definitive evidence of necrotizing soft tissue infection.

XR Chest 1 View
Final Result by Hartman, Jason Brett, MD (01/09 1102)

Lines and tubes: None.

Lungs: Clear.

Pleura: No effusion. No pneumothorax.

Heart and mediastinum: Unremarkable.

Bones: No acute or suspicious abnormality.

XR Femur 2 Vw Bilat (Results Pending)

Discharge Orders

XR Femur 2 Vw Bilat
Standing Status: Future *Standing Exp. Date:* 04/07/26

Reason for exam (include signs, symptoms, diagnosis, and medical history)?	3/13/25 Femur fracture f/u imaging as requested for this date by orthopedic surgery team
Does the patient require sedation or anesthesia?	None
Release Result to Patient	Immediate

Referral to Fractures/Trauma
Standing Status: Future
Referral Priority: Routine *Referral Type: Specialty Visit*
Number of Visits Requested: 1

Referral to Rehabilitation Medicine
Standing Status: Future
Referral Priority: Routine *Referral Type: Rehab*
Number of Visits Requested: 1

Discharge Summary: Enclosed

Patient Aware of Diagnosis: Yes

Activity (specify)
Order Comments:
- brace placed by orthotics on 3/7 at request of son and with guidance from orthotics and ortho.
- NWB on Right leg
- Should limit motion of leg (ideally no ROM of R leg)
- abduction pillow
- log rolls for turning
- hip-spica brace now in place settings 0-60, slight abduction, can take off if uncomfortable and when needed (was not strictly recommended at this point by ortho, patient and son prefer it to be on)
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25 (ordered as outpatient in case it needs to be done here vs at SNF)
- NWB on Left leg

Adult Discharge Diet (Specify)
Order Comments: As tolerated, aspiration risk

Diet type:	Regular
Carbohydrate level:	Carbohydrate managed

DISCHARGE PHYSICAL EXAM:

Vitals (Most recent in last 24 hrs)
T: (not recorded) **BP:** (not recorded) **HR:** (not recorded) **RR:** (not recorded) **SpO2:** (not recorded) Room air **T range:** No data recorded Admit weight: 45.5 kg (100 lb 6.4 oz) (01/09/25 1033) Last weight: 45.7 kg (100 lb 12 oz) (02/21/25 0749)

Physical Exam
NAD, comfortable appearing; sitting up in bed,

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Discharge Summary Note (continued)

EOMI, edentulous. Left parotid gland appears to be improved and is no longer erythematous.
No increased WOB, Decreased air movement. Crackles bilaterally mild.
Abd soft, NTND
No pretibial edema
no rash or concerning lesion of exposed skin. Incision site medial aspect with scab that appears picked off. No discolored drainage though there is some superficial white slough and 1-2mm of erythema.
Alert, no gross focal deficits, +dysarthria, seems to respond to question (though not intelligible) but interactive and able to prompt when wants something, interactive
Mood/affect congruent
RLE- wwp, pulses palpable

ATTENDING TIME STATEMENT:
I spent more than 30 minutes on hospital discharge day management.

Brief Op Note

Schwarz, Samuel, MD at 1/9/2025 1621

Immediate Brief Operative Note

Jeanne Leonie Hoffman - DOB: 1/6/1925 (100 year old female) MRN: U8170135
Procedure Date: 01/09/2025 | Location:UWMC MAIN OR

PROCEDURE DETAILS	
Procedure Team:	**Primary: Smith, Matthew C, MD** **Resident - Assisting: Schwarz, Samuel, MD**
Procedure(s):	AMPUTATION, ABOVE KNEE - Left
Pre Procedure Diagnosis:	Acute lower limb ischemia [I99.8]
Post Procedure Diagnosis:	* Acute lower limb ischemia [I99.8]

PROCEDURE SUMMARY

Anesthesia: General
Estimated Blood Loss: 50 mL

Wound Closure: Primary Closure (Primary Intention)
Wound Class: Procedure(s):
AMPUTATION, ABOVE KNEE - Wound Class: Class I/ Clean

SPECIMENS:

Clinical Notes (group 1 of 17) (continued)

ID	Type	Source	Tests	Collected by	Time
1 : Left leg and left leg thrombus	Tissue	Leg, Left	PATHOLOGY, SURGICAL	Smith, Matthew C, MD	1/9/2025 1650
2 : left leg thrombus	Tissue	Leg, Left	PATHOLOGY, SURGICAL	Smith, Matthew C, MD	1/9/2025 1714

FINDINGS

- PNC placed pre-op
- Above-knee amputation with little blood loss
- Closed with 3 layers sutures; staples for skin
- Patient extubated in OR without issue

1.

POST OP PLAN

- Admit CT ICU
- Bed rest overnight; will be NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for CLD, will advance in AM
- Insulin gtt for BG management; ok to transition to SQI once up in ICU
- SBP 100-160
- Cardiology consulted for bradycardia to 20s with 2nd degree AVB
- TTE needed for completion of embolic workup; ok to be done in AM unless cardiology would like it done sooner
- Hold AC until tomorrow AM at which point Hep gtt will resume

Care Plan

Dupriest, Mallory R, ARNP at 2/4/2025 1123

Jeanne Leonie Hoffman is a 100 year old female with PMH of HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA on 1/9/25, and with symptomatic bradycardia, RBBB (at baseline) and intermittent Mobitz 2 s/p Boston Scientific single chamber PPM (1/13/2025, Dr. Akoum).

Device Measured Data at implant:

DEVICE MEASUREMENTS
1. Right ventricle: R waves 25 mV, pacing impedance 630 ohms, threshold 0.9V at 0.4 ms.

FINAL PROGRAMMED PARAMETERS
VVIR 70-120

Patient was scheduled for 2 week in person wound check, but still admitted.I was asked to assess patient incision site. Incision site (left upper chest) is well approximated without evidence of tension or threatened dehiscence. With no c/o pain, redness or swelling. Pictures uploaded into Media tab.

Patient's son was present at time of visit. He reports that he would like to enroll in remote monitoring. He tells me they have electricity at home and would be able to send in transmissions to our team. I have reached out to the Device Clinic team in regards to setting this up.

Jeanne is scheduled for EP in person device follow-up on 3/21/2025.

Brief Update

PM visit
RN informed that patient son is insisting on a NGT and wanted provider to be seen at bedside

Bedside discussion
When I went to bedside Louis was sitting by Jeanne's bed holding her hand and crying .
He saw me said said look at her she is starving, we are starving her
I brought in a tissue box for Louis and sat down and asked him how I could help
Louis was very emotional, he shared that she was his only friend and business partner. She was not just his mother. He spent several minutes sharing a few if their back stories and also expressed a lot of guilt in not being able to take her to a good home and many instances when they struggled together. After briefly allowing him to share, I was able to redirect Louis.

Discussed disposition : Plan for discharge, when a safe plan is available, at the earliest.

Louis asked me if I cannot place an NGT to help her starvation: I informed him that it wasn't a safe option at this time and it will not help. I also shared that based on our multidisciplinary meeting that was considered an intervention that was not recommended in her well being
He said Ok. He shared verbally to n=know not to expect that plan to change tonight.

He asked about PIV: I informed him that if anyone could place one we would however we have all tried and her veins were too small
Louis stated at least try, its ok if you fail, I shared that we will see if there is anyone that hasn't tried and will see what's best

He was ok with the plan
I also shared with him that he had taken good care of his mother .

Plan
-order placed for Hydromorphone sub cu prn pain (appreciate rec from Pal Care)
-discussed with stat RN who said she will try to see if anyone can place PIV
-NO NGT placement

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Pronouns: she/her/hers, patient's name
PCP: Navalurkar, Reema, MD
Code Status: Full Code

Consults

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with no known cardiovascular disease history who is admitted for acute ischemic limb, cardiology is consulted for bradycardia post procedure.

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:

Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB.

Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

HISTORY

Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency

- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion
- Acute lower limb ischemia

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with no known cardiovascular disease history who is admitted for acute ischemic limb, cardiology is consulted for bradycardia post procedure.

 # 2:1 AV Block
 # RBBB
 # 1st degree AV block
 # Sinus Bradycardia
- Potentially vagally mediated after her surgery, I recommended 1mg of atropine and heart rate improved from high 20s to low 40s. Has some underlying conduction system disease given baseline 1st degree AV block and RBBB
- Telemetry
- Keep pacing pads on
- TSH, BMP to evaluate for hyperkalemia after surgery
- Atropine PRN for HR<25
- If patient develops acute symptomatic bradycardia (hypotension, altered mental status), recommend starting dopamine drip
- If significant arrhythmias on dopamine drip or does not respond rapidly, contact our cardiology team for consideration of TVP
- I discussed goals of care and patient's quality of life with son at bedside (patient is profoundly hard of hearing) and he reported that permanent pacer would be within goals of care (would have to discuss with EP) if it were indicated. States that she has good quality of life and is longevity focused
- We will follow-up in morning with further recommendations after review telemetry overnight

The patient was discussed with attending, Dr. Linker. Cardiology will follow. Please do not hesitate to reach out with any further questions.

Inpatient Consult to Pain Management

Consult performed by: Gicheru, Florence W, ARNP
Consult ordered by: Smith, Matthew C, MD
Reason for consult: Complex postoperative pain management requiring PNC for pain medication administration

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27.
APS is consulted for complex post-operative pain management, including PNC management

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Per Dr. Sonderman's note dated 1/9/25:
Patient presented to the ED today with acute limb ischemia. Vascular surgery had extensive goals of care discussion and patient is full code and proceeded to AKA. Pre procedure patient was in sinus brady with rates in 40s, first degree heart block and RBBB. Post procedure, patient had lower heart rates in the 20s-30s. She was alert and asymptomatic throughout, son is at bedside and reported she is at her baseline. She has no history of bradycardia, typical HR at clinic appointments 60s-70s, no recent history of syncope/pre-syncope. No known history of CAD, heart failure. Prior EKG in 11/2023 shows similar 1st degree AV block, RBBB and rates in 60s-70s. She recently went on 50d train trip throughout America and had no medical complications on the entire trip. She has good quality of life and is currently focusing on duration (she wants to meet Al Roker given her 100th birthday).

PAIN ASSESSMENT:
Pain Location:
surgical site: Left lower extremity above the knee amputation site
Pain Severity:
Worst Pain: 0
Least Pain: 0
Pain Intensity and Patient Reported Outcomes:
Pain control: well controlled
Patient Reported Treatment Side Effects:
No Nausea:
No itching

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

HISTORY REVIEWED:
I have reviewed the patient's social history with the patient.

Past Pain/Substance Use History: Notable opioid related events Multiple narcan events at home and inpatient per family

Up to date information could not be retrieved from the PDMP.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

APS is consulted for complex post-operative pain management, including PNC management

Pt. Seen at this time in the ICU. She is inially sleeping but later wakes up. She is HOH but responds appropriately to simple questions written on a board. Her son, also her caregiver, is at bedside and a good historian. Son reports that in 2023, pt. Was on opioids for chronic pain but had a number of narcan events at home, at which point all opioids were discontinued. She also had a narcan event during her most recent hospitalization. Pt. Consequently started using Tylenol but must have taken "one too many," which resulted in Acetaminophen toxicity per son. She has since been using positioning and activity to help with the pain.

Pt. Denies any pain at this time. She is on a PNC Ropivacaine 0.2% continuous infusion at 8ml/hr for pain. Per RN, she was unable to swallow any medications this evening hence low dose Acetaminophen IV ordered. Contacted the primary team to determine if the pt. Is a candidate for NSAIDS for pain management for which she is not due to a drop in HCT, currently 32% per lab review. Pt. Discussed with attending due to the significant hx. Of opioid adverse effects and limitation of non-opioid medications due to her hx. And labs. Plan at this time is to cautiously and use low dose opioids for pain and make adjustments as needed for pain and safety. HM 0.1mg IV q2hrs PRN ordered. Pt. Is not a candidate for PCA at this time.

Pt. Sleeping when checked on overnight. Pain appears to be well controlled with no PRN use/administered thus far

0430: Pain remains well controlled with PNC Ropivacaine@8ml/hr. Has not required PRN pain medication.

Today's Plan (Changes in bold):

01/09/25: Left Femoral PNC, 15cm @skin

CONT:
Ropivacaine 0.2% @8ml/hr

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: Pt. Family, RN, primary team and APS attending

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Electronically signed by Gicheru, Florence W, ARNP at 1/10/2025 5:04 AM

Diaz, Andrea Estefania, MD at 1/10/2025 1340

Consult Orders
1. Inpatient Consult to Cardiology [360358815] ordered by Sonderman, Mark Thomas, MD

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Cardiology

Consult performed by: Diaz, Andrea Estefania, MD
Consult ordered by: Smith, Matthew C, MD
Reason for consult: Symptomatic bradycardia

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100F with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA on 1/9/25. Presented with bradycardia that worsened after surgery. Now symptomatic with intermittent Mobitz 2.

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:
Patient presented on 1/9/25 with 2 days of sx of acute limb ischemia. After extensive GOC, patient determined to be longevity focused and received an AKA. HR on presentation to ED in the 40s with 1AVB and RBBB. After procedure patient had lower heart rates in the 20-30s. She was asymptomatic in these rates yesterday and this morning when cardiology consult team saw patient including no CP/SOB, LH/dizziness.Today patient worked with PT and afterwards developed lightheadedness which persisted despite patient being put supine. Therefore, there was concern that bradycardia had become symptomatic and more GOC discussions with primary team, it was deemed to be within her GOC to receive a TVP and be considered for a PPM for which we are consulted. TVP placed this afternoon at VVI 60.

She has no known history of bradycardia with clinic visit notes showing a HR in the 60-70s.

Team reached out to cardiology consults who saw her last evening and recommended atropine which was given with slight improvement. Dopamine was also recommended and patient initially on 3-4mcg/kg/min dopamine (started on 2100 1/9/25), was as high as 10mcg/kg/min now on 8mcg/kg/min.

Given wide pulse pressure, team has ordered a TTE which is pending.

Social history is significant for recent houseless due to being evicted from home. She has capacity per the team and makes her own decision. Should this change, her son would be her decision maker. As mentioned in Dr. Sonderman's consult note, she recently traveled for 50 days without any medical complications. She has good quality of life and is currently focusing on duration.

- Vitals: Afebrile, 98/32-153/41, satting well on ambient air with RR 16-20
- I/O: +2.4/-770mL, net positive 1.6L
- Labs: BMP with electrolytes within nl limits, CBC with leukocytosis to 12.5 from 8, Hb 9.4, plts 123 from 76.
- Telemetry: SB and 3:1 AV block present, rate in the 20s-30s prior to dopamine administration, with increase in rates to high 30s and low 40s after dopamine admin

Back in November of 2023, 1st degree AVB with atrial bigeminy.

No history of chest pain prior to presentation and troponins negative.

EKG 1/9 prior to AKA

EKG 1/9 post AKA

Tele this afternoon showing 3:1 AVB

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with no known cardiovascular disease history who is admitted for acute ischemic limb, cardiology is consulted for bradycardia post procedure.

2. 3:1 2nd degree AVB with syncope
3. Sinus bradycardia with 1st degree AVB
3. RBBB

Patient has underlying conduction disease with RBBB and 1st degree AVB on EKG on admission. Hrs decreased from 40--> 30s after surgery likely due to medications used during surgery. She subsequently has shown signs of high degree AVB with 3:1 AVB and associated symptoms (syncope on 1/9 while working with PT), which is a class 1 indication for permanent pacing. She is now s/p TVP placement. Her size and body habitus (96lbs, BMI 18) put her at high risk for cardiac perforation in the setting of a leadless pacemaker. Therefore, we think a single lead PPM would be the most appropriate device for her, with placement ideally early next week.

Plan:
- Continue TVP use over the weekend, reach out to EP if there are questions regarding TVP.
- Plan for single lead PPM next week
- NPO at MN on Sunday for possible procedure Monday pending lab availability
- Hold all heparin products the night before procedure and afterwards.

The patient was discussed with attending, Dr. Poole. EP will follow. Please do not hesitate to reach out with any further questions.

Andrea Diaz, MD.
Cardiology Fellow

I saw and evaluated the patient and agree with Dr.Diaz's note.
The patient has AV block and would like to pursue PM implant in order to improve her quality of life
She will receive a single chamber pacemaker next week.
Date of service is 1/10/2025

Consult Orders
1. Inpatient Consult to Palliative Care [360394214] ordered by Patterson, Kristopher T, MD

Attestation with edits by Fram, Julia R, MD at 1/10/2025 8:28 PM

Date of Service: 01/10/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.

I spent a total of 96 minutes for the patient's care on the date of the service.

Consult Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Palliative Care
Consult performed by: Hand, Cameron, MD
Consult ordered by: Smith, Matthew C, MD

PALLIATIVE CARE SERVICE: INITIAL CONSULT

ID/CC/REASON FOR CONSULT: Jeanne is a 100 yo F with PMH HTN, T2DM, HLD, who presented with LLE acute limb ischemia now s/p L AKA.
We appreciate the request from Dr. Smith, attending physician of the CTICU service, to consult for goals of care, patient and family support, palliative care.

OUTPATIENT PROVIDERS:
PCP: Navalurkar, Reema, MD
Specialists:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

HPI:
Brief history of illness/hospital course: 100 yo F with PMH HTN, T2DM, HLD, who presented with LLE acute limb ischemia now s/p L AKA. Post operatively also began to have symptomatic bradycardia now s/p TVP.

PALLIATIVE CARE DISCUSSION HELD TODAY:
Narrative History Interview

Participants: Patient Jeanne Hoffman, son Louis Alloin, Dr. Julia Fram PC Attending, Dr. Cameron Hand PC Fellow.

Voice: Jeanne is very hard of hearing and acutely bradycardic during our visit and so attempts were made to communicate to her as well using a white board, however she was not reliably responding to

simple/questions and dysarthric when attempting to vocalize. We spoke also with her son Louis who did provide some context about her recent medical situation as well as their social situation.

Background/Social History: Jeanne lives with her son Louis, who has been her primary caregiver. Louis had a lot of concern about recent housing uncertainty. He described at great length in detail difficulties with her current housing situation on Bainbridge, fighting to get the dwelling they were living in up to standards as it had difficulty with plumbing and kitchen appliances. He talks about ultimately not being able to live in the dwelling anymore and spending a temporary time in a hotel but says that since December 19 they have possibly been living in a tent on Bainbridge Island. He says his mother was born on Bainbridge 100 years ago and that all their community is there. As far as immediate family he describes them mainly living on the East Coast or in France and did not bring up anyone who is particularly close.

Understanding/perspective of illness: Louis was able to describe in quite detail how his mother's leg was showing signs of early gangrene around the start of the month. He had been trying to do wound care to the ability that he had outside of the hospital however he noticed it started turning black and progressing and eventually brought her into the hospital where she has undergone an above-the-knee amputation. He was also able to discuss her heart beating too slow and that they were trying to put a pacer in to fix this and that the current pacer did not appear that it was working.

Hopes and what brings life meaning or purpose: He talked about their enjoyment of traveling by trains together. She enjoys her community on Bainbridge Island. He did discuss that when it does come for the time for his mother to pass that she wishes to pass away and be buried on Bainbridge Island and that this was very important to her.

Acceptable quality of life: This was unable to be discussed at this visit.

Fears/Concerns/Worries: Much of the concerns that Louis expressed were regarding the recent housing uncertainty and he spent much of the time talking about this to great detail.

Strengths/ Role of spirituality/faith/religion: This was not discussed in this visit.

Communication preferences: Not discussed in this visit.

Past experience with serious illness/hospice: Not discussed during this visit.

SYMPTOM SCREENING AND ASSESSMENT: (Required for TJC)
Modified-ESAS not appropriate for content of initial meeting, will assess at next encounter.

PHYSICAL EXAM: Physical Exam
Const: Lying in ICU bed. Edentulous. Interactive.
Neck: Lines in place.
Resp: No respiratory distress
Ext: Moving upper extremities bilaterally.

IMPRESSION: Jeanne is a 100 yo F who presented with LLE acute limb ischemia now s/p L AKA, as well as TVP now placed for symptomatic bradycardia. Per discussion with other teams, the patient and son expressed a longevity focused goal for her care and have been assenting to the procedures and care offered up until this point. We spoke primarily with Jeanne's son today. During much of the attempts to

discuss Jeanne's medical condition, Louis primarily discussed concerns with her housing situation and housing insecurity.
He did however elaborate on how if Jeanne were approaching end of life, she would want to spend this time and be buried on Bainbridge Island as this is her longtime community and home.

Goals of Care: Continue current longevity focused care. Code status (not discussed during our visit) is full code.

Estimated Prognosis: Uncertain

PALLIATIVE CARE INTERDISCIPLINARY CARE PLAN AND RECOMMENDATIONS:

1. We introduced role of palliative care. We will continue to follow for support and further goals of care clarification.
2. Continue to try and communicate with Jeanne using any assistance as may be helpful such as pocket talker, whiteboard with large lettering, if she has dentures/hearing aids/other devices available
3. Louis does have multiple concerns about housing insecurity and may benefit from meeting with social work at some point during their admission.
4. Louis does express that Jeanne would have preference to pass away and be buried on Bainbridge Island if this were to become a factor in the future.

1.
2. **Advance Directives/POLST**
3. 1) SURROGATE DECISION MAKER: LNOK: Louis Alloin

Surrogate phone number: 206-780-6885

2) Advance Directives: None on file

3) POLST: was completed today? No

Disposition: CTICU

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

Consult Orders
1. Inpatient Consult to Nutrition [360746638] ordered by Mahdi, Elaa, MD at 01/12/25 1111
2. Inpatient consult to Nutrition [360361061] ordered by Grabar, Christina, MD at 01/09/25 2025

Inpatient Adult Nutrition - Brief Follow Up Note

Consult received re: nutrition assessment, TF recommendations

Recommendations/Interventions:

Labs

Pt at high risk of refeeding given inadequate oral intake >5 days.
Recommend BMP + Mg/Phos Q 12H for 3 days or until lytes stable
Replace lytes to WNL prior to EN initiation and/or advancement
Maintain BGs <200 prior to EN initiation and/or advancement

Request updated vit D 25-OH level to determine appropriate supplementation, r/o vit D toxcitity
Request updated zinc level to determine need for supplementation for wound healing

Meds/Supplementation

Recommend high dose thiamine: 500 mg IV TID for 3 days given ongoing AMS
- OK to continue oral thiamine as ordered
Recommend prenatal multivitamin 1 tab PO or per FT daily
Recommend ascorbic acid 500 mg BID x 14 days PO or per FT

Pending zinc level:
- recommend zinc sulfate 220 mg daily x 14 days PO or per FT

Consider hold vit D supplementation until updated lab
Continue oral vit B12 as ordered

Enteral Nutrition

Await NGT placement, appropriate for bridled tube insertion to prevent dislodgement by patient

Start @ 10 mL/hr, adv 10 mL Q 4H to goal rate
Jevity 1.5 @ 40 mL/hr
= 880 mL TF, 1320 kcal, 56 gm protein, 190 gm CHO, 18.5 gm fiber, 669 mL free water
Minimum 30 mL free water flush q 4 hours while TF are running to maintain tube patency
Calculated over 22 hrs to allow for interruptions for care

Oral Nutrition

6- soft and bite sized, 0- thin liquids per SLP
- if c/f aspiration risk, hold PO and request SLP re-eval

Appreciate nursing assistance in meal ordering/tray set up/feed assist PRN
Can adjust to non-select, automatic meal delivery for ease if indicated
Offer ONS in place of missed/skipped meals
Appreciate nursing documentation of % intake of meals/snacks/supplements

Interim:

Pt with ongoing delirium, combativeness; requiring mitts placed to prevent pulling lines

Current Nutrition Assessment:

FEN: cleared for level 6 diet per SLP on 1/9
Patient Vitals for the past 168 hrs:

	Percent Meals Eaten (%)
01/11/25 1300	50 (chicken pot pi, soup, squash)
01/11/25 0900	100 (oatmeal and peaches)

GI: constipation? Last BM 1/9, suspect prior to admit

- currently without EN access, unclear feasibility of placement given pt agitation
Weight: ~44-46 kg

Estimated Nutrition Needs
Using post LL amputation wt, 45.8 kg
Energy: 1145-1375 kcal (25-30 kcal/kg)
Protein: 55-64 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

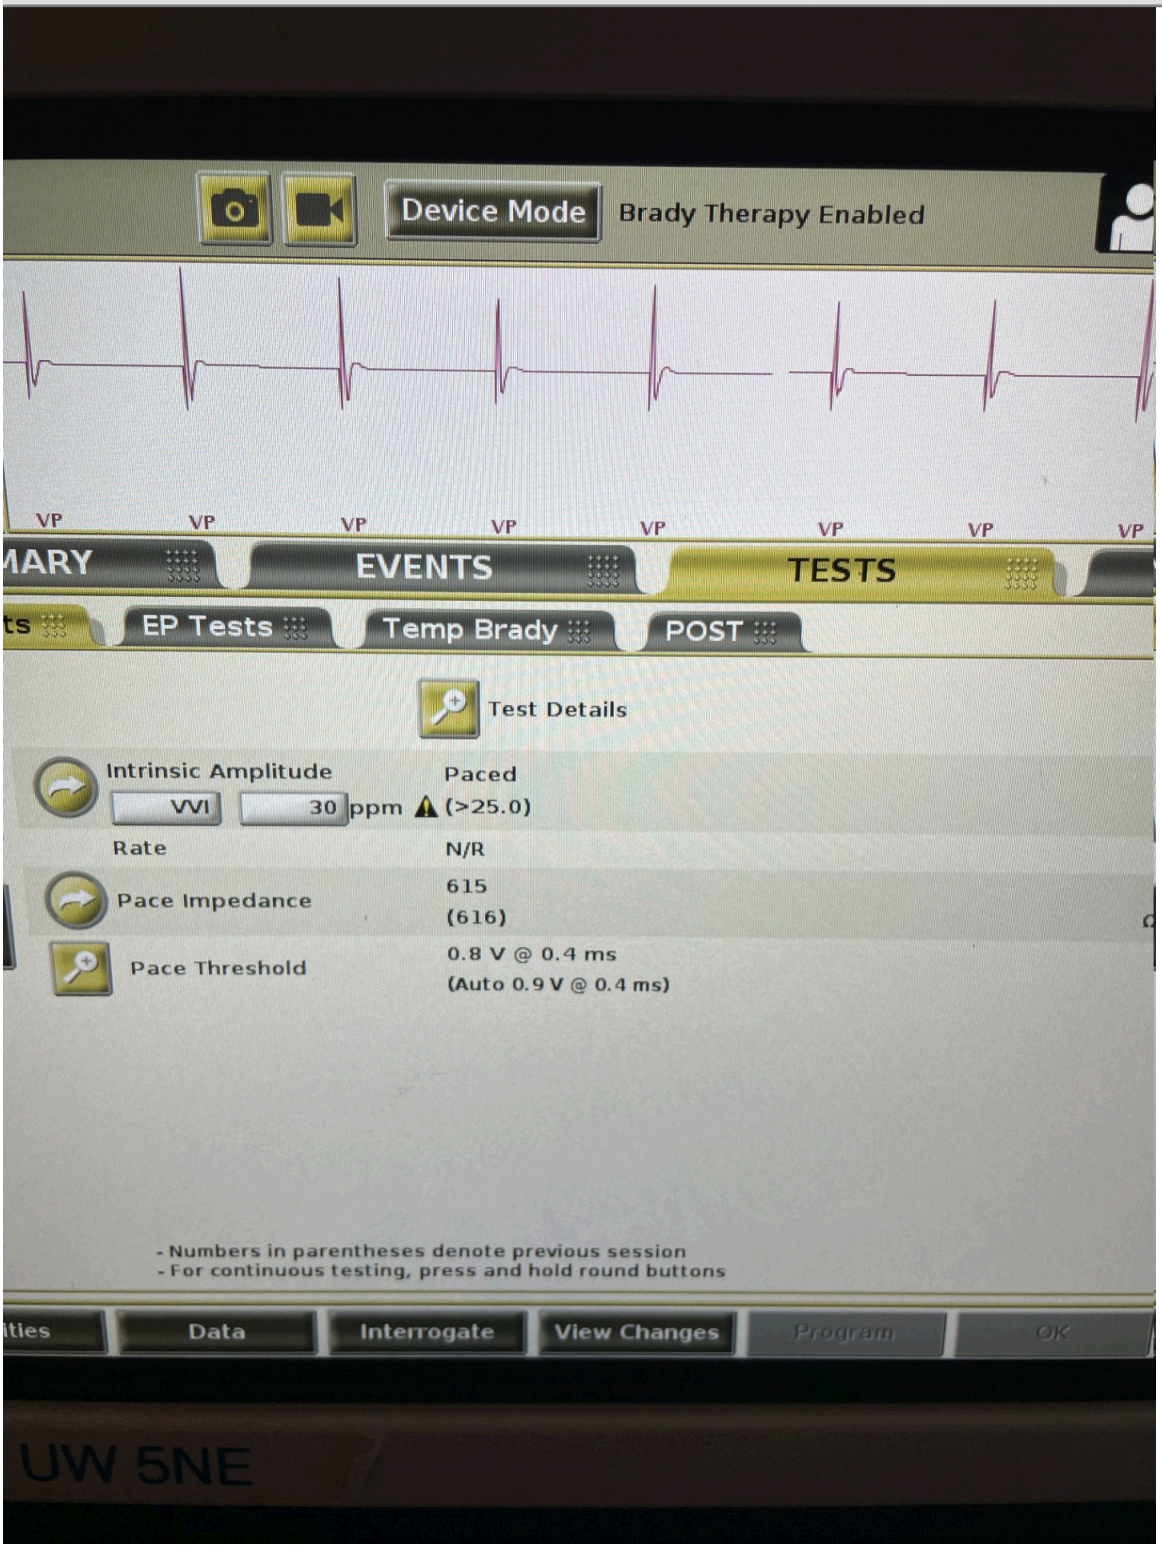
ELECTROPHYSIOLOGY DEVICE POST-IMPLANTATION NOTE

Implanting Electrophysiologist: Dr. Nazem Akoum, MD

Identification: Jeanne Leonie Hoffman is a 100 year old female who underwent placement of a single chamber pacemaker yesterday which was uncomplicated.

Subjective: Jeanne denies significant pain or shortness of breath.



Objective:

Vitals (Most recent in last 24 hrs)
T: **(!) 37.9 °C** (01/14/25 0800) **BP:** **(!) 111/46** (01/14/25 0800) **HR:** 70 (01/14/25 0800)
RR: 18 (01/14/25 0800) **SpO2:** 98 % (01/14/25 0800)
T range: Temp Min: 36 °C Max: 37.9 °C
Admit weight: 45.5 kg (100 lb 6.4 oz) (01/09/25 1033)
Last weight: 46.4 kg (102 lb 4.7 oz) (01/12/25 0600)

Chest: Incision is clean and dry with no evidence of dehiscence or bleeding. There is no hematoma.
Respiration: Normal work of breathing on room air.

Two-view chest x-ray: Leads in acceptable positions without evidence of pneumothorax.

Interrogation results:

Assessment and Plan:
Successful device placement without evidence of significant complications. Jeanne Leonie Hoffman has been added to the EP follow up list and will be called to schedule an appointment. Routine post-implantation care and activity restrictions discussed.

Thank you for involving us in Jeanne Hoffman's care. The patient was was seen and discussed with Dr. Nazem Akoum, MD, the attending electrophysiologist. We will now sign off. Please reach out via the operator with any further questions.

Device care instructions:
- May shower 72 hours after surgery; gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days.
- Activity restriction (for 30 days after implantation):

4. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
5. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

- 3. Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
-
- Avoid heparin products if possible after device placement. If heparin products are needed, please wait **at least 48 hours** after device placement.
-
- This patient was seen and discussed with Cardiology Attending Nazem Akoum, MD.
-
- Omar A Khan, MD
- Fellow in Cardiovascular Medicine

Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Inpatient Consult to Physical Medicine Rehab
Consult performed by: Gorelick, Noah L, MD
Consult ordered by: Segerson, Karen Elaine, MD

CHIEF CONCERN / IDENTIFICATION:

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Physical medicine and rehabilitation consulted for L above knee amputation recommendations.

Subjective

SUBJECTIVE

HISTORY OF PRESENT ILLNESS:

History obtained from combination of chart review and conversation with patient's son, Louis. He reports that they were evicted from their housing Bainbridge Island, where they were recently evicted from their home around October 2024. He had been working on caring for her chronic left lower extremity ulcers until he noticed that they had started to become necrotic following her 100th birthday celebrations on 1/6 and 1/7. They presented to the hospital on 1/9 and proceeded to left above-knee amputation for Rutherford class III acute limb ischemia.

Surgical hospital course was complicated by bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Today patient was approached resting comfortably at the bedside in the ICU. Communication with patient was limited by significant hearing impairment and conducted primarily via writing with large lettering on dry erase board at the bedside. Patient indicated that she was experiencing some pain at her incision. She also endorsed ongoing phantom sensation of her amputated toes and leg up to the incision. Importance of stretching to prevent HF contracture was discussed with her son Louis.

HISTORY

Problem List

Diagnosis
• Sensorineural hearing loss, unspecified
• Hypercholesterolemia
• Generalized osteoarthrosis, unspecified site
• Essential hypertension, benign
• Unspecified glaucoma(365.9)
• Routine general medical examination at a health care facility
• Type 2 diabetes mellitus without complication (HCC)
• Adult failure to thrive syndrome
• Osteoporosis, unspecified
• Osteoarthritis of lumbar spine
• Urine incontinence
• Pseudophakia, both eyes
• History of recurrent deep vein thrombosis (DVT)
• Imbalance
• Primary osteoarthritis of both hips
• Vitamin D deficiency
• Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
• Primary open angle glaucoma (POAG) of both eyes
• Closed fracture of distal end of femur, unspecified fracture morphology, sequela
• Community acquired bacterial pneumonia
• Reduced vision
• Housing instability
• Advanced care planning/counseling discussion
• Acute lower limb ischemia
• Bradycardia

Family History

Problem	Relation	Age of Onset
• No Known Problems	Father Mother	

Support System and Family Circumstances (i.e., potential caregivers): Lives with son Louis
Home Environment / Accessibility:
Per PT note 1/10:
"Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Jeanne's son, Louis, is the primary caregiver for Jeanne
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker;Other (Transport chair)"

FUNCTIONAL HISTORY

Prior Function: Per PT note 1/10: "limited mobility within tent. she was using FWW or SPC for short distances and then transport/wheelchair for community distances. she would occ need assistance wtih getting on/off the cot and for ADLs. Although Louis is a good historian, it can be difficult at times to get a understandable timeline of her fxnal mobility."

Current Function:
Mobility: max assist
ADLs: max assist/dependent
Cognition/Communication: impaired hearing, able to read large letters on dry erase board.
Swallow: low/moderate aspiration risk (pending mentation)
Bowel: LBM 1/15
Bladder: foley

MEDICATIONS:
SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- [Held By Provider] cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- [Held By Provider] guanFACINE, 1 mg, BID
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine, 500 mg, TID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/16/25 1047)
- ROPivacaine, , Continuous
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 1 packet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

ALLERGIES:
Adhesives, Aspirin, Nitrofurantoin, Penicillins, and Sulfa antibiotics

RELEVANT RESULTS
Imaging Results:
Electrophysiology procedure
- Successful single chamber pacemaker implantation
- pCXR now to r/o PTX
- PA/Lateral CXR tomorrow AM
- Sling immobilization overnight.
- 30 days with <10lb weight lifting limitation and no elevating left arm over shoulder height
- Remote device check tomorrow am to ensure stability of lead parameters

Cardiac catheterization
Procedure:
Successful right transjugular central line placement and temporary pacemaker placement.

Findings:
Severe symptomatic bradycardia.
Temporary pacemaker placement to RV apex.

Recommendations:
Findings discussed with primary team.
Cardiac catheterization, Electrophysiology procedure
Procedure:
Successful removal of temporary pacemaker lead, right transjugular central line replacement and new temporary pacemaker placement.
Limited bedside TTE.

Findings:
No pericardial effusion.
Severe symptomatic bradycardia.

Recommendations:
Findings discussed with primary team.

XR Chest 2 View

Narrative: EXAMINATION:
XR CHEST 2 VW

INDICATION:
Pacemaker

FINDINGS AND
Impression: Compared to 1/13/2025, pacemaker electrode position is unchanged. Heart size is unchanged.

Lung volume is lower. Basal atelectasis or aspiration and bilateral pleural effusions persist.

XR Chest 1 View

Narrative: EXAMINATION:
XR CHEST 1 VIEW

INDICATION:
Pacemaker

FINDINGS AND
Impression: Compared to 1/12/2025, a pacemaker has been placed from the left subclavian vein with electrode in the right ventricular apex, as expected.

Heart size is normal and unchanged. Aorta is calcified, indicating atherosclerosis.

Lung volume is low. There is basal atelectasis or aspiration and there are bilateral pleural effusions.

No pneumothorax.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Physical medicine and rehabilitation consulted for L above knee amputation recommendations. Reviewed the typical recovery course following amputation with patient's son Louis and emphasized to the patient and her son the importance of proper wound care, nutrition, fall prevention to optimizing healing following amputation. Patient has a transport chair with thick tires that may be well-suited for rough terrain, however, may benefit from more appropriately fitting wheelchair. Given patient's age and comorbidities, and significant energy expenditure with ambulation in AKA, unlikely that patient will progress to community level ambulation with any prosthetic device.

Recommendations:
- I discussed the importance of nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.

- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic).

Thank you for the opportunity to be involved in the care of this patient. Please feel free to call with questions or concerns via rehabilitation medicine consult pager (UWMC: 206-540-8975) or by the rehabilitation medicine resident listed in CORES on weekdays. We will continue to follow with you regarding rehabilitation needs.

Inactive Attestations

Consult Orders
1. Inpatient Consult to Nutrition [368664246] ordered by Pillai, Sunita, MD at 02/18/25 1404

Inpatient Nutrition Brief Note
Please see RD note on 2/14/25 for full assessment

Recommendations:
NUTRITION SUPPORT:
- TF via NGT: Standard TF formula to provide 100% of energy/protein needs
  - **start Jevity 1.5 at 10 mL/hr continuous on pump, advance 10 mL q12 hr to goal at 40 mL/hr**
  - TF at goal provides: 880 mL, 1320 kcal, 56 gm protein, 190 gm CHO, 18 gm fiber, 669 mL free water
  - run x24 hr (calculated x22 hr to allow for interruptions for care)
- Water Flush: Minimum 30 mL free water flush q4 hours while TF are running to maintain tube patency, consider additional 650 mL (160 mL 4x/day) daily for maintenance needs

LABS:
- significant risk of refeeding syndrome, consider potassium/magnesium/phos BID checks until TF meeting 100% of energy needs and labs are stable

VITAMINS/SUPPLEMENTS:
- **Start thiamine 100 mg daily, x5 days**

Diet/TF orders:

UWMC Montlake Spiritual Care Visit

Encounter Details

- Patient Name: Jeanne Leonie Hoffman
- Referral From: RN
- Requested by: Family
- Form of Contact: In person
- Present at Encounter: Patient and caregivers
- Visit Type: Initial
- Location: UWMC (Montlake) 7SA

Narrative of Spiritual Encounter

Extensive debrief w/ RN Allen post-visit. Jeanne's son, Louis, expressed his concern that Jeanne is not getting the medical care she "should" be getting. He asserted that he's her "physician" and quickly amended it to "medical advisor" because "you're not supposed to say physician." When this provider asked him, "Are you Jeanne's DPOA" he said, "No" and reiterated that he's her "medical advisor," noting that he has "suited up" when she's had surgery b/c he has needed to advise med team. He asserts having some background in health care. He said that he's been attempting to feed her and showed this provider juice that he said he's attempted to give her. When asked how spiritual care can support Jeanne and him, he asked for prayer "at whatever church you go to."

In debrief, RN Allen said that this provider could document his (RN's) concerns that Louis' attempts at feeding

Jeanne are putting Jeanne in physical jeopardy by taking unnecessary risks given Jeanne's physical condition. RN said that he has shared his concerns over Louis' interventions with Louis and med staff.

Wang, Virginia, MD at 2/24/2025 1010

Attestation signed by Saxena, Nina A, MD at 2/24/2025 7:23 PM

Date of Service: 02/24/25
I did not see the patient but have reviewed the resident(s)'s/fellow(s)'s documentation.
100 yoF with tenuous respiratory status, failed placement of NGT due to challenges with sedation. EGD with NG placement would require deep sedation/ intubation, which could compromise her already very tenuous respiratory failure. If the goal is to prolong life, a procedure requiring deep sedation/ intubation is more likely to cause harm than benefit. If she does move to the ICU and requires intubation for other reasons, or if her respiratory status significantly improves, we would be happy to be of assistance at that time.

Gastroenterology Brief Note
Jeanne Leonie Hoffman | U8170135 | 2/24/2025

10:10 AM
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, prior DVT, PAD p/w ALI on 1/9/25, now s/p L AKA (Smith 1/9/25). Post-op course c/b post-op bradycardia & new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM (1/13/25). Remains inpatient 2/2 delirium, poor PO intake, electrolyte derangements. Currently on HFNC 50L @ 100% due to pulmonary edema. GI consulted for consideration of endoscopic NGT placement as patient failed NGT placement under fluoro on 2/20/25 and is not taking enough PO to maintain nutritional needs.

Records reviewed, patient not seen. On review, this patient's respiratory status is very tenuous, and she has previously failed NGT placement under sedation. She would require anesthesia for endoscopically guided NGT placement. Given her very tenuous respiratory status, the likelihood that she would extubate successfully after procedural intubation is low. As such, we feel that the risks of performing this procedure far outweigh the potential benefits; we would not offer endoscopically guided NGT placement at this time. Should the patient require intubation for any other reason, including but not limited to respiratory decompensation, please feel free to re-engage our team if the bedside staff remain unsuccessful with NGT placement or NGT placement under fluoro remains unsuccessful at that time.

Staffed with GI attending Dr. Saxena.

Orthopaedic Surgery Consult Note

Date of Service: 03/06/25
Attending of Record: Navin Fernando, MD
Reason for Consult: Closed right peri-implant femur fracture
Non-Orthopaedic Injuries: None

History of Present Illness:
Jeanne Leonie Hoffman is a 100 year old female who initially presented to the hospital on 1/9/2025 with concerns for chronic LLE wounds and increased pain, ultimately found to have acute limb ischemia and went to the OR urgently with vascular surgery for AKA.

Her recovery from this procedure was complicated by sinus bradycardia, first-degree heart block and RBBB. She ultimately spent time in the cardiac ICU, and had a pacemaker placed. Palliative care became involved in her case on 1/10. Her recovery was further complicated by delirium, agitation, difficulty with nutrition/dysphagia, at times leading to starvation ketosis. She also had wound healing issues with her residual left lower extremity.

Per palliative care note from 2/10, Louis (son) has been concerned that Jeanne was not eating because she is frustrated and not adjusting well to the amputation. She was being maintained largely on IV fluids, but has subsequently lost access and has minimal options remaining other than a central line. From review of notes, it appears she was for long periods of time not a NGT candidate due to her poor respiratory status (they did not feel she was safe for any level of sedation). Due to the medical complexity of her situation, she has been largely bedbound since her AKA and has made little progress towards rehab.

Initially transitioned to comfort measures only on 2/25, however respiratory status subsequently improved and goals have shifted slightly towards her rehab and maintaining comfort with minimal necessary escalation of care.

On 3/5 she had an unwitnessed fall from her bed, resulting in the above-mentioned right peri-implant femur fracture.

Had a long conversation with her son regarding his longevity focus, and his plans for her to live another 5 to 6 years. At the time of this interview, she was fully unable to participate–he said that this is common when she gets pain medications, but states that she was fully lucid prior and they discussed her leg and she wanted it "fixed". He is a strong advocate for his mother, and very focused on ensuring that she receives excellent, holistic care, with the end goal of strengthening and rehabilitation.

Review of Systems:
Pertinent positives as per HPI.

Past Medical History:
Hypertension, type 2 diabetes, hyperlipidemia, history of DVT, acute LLE ischemia necessitating AKA, first-degree AV block, GERD, remote history of seizures, PAD

Past Surgical History:
1/9/2025–left AKA (Dr. Smith, vascular)
1/13/2025–pacemaker implantation
7/15/2021–ORIF right distal femur
Also has evidence of right femoral neck fixation

Allergies:
Adhesive's, aspirin, nitrofurantoin, penicillins, sulfa

Medications:

Lives in Bainbridge with her son

Occupation: Retired
Functional Status: Dependent for all ADLs, requires assistance to sit at EOB (loses balance quickly), currently transferred to chair via sling, has not been ambulatory since prior to AKA – when son references prior functional status, he defaults to talking to her abilities at least 1 year prior, unclear how functional she has been in the interim

Physical Exam (performed at roughly 0330 hours on 3/6/2025):
BP (!) 101/54 (Patient Position: Lying) | Pulse 92 | Temp 36.3 °C (Temporal) | Resp (!) 21 | Ht 5' (1.524 m) | Wt 45.7 kg (100 lb 12 oz) | SpO2 94% | BMI 19.68 kg/m²

General: Frail appearing. In no acute distress. Appears stated age. Lying in bed.
Respiratory: Breathing comfortably on room air. and Bilateral symmetric chest rise. No extra work of breathing.
Neuro: Opens eyes to physical stimuli, but does not track voices or people, eyes roving around the room. Intermittently raises arms in front of her or above her head, but these do not appear to be oriented movements. Does not answer questions or follow commands.
MSK:
Left Lower Extremity
Inspection: Status post AKA, incision largely well-healed except for some dehiscence along the medial edge of the incision with dried scabbing, no active drainage or erythema

Right Lower Extremity
Inspection: No open wounds. Swelling about the thigh, moderate lower leg and foot edema
Palpation: Difficult to assess tenderness in setting of altered mental status, but no changes in movements/no grimacing noted with palpation of foot or ankle . Pitting edema.
Range of Motion: Deferred due to known hip fracture
Motor: Does not follow commands, but is noted to spontaneously flex and extend the toes, fire TA
Sensory: Does not follow commands or answer questions to participate in a sensory exam, but does wiggle toes to touch on the dorsal and plantar foot
Vascular: warm and well perfused
Compartments:Compartments of the leg are soft and compressible.

Radiology:
Reviewed imaging which demonstrates oblique inter-implant fracture in the proximal 1/3 of the femoral shaft between a DHS proximally and a lateral distal femur plate distally. Implants appear intact. Fracture in varus and apex anterior malalignment. Significant vascular calcifications

ASSESSMENT
Jeanne Leonie Hoffman is a 100 year old female who sustained an inter-implant femoral shaft fracture after an unwitnessed fall.

We had a long discussion with the son regarding his goals of longevity and mobility for his mother. We discussed that

while this fracture is often one that is managed operatively, we have serious concerns regarding her ability to survive the surgery that would be required. In her case in particular, the implants she already had would necessitate a very large, morbid approach, with much higher blood loss than the surgery on someone without these implants. Additionally, the goal of the surgery is typically to improve mobility and pain control. In her case, given her contralateral AKA and overall deconditioning in the hospital, it is unclear that a large surgery would help her mobility goals, which would largely relegated to a pain control procedure. In light of that goal, her pain can also be managed with gentle mobilization and medication, without the associated mortality risks. The son has serious concerns regarding her conditions not being treated, and we explained that nonoperative treatment is still treatment, and that the goal would be to stabilize the fracture in a position of comfort such that it could begin healing. This would also allow him time to focus on improving her nutrition and p.o. intake which has been seriously lacking over the past months, further endangering her if she needs future surgery. With this understanding that we can still continue to monitor her healing, he is amenable to a trial of nonoperative treatment.

The location of her fracture makes it quite difficult to mobilize, we would like to start with a trial of using an abduction pillow for some gentle support. If this does not work, we can try additional braces, though they may be more difficult to don and doff.

All questions were answered and the patient was in agreement with the plan of care as stated. These recommendations were communicated with the medicine provider. Please find orthopaedic surgery problem based plan below.

PLAN
#R inter-implant femur fracture
Weight Bearing: NWB RLE
Antibiotics: Given the closed nature of the injury, a tetanus booster and antibiotics were not indicated
DVT Prophylaxis: Defer to primary
Immobilization: Abduction pillow
Follow Up: 3/13 repeat XR R femur
Team: UW Call Team

- This plan was discussed with Dr. Fermin Prieto, the Orthopaedic Trauma Chief on-call who is in agreement

Shirley, Jamie L at 3/7/2025 1118

Thank you for including ethics in this case. I met with nursing to discuss approaches to care on Tuesday 3/4 and offered follow-up today. Talked with nurse Rosalie and nurse manager Alex Dimitrov. Efforts continuing to discharge patient to SNF for rehab today or over weekend. Encouraged compassionate approach that acknowledges his long history of excellent care for her and his complicated grief related to her imminent demise. Provided support to staff for setting limits on tangential conversations related to son's multiple concerns and anxiety regarding patient welfare, but to focus on primary issues we can practically address. Additionally, it is appropriate to educate son and limit his actions regarding his interventions in patient's care that are not beneficial or harmful to patient's safety.

Please reach out to ethics for on-going support if we can be of assistance via the paging operator.

Consult Orders
1. Inpatient Consult to Spiritual Care [372368092] ordered by Barnes, James Irvin, MD at 03/06/25 1653

Brief Progress Note – Spiritual Care & Wellbeing

Encounter Details

- Referral From: RN
- Requested by: RN
- Form of Contact: In person
- Present at Encounter: Patient and caregivers
- Visit Type: Palliative care Attempted (Inpatient)
- Location: UWMC (Montlake) 7SA

Summary of Encounter

I consulted with RN before going into the room due to ongoing challenges. After conversation with medical team, as they were going to enter with Palliative Care within the hour, we determined it was best not to visit at this time. Closing consult per team recommendation, but they know they can reach out if our support would be helpful later.

Standard Interventions

- Spiritual Support;Ritual, Prayer

Plan of Care

- Follow-up Plan: No further needs at this time As available Will request spirtual care as desired
- To Provide: Faith affirmation;Ritual: prayer/blessing/meditation

Discharge Instructions

Dear Ms. Hoffman,

You were admitted for limb ischemia, and had a left above the knee amputation, you also developed heart block and needed a pacemaker for symptomatic bradycardia. You fell in the hospital and have a right hip fracture. You should follow-up with specialists such as vascular surgery, rehab medicine (limb clinic), cardiology (electrophysiology) and orthopedics, appointments are set or referrals have been made for these specialty clinics.

The instructions for your right leg:
"- brace placed by orthotics on 3/7 at request of son and with guidance from orthotics and ortho.
- NWB on Right leg
- Should limit motion of leg (ideally no ROM of R leg)
- abduction pillow
- log rolls for turning
- hip-spica brace now in place settings 0-60, slight abduction, can take off if uncomfortable and when needed (was not strictly recommended at this point by ortho, patient and son prefer it to be on and is certainly ok to be on per ortho)
- referral to NW ortho trauma clinic made, 2 view femur xray to be performed 3/13/25 (ordered as outpatient in case it needs to be done here vs at SNF)
- concentrated oxycodone for pain (low dose 2.5 - 5 mg)
- will continue lovenox for now"

Post Amputation Instructions:
Contracture prevention: Patient with an amputation are at risk for hip flexion contracture in the affected limb. Avoid laying in the seated position and spend 20 min three times a day on your belly. if elevated on a pillow, try to keep the pillow under the calf to prevent static flexion at the knee. Develop a home exercise program with therapists to maintain ROM and strength in the extremities and core for pre-prosthetic rehabilitation. Maintain hip range of motion to prevent contracture.

Sensation: Patients may experience phantom limb sensation. Many patients experience nonpainful sensations from the amputated foot including that it is curled up beneath him/her, or wrapped in his/her sheets. This tends to improve with time as the incision heals, and when shrinker socks, scar massage can be used for proprioceptive feedback. Some patients also experience phantom limb pain in addition to or in place of phantom limb sensation, represented by variable burning/ aching/ stinging/ cramping/ spasms amputated limb. We recommend mirror therapy and visualization techniques to help with phantom limb sensation.

Wound Care:
-Continue to change the dressing over the leg daily to keep it clean. Light compression should help keep edema out of

it and optimize its chances of healing.
-Any changes to your wound care regimen based on how the stump heals can be made with the Vascular Surgery clinic or the Wound Care clinic.

General Care:
-Activity: Continue to work on the exercises instructed to you by physical and occupational therapies
-Please call our clinic if you develop fevers, chills, chest pain, shortness of breath. If any of these symptoms are severe or you unable to reach our clinic, please present to an urgent care facility or Emergency Department.

Medications:
-You should continue to use Tylenol around the clock, it is okay to use ibuprofen as well.
-If you have been prescribed oxycodone for breakthrough pain, please use this as needed for more severe pain on top of the Tylenol.

Follow-up:
-You will follow-up in 6 weeks for staple removal with the vascular surgery clinic, if this is not already arranged we will have our scheduler reach out to you. If unable to return, a provider may remove staples after Februrary 21st.

Please call with any concerns or questions about your amputation.

Diagnosis Clarification

Whitehouse, Nathan Paul, RN at 1/17/2025 0912

In my clinical opinion, the patient is being managed for severe protein calorie malnutrition as demonstrated by wt loss, low BMI, housing and food insecurity, low calcium, low albumin.

Background:
Risk Factors: no PO intake in ~5 days PTA, unstable housing, s/p L AKA, s/p single chamber PPM
Clinical Indicators: cachectic, anorexia, global severe muscle and fat loss, age related loss compounding recent loss, 5.5% wt loss in 1 month, <50% of needs for >5 days
Treatment: Nutrition consult, multiple trials of NGT placement given poor PO intake but unsuccessful

Nursing Note

Sande, Nathan R, RN at 1/10/2025 0735

Patient Summary

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA

1/9: admitted post-op s/p L AKA, marked bradycardia (low 20s) w/ 2nd degree AVB w/ 2:1 AV conduction, given atropine x 1, then started on dopamine with HR improvement to 40s. Pads on. Additionally, given 750 LR for hypotension and oliguria. Failed bedside swallow, kept NPO until seen by SLP.

Son at bedside reports that they lost housing in October and currently live in a tent on Bainbridge Island. Social work consult placed.

Thomas, Tamlyn P, RN at 1/10/2025 1530

Patient Summary

Hx: HTN, T2DM, HLD, previous DVT (not on AC), chronic venous ulcers LLE

1/9/25 LLE acute limb ischemia x 48 hrs, bradycardic to the low 40s with EKG showing new RBBB but normal troponins prior to surgery
1/9: admitted post-op to 5sa s/p L AKA, marked bradycardia (low 20s) w/ 2nd degree AVB w/ 2:1 AV conduction, given atropine x 1, then started on dopamine with HR improvement to 40s
1/10/25 syncopal episode after 15" dangling, symptomatic brady to 30 +2 amps atropine, Dopa to 10mcg/kg/min. Emergent transvenous pacemaker placed in cath lab

RN shift summary, 07-1530, 1.10.25
Neuro: Pt profoundly HOH, but able to interact in a meaningful and appropriate manner. Difficult to assess orientation - states spont. "They cut off my left leg!" She has been anticipating it for a long time per her son due to non-healing sores. Clearly understands she is in the hospital.
Pain: Pt with zero pain at the beginning of the shift. Ropivicaine peripheral nerve block @ 8ml/hr. Pain mild until around noon when she pointed to posterior L upper thigh and said it was quite sore. Pain level unchanged after scheduled acetaminophen given on return from cath lab for transvenous pacemaker.
CV: Bradycardic mostly about 40, tolerating movement, unable to wean Dopamine gtt but asymptomatic until she had been working w/PT, sitting on side of bed, tolerating well, suddenly after 15-20" pt had an LOC, laid down remained symptomatic laying down, MAP to 54, pt responsive, but fatigued with very low energy and dizzy laying flat, team alerted, Dopa to 10mcg/kg/min, Atropine 2mg IV given in divided doses with little to no effect, Aline placed, sent to cath lab for emergent transvenous pacemaker. Returned from cath lab with working pacemaker. HOB raised 20 degrees and lost consistent capture and sensing - troubleshooting done by ICU team including 1 amp Calcium Chloride IV. CXR done. EP team notified and to bedside. Normotensive on dopamine gtt @ 5mcg/kg/min.
Pulm: Lung sounds clear throughout, on room air, RR reg. ABG WNL.
GI: Dec bowel tones, only on L side, no nausea, no stool
GU: Foley, average 50ml/hr, pale yellow, clear, UO dropped significantly from 1030 to 1400 upon return to cath lab - only 50ml output, but increased quickly in next hour.
Skin: At risk for breakdown, old diaper rash dermatitis healing well, intact, patchy scabs
Social: son in room, very informative, advocating for her. Visited by palliative care today.

Tatum, Krista N, RN at 1/10/2025 1949

Shift: 1500-1930
POD: 1
Acute Events:

- Lost capture s/p TVP #1 - cathlab did not lock pacer
  - Bradycardic 30's, neuro: somnolent and less responsive
  - Unable to regain capture with pacemaker adjustments, and placement estimated to be correct via bedside US per CTICU attending
  - Interventional cardiology arrived bedside to discover luer lock not locked - luer hidden under CHG dressing primapore
- Taken to cath lab for TVP replacement
  - New (R) IJ venous sheath
  - TVP #36 cm - Vpaced @70, amplitude 10 threshold 0.2 sensitivity 2
    - Amplitude @5 on arrival, increased to 10 s/p two incidences of noncapture
  - Hypotensive 90's/30's (50's) on arrival s/t Dopamine gtt being switched to PIV per cath lab d/t venous sheath being removed and replaced
    - ABP improved after switched back to central concentration

- UO downtrending at end of shift 90 --> 25
- SLP: chronic dysphagia noted, poor fitting dentures, soft easy chew diet ordered - tolerating well after TVP procedure, no s/s aspiration
- PNC: Ropivicaine @8 ml/hr, unchanged
- Pain: denies for me, per previous nursing endorsed intermittent (L)AKA pain
    - SCH IV Tylenol
- Social Work consulted
    - Working on housing assistance discharge planning
- EP consulted possible pacemaker
- Dopamine @ 5 - unchanged
- Caregiver, Son
    - Concerning behaviors and statements observed by nursing and cath lab personnel
    - During 2nd TVP placement, Son told nursing he was going to get food - left the unit without shoes, went to 2nd floor and tried to get into cath lab. Kicked out by staff. When Son asked why he did this he stated "I don't know where she was, you didn't tell me where she was going", and when cath lab told him he was present bedside for TVP replacement discussion and present when patient taken out of room by staff, he stated "no I wasn't, I was eating a sandwich"
    - Towards end of shift RN placing PIV bedside, Son said "you see those bruises? The way to get rid of them is with a toothbrush. If you brush over them a bunch, it breaks up all the blood and helps them heal."

Pt was delirious throughout night and efforts to reorient were unsuccessful. Restraints required as pt was pulling at TVP line. Sch seroquel and PRN melatonin were given without response. Agitation does not appear to be pain related as PRN pain medications do not seem to relax pt. Q4 NV checks WNL. Pt continually trying to get out of bed, saying she needs to get up and walk. Repositioning not alleviating pt's restlessness. Precedex started for continued agitation.
TVP remains, 100% V paced @ 70. SBP maintained in goal range on dopamine.
Pt on RA w/ spo2 WNL.
Pt took pills crushed in applesauce.
Foley in place w/ adequate output.

Mazariegos, Oscar, RN at 1/17/2025 0615

Patient Summary

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Pt seemed to be in pain overnight. Nalbuphine was given but pt continued to cry out. Ropivacaine bolus was given but medication seemed to be leaking from catheter insertion site rather than infusing. Surgical site was very tender to touch. Ropivacaine infusion was stopped per APS order. Pt finally calmed down and has been resting for the last few hours. No N/V. Drank 2 ensures last evening. No BM. Adequate UOP to foley.

Liu, Kayla W, RN at 1/30/2025 1828

Patient Summary
100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

0700-1900:
Unable to determine orientation. Intermittently able to respond to yes/no questions. Incomprehensible at times, otherwise pleasant this shift. Hypertensive to SBP 140s, otherwise VSS on RA. Managing pain with scheduled tylenol, buprenorphine patch removed and reapplied on L upper chest. Crackles heard bilaterally on auscultation, O2 saturation in high 90s on RA. Poor PO intake, high risk for aspiration. BM-. Voids via purewick. L AKA wound dressing changed. Changed flank mepilex and sacral mepilex. Q2hr turns offered, pt often refuses, OOB to wheelchair x1 this shift. Bed alarm on for safety. Pt took crushed meds with cream of wheat and yogurt. Unable to obtain CBC this AM d/t insufficient blood in testing tube, provider aware

Jeanneret, Amber Marie, RN at 2/12/2025 0954

Illness Severity
Stable.

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

0700-1900: UTA orientation, VSS, afebrile. Groans and screams at times, seemingly agitated, otherwise resting.
Pain: UTA, CNPI scale suggesting some pain and agitation but only managing with lidocaine patch at L thigh.
HEENT: Deaf. Moderate vision loss. Dry tongue and membranes.
Resp: Clear, diminished.
CV: Pacemaker in place.
Skin: L AKA ACE wrap in place, CDI.
GI: Per pt's son, pt was able to eat and drink about 80% of breakfast with his help. Was not present for feeding, unclear how pt handled food and drink considering aspiration risk. Continued to educate pt's son on aspiration precautions and s/sx of aspiration. Pt needing 1:1 feeds and supervision.
GU: Incontinent void x1, purewick not used because pt moves and pulls at things at times, dislodging placement.
Lines:R arm PIV infiltrated, removed, PICC ordered but pt had no appropriate vasculature, new PIV placed in L forearm by vascular access. Now infusing D5 for hypernatremia treatment. Next sodium draw @0500
Mobility: Bedbound. Heavy 2PA/sling OOB.

PO meds not given due to decreased alertness and aspiration risk, provider aware.

Action Items
-Concern for pressure injury risk - try to clean up incontinence quickly
-Feed/drink with spoon as able with aspiration precautions when lucid.
-needs daily dressing change to LLE

Situational Awareness
- Potential DC to SNF?
- Louis (son) at bedside; can be difficult to give education - has cared for her and other family members for some time
- Recently removed from housing (October), now lives in tent with son. SW aware and addressing
- Severe hard of hearing, use whiteboard to communicate
-Pill crusher in room with patient label
- GOC meeting 2/11, team will reconvene at end of week to discuss plans going forward (SNF, hospice, home, etc).

Electronically signed by Jeanneret, Amber Marie, RN at 2/12/2025 6:26 PM

Lam, Elim, RN at 2/12/2025 1422

PICC order received. Unfortunately, pt not a PICC candidate at this time. L pacemaker in place. No veins large enough to accommodate even SL PICC on RUE. Largest vein was basilic at 2.5mm. MD Pillai with Med H and BSRN made aware. 22g PIV placed to R forearm.

Electronically signed by Lam, Elim, RN at 2/12/2025 2:23 PM

Gindi, Jeanna A, RN at 2/13/2025 0630

0700-1900

UTA orientation status; alert to some degree, nonverbal, but is able to to make sounds; cooperative w/ some aspects of care.
Some deafness, and moderate vision loss.
VSS on RA.
Unable to assess pain, used FLACC scale, some agitation noted.
R PIV for access,5% dextrose lowered to 50mL/hr today, per provider's order.
Amputation site closed w/ staples no drainage, applied 4x4 gauze w/ betadine and wrapped w/ ACE bandage per order.
+flatus, -BM, dim UOP via female purewick. Incontinent.
Had a visit from social worker.

Worked w/ PT today.
2PA, q2h turns complete, was able to get OOB via sling in to chair for most of the morning.
Son @ bedside, assists w/ various aspects of care.

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Pt. Has moments of alertness per sons report. Unable to assess orientation level despite multiple attempts using the white board for communication. I discussed goals of care w/ pt. Son, who is POA, to clarify his expectations for his mother. The son was distressed as he stated "She's starving to death. If we aren't putting in an NG tube then I want her dressed and ready to leave by 1000 so we can catch the ferry." He then went on to discuss his concerns and dissatisfaction about the pt. Not having IV access for fluids. He stated "the reason they haven't gotten an IV on her yet is because they aren't tying the tourniquet tight enough. Yes it hurts her, but she'll be alright. When they come to place it again I will tie the tourniquet for them." He then preceded to tie the tourniquet on the pts. Upper left arm. The pt. Cried out in distress and reached for the tourniquet. I asked the son to remove the tourniquet as we weren't placing an IV at the moment, and son stated "just a minute, I want to show you how her veins pop up." He then showed me her veins, how they roll, and discredited the attempts made by our nursing staff, Stat nurses, and vascular access team. I then removed the tourniquet myself to relieve the pt. from discomfort.
I informed the son that his plans to discharge wouldn't include going home with an NGT or PIV, to which he replied "I can figure out how to hang it somehow. But it's going to be hard to get her to eat since she wont take anything." He then stated that if were to leave her, his plan was to take the pt. To Harborview ER and "demand they place an NGT. But then it would come out that you guys have starved her to death." I explained to the Son that the pt. Would likely be readmitted at Harborview if he were to take her there after discharging here. I also explained the pt. Current O2 demands would prohibit the pt. From safely discharging with just an oxygen tank. The son stated "she will be fine." I

reinforced with him that we would need to wean the pt. Off oxygen so that she could safely leave the hospital if that was the plan. He then began talking about how the pt. Life was no over yet, and that the pt. Has "5- 20 years to live. She wants to live. Our family has strong hearts. If her heart were to stop I would start chest compressions." I then clarified with the Son his statement and reminded him that the pt. Current code status is DNR/DNI. He then stated "That's incorrect, she wants to live, I want her to live, we all want her to live. She made me POA and said that she wants whatever I want, and I want her to live." Lastly, I discussed pain management with the son. He stated that he does not want morphine or dilaudid given because "she's not crying out in pain. That's not a pain cry. See look, she's comfortable." I told him that I believed that was because the pt. Received her pain medication last night, but the son disagreed. The son gave me permission to give tylenol and lorazepam when he requests. I thanked the son for clarifying his wishes and told him I would communicate his concerns to the team so that we could all be on the same page. After sharing this info with the care team, I expressed concerns about his ability to a safe caregiver for the pt. These concerns are in the setting of his behavior observed at the bedside throughout the pt. Stay here. The nursing staff has called multiple rapid responses due to aspiration concerns as the Son has consistently fed the pt. Despite being requested not to and warned of her high aspiration risk. Most recently this lead to her being placed on Hiflow to maintain her SpO2 goals. He has also during this hospital stay attempted to mobilize pt himself, which is contraindicated due to her high risk of injury. Staff utilizes a sling to transfer pt. When necessary to mitigate this risk. The son has also taken the pt. Off unit and down to the water during this stay without permission or awareness of providers or nurses. A major concern I have regarding this pt. Discharging with her POA is his interpretation of her pain. The pt. Cries out most of the time, and scores on the FLACC scale indicate discomfort, however the son denies this as pain and refuses available pain medications for the pt.
Lastly, after attempting to place the pt. NGT but failing, the Son made a concerning comment about providing assistance with a tongue depressor. He stated "Hey! I have a solution. I'll use this to hold her tongue back so that you can visualize which hole to place the tube in!" I declined his assistance and told him that method he suggested is not part of our insertion technique, and that we would try to place NGT tomorrow so that the pt. Can rest. I Updated oncoming RN w/ goals of care changes and POA preferences for continuity of care.

Patino Castro, Jennifer A, RN at 2/19/2025 0416

Patient Summary

100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

1900-0700: Alert to voice, very hard of hearing and very hard to understand due to speech. Patient able to localize pain. Incomprehensible sounds at times and can yell and cry out. FLACC scale used to assess pain level, rating up to 10 at times, 0.5mg subQ dialudid given at beginning of shift, since son agreeable to administration. 0.25mg IM ativan x1 for agitation. Strict NPO due to high aspiration risk. Oral suction PRN.+ BM. Diminished UOP via purewick. L AKA wound dressing applied but patient shifts frequently and dressing comes off. Lidocaine patch applied on left thigh. Q2H turns continued when patient allowed. Pillows used for support. Vital signs stable on 60L heated high flow mask, at 60% FIO2. Patient noted to be heated high flow mask at shift change. Patient pulls of mask towards neck but some O2 still manages to blow by her mouth. No NGT placed overnight, son okay with holding off until morning to let patient rest overnight. FLACC scale rating 7/10 towards end of shift, patient screaming and restless in bed, son refusing dilaudid for patient and requesting just tylenol. Son stating "this is just anxiety for her".

Walsh, Julia McKeon, RN at 2/21/2025 1702

Patient Summary

100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

1100-1930:

Intermittent drowsiness vs agitation. Pt hard of hearing. +Pain per FLACC score, occasionally following commands/localizing pain. Prns w/ mod effect. Responsive to physical comforting.
Son at bedside majority of shift, attentive to patient. Strict NPO. Frequent oral care/mouth moisturizer applied. IVF infusing. Unmeasured urine occurrence X1, purewik w/ small measured output. Last bm several days ago per son, abd soft, does not appear tender to palpation. LLE stump w/ staples, OTA, +CDI. Call bell in reach of son. Bed alarm for safely. Turned q2h. Heels and bony prominences offloaded. Asp precautions maintained. Humidified 02. Frequent monitoring.

Illness Severity
Stable.

Gindi, Jeanna A, RN at 2/22/2025 0622

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Unable to assess A&O status. Pt with severe impaired vision and hearing. VSS on RA. +Pain per FLACC score, PRN IV Dilaudid given. D5NS with Kcl infusing continuously in PIV. Incontinent, using female purewick without issue. NPO, high aspiration risk. Q2 turns done as pt allows. LLE AKA with staples OTA. Bed alarm on for safety.

At 4:30 AM pt started showing signs of increased pain (increased movement, moaning, yelling). Son was not agreeable to giving her Ativan or Dilaudid. Provider notified. After further discussions with pt showing increased signs of pain and discomfort, pt's son agreed to a dose of IV Dilaudid. PRN IV Tylenol ordered for future.

Nursing Note

Porter, Allen, RN at 2/22/2025 1932

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

UTA pt. Orientation level. VS WNL on RA. Adhering to NPO diet, No emesis, BM-, DIM UOP. Not OOB this shift. FLACC scores suggest pain, gave PRN IV acetaminophen and also lorazepam for agitation when available, encouraged son to allow for prn dilaudid. I overheard the pt. son from the nurses station loudly saying to pt. "Stop it. Stop it. Stop it." And went in to check on them. Pt. Was still crying out. I reeducated pt. son about pain regiment and he was willing to try dilaudid. Pt. appeared restful upon reassessment. Encouraged son to let us stay on top of pain management and explained it's easier to stay on top of pain rather than catch up later.

Electronically signed by Porter, Allen, RN at 2/22/2025 7:42 PM

Jallow, Yusupha, RN at 2/22/2025 2227

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Pt alert but not able to participate in orientation assessment. VSS on RA. Occasionally cries out but otherwise appears comfortable on this shift. Doesn't appear to be in pain. FLACC score a 2. Lidocaine patch on L thigh. Had one episode of urinary incontinence. Purewic in place. Son reported small BM this AM. Pt with impaired vision and hearing. D51/2NS with 20Kcl infusing continuously in LFA PIV. NPO, high aspiration risk. Q2 turns done as pt allows. LLE AKA with staples OTA. Bed alarm on for safety.

Illness Severity
Stable.

Porter, Allen, RN at 2/23/2025 1824

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Unable to access pt. Orientation status. Upon taking over assignment, pt. Appeared in distress as indicated by her FLACC score. Pt. Son was concerned about pt. Hypertension, which I explained was likely due to her restlessness and pain. Pt. Son agreed to lorazepam, which had good effect at calming pt. Down. I rechecked BP which was WNL, and reiterated to pt. Son the importance of treating her pain and anxiety with available PRN. Later after another dose of IV dilaudid, pt. SpO2 dropped to 80% on RA. Placed on 6L face mask and paged RT and provider to bedside. SpO2 improved on hiflow 50L 50%. Provider discussed code status at bedside w/ pt. Son.
Pt. Son showed me photos of pt. Before hospitalization and vocalized concerns about her starving to death. I attempted to reassure son that until decisions are made about NGT placement we can focus on keeping her comfortable. I consulted spiritual care to provide additional support to pt. Son as he continues to grieve.

Patino Castro, Jennifer A, RN at 3/6/2025 2355

Patients son Louis came up to this writer to inform that he has an early appointment at Harborview and will leave at 0840, and he will be taking all his belongings and wheelchair and will not come back at all and that he will not sign any papers in regards to transferring Jeanne to Bainbridge Island Rehab. When clarifying what he meant regarding not coming back he stated "there's no point of being her caregiver when you guys are starving her, and I can't win when I have everyone here attacking me". Patient also states that staff were criminals and committing fraud, and that due to Trumps policies patients in rehabs are getting "thrown out onto the street" so he will not be sending her to a place where it also smells like urine and where they won't let him in. He also is stating he didn't want to be in the room with a "vegetable", so he will be sleeping in the family room overnight.
This writer reinforced that staff is not attacking him, and that we are trying to care for Jeanne and make her comfortable. This writer asked Louis if he could stay in the morning to talk to Social work and the day team providers regarding his concerns, and Louis stated he was going to try to reschedule his appointment but that he will let us know in the morning.

Primary RN Reese notified and provider Abay, made aware by Reese RN.

Patient Summary

100YO w/Hx of HTN, T2DM, HLD, prior DVT, PAD admitted on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-op bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

1900-0730:
A/Ox0-1 (self). Intermittently able to nod appropriately. Comfort measures in place. Occasionally cries out in pain, given PRN PO morphine & SQ dilaudid. Slightly agitated and restless at times, given PRN SQ lorazepam. Oral care done PRN. L AKA incision slightly dehisced on right inner medial section. R hip fracture from 3/5 fall, slight swelling noted, abduction pillow ordered. Bed alarm on, fall mats in place, fall precautions enforced. Purewick in place, incontinence care as needed. Mepilex dressing on back. Repositioning as needed.

At 0000: Pt's son reported to Jenn charge RN that he has an early appointment, he will be leaving at 0840,and he will not be coming back. He expressed he will be refusing to sign anything in regards to transferring Jeanne to the Bainbridge Island Rehab. He is willing to further discuss with day team about further plans. He is verbal and is continuously reporting that the healthcare team is "starving her to death" and "there is no point to continuing to care for her & being a caregiver". Provider notified, no new orders.

At 0555: While going in to round & assess pt, son told me to "please leave" to which I did. I attempted a second time to go in with my charge RN to which he responded "please leave us alone, we don't need anything from you, she's fine". my charge nurse and I tried explaining that we still have a responsibility to assess and care for Jeanne to which he replied "you are killing her and doing a good job at it so please leave". We reinforced that we and other staff would like to be treated with respect to which the son replied "I am respecting you, leave". Provider notified.

Impaired Coping- Son present at bedside will often delay meaningful interventions; like pain medication for cleaning and turning. Son also talks about interventions not aligning with safe practice given aspiration and fall risk. Team comes to bedside and attempts to assess son's concerns.

Aspiration- Patient has difficulty swallowing and is at risk for aspiration. Son educated to ensure she is positioned appropriately and to only offers small amounts of fluid/food.

Transfer- Patient is cleared to transfer to a rehab facility on Bainbridge Island. When team comes to consent for POLST needed for transfer patient appears to have some magical thinking. He states that he does not want to sign it that he can do "soft compressions" and that "she is not going to die." Team attempts to educate son that there is not

effective chest compressions outside of the norm and CPR would likely cause harm/suffering without meaningfully extending her life.

Brace- Patient requests a brace to minimize movement of femoral fracture. He states he wants to reduce pain through immobilizing. Orthotics team come to fit brace on patient.

100YO w/Hx of HTN, T2DM, HLD, prior DVT, PAD admitted on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-op bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

1900-0730:
Aox0-1, Comfort care measures in place. L AKA incision dehisced, covered with mepilex. R hip fracture 3/5, hip brace in place. Okay for log roll. Nonblanchable redness middle back, mepilex applied. Bed alarm on, fall mats in place, fall precautions enforced. Incontinent. Given suppository, waiting to have BM.

2020: This nurse notified the on call MD. "Patient's son is yelling, stating that he doesn't want any pain medication given to the patient so that she could be more awake to eat. This nurse said that if the patient is in pain, (if she's restless, looks uncomfortable) I'll be giving pain medication. He refuses for any pain medication to be given and stated "I'll fight you on that,"
Son states that the reason she's in pain is because of cramps and that she needs to eat.
At the moment, patient looks comfortable. Last given pain med was 1800.

At midnight, patient seems to be in a lot of pain. Given suppository and tylenol, with good effect. At 0320, given PO oxy for r hip pain. Possible D/C today before 11am.

Report give to Rehab Facility on Bainbridge island. Transfer documents filled out by MD.

Impaired Coping- Son continues to exhibit impaired coping. Son sets up food tray on patients lap including coffee and dentures in a cup and leaves her unattended. Son advised that dentures are expensive and need to be on a stable surface. Son places coffee in patients hand and she proceeds to spill it on herself. I advise him she may be burned and cannot feed herself he argues "She needs to eat! She is starving" Son re-educated about aspiration precautions.

Aspiration- Patient has difficulty swallowing and is at risk for aspiration. Son educated to ensure she is positioned appropriately and to only offers small amounts of fluid/food.

Transfer- Patient is cleared to transfer to a rehab facility on Bainbridge Island. When team comes to transport son interrupts report and shouts "Do no listen to what she says! I am her doctor!" Transport team advised to review POLST form.

Brace- Brace to minimize movement of femoral fracture in place.

Pre Procedure Diagnosis
Pre-op Diagnosis
* Acute lower limb ischemia [I99.8]

Post Procedure Diagnosis
Post-op Diagnosis
* Acute lower limb ischemia [I99.8]

Procedures:
Left above knee amputation

Procedure Summary
Anesthesia: General **ASA:** IV

Indications: Jeanne Leonie Hoffman is a 100 year old female who presents with Rutherford class III acute limb ischemia presenting with an insensate left lower extremity at the level of the high shin on the left which has been going on for somewhere between 2 weeks and 2 days. As the patient is a relatively poor historian. She had no motor function or distal leg. I offered her the options of palliative pain control versus an above-knee amputation and counseled her on a very high risk of mortality in either case as well as severe disability from the amputation. The patient and her son understood this and wished to proceed with amputation.

Findings: Amputation of left leg above the knee

Procedure Details: After obtaining informed consent in the preoperative care unit the patient was brought to the operating room was placed in a comfortable supine position on the operating room table. A timeout was performed indicating the appropriate patient, left above-knee amputation as the procedure and need for preoperative antibiotics. General and regional anesthesia was induced and the left leg an incision was made just above the kneecap on the left leg was prepped and draped in the usual sterile fashion. And Bovie cautery was used to carry the dissection down through subcutaneous tissues including the muscle. This was carried down to the level of the bone circumferentially. The muscle appeared healthy and there was a small amount of bleeding in both muscle and fat tissues. The bone was transected with an oscillating bone saw the femoral vessels were then controlled and independently ligated. The femoral nerve was identified and injected with additional ropivacaine and tied off using a 2 oh tie. I then used Bovie to transect the remainder of the muscular attachments in the posterior leg. The wound was irrigated and then closed in

multiple layers using 2-0 and 3-0 Vicryl followed by staples at the skin. The wound was dressed in Xeroform, Kerlix and an Ace wrap

As the attending surgeon, I was present and scrubbed for the entire case, all needle, sponge and instrument counts were correct at the end of the procedure.

Inpatient Initial Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

Reason for Consult: Nutrition Assessment and Unintentional Wt Loss

Nursing Nutrition Screen

In the past 3 months, have you had unintentional weight loss?: Yes, less than 7kg or 15 lbs
Are you currently receiving TPN or tube feeds?: No
Have you been eating poorly for at least 7 days because of decreased appetite?: Yes

Recommendations/Interventions:
Oral Nutrition:
-- Diet per SLP. Rec remove CHO restriction iso poor PO
-- Ensure Plus BID auto-send per pt's son request
-- 1:1 feeds

Meds/Vitamins:
-- Daily multivitamin w/ minerals
-- Proposed to check Vit D levels:
- if serum levels <30, start Ergocalciferol 50000 international units po once weekly x 8 wks, then Cholecalciferol 2000 IU po once daily.
- If serum levels >30, Cholecalciferol 1000 international units po once daily for maintenance.

-- 100 mg thiamine for refeeding risk

Wound Healing:
-- Obtain current Vitamin C lab. If low, replete 500-1,000mg daily x 10-14 days
-- Obtain current Zinc lab. If low, replete 220mg zinc sulfate daily (PO) x10-14 days

Education:
-- Nutrition education prior to discharge as needed

Subjective
Nutrition History PTA:
- Spoke to son in hallway - pt was receiving procedure.
- Son reports good PO intake prior to December. Was eating 3 meals/day w/out issue.
- PO intake declining in last month. Struggling to eat solids. Maintained 3-4 Ensures/day
- No PO intake in ~5 days PTA
- Has full dentures but a little too big and doesn't like to use glue

Nutrition-Focused Physical Assessment:

Conducted 01/10/25
Global severe muscle and fat loss present. Age related loss compounding recent loss.

Edema/Fluid: None

Current Nutrition Assessment:
FEN: Diet advanced per SLP this AM. Soft/bite sized w/ thins.
GI: dysphagia. No BM since admit
Wounds Present: Yes, acute lower limb ischemia s/p LLE amputation

Assessment/Plan

Estimated Nutrition Needs
Using post LL amputation wt, 45.8 kg
Energy: 1145-1375 kcal (25-30 kcal/kg)
Protein: 55-64 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to wound healing as evidenced by calculated kcal/pro needs

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Severe malnutrition present on admission (in setting of acute illness/injury) related to anorexia as evidenced by PO intake < 50% of needs for > 5 days, 5.5% wt loss in 1 month.

Interventions:
Coordination of Care:
Chart reviewed.
Patient seen, unable to interview.
Discussed status, point of care/goals with APP and family.
Discussed current intake and tolerance with APP and family.
Setup and/or adjusted nutrition supplement(s).
Sent secure message to APP

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.
To support anabolism.

Language Support:
No interpreter needed (patient not a participant in teaching)

Plan / Monitoring and Evaluation:
Adjust supplements/snacks/meals.
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/10/2025: Heart rate in 40s, appears to be patient's baseline. Patient denies pain this morning. No changes to plan.

CONT:
Ropivacaine 0.2% @8ml/hr, pump

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: APS attending, primary team, patient

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Electronically signed by Smith, Grace, MD at 1/10/2025 11:33 AM

Patterson, Kristopher T, MD at 1/10/2025 0905

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- POD 1 from L AKA
- Cardiology consulted for persistent bradycardia (20-30's) post-op
- Started on dopamine gtt, HR improved to 30-40's, BP stable
- Pain well controlled with Left femoral PNC

SCHEDULED MEDICATIONS:
- acetaminophen, 500 mg, q6h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-4 units, q HS
- insulin LISPRO, 0-5 units, TID before meals
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- DOPamine, 0-20 mcg/kg/min (Dosing Weight), Continuous, Last Rate: 3 mcg/kg/min (01/10/25 0700)
- ROPivacaine, , Continuous

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- [START ON 1/12/2025] bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.1 mg, Q2 Hours PRN

- magnesium sulfate, 2 g, q6h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- [START ON 1/12/2025] senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

#Acute limb ischemia
#S/p L AKA (1/9/25)
POD 1
- NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Advance to regular diet
- SQI for glucose management
- SBP 100-160
- TTE for embolic workup
- Hold anticoagulation pending TTE
- Foley out
- Palliative consult
- Disposition: CTICU

#Sinus Bradycardia
#2:1 AV Block
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable.
Cardiology consulted, appreciate recommendations:
- Potentially vagally mediated after her surgery, I recommended 1mg of atropine and heart rate improved from high 20s to low 40s. Has some underlying conduction system disease given baseline 1st degree AV block and RBBB
- Telemetry
- Keep pacing pads on
- TSH, BMP to evaluate for hyperkalemia after surgery
- Atropine PRN for HR<25
- If patient develops acute symptomatic bradycardia (hypotension, altered mental status), recommend starting dopamine drip
- If significant arrhythmias on dopamine drip or does not respond rapidly, contact our cardiology team for consideration of TVP
- I discussed goals of care and patient's quality of life with son at bedside (patient is profoundly hard of hearing) and he reported that permanent pacer would be within goals of care (would have to discuss with EP) if it were indicated. States that she has good quality of life and is longevity focused

Plan discussed with attending vascular surgeon Dr. Smith

Speech Language Pathology Eval

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Date of Service: 01/10/25
Treatment Duration: 20 Minutes (sw eval)
Subjective
Patient Report/Self-Assessment: pt. awake and alert, sitting upright in bed

Patient Stated Goal: to eat/drink

Prior Function
Prior Function: Patient was seen by SLP novemebr 2023: "She demonstrated mild oral deficits and 1 cough that was not repeated with further trials of thin liquids (silent aspiration cannot be ruled out at bedside). Unclear if mild dysphagia vs presbyphagia related changes complicated by ill fitting dentures and recent thrush. Given her performance, recommend thin liquids and soft and bite sized solids (son assisting to self select softer solids as needed" She reports she mainly eats puree and soft solids at baseline. Son endorses coughing with thin liquids when laying in bed, but not when in chair/at table

Objective
Patient Information
Respiratory Status: Room air
Behavior/Cognition: Alert;Participates well
Patient Positioning: Upright in bed

Consistencies Assessed: 0-Thin Liquids;4-Pureed;Soft solids

0-Thin Liquids - Presentation: Straw;Self Fed (with assist)

4 Pureed - Presentation : Spoon;Self Fed
Soft Solids - Presentation: Self Fed

Consistencies Assessed Comment: Patient with intermittent coughing on thin liquids, specifically with larger sips of water. When cued to take slow/small sips, she was able to take water without coughing. no overt s/s aspiration with puree or graham cracker, no significant oral residuals

Patient/Caregiver Training: SLP education provided regarding patients current swallow function

Labial Strength: Within Functional Limits
Lingual ROM: Within Functional Limits
Lingual Symmetry: Within Functional Limits
Lingual Strength: Within Functional Limits
Soft Palate: Within Functional Limits
Vocal Quality: Within Functional Limits

ASSESSMENT/PLAN

Jeanne was seen for initial swallow evaluation with intermittent cough response with large sips of thin liquids. This is likely consistent with presbyphagia, or chronic dysphagia which is common in patients of advanced age. She has had no respiratory issues and current assessment is consistent with SLP eval 11/2023. Her baseline diet is soft solids due to ill-fitting dentures. Recommend soft and bite size textures and thin liquids via small single sips. meds whole in puree. SLP will continue to follow.

Aspiration Risk: Moderate

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: presbyphagia
Prognosis: Good

Evaluation/Treatment Tolerance: Patient tolerated treatment well

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow eval
SLP Frequency: 1-3x/week

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations
Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time

Goals
Short Term Goal: Tolerate least restrictive diet
Estimated Completion Date: 01/24/25
Goal Status: Updated

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 01/24/25
Goal Status: Updated

Phan, Janet, MD at 1/10/2025 1312

Attestation signed by Nikravan, Sara, MD at 1/10/2025 6:10 PM

Date of Service: 01/10/25

Critical care is necessary because this patient requires continuous observation and interventions to respond to emergent changes in their medical condition and prevent further deterioration in their clinical state. This includes close monitoring and adjustment of hemodynamic data as necessary.
I am treating conditions outside the scope of care typically provided by the surgical or procedural team(s) for this type of ICU patient.

Assessment:
This patient has a high probability of imminent or life-threatening deterioration resulting from her symptomatic bradycardia and likely Mobitz II heart block refractory to significant pharmacologic improvement with atropine and dopamine infusion.

Plan:
The following intervention(s) impact decision-making required to stabilize the patient:
vasopressors for shock: hypotension in the setting of signficant bradycardia, requiring dopamine infusion.
#Heart block: with HR in 20's patient appeared to be in a Mobitz II heart block, symptomatic and hypotension despite dopamine infusion at 6mcg/kg/min. Atropine administered (1mg in total) and Dopamine infusion increased to 10 mcg/kg/min with minimal increase in HR (from 28 - upper 30's). Patient is now s/p transvenous temporary pacemaker placement. Initially capturing well, but lost capture despite what appears to be adequate positioning on CXR and bedside basic cardiac POCUS. Interventional team to retake patient to cath lab for readjustment of TVP under fluoroscopic guidance. Have consulted EP for further evaluation.

Critical Care Time:
I spent a total of 60 minutes personally providing critical care to Jeanne Leonie Hoffman. This does not include time spent teaching or performing any separately billable procedures.
This critical care time includes meeting with the patient's family for the sole purpose of data gathering, discussion of treatment options, and care planning (patient incapable of participating in medical decision making).

I saw and evaluated this patient today with the resident(s)/fellow(s). I have reviewed their findings and agree with it.

Progress Note - Critical Care

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA. Admitted to the CTICU for hemodynamic monitoring.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Overnight, continued to be bradycardic to the 20s. Cardiology consulted. She became hypotensive, so was started on a dopamine infusion.
- Unable to wean from dopamine this AM due to hypotension.
- Worked with PT/OT and became dizzy and diaphoretic with acute drop in HR from 40s to 20s. Unresponsive to atropine pushes bedside. Patient was taken down emergently for a transvenous pacer in cath lab. Tolerated procedure without complications.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

#Symptomatic bradycardia
#2ndd degree AVB
- Emergent TVP placement with interventional cardiology
- Appreciate continuing recs from cardiology service
- Telemetry
- Keep pacing pads on
- Atropine PRN for HR<25
- Dopamine gtt

#Acute limb ischemia
#S/p L AKA
- Bed rest overnight; will be NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for CLD, will advance in AM **(NPO now given possibility of cath lab procedure)**
- Insulin gtt for BG management; ok to transition to SQI once up in ICU

- SBP 100-160
- Cardiology consulted for bradycardia to 20s with 2nd degree AVB
- TTE needed for completion of embolic workup; ok to be done in AM unless cardiology would like it done sooner
- Hold AC until tomorrow AM at which point Hep gtt will resume

CHRONIC/STABLE/RESOLVED ISSUES

CTICU CHECKLIST:
- Tubes/lines/drains: PIV, Foley
- Nutrition/IVF: Regular diet post procedure
- Analgesia/sedation: acetaminophen and PNC
- Anti-infectives: not indicated
- Daily mobility goal: bedrest due to invasive lines/devices
- Glycemic control: subQ insulin
- GI ppx: not indicated
- Bowel regimen/last BM: senna and miralax per protocol / PTA
- VTE ppx: SCDs, Resume POD1
- Anti VAP care: not indicated
- Code status: ACLS
- Date next Interim Summary due: 1/17/24
- Family contact: Louis (206) 780-6885

The patient was seen on multidisciplinary rounds and the plan was discussed and developed in conjunction with Critical Care Attending, Vascular Surgery

DISPOSITION
ICU level care is necessary because the patient requires continuous physician/advanced practice provider observation and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

U8170135

1/10/2025
Duration of session: 71 Minutes

Patient Active Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- Hypercholesterolemia

- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Adult failure to thrive syndrome
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- History of recurrent deep vein thrombosis (DVT)
- Imbalance
- Primary osteoarthritis of both hips
- Vitamin D deficiency
- Atherosclerosis of native artery of both lower extremities with bilateral ulceration of calves (HCC)
- Primary open angle glaucoma (POAG) of both eyes
- Closed fracture of distal end of femur, unspecified fracture morphology, sequela
- Community acquired bacterial pneumonia
- Reduced vision
- Housing instability
- Advanced care planning/counseling discussion
- Acute lower limb ischemia
- Bradycardia

Past Medical History:

Diagnosis	Date
• Closed fracture of right distal femur (HCC)	7/15/2021
• Fall	9/3/2019
• Non-pressure chronic ulcer of right ankle with necrosis of muscle (HCC)	5/26/2019
• Venous stasis ulcer (HCC)	5/26/2019
• Diabetic ulcer of lower extremity (HCC)	9/24/2018
• Severe protein-calorie malnutrition (HCC)	6/7/2018
• Urge urinary incontinence	6/7/2018
• Venous ulcer of left leg (HCC)	6/7/2018
• Normocytic anemia	6/7/2018
• Chronic venous hypertension with ulcer and inflammation, left (HCC)	5/17/2018
• Non-pressure chronic ulcer of left ankle with necrosis of muscle (HCC)	5/17/2018
• Non-pressure chronic ulcer of left calf with necrosis of muscle (HCC)	5/17/2018

- Thrombocytopenia (HCC) 11/2/2016
- Leg weakness, bilateral 1/6/2015
- Weakness of trunk musculature 1/6/2015
- Vertebral fracture 12/13/2012
  Dec 2012. L3 secondary to fall. TLSO brace placed. Follow up imaging in 6 months showed healed
- Thyroid nodule, uninodular 12/13/2012
  CT of spine at HMC sowed left thyroid nodule which needs follow up with US and checking TSH. TSH has been normal on several occassions, the most recent was in fall of 2011. 5/23/2013 thyroid US showed small bilateral thyroid nodules none of concern.
- Closed fracture of unspecified intracapsular section of neck of femur 5/1/2007
  Pinned April 2007. Post op hematocrit 25 Has walker with wheels for use outside of home. Uses cane in home.
- Unspecified vitamin B deficiency 5/1/2007
  Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency
- Impaired fasting glucose 3/22/2007
- Carpal tunnel syndrome 11/20/2006
  Carpal tunnel release right wrist in 1989
- DIAPHRAGMATIC HERNIA 11/20/2006
  CT of abdomen in 2006
- Esophageal reflux 11/20/2006
- Other convulsions 11/20/2006
  Petit Mal since 1975 Carbamazepine level 7.6 on Feb 2007 Discontinued based on ER neuro consult in early 2013 No recurrence
- Allergic rhinitis, cause unspecified 11/20/2006
- DVT, recurrent, lower extremity, chronic 11/20/2006
  Recurrent DVT and phlebitis since 1982 Per Vascular Surgery note 5/9/2006: continue warfarin 3/9/2010 Lower extremity arterial vascular ultrasound studies normal
- Diabetes mellitus (HCC)
- PAD (peripheral artery disease) (HCC)
- Ulcer of left lower extremity, limited to breakdown of skin (HCC)
  Chronic, Multiple sites of lower leg and ankle, with MSSA

Past Surgical History:

Procedure	Laterality	Date
• PR TOTAL ABDOMINAL HYSTERECT W/WO RMVL TUBE OVARY		

Subjective
Patient Report/Self-Assessment: Pt supine in bed, agreeable to work with PT. Pt's son, Louis, provided majority of her recent medical and social history since Jeanne's significantly HOH. Communicates the best with writing large letters on white board and speaking very loudly and clearly.
Patient Stated Goal(s): "When can I start walking again?"

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Jeanne's son, Louis, is the primary caregiver for Jeanne
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker;Other (Transport chair)

Prior Level of Function : limited mobility within tent. she was using FWW or SPC for short distances and then transport/wheelchair for community distances. she would occ need assistance wtih getting on/off the cot and for ADLs. Although Louis is a good historian, it can be difficult at times to get a understandable timeline of her fxnal mobility.

Objective
RUE Assessment
RUE Assessment: Within Functional Limits

LUE Assessment
LUE Assessment: Within Functional Limits

RLE Assessment

RLE Assessment: Within Functional Limits
RLE Assessment Comments: her R knee can have limited AROM 2/2 pain and stiffness from a femoral fx repair in 2021

LLE Assessment
LLE Assessment: Exceptions to WFL
LLE Assessment Comments: AKA. limited assessment of L hip AROM 2/2 pain/soreness

Sensation
Light Touch: WFL

Static Sitting Balance
Static Sitting Balance Comments: sitting at EOB w/o back support, no foot support. intermittent retropulsion
Static Sitting Balance Level of Assistance: Minimum Assist (less than 25% help needed)
Dynamic Sitting Balance
Dynamic Sitting Balance Comments: scooting forward, pulling on mattress or bed rail w/BUE
Dynamic Sitting Balance Level of Assistance: Contact guard assist (touching/steadying assistance)
Static Standing Balance
Static Standing Balance Comments: deferred standing at this time

Activity Tolerance
Endurance: Tolerates 30 min of activity with multiple rests
Endurance Comments: bradycardia throughout session; stable BP

Functional Level:
Bed Mobility
Rolling Left: Maximum Assist (between 50-74% help needed)
Rolling Right: Maximum Assist (between 50-74% help needed)
Supine to Sit: Moderate Assist (between 25-49% help needed);Head of Bed Elevated;Cues needed
Sit to Supine: Dependent (greater than 75% help needed)
Scooting: Dependent (greater than 75% help needed)

Interventions:

Theract: Bed mobility - supine>Sit ModA for LEs, heavy cues for hand placement. pt declined log roll technique, preferring to sit up into long sitting. sit>supine dependent 2/2 LOC/syncopal episode at EOB Sitting tolerance - Jeanne sat at EOB for 15-20 minutes w/close SBA to MinA to maintain upright posture. Intermittent retropulsion w/Min to ModA to correct; pt reaching with UEs to maintain balance. Frequent monitoring of vitals - HR brady but stable, BP WNL - until pt demostrated syncopal episode/LOC and was returned to supine quickly with RN assessment. Jeanne quickly responded, RN monitoring vitals. Provided pt and son some amputation education re: process of fitting for prosthesis, phantom sensations, possibly fxnal mobility. Aimed to provide them with realistic expectations for post-AKA rehab. They will benefit from further education and handouts re: amputation care Additonal time needed for lengthy discussion with Jeanne and Louis regarding her PLOF and past experiences with PT. Louis is a good advocate for his mother's medical care and has had a lot of experience with working with her on exercises at home

ASSESSMENT/PLAN

Jeanne presents with decreased activity tolerance, generalized weakness, impaired sitting balance, h/o falls, bradycardia at rest, and significantly HOH. At her baseline, she is able to amb short distances with walker or cane and uses a w/c (transport chair) for community distances. Her son is her primary caregiver and provides a fluctuating amount of assistance. They are also currently homeless, living in a tent on Bainbridge Island. Today, Jeanne required 50-100% assist for bed mobility and was able to sit at EOB for 15-20 minutes with intermittent assistance. She did have a syncopal/LOC episode while at EOB and was returned to supine w/RN assistance. Her HR continued to be low but stable throughout the session. Provided some education regarding AKA and treating amputation including mobility progression and phantom sensations. They will benefit from on-going education. Jeanne's son, Louis, has made it clear that he does not want his mother to discharge to a SNF for sub-acute therapies, although this would the PT recommendation for dispo after today's session. Since Jeanne and Louis are currently homeless, this makes receiving HHPT extremely challenging.

Barriers to Discharge: unable to safely ambulate or transfer OOB 2/2 bradycardia

Discharge Equipment: TBD; pt has FWW and transport chair

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/24/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/24/25
Goal Status: Progressing
Goal: Amb with AD, Contact guard assist (touching/steadying assistance) (> 15 feet)
Estimated Completion Date: 01/24/25
Goal Status: Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes
Estimated Completion Date: 01/24/25

Goal Status: Not Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: dangle at EOB; transfer training w/FWW (have pt wear shoe on R foot); pivot transfer to chair; ongoing amputation education

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: 1-2 person assist for dangle at EOB or ceiling lift transfer to chair

Social Work Progress Note

ASSESSMENT:
Admit reason: 100YO F admitted for Arterial occlusion [I70.90]k Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: DC TBD
Potential barriers/concerns: Unhoused, open Adult Protective Service case
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker. SON; Louis 206.780.6885

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated:

(I am covering the CTICU Service today only, contact x84583 for updates)

-MSW Aguirre providing care coordination + assistance in DC Planning for Cardiology C / CCU / CICU Cardiology Services. Writer reviewed patient's hospital status and current admission, DC TBD. Chart review performed and social work needs were identified re: care coordination

-MSW spoke w/medical team re; patient and identified SW needs. Patient currently lives in tent w/son who is an older adult as well, located on Bainbridge Island. From chart review, it is indicated that recently while at HMC they had been given hard copies of housing materials for patient and son; they did not wish to have patient discharged to SNF. It is documented that DSHS Adult Protective Services had been notified; Caroline Ventrice 360.814.9682

-MSW only able to leave a VM for the APS investigator, w/summary of patient's current admission details. Writer left contact number and requested a return call when able

-MSW provided the above information to the medical team. Writer will continue to work on patient's care coordination/safe medical discharge and remain available for patient/family support for today only. For SW updates call x84583

PLAN or OUTCOME:

-MSW provided the above information to the medical team. Writer will continue to work on patient's care coordination/safe medical discharge and remain available for patient/family support for today only. For SW updates call x84583

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Symptomatically bradycardic yesterday despite dopamine gtt, taken to cath lab for transvenous pacemaker placement
- Now hemodynamically stable, paced at 70bpm, remains on dopamine gtt
- Received some prn Seroquel for delirium and agitation
- Still on PNC for pain control
- SLP evaluated yesterday, noted chronic dysphagia with recs for soft and bit size textures
- Palliative consulted yesterday
- TTE yesterday with normal LVEF and moderate aortic stenosis, no embolic source identified

SCHEDULED MEDICATIONS:
- acetaminophen, 500 mg, q6h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-4 units, q HS
- insulin LISPRO, 0-5 units, TID before meals
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- DOPamine, 0-20 mcg/kg/min (Dosing Weight), Continuous, Last Rate: 7 mcg/kg/min (01/11/25 0400)
- lactated ringers, 35 mL/hr, Continuous, Last Rate: 35 mL/hr (01/11/25 0400)
- ROPivacaine, , Continuous

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- [START ON 1/12/2025] bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.1 mg, Q2 Hours PRN
- magnesium sulfate, 2 g, q6h PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- perflutren lipid microspheres (Definity) 1.3 mL in sodium chloride (PF) 0.9 % 8.7 mL injection, 1-10 mL, Once PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- QUEtiapine, 12.5 mg, q HS PRN
- [START ON 1/12/2025] senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Update 1/11: Patient now POD 2 from L AKA and overall recovering well from a surgical standpoint. Was symptomatically bradycardic yesterday and went for an urgent TVP placement with interventional cardiology. Now hemodynamically stable, paced at 70bpm. TTE yesterday without evidence of embolic source, therefore we will hold off on anticoagulation at this time. Plan for the weekend will be to engage in therapies and continue to work with social work for dispo planning. Will plan to remove L AKA dressing on POD 4.

#Acute limb ischemia
#S/p L AKA (1/9/25)
POD 2
- NWB LLE once able to get up

- Dressing management per vascular - dressings down POD4
- Advance to regular diet
- SQI for glucose management
- SBP 100-160
- Palliative care following
- PT/OT
- No anticoagulation at this time
- Disposition: CTICU

#Sinus Bradycardia
#2:1 AV Block
#S/p Transvenous pacemaker placement (1/10)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. Now paced at 70bpm and hemodynamically stable.
Cardiology consulted, appreciate recommendations:
- *Telemetry*
- *Atropine PRN for HR <25*
- *Dopamine gtt*

Plan discussed with attending vascular surgeon Dr. Smith

Clinical Notes (group 9 of 17) (continued)

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/11/2025: In pain with movement this AM, bolus 4cc through PNC and increased rate to 10. Pain resolved with bolus. Now on pacing for heart rate. No other changes to plan.

CONT:
Ropivacaine 0.2% @10ml/hr, pump

SCH:
APAP 500mg IV q6hrs

PRN:
HM 0.1mg IV q2hrs PRN

Discussed With: APS attending, primary team, patient

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

#Symptomatic bradycardia
#2ndd degree AVB s/p emergent TVP placement and repositioning 1/10
- Now paced at HR 70s
  Underlying rate 38-39 with 1st degree block - prolonged PR intervals.
  Pt has reported history of 1st degree block in the past
- Dopamine gtt @ 5 - **attempted to transition to isopeterenol but became hypotensive --> discontinued isopeterenol**
- Appreciate continuing recs from cardiology service - f/u with cards and EP about long-term plan
  - Continue TVP use over the weekend, reach out to EP if there are questions regarding TVP.

    - Plan for single lead PPM next week
    - NPO at MN on Sunday for possible procedure Monday pending lab availability
    - Hold all heparin products the night before procedure and afterwards.
- Telemetry
- Keep pacing pads on
- Atropine PRN for HR<25
- Bedrest while on TVP

#Acute limb ischemia
#S/p L AKA
- NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for regular diet
- SSI
- SBP 100-160
- Palliative following
- TTE:
- No anticoagulation indicated

#**DM Type 2**
- Bgs > 180 on SSI
- **Increase SSI to medium range dose**
- Monitor BGs

#Delirium
- Seroquel qHS

CHRONIC/STABLE/RESOLVED ISSUES

CTICU CHECKLIST:
- Tubes/lines/drains: PIV, Foley
- Nutrition/IVF: Regular diet
- Analgesia/sedation: acetaminophen and PNC
- Anti-infectives: not indicated
- Daily mobility goal: bedrest due to invasive lines/devices
- Glycemic control: subQ insulin
- GI ppx: not indicated
- Bowel regimen/last BM: senna and miralax per protocol / PTA
- VTE ppx: SCDs, Resume POD1
- Anti VAP care: not indicated
- Code status: ACLS
- Date next Interim Summary due: 1/17/24
- Family contact: Louis (206) 780-6885

The patient was seen on multidisciplinary rounds and the plan was discussed and developed in conjunction with Critical Care Attending, Vascular Surgery

DISPOSITION
ICU level care is necessary because the patient requires continuous physician/advanced practice provider observation and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

Electronically signed by Mahdi, Elaa, MD at 1/11/2025 4:30 PM
Electronically signed by Nikravan, Sara, MD at 1/11/2025 7:03 PM

Kondamudi, Nitin, MD at 1/11/2025 1411

Attestation signed by Akoum, Nazem Walid, MD at 1/11/2025 5:59 PM

Date of Service: 01/11/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.
High degree AV block s/p temporary transvenous pacemaker. Will need a permanent device next week.

Cardiac Electrophysiology Brief Follow Up Note

Jeanne Leonie Hoffman is a 100 year old female with no known cardiovascular disease history admitted 1/9/2025 for acute ischemic limb with post op course c/b symptomatic Mobitz II AV block s/p TVP.

TVP placed overnight
Remains in Mobitz II AV block when pacing rate is reduced

GEN: thin, elderly
LUNGS: clear to auscultation bilaterally
CV: RRR, nl S1/S2, no appreciable m/g/r
ABD: soft, nondistended
EXT: no edema
SKIN: no ecchymosis
PSYCH: appropriate, oriented
NEURO: grossly intact

TTE: LVE 74%

Impression:
Mobitz II AV Block: Has RBBB at baseline, now with symptomatic Mobitz II AV block, meeting class 1 indication for permanent pacing. She is now s/p TVP placement. Tentative plan for single chamber pacemaker 1/13.

Recommendations:
- Check baseline rhythm daily
- NPO at MN on Sunday for possible procedure Monday pending lab time availability
- Hold all heparin products the night before procedure and afterwards.

Assessment and plan discussed with Dr. Akoum

Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- NAEO, remains paced with TVP and hemodynamically stable on dopamine gtt
- Interventional cardiology attempted to transition dopamine gtt to isoproterenol gtt, but patient became hypotensive so isoproterenol was discontinued
- Plan for single lead PPM early this week
- Continues to be delirious overnight, refractory to Seroquel and dilaudid, placed in soft restraints and started on precedex this morning
- PNC remains in place for pain management

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- QUEtiapine, 12.5 mg, Once
- QUEtiapine, 25 mg, q HS
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- dexmedeTOMIDine, 0-1.5 mcg/kg/hr (Dosing Weight), Continuous, Last Rate: 0.8 mcg/kg/hr (01/12/25 0515)
- DOPamine, 0-5 mcg/kg/min (Dosing Weight), Continuous, Last Rate: 5 mcg/kg/min (01/12/25 0500)
- ROPivacaine, , Continuous
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: 10 mL/hr (01/12/25 0500)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN

- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.05 mg, Q2 Hours PRN
- magnesium sulfate, 2 g, q6h PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Update 1/12: POD 3, doing well from a surgical standpoint. Interventional cardiology planning for PPM placement early this week (possibly 1/13). Remains hemodynamically stable, paced at 70bpm on a dopamine gtt. Continues to exhibit delirium overnight with light sedation started this morning. Plan to take L AKA dressing down tomorrow. No other changes from a vascular surgery standpoint at this time, appreciate care from CTICU and cardiology teams.

#Acute limb ischemia
#S/p L AKA (1/9/25)
POD 3
- NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Advance to regular diet
- SQI for glucose management
- SBP 100-160
- Palliative care following
- PT/OT
- No anticoagulation at this time
- Disposition: CTICU

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. Now paced at 70bpm and hemodynamically stable. Plan for PPM placement on 1/13.
Cardiology consulted, appreciate recommendations:
- *Telemetry*
- *Atropine PRN for HR <25*
- *Dopamine gtt*
- *PPM placement pending*

Plan discussed with attending vascular surgeon Dr. Smith

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Delirium overnight, attempted to get out of bed and pull lines - seroquel dose increased, soft restraints placed, and started on dexmed (stopped this am)
- Remains on dopamine 5 mcg/kg/min --> attempted to transition to isopeterenol yesterday, but discontinued due to hypotension. Continues to be paced at 70 bpm
- Poor PO intake - given LR 500 mL for hypotension with improved BP
- Cardiology recs yesterday: **Mobitz II AV Block:** Has RBBB at baseline, now with symptomatic Mobitz II AV block, meeting class 1 indication for permanent pacing. She is now s/p TVP placement. Tentative plan for single chamber pacemaker 1/13.
- UOP 1.9 L, net -428 mL

Update from rounds:
- Paced at 80 bpm with improved BP
- Given additional 250 mL and started on mIVF in setting of low UOP, poor PO intake, and hypotension. Remains fluid responsive

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA.

#Symptomatic bradycardia
#2ndd degree AVB s/p emergent TVP placement and repositioning 1/10
- Now paced at HR 70s - **increase to pacing at HR 80. Thresholds stable**
    Underlying rate 38-39 with 2nd degree block
    Pt has reported history of 1st degree block in the past
- Dopamine gtt @ 5
    - attempted to transition to isopeterenol but became hypotensive --> discontinued isopeterenol 1/11
- Appreciate continuing recs from cardiology service - f/u with cards and EP about long-term plan
    - **Mobitz II AV Block:** Has RBBB at baseline, now with symptomatic Mobitz II AV block, meeting class 1 indication for permanent pacing. She is now s/p TVP placement. Tentative plan for single chamber pacemaker 1/13.
    - Continue TVP use over the weekend, reach out to EP if there are questions regarding TVP.
    - Plan for single lead PPM next week
    - NPO at MN on Sunday for possible procedure Monday pending lab availability - **order placed**
    - Hold all heparin products the night before procedure and afterwards. - **order placed**
- Telemetry
- Keep pacing pads on
- Atropine PRN for HR<25
- Bedrest while on TVP

#Acute limb ischemia
#S/p L AKA
- NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for regular diet
- SSI
- SBP 100-160
- Palliative following
- TTE:
- No anticoagulation indicated

#**DM Type 2**
- Bgs > 180 on SSI, improved since SSI increase
- SSI medium range dose (increased 1/11)
- Monitor BGs

#Delirium

- Seroquel qHS - **not effective despite increased dosing, d/c 1/12**
- Start guanfacine 1 mg BID
- D/c precedex

#Poor PO intake, high risk malnutrition
- Start mIVF
- Nutrition consult for TF recs
- Aspiration precautions

CHRONIC/STABLE/RESOLVED ISSUES

CTICU CHECKLIST:
- Tubes/lines/drains: PIV, Foley, RRAL, RIJ venous sheath and TVP
- Nutrition/IVF: Regular diet - **NPO at midnight**
- Analgesia/sedation: acetaminophen and PNC
- Anti-infectives: not indicated
- Daily mobility goal: bedrest due to invasive lines/devices
- Glycemic control: subQ insulin
- GI ppx: not indicated
- Bowel regimen/last BM: senna and miralax per protocol / PTA
- VTE ppx: SCDs, SQH
- Anti VAP care: not indicated
- Code status: ACLS
- Date next Interim Summary due: 1/17/24
- Family contact: Louis (206) 780-6885

The patient was seen on multidisciplinary rounds and the plan was discussed and developed in conjunction with Critical Care Attending, Vascular Surgery

DISPOSITION
ICU level care is necessary because the patient requires continuous physician/advanced practice provider observation and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Update 1/13: Overall doing well, hemodynamics improving with TVP rate increase to 80bpm and starting mIVF, still requires dopamine gtt for support. Nutrition consulted yesterday I/s/o poor po intake. Plan for PPM placement early this week (possibly today). Vascular team will take down L AKA dressing today.

#Acute limb ischemia
#S/p L AKA (1/9/25)
POD 4
- NWB LLE once able to get up
- Dressing management per vascular - **dressings down POD4**
- Advance to regular diet, follow nutrition recs

- SQI for glucose management
- SBP 100-160
- Palliative care following
- PT/OT
- No anticoagulation at this time
- Disposition: CTICU

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. Now paced at 80bpm and hemodynamically stable. Plan for PPM placement on 1/13.
Cardiology consulted, appreciate recommendations:
- *Telemetry*
- *Atropine PRN for HR <25*
- *Dopamine gtt*
- *PPM placement pending*

Plan discussed with attending vascular surgeon Dr. Matthew Smith

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course

is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/13/2025: 4X CB in last 24 hours. No reported pain overnight per bedside son's observatoin. PNC still providing analgesia. Given postoperative exacerbation in heart block/bradycardia, plan to be cautious with total amount of local anesthetic delivered per day. Plan to discontinue PNC CB but continue at current rate. Patient has also had significant sedation with HM during this hospital course. Plan to add nalbuphine 5mg q4h PRN as adjunct, as partial agonist may produce fewer side effects vs HM.

The challenges to pain management:
1. Elderly with difficult communication and difficult pain assessment;
2. Highly sensitive to opioids
3. Partial pain relief from Femoral PNC for AKA
4. Local anesthetic infusion in the patient Bradycardia and 2nd degree heart block
5. Need further PPM for bradycardia, which means more surgical pain.
6. Carefully observe the toxicity from pain regimen.

CONT:
Ropivacaine 0.2% @10/hr

SCH:
APAP 500mg IV q6hrs

PRN:
Nalbuphine 5 mg q4

Discussed With: APS attending, primary team, patient

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

McKinstry, Mia, MD at 1/13/2025 0807

Attestation signed by Lewis, Christopher P, MD at 1/13/2025 2:32 PM

Date of Service: 01/13/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.

Critical care is necessary because this patient requires continuous observation and interventions to respond to emergent changes in their medical condition and prevent further deterioration in their clinical state. This includes close monitoring and adjustment of hemodynamic data as necessary.
I am treating conditions outside the scope of care typically provided by the surgical or procedural team(s) for this type of ICU patient.

Assessment:
This patient has a high probability of imminent or life-threatening deterioration resulting from her high degree AV block and hypotension requiring vasopressors.

Plan:
The following intervention(s) impact decision-making required to stabilize the patient:

1. AV block: s/p TVP, paced at 80; pending PPM today
2. Hypotension, on dopamine: suspect that dopamine was started earlier for HR during acute bradycardia; now remains on for hypotension. If still requiring pressor after PPM to maintain MAP of 65 will switch to levophed; titrate as tolerated. May require midodrine longer term given chronic deconditioning and suspected poor vascular tone at baseline.
3. Delirium: team last week trialed multiple agents; started guanfacine yesterday which seems to have been effective at least in the short term. Will continue for now but hope to be able to liberalize restraints/precautions after PPM which may also help delirium.

1.
2.
3. **Critical Care Time:**
4. I spent a total of 35 minutes personally providing critical care to Jeanne Leonie Hoffman. This does not include time spent teaching or performing any separately billable procedures.
5.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA, hospital course complicated by new Mobitz II AV block necessitating TVP, paced at 80.

#Symptomatic bradycardia
#2ndd degree AVB s/p emergent TVP placement and repositioning 1/10
- Now paced at HR 80s
  Underlying rate 38-39 with 2nd degree block
  Pt has reported history of 1st degree block in the past
- Dopamine gtt @ 3.5
  - attempted to transition to isopeterenol but became hypotensive --> discontinued isopeterenol 1/11
- Appreciate continuing recs from cardiology service
  - **Mobitz II AV Block:** Has RBBB at baseline, now with symptomatic Mobitz II AV block, meeting class 1 indication for permanent pacing. She is now s/p TVP placement. Plan for single chamber pacemaker 1/13.
- Telemetry
- Keep pacing pads on
- Atropine PRN for HR<25
- Bedrest while on TVP

#Acute limb ischemia
#S/p L AKA
- NWB LLE once able to get up
- Dressing management per vascular - dressings down POD4
- Ok for regular diet
- SSI
- SBP 100-160
- Palliative following
- No anticoagulation indicated
- Pain control: APS following for Left Femoral PNC

#**DM Type 2**
- Bgs > 180 on SSI, improved since SSI increase
- SSI medium range dose (increased 1/11)
- Monitor BGs

#Delirium
- Guanfacine 1 mg BID
- Seroquel not effective

#Poor PO intake, high risk malnutrition
- Start mIVF
- post procedure NG tube placement, Nutrition consult for TF recs
- Aspiration precautions

CHRONIC/STABLE/RESOLVED ISSUES

CTICU CHECKLIST:
- Tubes/lines/drains: PIV, Foley, RRAL, RIJ venous sheath and TVP
- Nutrition/IVF: Regular diet - **NPO until post procedure**
- Analgesia/sedation: acetaminophen and Left femoral PNC
- Anti-infectives: not indicated
- Daily mobility goal: bedrest due to invasive lines/devices
- Glycemic control: subQ insulin

- GI ppx: not indicated
- Bowel regimen/last BM: senna and miralax per protocol / PTA
- VTE ppx: SCDs, SQH
- Anti VAP care: not indicated
- Code status: ACLS
- Date next Interim Summary due: 1/17/24
- Family contact: Louis (206) 780-6885

The patient was seen on multidisciplinary rounds and the plan was discussed and developed in conjunction with Critical Care Attending, Vascular Surgery

DISPOSITION
ICU level care is necessary because the patient requires continuous physician/advanced practice provider observation and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns:
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated:

This SW called the pt's son to discuss the plan of care. He was not able to speak long, but stated he would be coming to the hospital to visit the pt. He reiterated not wanting the pt to go to a SNF and wanting permanent housing. SW informed him that there are extreme limitations to locating permanent housing while inpatient and that is something that he would have to work with community entities to obtain. He acknowledged understanding and shared that he would like permanent housing to be a collaborative effort between SW and community support; SW acknowledge and noted realistic expectations in obtaining permanent housing quickly.

SW called Caroline Ventrice, 360.814.9682, DSHS Adult Protective Service and LVM with contact information and requested a returned call.

SW later met with the pt's son at bedside. SW explained that they would discuss pt's care on the next day. He shared that he has started a Go Fund Me for the pt. He also shared that his mother's condition is due to “bad predators” and “bad landlords.” He shared that he believes the pt has 7-10 more years of life and she would like to have end of life be with her friends. He also requested staff to ask the pt's scenario type questions for events that have never occurred to engage her and build rapport, i.e., “when are you going to see Al Roker.” Louis also shared that he has also been working with APS regarding the pt's well-being.

PLAN or OUTCOME:

SW will continue to work on patient's care coordination/safe medical discharge and remain available for patient/family support

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

Update 1/14: S/p PPM placement yesterday, now paced at 80bpm and hemodynamically stable off dopamine. L AKA site dressing taken down yesterday and is well approximated, healing well. Per RN this morning patient's delirium has improved yesterday and she did not received any of her PRN medication. SW continues to work on dispo planning. No changes in her management from a vascular surgical perspective.

#Acute limb ischemia
#S/p L AKA (1/9/25)

POD 5
- NWB LLE once able to get up
- Dressing management per vascular
- Advance to regular diet, follow nutrition recs
- SQI for glucose management
- SBP 100-160
- Palliative care following
- PT/OT
- No anticoagulation at this time
- Disposition: Medicine acute care

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
Cardiology consulted, appreciate recommendations:
- *Telemetry*
- *PPM management per cardiology*

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course

is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/14/2025: No reported pain overnight per nursing observation. Good sleep last night. PNC still providing analgesia. Given postoperative exacerbation in heart block/bradycardia, plan to be cautious with total amount of local anesthetic delivered per day. Per nursing, nalbuphine improving with comfort but still causes sedation. Plan to decrease to 1.5 q6h. PNC site nontender to palpation.

The challenges to pain management:

6. Elderly with difficult communication and difficult pain assessment;
7. Highly sensitive to opioids, sleepy since on Nalbuphine;
8. Partial pain relief from Femoral PNC for AKA
9. Local anesthetic infusion in the patient with Bradycardia and 2nd degree heart block
10. S/p PPM, with the 2nd source of procedural pain.
11. Carefully observe the toxicity from pain regimen.

CONT:
Ropivacaine 0.2% @10/hr

SCH:
APAP 500mg IV q6hrs

PRN:
Nalbuphine 1.5 mg q6

Discussed With: APS attending, primary team, patient

APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.

Electronically signed by Wu, Jiang, MD at 1/14/2025 5:16 PM

Progress/Transfer Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
-successful placement of PPM yesterday, remained hemodynamically stable overnight off dopamine
-pain under good control
-multiple trials of NGT placement given poor PO intake but unsuccessful
-pt ate breakfast this AM per nursing staff
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge

When I visited pt this afternoon, son was at bedside. Pt reported she feels fine and was in the middle of eating some mashed potatoes.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 1 mg, BID
- [Held By Provider] heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/14/25 1100)
- ROPivacaine, , Continuous
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- calcium carbonate, 1,000 mg, q6h PRN
- calcium carbonate, 500 mg of ELEMENTAL calcium, q6h PRN
- calcium gluconate, 2 g, q6h PRN
- magnesium sulfate, 2 g, q6h PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q6h PRN
- ondansetron, 4 mg, q8h PRN

- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 3 packet, q6h PRN
- potassium chloride, 20 mEq, q6h PRN
- potassium chloride, 40 mEq, q6h PRN
- potassium chloride ER, 20 mEq, q6h PRN
- potassium chloride ER, 40 mEq, q6h PRN
- potassium phosphate, 40 mEq, PRN
- potassium phosphate-sodium phosphate, 3 tablet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

- need PT and OT re-evaluations now that pt is off TVP to determine disposition/needs at discharge
- ongoing close monitoring of PO intake (CT ICU had planned to initiate tube feeds but unable to insert NGT, pt ate 100% of breakfast AM 1/14, holding off for now)
- please see Marquette McBryde's note from today re: complex dynamic with pt's caregiver (son, Louis), will appreciate ongoing support from SW team and follow up on APS involvement
-note that I share the concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
- PT/OT consulted
    - PT last eval 1/10, OT last eval N/A, both will need to re-evaluate pt now that she no longer has TVP in place
- SQ heparin for DVT ppx restarted 1/14 (ok with both Cardiology and Vascular Surgery)
- Pain control per APS, appreciate recs
    -femoral PNC in place (ropivacaine)
    -scheduled tylenol 500 mg IV q6h
    -PRN nalbuphine 1.5 mg q6h

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
Cardiology consulted, appreciate recommendations:
- Continuous telemetry
- PPM management per cardiology, appreciate recs

#Delirium
Started on guanfacine 1mg BID by ICU team, will continue for now. Of note, Seroquel reportedly ineffective.

#T2DM
- SSI while inpatient

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV in RUE, foley catheter
Disposition: Acute care
Code Status: Full Code
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns:
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated:

This SW met with the pt's son Louis at bedside to discuss DCP.

Housing: He shared that he and the pt lived at Village Homes which he described as “prisons” from June 2019-Oct 2024. During this period, he shared that the stove did not work for 1.5 years, the shower did not work for 5 years, they did not have a working refrigerator, and they used a bucket for toileting. He shared that he and the pt were coerced to live there through the Cross Sound Church and the Housing Resource Board. He stated that the goal of Cross Sound Church and the Housing Resource Board is to want to kill the pt and kill him. When prompted, he stated that after eviction, he and the pt went on a “business tour,” lived in hotels and took train trips (Oct-Dec). When prompted, he shared that he and the pt both have state housing vouchers; he prefers to be the primary lessee and the pt is the co-renter. He stated that he and the pt currently live in CERT tents.

Housing Goal: Louis stated that the goal post hospitalization is for the pt to return to independent living, and he will continue as her caregiver (30 years). He shared that he does not want to consider subsidized housing due to poor past experiences. If needed, he would also prefer HH PT/OT. He shared that he has been working with Shannon McDonald at HMC and Donna from Bainbridge Island but has not had much movement to secure permanent housing.

Family support: Louis shared that he has a brother Doug who lives locally. However, he shared that there is a restraining order again him because “he wants her dead” and has tried to hurt her in the past. He shared that the pt does not have any living siblings and other family members live throughout the US and Europe. When prompted, he stated that family members are not aware of their unhoused status. He shared that the pt's wishes is to be buried next to her family and friends on Bainbridge.

Financial & Employment: Louis shared that the pt's income is about 2k per month (undisclosed source). However, he stated that the pt has items of value that she can sell for income as needed. He shared that he and the pt have operated a rail and senior service travel business for 25-30 years. He also shared that he has a background in business, IT, construction, photography and he has also studied in the Netherlands during WWII.

SW and Louis discussed he and the pt's aversion to SNF placements when it was recommended by PT/OT and medical Providers. He stated that the pt went to a few SNFs for rehab and he ultimately had her removed due to what he thought was inadequate care. He describes SNFs as “places where people go to die” and the pt's quality of life is a priority for him. He also shared that he has spoken with personal injury attorney lawyers, HUD and WHRC and they also all investigating his claims regarding the pt's care and housing discrimination.

Pt's son appears to have some fixed paranoid delusions regarding housing inequities, people wanting kill him and the pt and appears to have unrealistic expectations about the pt's health and prognosis. During the discussion, he also made grandiose and verbose statements, was tangential and had to be redirected often. It is unclear if he understands the extent of the pt's care needs and if he can meet those needs while housed/unhoused. He stated that one of the goals post hospitalization is for the pt to use prosthetics and travel with him to visit Al Roker and other family members in New York. He stated that he has geriatric training that he has learned through various forms of media to include CD's and online and shared that he knows more than most MDs at HMC. When prompted, he shared that he does not have a car and uses public transport to get the pt to appointments. He mentioned that he also operates a wheel chair service.

SW called Caroline Ventrice, 360.814.9682, DSHS Adult Protective Service and she did not answer: APS referral confirmation # 653P6EZK0BN5S. SW called DSHS Adult Protective Service Supervisor Gaylan Warnock, 360-968-4610 and LVM.

_____

SW consulted with Shannon McDonald, MSW, W. Specialty Clinic Social Worker, Harborview Medical Center, 206-744-8036 who shared that she referred the pt and Louis to Helpline House (HH) and that he needs to follow up with them

SW met with Louis again at bedside to discuss housing referral. He shared that he has spoken with Donna of HH and she sided with the housing review board to have them evicted. He continued to lament about Bainbridge trying to “sweep people off the island” and not provide any housing support. Louis shared that he was not opposed to the pt going to rehab for 90 days but was adamantly against the pt going to a long term care facility (LTCF). He stated that the pt going to a LTCF would mean that he would lose everything and become homeless; there appears to be some secondary gain. He also stated that he did not want to use any of the pt's social security to pay for long term care. This SW explained the differences between LTC vs. SNF for rehab vs. outpatient rehab and further explained limitations and barriers to either of those options. He shared that the pt has willed everything to him and they have 3 storage units full of items as they wait for permanent housing. He was again tangential and sometimes spoke loudly, but redirectable. No other questions or concerns identified.

SW called Helpline House to get an update from Donna, 206-842-7621 and LVM.

PLAN or OUTCOME:

SW will continue to provide support as needed.

Marquette McBryde, MSW

#Anemia
-Hct today 27, down from 29 ,no active signs of bleeding

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Delirium
-Started on guanfacine 1mg BID , continues bid, will try holding today to improve sedation and eval
-Of note, Seroquel reportedly ineffective.

#Disposition planning
Per SW "SW met with Louis again at bedside to discuss housing referral. He shared that he has spoken with Donna of HH and she sided with the housing review board to have them evicted. He continued to lament about Bainbridge trying to “sweep people off the island” and not provide any housing support. Louis shared that he was not opposed to the pt going to rehab for 90 days but was adamantly against the pt going to a long term care facility (LTCF). He stated that the pt going to a LTCF would mean that he would lose everything and become homeless; there appears to be some secondary gain. He also stated that he did not want to use any of the pt's social security to pay for long term care. This SW explained the differences between LTC vs. SNF for rehab vs. outpatient rehab and further explained limitations and barriers to either of those options. He shared that the pt has willed everything to him and they have 3 storage units full of items as they wait for permanent housing. He was again tangential and sometimes spoke loudly, but redirectable. No other questions or concerns identified."
-SW called Helpline House to get an update from Donna, 206-842-7621 and LVM.
-This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile, and not clearly answering questions today**

#FEN:
- at high risk of refeeding given inadequate oral intake >5 days.
- Recommend BMP + Mg/Phos Q 12H for 3 days or until lytes stable
- Replacing phos today
- Replacing Mg today
-Replace lytes to WNL prior to EN initiation and/or advancement
-Maintain BGs <200 prior to EN initiation and/or advancement
-Request updated vit D 25-OH level to determine appropriate supplementation, r/o vit D toxcitity
-Request updated zinc level to determine need for supplementation for wound healing
-Now on oral thiamine
-Nutrition had recommend high dose thiamine: 500 mg IV TID for 3 days given ongoing AMS, started today 1/15, OK to continue oral thiamine as ordered
-prenatal multivitamin 1 tab PO or per FT daily
- ascorbic acid 500 mg BID x 14 days PO or per FT
Pending zinc level:
- recommend zinc sulfate 220 mg daily x 14 days PO or per FT
-Hold vit D supplementation until updated lab
-Continue oral vit B12 as ordered
-Re consult SLP today for swallow eval
PRIOR NUTRITION RECS:

Enteral Nutrition
Await NGT placement, appropriate for bridled tube insertion to prevent dislodgement by patient

Start @ 10 mL/hr, adv 10 mL Q 4H to goal rate
Jevity 1.5 @ 40 mL/hr
= 880 mL TF, 1320 kcal, 56 gm protein, 190 gm CHO, 18.5 gm fiber, 669 mL free water
Minimum 30 mL free water flush q 4 hours while TF are running to maintain tube patency
Calculated over 22 hrs to allow for interruptions for care

Oral Nutrition
6- soft and bite sized, 0- thin liquids per SLP
- if c/f aspiration risk, hold PO and request SLP re-eval

Appreciate nursing assistance in meal ordering/tray set up/feed assist PRN
Can adjust to non-select, automatic meal delivery for ease if indicated
Offer ONS in place of missed/skipped meals
Appreciate nursing documentation of % intake of meals/snacks/supplements

#T2DM
- SSI while inpatient

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

#PT/OT contacted today to request dispo eval (1/15)

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT (note: resumed 1/14/25 as had been held for pacer
Lines/Drains/Airways: PIV in RUE, foley catheter
Disposition: Acute care
Code Status: Full Code

Social Work Progress Note:

MSW received handoff from previous MSW, see previous MSW notes for more details. Previous MSW found following information for patient's other son - Douglas Hoffman (possible address - 10790 Hyla Ave NE, Bainbridge Island; 206.842.8360; 425.971.8286).

MSW spoke with Caroline, APS CM (360.814.9682, fax 360.478.4570). Caroline confirms there is an open investigation but no determination has been made. Caroline will continue to follow.

MSW participates in discharge huddles/multidisciplinary rounds to discuss ongoing medical plan and discharge planning Monday through Friday. Patient remains medically active and requiring IV pain medications. Medicine team will continue to evaluate patient's decision making capacity.

MSW continues to follow for discharge planning, care coordination, and support.

Jennifer L. Jerbi, MSW, LICSW
Clinical Social Worker - Medicine Services B, C, and G

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/15/2025: No reported pain overnight per nursing observation. Comfortable sleep last night with some difficulty falling asleep. PNC still providing analgesia. Given postoperative exacerbation in heart block/bradycardia, plan to be cautious with total amount of local anesthetic delivered per day. Per nursing, ongoing reports of nalbuphine causing drowsiness. Plan to CTM nalbuphine side effects. PNC site nontender to palpation, at 15 cm.

The challenges to pain management:
2. Elderly with difficult communication and difficult pain assessment;
3. Highly sensitive to opioids, sleepy since on Nalbuphine;
4. Partial pain relief from Femoral PNC for AKA
5. Local anesthetic infusion in the patient with Bradycardia and 2nd degree heart block
6. S/p PPM, with the 2nd source of procedural pain.
7. Carefully observe the toxicity from pain regimen.

1.
2. CONT:
3. Ropivacaine 0.2% @10/hr
4.
5. SCH:
6. APAP 650 mg q8
7.
8. PRN:
9. Nalbuphine 2.5 mg q8

10.
11. Discussed With: APS attending, primary team, patient
12.
13. APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.
14.

Occupational Therapy Note

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Total Treatment time: 40 Minutes

Home Living:
Type of Home: Homeless
Lives With: Son
Lives with Comments: Jeanne's son, Louis, is the primary caregiver for Jeanne
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (transport chair)
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island

Prior Level of Function:
BADLs: Requires assist
IADLs: Requires assist
Functional Mobility: Requires assist
Leisure and Hobbies: travel
Details of previous level of function: per PT note (son not present during eval & pt unable to report) - patient was limited mobility within tent. she was using FWW or SPC for short distances and then transport/wheelchair for community distances. she would occ need assistance wtih getting on/off the cot and for ADLs. Although Louis is a good historian, it can be difficult at times to get a understandable timeline of her fxnal mobility.

Upper Extremities:
RUE Assessment: Within Functional Limits
RUE Assessment Comments: generalized weakness/deconditioning ~4-/5

LUE Assessment: Within Functional Limits
LUE Assessment Comments: generalized weakness/deconditioning ~4-/5

Hand Function:

Coordination:
Movements are Fluid and Coordinated: No
Coordination and Movement Description: had some difficulty coordinating items in her hands

Sensation:

Proprioception:
Vision: Vision Comments: wears glasses
Perception:
Cognition: Overall Cognitive Status: Impaired
Cognition Comments: hard to assess due to profound hearing loss, able to comprehend information best from reading from whiteboard but does not always answer questions directly; at times responds with unrelated information

Subjective: "I just turned 100!"

Current Level of Function

Grooming/Oral Hygiene: Position- sitting;Maximum Assist (between 50-74% help needed),

Dependent (greater than 75% help needed);Position-sitting
required assist to clean and rinse dentures; once handed dentures, she was able to put them back in herself with just a little bit of help to orient them in the correct direction/position prior to putting them in. while sitting at EOB, used mouthwash to rinse; had difficulty maintaining balance while also holding mouthwash and bringing to mouth - needed assist to hold basin under mouth

Upper Body Dressing: Maximum Assist (between 50-74% help needed)

Footwear Dressing: Dependent (greater than 75% help needed)
donning sock on R foot

Toileting: Dependent (greater than 75% help needed)
total assist for clean up of minor incontinence at bed level

Therapeutic Interventions

Functional Transfers

Bed Mobility: Supine>Sit: Maximum Assist (between 50-74% help needed);Cues needed
Sit>Supine: Dependent (greater than 75% help needed);Cues needed
Scooting: Dependent (greater than 75% help needed)

,
Balance:
Sitting:
Static: Minimum Assist (less than 25% help needed)
dangling at EOB; able to maintain midline with light hands on assist once scooted
Dynamic: to further edge of bed. limited tolerance of R knee flexion due to pain and limited AROM of

R knee at baseline; tolerated sitting at EOB better with RLE propped up on chair; kyphotic posture, relies on arms to maintain balance
Dependent (greater than 75% help needed)
unable to correct posture when beginning to lean backwards or laterally out of COG; requires total assist to return to midline and recover stability

,

ADL/IADL Comments: edu on OT role & POC; pt requires extra time to communicate as she is profoundly hard of hearing and does best understanding when information is written on whiteboard for her to read; she answered questions mostly with head nods yes/no and short few word sentences

Assessment

Assessment: Jeanne presents well below baseline with significant weakness, frailty, and deconditioning s/p recent L AKA & subsequent PPM placement. She required heavy physical assist to move from laying to sitting up at edge of bed and ultimately was only able to tolerate sitting up for about 6-7 minutes. After AKA, she relied heavily on her arms for stability when sitting up and is therefore currently not able to maintain new PPM precautions. She needed a lot of assistance to maintain her sitting balance at edge of bed today. She was also limited by pain with majority of movements and was unable to tolerate sitting with her right knee bent due to chronic joint stiffness from previous surgical repair in 2021. She ultimately requires near total assist for majority of cares at this time.

Session Tolerance: Patient limited by fatigue, Patient limited by pain

Plan

Plan: Skilled OT
Treatment Interventions: Self-care/Home management, Caregiver education/training, Therapeutic exercise, Therapeutic activities
Frequency: 2-3x/week
Coverage for Next Shift: progress EOB dangle & core/postural control activities, seated grooming/sitting tolerance

Discharge Recommendations

Recommendations: Will need follow up OT at next level of care
Barriers to Discharge: heavy care needs
Assistance with: ADLs, Functional mobility and transfers, Home safety, IADLs
Supervision with:

Equipment Recommended: TBD pending dispo plan

Goals

1. Goal: Self feeding, Grooming, Set up or clean up assistance
Estimated Completion Date: 01/29/25
Goal Status: Progressing

2. Goal: Bed mobility, Minimum Assist (less than 25% help needed)
Estimated Completion Date: 01/29/25
Goal Status: Progressing

3. Goal: Toileting, Toilet transfer, Moderate Assist (between 25-49% help needed)
Estimated Completion Date: 01/29/25
Goal Status: Progressing

4. Goal: Jeanne will dangle at EOB x15 mins with SBA to complete grooming & hygiene tasks.
Estimated Completion Date: 01/29/25
Goal Status: Progressing

5.

Discharge Planning Assessment

See other SW notes for more details on discharge planning.

Visit Information:
Patient is a 100 yrs female admitted on 1/9/2025 for Acute lower limb ischemia.
Discharge Planning Assessment Type: Discharge Planning Assessment (Chart Review)
Is an interpreter used:: No
Is this a planned admission: No, Admission Source: Admitted through ED
Did pt/family decline dc planning evaluation/assistance? No

Living Situation Prior to Admit:
Living Situation Prior to Admission: Tent (in tent per son, referred to as "homestead")

Pt reports that they felt their needs were met in living situation: Unable to assess/deferred
Home Accessibility Concerns: Narrow doorway/hallways;Unhoused
Primary Caregiver: Children
Support System: Children;Case manager/social worker
Physical/Cognitive/Functional History: Physical Limitations;Cognitive Limitations
Access to Healthcare Prior to Admit:
Activities of Daily Living Prior to Admission:
PTA-Independent with ADLs?: No
PTA-Memory Adequate to Safely Complete Daily Activities: No
PTA- Adequate self-medication management: Unable to assess
PTA-Patient Able to Express Needs/Desires: Unable to assess
PTA-Dressing: Needs assistance
PTA-Feeding: Needs assistance
PTA-Bathing: Needs assistance
PTA-Toileting: Needs assistance

PTA-In/Out Bed: Needs assistance
PTA-Walks in Home: Needs assistance
PTA-Assistive Devices: Wheelchair;Walker;Comments (son states home equipped with railing system to aid with walking)

Social Work Progress Note:

MSW received following email from Donna Dahlquist with Helpline Housing. It has been forwarded to new primary MSW:

Hello Jennifer,

Several weeks ago Jeanne and her son, Louis Alloin, met with me and gave permission for Helpline House to communicate with UW Medical Center staff and shared what high regards he has for UWMC. At the time they were staying in a local hotel after a lengthy eviction process.

I was also given permission to contact two local subsidized housing providers that Louis and Jeanne had applied to. I learned one declined them after not receiving a reference from previous landlord. The other had an opening for a two bedroom apartment that was declined by Louis and Jeanne.

My understanding is new wait list applications would need to be completed. We have a county wide housing specialist on site weekly on Tuesdays and I can assist with applications if they are open to it but that is a very long-term possible solution.

I will call you tomorrow about 9:30.

Kind regards,

Donna Dahlquist

Speech Language Pathology Progress

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Date of Service: 01/16/25
Treatment Duration: 20 Minutes (swallow tx)

Subjective

Patient Report/Self-Assessment: Provider requested swallow re-assessment 2/2 c/f aspiration. On arrival, pt is alert, responsive to simple questions/directions via written communication 2/2 hearing loss.
Patient Stated Goal: None stated

Prior Function

Prior Function: Patient was seen by SLP novemebr 2023: "She demonstrated mild oral deficits and 1 cough that was not repeated with further trials of thin liquids (silent aspiration cannot be ruled out at bedside). Unclear if mild dysphagia vs presbyphagia related changes complicated by ill fitting dentures and recent thrush. Given her performance, recommend thin liquids and soft and bite sized solids (son assisting to self select softer solids as needed" She reports she mainly eats puree and soft solids at baseline. Son endorses coughing with thin liquids when laying in bed, but not when in chair/at table
IADLs: Requires assist
Leisure and Hobbies: travel

Objective

Patient Information
Temperature: Afebrile
Respiratory Status: Room air
Behavior/Cognition: Alert;Participates well (utilized white board to write questions/directions/information- pt responded verbally or w/ head shake yes/no)
Patient Positioning: Upright in bed

Consistencies Assessed: 0-Thin Liquids;4-Pureed;Soft solids;Hard solids

0-Thin Liquids - Presentation: Straw

4 Pureed - Presentation : Spoon;Self Fed
Soft Solids - Presentation: Spoon
Hard Solid - Presentation: Self Fed

Oral Phase: Prolonged mastication (w/ hard solids suspected; oral residue w/ hard solids- cleared w/ liquid rinse)
Pharyngeal Phase: Other (laryngeal elevation present)
Signs/Symptoms of Penetration/Aspiration: None (note that silent aspiration cannot be excluded at bedside)

Clinical Notes (group 10 of 17) (continued)

Oral Mechanism Examination
Dentition: Adequate with dentures
Oral mucosa: Dry
Observations: Consistent w/ prior CNE

ASSESSMENT/PLAN

Pt seen for swallow tx w/ no overt s/sx of aspiration across numerous trials though mastication of hard solids continues to appear prolonged w/ incomplete oral clearance. Given prior assessment, pt cue her to take small, single sips, which she was able to do without issue. Given stable respiratory status, Jeanne appears ok to continue current diet given supervision/assist 2/2 delirium and adherence to aspiration precautions. SLP to continue to follow.

Dysphagia: Other (?presbyphagia)
Aspiration Risk: Low;Moderate (pending mentation)

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: delirium
Prognosis: Good

Evaluation/Treatment Tolerance: Patient tolerated treatment well

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow treatment;Patient/family education
SLP Frequency: 1-3x/week

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations
Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time

Goals
Short Term Goal: Tolerate least restrictive diet

Estimated Completion Date: 01/24/25
Goal Status: Progressing

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 01/24/25
Goal Status: Progressing

Assessment/Plan

ASSESSMENT/PLAN

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 10 of 17) (continued)

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/16/2025: No reported pain overnight per nursing observation. PNC still providing analgesia. Given postoperative exacerbation in heart block/bradycardia, plan to be cautious with total amount of local anesthetic delivered per day. Per nursing, ongoing reports of nalbuphine causing drowsiness. Plan to CTM nalbuphine side effects. PNC site nontender to palpation, at 15 cm. More awake and alert today. Will decrease rate of PNC to 6cc/hr. If no change in pain, can discontinue PNC tomorrow.

The challenges to pain management:
20. Elderly with difficult communication and difficult pain assessment;
21. Highly sensitive to opioids, sleepy since on Nalbuphine;
22. Partial pain relief from Femoral PNC for AKA
23. Local anesthetic infusion in the patient with Bradycardia and 2nd degree heart block
24. S/p PPM, with the 2nd source of procedural pain.
25. Carefully observe the toxicity from pain regimen.

1.
2. CONT:
3. **Ropivacaine 0.2% decrease to 6 from 10/hr**
4.
5. SCH:
6. APAP 650 mg q8
7.
8. PRN:
9. Nalbuphine 2.5 mg q8
10.
11. Discussed With: APS attending, primary team, patient
12.
13. APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.
14.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
Subjective

SUBJECTIVE

INTERVAL HISTORY:
- S/p PPM placement. Limiting arm activity for rehab.
-Starting to strengthen, eating. Moving toward DC.
-No concerns for amp incision.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- [Held By Provider] cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- [Held By Provider] guanFACINE, 1 mg, BID
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine, 500 mg, TID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/16/25 1047)
- ROPivacaine, , Continuous
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 1 packet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, previous DVT (not on AC) who presented with LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).

#Acute limb ischemia
#S/p L AKA (1/9/25)
POD 7
- I talked to PT/OT.. No activity restrictions from AKA standpoint. Obviously a fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- Recommend PMR consult. Pt will need walker, wheel chair (seating exam), for transfers. Need training for hip extension exercises and prone positioning 3x per day (if able) to prevent hip contracture.
- Disposition: I spoke to Hospitalist. Soon to TCU vs home with son.

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
-Much more awake today. Answering questions accurately and speaking some today, whereas yesterday only mumbling.
-she is eating and drinking
-not sob or coughing today
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge
- communicated extensively this am with patient without Louis. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. She indicated she is fine with going to a SNF and fine going home with Louis. She wants him to be her caretaker and leaves him as the decision maker.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID

Net	**157 ml**

Physical Exam

GENERAL: elderly, frail woman laying in bed in no acute distress
NEURO: She wakes for questions, looks at whiteboard to read, shakes head, and speaks. She asked for her glasses and answered questions appropriately. Rated her pain as a small amount.
HEENT: normocephalic
CARDIAC: RRR, extremities warm and well perfused
Chest: Pacer incision site is CDI
PULM: no increased work of breathing on room air
ABD: nontender, nondistended
EXT: s/p L AKA, CDI, staples in place. Dressing was removed for exam.

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Plan 1/15
- ongoing close monitoring of PO intake. Nutrition following. No e/o aspiration
- please see SW notes re: complex dynamic with pt's caregiver (son, Louis), will appreciate ongoing support from SW team

-Per APS involvement she may be able to DC IV pain management tonight or tomorrow

#Acute Pain- per APS
- Please see note from acute pain service
- Weaning IV medications
-Current reg:
Ropivacaine 0.2% @6/hr
APAP 650mg q8h
Nalbuphine 2.5 mg q8

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD

Per Troy Decker Vasc Surgery"
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- PMR consult. Pt will need walker, wheel chair (seating exam), for transfers. Need training for hip extension exercises and prone positioning 3x per day (if able) to prevent hip contracture.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
- PT/OT consulted, needs re-evaluate pt now that she no longer has TVP in place

#Anemia
-Hct today 27, down from 29 ,no active signs of bleeding

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
20. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
21. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. **#Delirium**
4. -Started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
5. -Of note, Seroquel reportedly ineffective.
6.
7. **#Disposition planning**
8. -SW following, see notes
9. - currently unhoused, living in tent
10. -This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**

11.
12. **#Aspiration risk**
13. -Improved per SLP, working toward patient and family education
14. -Swallow Recommendations
15. Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
16. Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
17. Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
18. Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time

#FEN:
- at high risk of refeeding given inadequate oral intake >5 days.
- Eating now in good amounts, so plan 2 more days of monitoring for refeeding syndrome (end 1/18, will feel comfortably stable for DC from elyte standpoint on 1/19). She will complete high dose thiamine on 1/17.
- Phos was replaced 1/15, now in normal range
- Mg replace 1/15, now in normal range
-Replace lytes to WNL and maintain glc <200. She did have one elevated at 217 today
-Sent vit D 25-OH level to determine appropriate supplementation, r/o vit D toxcitity
-Request updated zinc level to determine need for supplementation for wound healing
-Now on oral thiamine
-Nutrition had recommend high dose thiamine: 500 mg IV TID for 3 days given ongoing AMS, started today 1/15, OK to continue oral thiamine as ordered
-prenatal multivitamin 1 tab PO (initiated 1/15)
-ascorbic acid 500 mg BID x 14 days PO (initiated 1/15)
Pending zinc level:
-zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
-Hold vit D supplementation until updated lab
-Continue oral vit B12 as ordered

#T2DM
- SSI while inpatient, has had one glc> 200

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

#PT/OT f/u

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT (note: resumed 1/14/25 as had been held for pacer
Lines/Drains/Airways: PIV in RUE, foley catheter
Disposition: Acute care
Code Status: Full Code
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

Physical Therapy Treatment

Jeanne Leonie Hoffman
U8170135

1/16/2025
Duration of session: 60 Minutes

Subjective
Patient Report/Self-Assessment: Nods yes to reviewing exercises and getting up to chair. Written on whiteboard

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Jeanne's son, Louis, is the primary caregiver for Jeanne
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (Transport chair)

Functional Level:
Bed Mobility
Rolling Left: Maximum Assist (between 50-74% help needed)
Rolling Right: Maximum Assist (between 50-74% help needed)
Transfers
Bed<>Chair/WC: Dependent (greater than 75% help needed);Assistive device used
Bed<>Chair/WC Assistive Device Details: Mechanical lift

Interventions:
Therex: Supine edu ther ex to son and pt: SLR B, hip add with pillow. Provided written handout with pictures of these two exercises to pts son
Theract: Rolling side to side to don sling, pt needing clean up (dependent for pericare) Lift to pts transport chair, likely not enough support with pts core weakness but able to get her positioned (lifting/lowering several times to get better positioning in chair, needed to tip transport chair back). Pt not able to keep self upright without assistance as she was fatiguing, placed posey belt around pt to better support her chest
Balance/Neuro Re-ed:
Gait Training:

ASSESSMENT/PLAN

Jeanne continues to demonstrate impaired cognition but is able to follow simple commands. Provided education on several exercises she can perform on her own with her son. She needs heavy assistance for rolling in the bed, lift utilized to get her to her personal transport chair, which at this time is not supportive enough with new amputation and her hospital aquired weakness -ordered rental tilt in space wheelchair for pt. Posey belt added support to pts trunk for brief sitting period in her transport chair.

In regard to post amputee training: It should be noted that her kyphotic posture and recent pacemaker make prone positioning challenging at this acute stage in her healing- not trialed this session. She is also very limited on what devices she can use to transfer, as her pacemaker precautions prevent the use of a walker or a slideboard. She will also not be able to perform self propulsion in a wheelchair until her precautions are lifted. Her recent amputation and her pacemaker precautions make her dependent for all of her care, and **subacute rehab is strongly recommended**

at this time for discharge.

Barriers to Discharge: Currently dependent for all cares, pt family does not have proper training/equipment to manage her care at home at this time

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Sit unsupported for (30 mins)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes
Estimated Completion Date: 01/24/25
Goal Status: Not Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: Fit to TIS, dangle at EOB; STS practice; pivot transfer to chair; ongoing amputation education

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: Lift for transfers to TIS chair

Kelly Whitney, PT

Barnhart, Shelley Lea, RD at 1/16/2025 1540

Inpatient Follow Up Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Recommendations/Interventions:
ORAL NUTRITION:
- diet per team
- added high calorie / high protein to diet order
- encourage oral nutrition supplements:Ensure Plus TID

- Calorie Count: appreciate nursing documentation of %meals consumed

VITAMINS/SUPPLEMENTS:
- thiamine 100 mg po daily
- thiamine IV 500 mg TID
- 220 mg zinc sulfate, **x14 days**
- 500 mg ascorbic acid**, x14 days**

Subjective

Current Nutrition Assessment:
FEN:
- visited pt/family at bedside, reports today first day of improved intake, last night pt consumed x1 ensure. Ensure HP at bedside, discussed changing to Ensure Plus with Son, agreed and son requested 3x/day. Breakfast good yesterday and today, x2 oatmeal, usually add peanut butter and banana to oatmeal but not today.
- per nursing documentation:

Patient Vitals for the past 96 hrs:

	Percent Meals Eaten (%)
01/16/25 1339	33
01/16/25 1033	33
01/15/25 1928	33
01/15/25 0900	100
01/14/25 1300	75
01/14/25 0900	100

	Oral Nutritional Supplement Intake (mL)
01/16/25 1300	237 mL
01/16/25 0800	0 mL
01/15/25 1300	0 mL
01/15/25 0800	0 mL
01/14/25 1259	225 mL
01/14/25 0800	0 mL
01/13/25 1300	0 mL
01/13/25 0743	0 mL

- estimate pt consumed 60% of estimated energy/protein needs in 24 hours, most likely will improve

GI: dysphagia. SLP recommendations for soft and bite size
Edema/Fluid: +1 RUE
Weight: wt gain d/t fluids
Wounds Present: Yes, L BKA, partial thickness wound to perineum

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Objective

Active Diet Order: Yes
Diet: General Heart Healthy Carb Managed

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan

Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
01/16/25 0742	54 kg (119 lb 0.8 oz)
01/12/25 0600	46.4 kg (102 lb 4.7 oz)
01/11/25 0600	43.8 kg (96 lb 8 oz)

01/10/25 0600 45.8 kg (100 lb 15.5 oz)

Current Body mass index is 23.25 kg/m².

Estimated Nutrition Needs
Using post LL amputation wt, 45.8 kg
Energy: 1145-1375 kcal (25-30 kcal/kg)
Protein: 55-64 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Malnutrition Assessment: Severe malnutrition
Malnutrition: Present at admission?: Yes

Interventions:
Coordination of Care:
Chart reviewed.
Discussed current intake and tolerance with family.

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

Language Support:
No interpreter needed (documented language preference is English)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/17/2025: Pain exacerbated overnight and PNC found to be leaking. Pain appears to be well controlled this morning. PNC site nontender to palpation, remains at 15 cm. Will leave capped. Will add buprenorphine for additional pain control. Will monitor for side effects and if tolerating buprenorphine, can consider PNC removal tomorrow.

The challenges to pain management:
19. Elderly with difficult communication and difficult pain assessment;
20. Highly sensitive to opioids, sleepy since on Nalbuphine;
21. Partial pain relief from Femoral PNC for AKA. However it starts to leak and lose its efficacy since yesterday.
22. Local anesthetic infusion in the patient with Bradycardia and 2nd degree heart block
23. S/p PPM, with the 2nd source of procedural pain.
24. Carefully observe the toxicity from pain regimen.
25. Slowly wean off PNC.

1.
2. CONT:
3. Ropivacaine 0.2% 6ml/hr (Cap)
4.
5. SCH:
6. APAP 650 mg q8
7. **+ Buprenorphine patch 5mcg q7 days**
8.
9. PRN:
10. Nalbuphine 2.5 mg q8 for itching
11.
12. Discussed With: APS attending, primary team, patient
13.
14. APS will continue to follow. Please do not make any changes to pain medication orders without discussing with our team. Please contact us with any additional questions or concerns.
15.
16.
17.

Inpatient Follow Up Calorie Count

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Recommendations/Interventions:
ORAL NUTRITION:
- diet per team
- added high calorie / high protein to diet order
- encourage oral nutrition supplements:Ensure Plus TID
- Calorie Count: appreciate nursing documentation of %meals consumed

VITAMINS/SUPPLEMENTS:
Current:
ascorbic acid, 500 mg, Oral, BID (x 14 d)
[Held By Provider] cholecalciferol, 2,000 units, Oral, Daily
cyanocobalamin, 500 mcg, Oral, Daily
prenatal multivitamin iron-folic acid, 1 tablet, Oral, Daily
thiamine, 500 mg, Intravenous, TID
thiamine mononitrate, 100 mg, Oral, Daily
zinc sulfate, 220 mg, Oral, Daily (X 14 d)

Subjective

Current Nutrition Assessment:
FEN:
1/17 661 kcals/1145 kcals = 57% goal
Calorie Count

	1/16
Breakfast	Oatmeal (156 kcals, 6 g pro)
Lunch	Yogurt x 1 and bites of soup and potatoes (155 kcal, 13 g pro)
Dinner	Not recorded
Supplements	Ensure plus x 1 (350 kcal, 20 g pro)
Total	661 kcal, 39 g pro

See note 1/16 - (1/16) estimate pt consumed 60% of estimated energy/protein needs in 24 hours,

- per nursing documentation:
Patient Vitals for the past 168 hrs:

	Percent Meals Eaten (%)
01/16/25 1339	33
01/16/25 1033	33

GI: dysphagia. SLP recommendations for soft and bite size
Edema/Fluid: +1 RUE
Weight: wt gain d/t fluids
Wounds Present: Yes, L BKA, partial thickness wound to perineum

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
-MS still clear and awake today.
-She had significant pain overnight. There was a leaking catheter and APS was contacted. IV meds were off. There was also concern she may have had a positional pillow abutting her incision/staples, exacerbating pain
-This am has had nausea. Not able to eat. Has been dry heaving. Now has an associated cough.
-Tachypnea noted with some new sob.
-not sob or coughing today
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge. PT has strongly recommended acute rehab.

Communicated extensively 1/16 with patient without Louis present. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. She indicated she is fine with going to a SNF and fine going home with Louis. She wants him to be her caretaker and leaves him as the decision maker.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH

I personally reviewed CXR and found evidence of improvement of L lower lung opacity. Read pending.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Plan 1/17
- Some concern for aspiration, more related to GERD/dry heaves than swallow, will limit po intake today. CXR official read pendning
-RX for nausea.
- please see SW notes re: complex dynamic with pt's caregiver (son, Louis), will appreciate ongoing support from SW team
-Paging APS re- increased pain

#Acute Pain- per APS
- Please see note from acute pain service today to address worsened pain o/n
Ropivacaine 0.2% 6ml/hr
APAP 650 mg q8
Buprenorphine patch 5mcg q7 days
Nalbuphine 2.5 mg q8 for itching

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD

Per Troy Decker Vasc Surgery
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.

-Added to EP follow up list and will be called to schedule an appointment.

Device care instructions:

- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

21. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
22. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #Delirium
4. -Started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
5. -Of note, Seroquel reportedly ineffective.
6.
7. #Disposition planning
8. -SW following, see notes
9. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
10. - currently unhoused, living in tent
11. -This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**
12.
13. #Aspiration risk
14. -Current picture c/w aspiration from vomiting/not swallow
15. -Afebrile, not hypoxic, no abx for now
16. -Improved per SLP, working toward patient and family education
17. -Swallow Recommendations
18. Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
19. Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
20. Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
21. Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time
22.
23. #FEN:
24. - at high risk of refeeding given inadequate oral intake >5 days.
25. - Was eating well until currently nausea (? Pain related) good amounts, so plan 2 more days of monitoring for refeeding syndrome (end 1/18, will feel comfortably stable for DC from elyte standpoint on 1/19). She will complete high dose thiamine on 1/17.
26. - Phos was replaced 1/15, now in normal range
27. - Mg replace 1/15, now in normal range
28. -Replace lytes to WNL and maintain glc <200.
29. -Sent vit D 25-OH level to determine appropriate supplementation, r/o vit D toxcitity. Holding vit D
30. -Request updated zinc level to determine need for supplementation for wound healing
31. -Now on oral thiamine
32. -Completes high dose thiamine: 500 mg IV TID for 3 days today (given 1/15-1/17), OK to continue oral thiamine as ordered
33. -prenatal multivitamin 1 tab PO (initiated 1/15)
34. -ascorbic acid 500 mg BID x 14 days PO (initiated 1/15)
35. Pending zinc level:
36. -zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
37. -Hold vit D supplementation until updated lab
38. -Continue oral vit B12 as ordered
39.
40. #T2DM
41. - SSI while inpatient, has had one glc> 200
42.

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

Palliative Care Sign Off Note

After conversation with the patient and her son Louis their goals have remained clear at that time to pursue the medical treatments currently being offered and remaining full code. Jeanne has expressed multiple that she trusts and defers medical decisions to Louis. At this point palliative care will sign off, feel free to reengage our team if there is changes in medical situations or new discussions on goals of care needed.

Smith, Grace, MD at 1/18/2025 0725

Attestation signed by Wu, Jiang, MD at 1/18/2025 7:44 PM

Date of Service: 01/18/25
I saw and evaluated the patient. I have reviewed the resident(s)'s/fellow(s)'s documentation and agree.

Jiang Wu MD

Brief progress note, Pain service

PNC was capped overnight 1/16-17. Patient's pain level has remained stable on nalbuphine and buprenorphine patch since capping.
PNC was removed with tip intact 1/18 at 0900. Site is clean and dry, no bleeding, no tenderness.

APS is signing off, please page with any questions via the Operator.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)

Assessment/Plan

ASSESSMENT/PLAN

Pain Care Impression: Jeanne Leonie Hoffman is a 100 year old female with hx of HTN, T2DM, HLD, prior DVT (previously on warfarin) who is admitted for acute ischemic limb. She is now s/p above knee LLE amputation on 1/9/27. He postoperative course is complicated by sinus brady with ower heart rates in the 20s-30s, previously 40s pre-procedure, first degree heart block and RBBB.

Today's Plan (Changes in bold):

1/18/2025: Pain appears to be well controlled with buprenorphine/nalbuphine after capping PNC for 24 hrs. PNC site nontender to palpation, remains at 15 cm. PNC pulled on rounds with black tip intact. APS will sign off.

The challenges to pain management:
63. Elderly with difficult communication and difficult pain assessment;
64. Highly sensitive to opioids, sleepy since on Nalbuphine;
65. Partial pain relief from Femoral PNC for AKA. However it starts to leak and lose its efficacy since yesterday.
66. Local anesthetic infusion in the patient with Bradycardia and 2nd degree heart block
67. S/p PPM, with the 2nd source of procedural pain.
68. Carefully observe the toxicity from pain regimen.
69. Post- PNC day #9

1.
2. CONT:
3. **Ropivacaine 0.2% 6ml/hr - DC**
4.
5. SCH:

Progress/Transfer Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Received bolus of pain medication this AM just prior to visit and is sleeping as a result. No reported discomfort from son. Previously had been grabbing limb in discomfort, no longer doing that.
- Son is worried about dressing changes. Has been preferring to give the wound 30 minutes to air dry before wrapping.
- Reported drainage overnight from the wound that was more clear. No purulent drainage. Son also concerned about some redness, but that has improved this AM
- No fevers or chills overnight.
- Has been eating a little bit more, but not consistently. Son working on this diligently.

From 1/17:
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge. PT has strongly recommended acute rehab.
- Communicated extensively 1/16 with patient without Louis present. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. She indicated she is fine with going to a SNF and fine going home with Louis. She wants him to be her caretaker and leaves him as the decision maker.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- [Held By Provider] cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/17/25 2129)
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q8h PRN

- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 1 packet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/18/25 1520)
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- atropine, 1 mg, q15 min PRN

- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 1 packet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia

and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Plan 1/19/2025:
- Nalbuphine QHS SCH + BID PRN
- HM 0.2mg IV PRN added
- If persistent issues with pain coverage, will reengage APS on 1/20 or 1/21
- follow-up vitamin D, zinc
- please see SW notes re: complex dynamic with pt's caregiver (son, Louis), will appreciate ongoing support from SW team

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- Ropivacaine 0.2% 6ml/hr
- APAP 650 mg q8
- Buprenorphine patch 5mcg q7 days
- Nalbuphine 2.5 mg QHS + BID PRN for itching
- HM 0.2mg IV Q4H PRN

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD

Per Troy Decker Vasc Surgery
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)

- Activity restriction (for 30 days after implantation- 2/13):
1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #Delirium
4. -Started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
5. -Of note, Seroquel reportedly ineffective.
6.
7. #Disposition planning
8. -SW following, see notes
9. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
10. - currently unhoused, living in tent
11. -This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**
12.
13. #Aspiration risk
14. -Current picture c/w aspiration from vomiting/not swallow
15. -Afebrile, not hypoxic, no abx for now
16. -Improved per SLP, working toward patient and family education
17. -Swallow Recommendations
18. Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
19. Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
20. Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
21. Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time
22.
23. #FEN:
24. At high risk of refeeding given inadequate oral intake >5 days.
25. -Sent vit D 25-OH level to determine appropriate supplementation, r/o vit D toxcitity. Holding vit D
26. - Zinc pending
27. - zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
28. - Daily thiamine
29. - s/p high dose thiamine
30. - Prenatal multivitamin
31. - Ascorbic acid 500 mg BID x 14 days PO
32. -Vit B12 daily
33.
34. #T2DM
35. - SSI while inpatient, has had one glc> 200
36.
37. #s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
38. dressing per vascular
39. NWB LLE once able to get up
40.
41. #PT/OT f/u
42.
43. Inpatient Checklist:
44. Fluids/Electrolytes/Nutrition: Regular CC diet
45. Prophylaxis: SQ heparin for DVT (note: resumed 1/14/25 as had been held for pacer)
46. Lines/Drains/Airways: PIV in RUE, foley catheter
47. Disposition: Acute care
48. Code Status: Full Code

Progress/Transfer Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Last night was overall better for pain control. Got Nubain at 5pm. Able to sleep throughout the night. Got a single dose of HM IV. Then had pain flare at 6am. Got Nubain and HM.
- Very interactive and talkative this AM. Eating some breakfast. Son at bedside, supportive.
- No fevers or chills. Stump pain is stable right now. No flares of pain.
- Has persistent strong cough while eating and after taking medications. CXR yesterday w/interval improvement compared to prior scans. No abx given.

From 1/17:
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge. PT has strongly recommended acute rehab.
- Communicated extensively 1/16 with patient without Louis present. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. She indicated she is fine with going to a SNF and fine going home with Louis. She wants him to be her caretaker and leaves him as the decision maker.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- [Held By Provider] cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- lidocaine, 1 patch, q24h
- nalbuphine, 2.6 mg, q24h
- nalbuphine, 5 mg, q24h

- omeprazole, 20 mg, Daily empty stomach
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/19/25 2126)
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, BID PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- peripheral nerve, 4 mL, q4h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- potassium & sodium phosphates, 1 packet, q6h PRN
- senna, 17.2 mg, BID PRN
- sodium phosphate, 40 mEq, PRN

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Overnight, was able to sleep well. Improved pain control w/Nubain 5mg SCH 5pm and Nubain 2.5mg SCH 0400. Got some additional HM IV PRN which inconsistently is helping. Given APAP this AM for some improvement.
- Her son is at bedside and is worried that she is not doing well this AM. She has been gripping the sides of the bed and not totally engaged with communication. He thinks she is likely having some degree of delirium.
- Her right foot is slightly colder today compared to before. It also has some swelling. Nurse planning to get doppler for pulses.
- No fevers or chills. Persistent cough. Eating some food, but not a lot.

From 1/17:
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge. PT has strongly recommended acute rehab.
- Communicated extensively 1/16 with patient without Louis present. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Plan 1/21/2025:
- No chang to pain meds today.
    - Nalbuphine 5mg 1900 daily, 2.5mg 0400 daily, BID PRN
    - Per pain service, would anticipate this Nubain use for another week, but then should come off and okay to be discharged on buprenorphine patch monotherapy x1-2 weeks.
    - HM 0.2mg IV PRN
- Restart cholecalciferol 2000IU daily
- follow-up zinc
- RLE DVT US today
- RLE doppler for pulse check

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8
- Buprenorphine patch 5mcg q7 days
- Nalbuphine per orders
- HM IV per orders

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD

Per Troy Decker Vasc Surgery
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses not easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted.
- Doppler pending
- RLE DVT US pending

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
40. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
41. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Delirium
-Started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
-Of note, Seroquel reportedly ineffective.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent
-This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**

#Aspiration risk
-Current picture c/w aspiration from vomiting/not swallow
-Afebrile, not hypoxic, no abx for now
-Improved per SLP, working toward patient and family education
-Swallow Recommendations
Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time

#FEN:
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- Zinc pending
    - zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
    - s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily

#T2DM
- SSI while inpatient, has had one glc> 200

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

#PT/OT f/u

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT (note: resumed 1/14/25 as had been held for pacer)
Lines/Drains/Airways: PIV in RUE, foley catheter
Disposition: Acute care
Code Status: Full Code
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

Electronically signed by Holmberg, Mackenzie Howard, MD at 1/21/2025 1:03 PM

Progress/Transfer Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Based off of Luis's report, overnight was okay. The patient received Nubain 5 mg scheduled in the evening in addition to Nubain 2.5 mg at 4 AM. She however has been more drowsy and less communicative this morning. She intermittently has points where she reaches out and tenses her muscles. She opens up her eyes and does not respond to any movement in front of them. She intermittently continues to express significant pain, but Louis reports that she is holding her stomach as opposed to her stump now.
– The stump is looking okay during dressing changes from his evaluation. Her right foot yesterday was cold, but it is more warm today. She did DVT ultrasound which was negative. They were able to find a pulse with palpation and with Doppler.
– No fevers or chills. Persistent, strong cough. Not eating much food.

From 1/17:
-SW has been in discussions with pt's son regarding disposition, concerned about his lack of insight into pt's change in condition and what her care needs will look like at time of discharge. PT has strongly recommended acute rehab.
- Communicated extensively 1/16 with patient without Louis present. She clearly stated she wants to follow the DC plan preferred by Louis, including if DC to the tent given housing instability. She indicated she is fine with going to a SNF and fine going home with Louis. She wants him to be her caretaker and leaves him as the decision maker.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- lidocaine, 1 patch, q24h
- nalbuphine, 5 mg, q24h
- omeprazole, 20 mg, Daily empty stomach
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily

- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/22/25 0642)
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, BID PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Plan 1/22/2025:
-Pain plan:
- Nalbuphine 5mg 1900 daily, DISCONTINUE 2.5mg 0400 daily, BID PRN
- Per pain service, would anticipate this Nubain use for another week, but then should come off and okay to be discharged on buprenorphine patch monotherapy x1-2 weeks.
- HM 0.2mg IV PRN
- follow-up zinc

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8
- Buprenorphine patch 5mcg q7 days
- Nalbuphine per orders
- HM IV per orders

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD

Per Troy Decker Vasc Surgery
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia

-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
40. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
41. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #Delirium
4. -Started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
5. -Of note, Seroquel reportedly ineffective.
6.
7. #Disposition planning
8. -SW following, see notes
9. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
10. - currently unhoused, living in tent
11. -This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**

Inpatient Follow Up Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready

for transfer to acute care as of 1/14.

Recommendations/Interventions:
Oral Nutrition:
- diet order: recommend to **D/C heart-healthy diet restriction** - pt not taking in enough PO at this time to warrant mult restrictions. Consider also lifting carb managed restriction if BG within acceptable ranges/if ongoing low PO.
- continue high calorie/high protein order
- SLP recommends 6-soft & bite sized textures & 0-thin liquids
- encourage oral nutrition supplements: Ensure Plus TID (currently sending vanilla flavor w/ trays). Offer addt'l ONS prn if ok on carb managed diet (CIB milkshakes, Naked Protein smoothies, etc)
- Calorie Count: appreciate nursing documentation of %meals consumed

Nutrition Support:
- holding off at this time - recommend GOC discussion prior to any artificial nutrition given advanced age, current status

Vitamins/Supplements:
- can d/c thiamine 100 mg po daily (has received for > 7 days)
For wounds:
- 220 mg zinc sulfate, x14 days - check zinc level s/p supplementation
- 500 mg ascorbic acid**, x14 days**

Subjective

Current Nutrition Assessment:
Interim: A&O to self.
FEN:
- pt A&O to self, unable to participate in interview. Low PO intake noted. Also refusing ONS past few days.
-Cal Ct: unable to calculate % of kcal/pro needs met d/t limited data available. Based on available records/meal tickets, estimate that pt has been consuming <50% of needs on avg x past 4 days.
1/17:
B: ?
L: 25% few bites of oatmeal w/ PB + banana
D: ?

1/18:
overnight: 1/2 choco chip cookie, 1 vanilla pudding, 1 Ensure Plus
no other meals recorded..

1/19:
B: 100% of an apple sauce..
L/D: not recorded

1/20:
no data recorded

1/21:
B: 0%
L: 0%
D: ? (Not recorded, did order)

GI: dysphagia. SLP recommendations for soft and bite size, noted pt currently on reg textures diet order though . LBM documented 1/17. Has PRN bowel med orders, though not given since 1/15. No current nausea noted.
Edema/Fluid: +1 dependent BUE edema (charted 1/20 pm)
Weight: had wt gain during admission d/t fluids, now trending back down over past two days. Bed scale wt 49.1 kg 1/21 - up 3.6 kg from admit.
Wounds Present: Yes, L BKA, partial thickness wound to perineum
Labs: Mg 1.7-. BG 137-169/past 24 hr. Has med-dose SSI orders (0 units given/past 24H)

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Active Diet Order: Yes
Diet: General Heart Healthy Carb Managed

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan
Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
01/21/25 1100	49.1 kg (108 lb 3.9 oz)
01/20/25 1000	52.2 kg (115 lb 1.3 oz)
01/19/25 0820	56.2 kg (123 lb 14.4 oz)
01/17/25 0739	54.7 kg (120 lb 9.5 oz)
01/16/25 0742	54 kg (119 lb 0.8 oz)

Current Body mass index is 21.14 kg/m².

Estimated Nutrition Needs
Using post LL amputation wt, 45.8 kg
Energy: 1145-1375 kcal (25-30 kcal/kg)
Protein: 55-64 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Malnutrition Assessment: Severe malnutrition
Malnutrition: Present at admission?: Yes

Interventions:
Coordination of Care:
Chart reviewed.
Patient seen, unable to interview.

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

Language Support:
No interpreter needed (patient not a participant in teaching)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Nutrition following
See treatment team for RD contact
Weekend pager: 989-1191

Schramm, Tiffany M, OT at 1/22/2025 1510

Occupational Therapy Note

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Total Treatment time: 11 Minutes

Subjective: Not responding to therapist eyes closed. "We just got her back into bed from sitting at the Edge of the bed." -Son

Current Level of Function

Therapeutic Interventions

ADL/IADL Comments: Dependent positioning in bed, patient listing to the L. Patient requires dependent assistance to get centered in the bed and boosted up.

Assessment

Assessment: Jeanne was hard to arouse this afternoon, per son they had just been sitting at the EOB. She required dependent assistance to be boosted up in bed and recentered. Patient did not wake to movements. OT notified nursing that the patient is currently A&O x0

Session Tolerance: Patient limited by fatigue, Patient limited by pain

Plan

Plan: Skilled OT
Treatment Interventions: Self-care/Home management, Caregiver education/training, Therapeutic exercise, Therapeutic activities
Frequency: 2-3x/week
Coverage for Next Shift: progress EOB dangle & core/postural control activities, seated grooming/sitting tolerance

Discharge Recommendations

Recommendations: Will need follow up OT at next level of care
Barriers to Discharge: heavy care needs
Assistance with: ADLs, Functional mobility and transfers, Home safety, IADLs
Supervision with:

Equipment Recommended: TBD pending dispo plan

Goals

1. Goal: Self feeding, Grooming, Set up or clean up assistance
   Estimated Completion Date: 01/29/25
   Goal Status: Progressing

2. Goal: Bed mobility, Minimum Assist (less than 25% help needed)
   Estimated Completion Date: 01/29/25
   Goal Status: Progressing

3. Goal: Toileting, Toilet transfer, Moderate Assist (between 25-49% help needed)
   Estimated Completion Date: 01/29/25
   Goal Status: Progressing

4. Goal: Jeanne will dangle at EOB x15 mins with SBA to complete grooming & hygiene tasks.
   Estimated Completion Date: 01/29/25
   Goal Status: Progressing

5.

Tiffany M Schramm, OT

Shepherd, Amanda Kay, MD at 1/23/2025 0936

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Hypertension o/n which per RN note improved with pain control.
Foley leaking and so removed o/n
Intermittent agitation and restlessness

Ms. Hoffman is joined by her son at bedside.
He drives a conversation and shares that her pain was severe last night despite the pain medication but that overall today has been much better.
He shares that she has spent several hours up in the chair and enjoyed going on some loops on the unit and was able to tolerate about a half a mile according to his calculations pleat.
She declines any chest pain, pressure, shortness of breath but he does note that she has been productive of rusty colored sputum for at least the last 5 days.
He thinks that this has been intermittent but does wonder about the cause.
Does agree that sometimes food is hard to go down.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- lidocaine, 1 patch, q24h
- nalbuphine, 5 mg, q24h
- omeprazole, 20 mg, Daily empty stomach
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- lactated ringers, 60 mL/hr, Continuous, Last Rate: 60 mL/hr (01/23/25 0200)
- sodium chloride, 10-50 mL/hr, Continuous, Last Rate: Stopped (01/13/25 1800)

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- atropine, 1 mg, q15 min PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, BID PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

This note is edited and adapted from Dr. Holmberg's note to reflect today's medical decision making and plan of care.

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8
- Buprenorphine patch 5mcg q7 days

- Nalbuphine; no changes today
    - decreased yesterday to Nalbuphine 5mg 1900 daily, and 2.5 BID PRN
- HM IV per orders

#Delirium
 # Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trailed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation
- delirium precautions
- treatment pain where able

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
-Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
40. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
41. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no

placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3.
4. **#Disposition planning**
5. -SW following, see notes
6. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
7. - currently unhoused, living in tent
8. -This MD agrees with **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**
9.
10. **#Aspiration risk**
11. -Current picture c/w aspiration from vomiting/not swallow
12. -Afebrile, not hypoxic, no abx for now
13. -Improved per SLP, working toward patient and family education
14. -Swallow Recommendations
15. Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
16. Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
17. Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
18. Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time
19.
20. **#FEN:**
21. At high risk of refeeding given inadequate oral intake >5 days.
22. - Vitamin D 2000IU daily
23. - zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
24. - Daily thiamine
25. - s/p high dose thiamine
26. - Prenatal multivitamin
27. - Ascorbic acid 500 mg BID x 14 days PO
28. -Vit B12 daily
29.
30. **#T2DM**
31. - SSI while inpatient, has had one glc> 200
32.
33. **#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).**
34. dressing per vascular
35. NWB LLE once able to get up
36.
37. #PT/OT f/u
38.
39. **Inpatient Checklist:**
40. Fluids/Electrolytes/Nutrition: Regular CC diet
41. Prophylaxis: SQ heparin for DVT (note: resumed 1/14/25 as had been held for pacer)
42. Lines/Drains/Airways: PIV in RUE, foley catheter
43. Disposition: Acute care
44. Code Status: Full Code
45. Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
46.

Physical Therapy Treatment

Jeanne Leonie Hoffman
U8170135

1/23/2025
Duration of session: 31 Minutes

Subjective
Patient Report/Self-Assessment: Continually attempts to mobilize to EOB
Patient Stated Goal(s): none stated, per son to received prothesis

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Jeanne's son, Louis, is the primary caregiver for Jeanne
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (Transport chair)

Functional Level:
Bed Mobility
Rolling Left: Maximum Assist (between 50-74% help needed)
Rolling Right: Maximum Assist (between 50-74% help needed)
Supine to Sit: Minimum Assist (less than 25% help needed);Moderate Assist (between 25-49% help needed);Head of Bed Elevated;Railings used;Cues needed
Sit to Supine: Supervision / Stand by assistance (posterior LOB to bed after writer redirects pt not to use L UEon rail)
Transfers
Bed<>Chair/WC: Dependent (greater than 75% help needed);Assistive device used
Bed<>Chair/WC Assistive Device Details: Mechanical lift

Wheelchair Activities
Wheelchair Activities: Yes
WC Type: Manual tilt-n-space
WC Size: 16"
WC Cushion: roho
WC Pressure Relief: dependent - son educated on Q15 tilt backs for 1-2 min
Level of Assistance for Pressure Relief: Dependent (greater than 75% help needed)
Wheelchair Comments: pt's son dependently moves pt on unit after session

Interventions:
Therex:
Theract: rolling L and R max A 2/2 poor command follow, donning of sling supine <> sit x5 sttempts in session

spontaneously, manual removal of L arm from bed rail 2/2 precautions > posterior LOB d/t poor upright trunk positioning/control education on progression of mobility, therapeutic rest breaks 2/2 dizziness education to son about timeline of prosthetic, d/c recommendations
Balance/Neuro Re-ed:
Gait Training:

PT Wheelchair Management Activity Time Minute(s): 16
PT Wheelchair Management Activity 1: TIS adjustment of head rest, arm rests; Roho apporpriately inflated, leg rest requires no adjustment at this point in time
PT Wheelchair Management Activity 2: educated pt's son on tilt back ad scheduling of tilt back - educated that w/c adjustments are by staff only

ASSESSMENT/PLAN

Pt seen this PM for TIS adjustment and to continue with mobility interventions. She requires Max cues and redirection to not use L UE throughout session, pt's son provides physical assist also breaking PPM precautions -re-educated and redirected during session. She is unable to sustain EOB sitting w/o L UE on bed rail during session and demonstrates posterior LOBs to supine multiple times. After use of OHL to chair, pt fitted to TIS, son educated on use of chair, features, and tilt back schedule. Will continue to follow. Recommend d/c setting that is w/c accessible, assist for all mobility, and ongoing therapies.

Increased time required for educating pt's son- demonstrates min readiness to learn at this point in time. Able to follow cues from therapist intermittently to adhere to pt safety/precautions, educated on: expectations with adjustment of TIS, how to provide physical assist to pt, use of nursing staff for dangling EOB and for use of OHL. Pt endorses knowing all information acute PT has provided thus far.

Barriers to Discharge: Currently dependent for all cares, pt family does not have proper training/equipment to manage her care at home at this time

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Not Progressing
Goal: Sit unsupported for (30 min)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes

Estimated Completion Date: 01/24/25
Goal Status: Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: dangle EOB/scooting? sling for L UE PRN

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: Lift for transfers to TIS chair

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Increasing agitation throughout evening
Noc doc evauated and noted no buprenorphine visible on her skin; reordered
Agitation seemingly improved
RN noted aspiration on liquid tylenol in the evening

She reports she is having the best day yet.
Her son is not here but her the nurse shares that he said this is the best she has looked in 15 days.
She shares she's eating some lunch; keeps working on some mashed potatoes.
She reports pain is under good control currently.
She reports she likes to eat and doesn't want to talk about any tubes.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily

- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

#Acute Pain:
Agbitation
I suspect her agitation last evening and last night was due to pain/withdrawal in the setting of missing buprenorphine patch. Once reapplied, she had much improved pain control and today is more clear than I've seen her. Given complexity of her pain control, and our inexperience with nalbuphine, have asked APS for guidance on how to wean.
- APS reengaged for
    - guidance on nalbuphine taper
- APAP 650 mg q8
- Buprenorphine patch 5mcg q7 days
- Nalbuphine; currently Nalbuphine 5mg 1900 daily, and 2.5 BID PRN
- HM IV per orders

#Delirium
 # Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trailed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation. Much better today after resumption of buprenorphine patch.
- delirium precautions
- treatment pain where able

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit

recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
47. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
48. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3.
4. #Disposition planning
5. -SW following, see notes
6. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
7. - currently unhoused, living in tent
8. - ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**
9.
10. #Aspiration risk
11. -Current picture c/w aspiration from vomiting/not swallow
12. -Afebrile, not hypoxic, no abx for now
13. -Improved per SLP, working toward patient and family education
14. -Swallow Recommendations
15. Diet Recommendations: 6-Soft and bite-sized;0-Thin liquids
16. Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
17. Oral care: Frequency: 2-3x per day;Toothbrush and toothpaste
18. Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time

19.
20. #FEN:
21. At high risk of refeeding given inadequate oral intake >5 days.

- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
    - s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily

#T2DM
- SSI while inpatient, has had one glc> 200

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

#PT/OT f/u

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV in RUE, foley catheter
Disposition: Acute care
Code Status: Full Code
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

Electronically signed by Shepherd, Amanda Kay, MD at 1/24/2025 5:31 PM

Smith, Marie, MD at 1/24/2025 1812

Brief Note APS:
100F who underwent AKA on 1/9. Followed by APS with femoral PNC in place until 1/18. Pain now controlled on nalbuphine 5mg qPM/2.5mg BID and buprenorphine 5mcg patch. With addition of buprenorphine patch, pt has not required PRN nalbuphine. PM dose can be weaned to 2.5 mg; if she tolerates dose decrease, can discontinue.

Discussed with APS attending, Dr. Curatolo.

Electronically signed by Smith, Marie, MD at 1/24/2025 6:16 PM

Speech Language Pathology Progress

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Date of Service: 01/25/25
Treatment Duration: 45 Minutes (swallow tx)

Subjective

Patient Report/Self-Assessment: Jean was restless throughout the session, reaching out and grabbing at her arms and blankets
Patient Stated Goal: Per Jeanne's son, the plan is to understand what is happening with her new cough

Prior Function
Prior Function: Patient was seen by SLP novemebr 2023: "She demonstrated mild oral deficits and 1 cough that was not repeated with further trials of thin liquids (silent aspiration cannot be ruled out at bedside). Unclear if mild dysphagia vs presbyphagia related changes complicated by ill fitting dentures and recent thrush. Given her performance, recommend thin liquids and soft and bite sized solids (son assisting to self select softer solids as needed" She reports she mainly eats puree and soft solids at baseline. Son endorses coughing with thin liquids when laying in bed, but not when in chair/at table
IADLs: Requires assist

Objective
Patient Information
Temperature: Afebrile
Respiratory Status: Room air
Behavior/Cognition: Alert;Impulsive;Distractible;No command following
Patient Positioning: Upright in bed

Consistencies Assessed: Ice chips;0-Thin Liquids
Ice Chips - Presentation: Spoon
0-Thin Liquids - Presentation: Spoon

Oral Phase: Impaired;Oral residue;Delayed anterior to posterior transit (Frequent oral inattention, trials were suctioned via Yankauer)
Pharyngeal Phase: Impaired
Signs/Symptoms of Penetration/Aspiration: Cough - immediate;Wet vocal quality

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 11 of 17) (continued)

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 11 of 17) (continued)

Oral Mechanism Examination
Dentition: Edentulous (Jeanne's dentures were not placed for today's assessment)
Oral mucosa: Dry;Thick saliva (Thick beige secretions visible across visible posterior pharyngeal wall)
Observations: Jeanne did not follow any instructions for assessment today. She maintained a constant open mouth posture at baseline. Spontaneous movements were symmetric

ASSESSMENT/PLAN

Jeanne presents with diminished swallowing function today with new oral inattention, overt s/sx aspiration with limited PO trials, and generalized weakness. Her new difficulty is concurrent with recent changes in mentation consistent with hyperactive delirium. Overall, she presents with very high risk for aspiration and given her worsening CXR, advanced age, and high risk for complications should aspiration occur, agree with RN and primary team recommendation to continue NPO as Jeanne's goals evolve. Should Jeanne's mental status rapidly improve to be consistent with previous assessment (e.g., following instructions, able to self-feed without significant physical assistance), defer to primary team for liberalizing diet (e.g., up to Pureed Solids and Thin Liquids). Otherwise, recommend continue NPO with frequent, rigorous oral care to minimize risk for aspiration of oral flora and allowance for ice chips and small sips of water with oral care for comfort. SLP will continue to follow

Dysphagia: Other (presbyphagia + superimposed acute dysphagia i/s/o delirium)
Aspiration Risk: High

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: Delirium
Prognosis: Fair

Evaluation/Treatment Tolerance: Patient tolerated treatment well

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow treatment;Patient/family education
SLP Frequency: 3-5x/week (NPO w/no nutrition)

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations
Diet Recommendations: Sips & Chips only
Medication Administration Recommendations: Meds via tube feed or IV
Oral care: Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette

Goals
Short Term Goal: Tolerate least restrictive diet
Estimated Completion Date: 02/22/25
Goal Status: Not Progressing

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Chi, Frank, MD at 1/25/2025 1756

Progress Note
Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)

Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Concern for aspiration event overnight given episode of desaturation after pt son was giving pt water
- saw pt with son at bedside. He reports that she has been in a "stupor" and likely dealing with phantom limb pain. She has had some periods of mental alertness when he can have meaningful interactions with her, but they episodes are often short. He tried to spoon feed her food at times. When I saw her later in the afternoon, he was trying to give her some water, which she pushed away. He wonders why she has been coughing lately, which I told him was likely due to aspiration, which he acknowledges that she is high aspiratoin risk, but that he has only witnessed her aspirating a couple times. He notes her voice has been very hoarse and she can no longer phonate

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- insulin LISPRO, 0-7 units, q HS
- insulin LISPRO, 0-8 units, TID before meals
- lidocaine, 1 patch, q24h
- nalbuphine, 2.6 mg, q24h
- omeprazole, 20 mg, Daily empty stomach
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, BID PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium

#Delirium
#Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation. On 1/25, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough
- delirium precautions
- treatment pain where able as below (attempting to minimize deliriogenic meds)
- consider further infectious workup if continues with delirium esp if there is evidence of other lab abnormalities

#Aspiration risk
-Current picture c/w aspiration
-Afebrile, not hypoxic, no abx for now

-As patient is delirious and mental status is not intact enough for safe swallowing, will make NPO besides ice chips/small sips water with oral care for comfort. She does not have any essential oral medication to take
- If mental status improves, can trial PO again during daytime

-Frequent oral care 5-6x per day. Oral swab and suction;Suction toothbrush/toothette

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8 -> **rectal tylenol while unable to safely swallow**
- Buprenorphine patch 5mcg q7 days
- Nalbuphine: decreased from 5mg to 2.5mg daily on 1/24. Continue 2.5mg BID PRN (last received on 1/23), but consider discontinuing soon
- HM IV per orders

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)

- Activity restriction (for 30 days after implantation- 2/13):
48. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
49. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3.
4. #Disposition planning
5. -SW following, see notes
6. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
7. - currently unhoused, living in tent
8. - ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. - Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.

- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent
- ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**

#FEN:
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
    - s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily

#T2DM
- Discontinued SSI since not triggering insulin

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

Inpatient Checklist:

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

Clinical Notes (group 11 of 17) (continued)

Jeanne Hoffman is a 100-year-old woman with status post left above-the-knee amputation for ischemic limb on 1/9/2025. She has baseline delirium, agitation, and is hard of hearing. Her son was with her today at the bedside who help me take the dressing down on her left stump. The incision is well-approximated, without erythema and drainage. It looks like it is healing to me. However, I do have some concerns about her nutritional status and oral intake. I have elected to leave the staples in for at least another 2 weeks. If she is here, I'd be happy to take them out. I will visit weekly.

Spoke to the son about rehabilitation and trying to get hip extension to prevent contracture. He said that the therapists are trying but her agitation has limited rehabilitation.

Speech Language Pathology Progress

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Date of Service: 01/27/25
Treatment Duration: 21 Minutes (swallow tx)

Subjective

Patient Report/Self-Assessment: RN cleared SLP for entry. Pt is alert on arrival, appears restless. Supportive son at bedside.
Patient Stated Goal: Per son, to resume PO intake and avoid NGT placement

Prior Function

Prior Function: Patient was seen by SLP november 2023: "She demonstrated mild oral deficits and 1 cough that was not repeated with further trials of thin liquids (silent aspiration cannot be ruled out at bedside). Unclear if mild dysphagia vs presbyphagia related changes complicated by ill fitting dentures and recent thrush. Given her performance, recommend thin liquids and soft and bite sized solids (son assisting to self select softer solids as needed" She reports she mainly eats puree and soft solids at baseline. Son endorses coughing with thin liquids when laying in bed, but not when in chair/at table
IADLs: Requires assist

Objective

Patient Information
Temperature: Afebrile
Respiratory Status: Room air
Behavior/Cognition: Alert;Impulsive;Distractible;No command following
Patient Positioning: Upright in bed

Consistencies Assessed: 1-Slightly Thick (Ensure)

0-Thin Liquids - Presentation: Spoon

Consistencies Assessed Comment: pt declined a majority of PO trials by shaking her head
Oral Phase: Other;Spillage Right (difficulty achieving intra-oral pressure for straw use)
Pharyngeal Phase: Other (laryngeal elevation present)
Signs/Symptoms of Penetration/Aspiration: None (note that silent aspiration cannot be excluded at bedside)

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 11 of 17) (continued)

Oral Mechanism Examination
Dentition: Adequate with dentures
Oral mucosa: Dry

ASSESSMENT/PLAN

Pt seen for swallow tx w/ supportive son present. Given pt's age and waxing/waning mentation, anticipate some degree of ongoing aspiration risk w/ any PO intake. This was discussed w/ pt's son, who states that he does not want an NGT placed and that he is accepting of aspiration risk. Given pt/family GOC, recommend a minced and moist diet (son's request) and thin liquids. Please provide careful 1:1 feeding vs supervision, adhere to strict aspiration precautions and d/c PO w/ inadequate alertness/mentation.

Dysphagia: Other (?presbyphagia + superimposed acute dysphagia i/s/o delirium)
Aspiration Risk: Moderate;High (likely iso waxing/waning mentation)

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: Delirium
Prognosis: Fair

Evaluation/Treatment Tolerance: Patient tolerated treatment well

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow treatment;Patient/family education
SLP Frequency: 1-3x/week

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations
Diet Recommendations: 5-Minced and moist;0-Thin liquids (per pt/family GOC)
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time;1:1 feeding;Upright for 30 minutes after eating

Goals
Short Term Goal: Tolerate least restrictive diet
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: Full Code

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:

NAEON. Awake this AM but I wasn't able to understand most of her responses. When asked what year it is, she states January.

SCHEDULED MEDICATIONS:
- acetaminophen, 650 mg, q8h SCH
- ascorbic acid, 500 mg, BID
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 1 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- nalbuphine, 2.6 mg, q24h
- omeprazole, 20 mg, Daily empty stomach
- pill crusher, ,
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID
- zinc sulfate, 220 mg, Daily

INFUSED MEDICATIONS:
- dextrose 5% and sodium chloride 0.45%, 80 mL/hr, Continuous, Last Rate: 80 mL/hr (01/27/25 0938)

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.2 mg, q6h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 1.2 mg, BID PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4 mg, q8h PRN
- pill crusher, ,
- polyethylene glycol 3350, 17 g, Daily PRN

- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium

#Delirium
#Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation. On 1/25, 1/26, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough
- **Restarted guanfacine 1mg BID as it helped when she was in the MICU**
- delirium precautions

- treatment pain where able as below (attempting to minimize deliriogenic meds)
- consider further infectious workup if continues with delirium esp if there is evidence of other lab abnormalities
- CXR with stable consolidation. Given this stability and normal vitals, no white count I have a low suspiction for a PNA causing her delerium.

#Aspiration risk
-Current picture c/w aspiration
-Afebrile, not hypoxic, no abx for now
-SLP evaluated the patient. Son was at bedside. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. As such, ordered for minced diet with thin liquids and strict aspiration precautions.
-Frequent oral care 5-6x per day. Oral swab and suction;Suction toothbrush/toothette

#Hoarse/soft voice, improving
New, per son. Per RN team, previously could verbalize. Son states her hoarseness is improving
- consider OTO c/s for laryngoscopy if not continuing to improve, but she would need to be cooperative

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8 -> **rectal tylenol while unable to safely swallow**
- Buprenorphine patch 5mcg q7 days
- Nalbuphine: decreased from 5mg to 2.5mg daily on 1/24. **Change PRN IV nalbuphine to 1.25mg BID PRN**
- HM IV per orders

#Anion gap metabolic acidosis
2/2 starvation ketosis
- Beta hydroxybutyrate elevated
- UA for ketones (difficult as incontinent, unless we straight cath)
- continue D5 1/2NS for mIVF for 1L, restarted PO diet as above
- VBG with normal PH and normal LA

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:

Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3.
4. #Disposition planning
5. -SW following, see notes
6. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
7. - currently unhoused, living in tent
8. - ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation.**
9.
10. #FEN:
11. At high risk of refeeding given inadequate oral intake >5 days.
12. - Vitamin D 2000IU daily
13. - zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
14. - Daily thiamine
15. - s/p high dose thiamine
16. - Prenatal multivitamin
17. - Ascorbic acid 500 mg BID x 14 days PO
18. -Vit B12 daily
19.
20. #T2DM
21. - Discontinued SSI since not triggering insulin
22.
23. #s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
24. dressing per vascular
25. NWB LLE once able to get up
26.
27. **Inpatient Checklist:**
28. Fluids/Electrolytes/Nutrition: Regular CC diet
29. Prophylaxis: SQ heparin for DVT

Inpatient Follow Up Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Recommendations/Interventions:
ORAL NUTRITION:
- consider liberalizing diet, remove carb restriction
- encourage oral nutrition supplements: Ensure Plus TID
- appreciate nursing documentation of %meals consumed

NUTRITION SUPPORT:
- recommend GOC discussion prior to any artificial nutrition given advanced age, current status

VITAMINS/SUPPLEMENTS:
- thiamine 100 mg po daily
- Cholecalciferol 2000 internation units daily for maintenance
- 220 mg zinc sulfate, x14 days then recheck labs
- 500 mg ascorbic acid, x14 days

Subjective

Current Nutrition Assessment:
FEN:
- diet order NPO starting 1/25 d/t concern for aspiration, diet advanced today
- per nursing documentation:

	Percent Meals Eaten (%)
01/24/25 1300	25

	Oral Nutritional Supplement Intake (mL)
01/27/25 1130	1 mL
01/27/25 0800	0 mL
01/26/25 1654	0 mL
01/26/25 1130	0 mL
01/26/25 0800	0 mL
01/25/25 1700	0 mL
01/25/25 1130	0 mL
01/25/25 0800	0 mL
01/24/25 1700	0 mL

01/24/25 1130	0 mL
01/24/25 0800	50 mL

- po intake less than 25% of estimated needs last 2 days, 60% or less since admit, no po intake x5 days pta per nutrition hx (PO <75% of estimated needs x23 days)

GI: dysphagia
Edema/Fluid: +2 RLE
Weight: wt gain since admit d/t fluids
Wounds Present: Yes, L BKA, partial thickness wound to perineum, stage 1 pressure injury to back

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Active Diet Order: Yes
Diet: General Heart Healthy Carb Managed

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan
Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
01/27/25 0829	52.4 kg (115 lb 8.3 oz)
01/26/25 1503	52 kg (114 lb 10.2 oz)
01/21/25 1100	49.1 kg (108 lb 3.9 oz)

Current Body mass index is 22.56 kg/m².

Estimated Nutrition Needs
Using lowest wt, 43.7 kg
Energy: 1092-1311 kcal (25-30 kcal/kg)
Protein: 56-66 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Malnutrition Assessment: Severe malnutrition
Malnutrition: Present at admission?: Yes

Interventions:
Coordination of Care:
Chart reviewed.

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

Language Support:
No interpreter needed (documented language preference is English)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Nutrition following
See treatment team for RD contact

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Care Coordination;Chart Review/Screening;Discharge planning;Consult with healthcare team/provider/community

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Per MD report, pt's LNOK/son Louis is open to short-term rehab, requesting to speak w/ SW.

SW met w/ pt and son Louis at bedside, introduced self, role, and reason for visit. Louis provided extensive background on his and his mother's background and experience/concerns with housing assistance on Bainbridge Island. MSW provided empathetic listening. Per son Louis, they have recently lost their permanent housing and have been living in large tent that has flooring, running water, and heat. MSW explained the role and limits of inpatient SW, Louis expressed understanding. Louis states he is open to short term rehab only, not long term care. MSW explained some of the possible barriers to SNF acceptance for rehab; Louis agreeable to initiating SNF referral when medically appropriate.

PLAN or OUTCOME:
SNF ref

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium

#Delirium
#Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation. On 1/25, 1/26, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough

- **Restarted guanfacine 1mg BID as it helped when she was in the MICU 1/27**
- Discussed with Louis about plan going forward. I expressed my concerns about his moms nutritional status in the setting of the delirium. I am concerned about her ability to recover overall post op, after prior aspirations, and her current starvation ketosis. He agreed for a 24H trial period with the guanfacine and if her mental status doesn't improve, we would have ongoing conversations about GOC.
- delirium precautions
- treatment pain where able as below (attempting to minimize deliriogenic meds)
- consider further infectious workup if continues with delirium esp if there is evidence of other lab abnormalities
- CXR with stable consolidation. Given this stability and normal vitals, no white count I have a low suspiction for a PNA causing her delerium.

#Aspiration risk
-Current picture c/w aspiration
-Afebrile, not hypoxic, no abx for now
-SLP evaluated the patient. Son was at bedside. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. As such, ordered for minced diet with thin liquids and strict aspiration precautions.
-Frequent oral care 5-6x per day. Oral swab and suction;Suction toothbrush/toothette

#Hoarse/soft voice, improving
New, per son. Per RN team, previously could verbalize. Son states her hoarseness is improving
- consider OTO c/s for laryngoscopy if not continuing to improve, but she would need to be cooperative

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8 -> **rectal tylenol while unable to safely swallow**
- Buprenorphine patch 5mcg q7 days
- Nalbuphine: decreased from 5mg to 2.5mg daily on 1/24. **Change PRN IV nalbuphine to 1.25mg BID PRN**
- HM IV per orders

#Anion gap metabolic acidosis
2/2 starvation ketosis
- Beta hydroxybutyrate elevated
- UA for ketones (difficult as incontinent, unless we straight cath)
-S/p D5 1/2NS for mIVF for 1L, restarted PO diet as above
- VBG with normal PH and normal LA

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consider consult to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are

in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent
- ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation. On 1/28 he told me he would be okay with the patient going to a rehab facility for a short stay while he works on long term housing.**

#FEN:
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
    - s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily

#T2DM
- Discontinued SSI since not triggering insulin

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular

NWB LLE once able to get up

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV
Disposition: Acute care
Code Status: Full Code

Physical Therapy Treatment

Jeanne Leonie Hoffman
U8170135

1/29/2025
Duration of session: 60 Minutes

Subjective
Patient Report/Self-Assessment: Pt agreeable to PT, communication via whiteboard

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Lives in tent with flooring and heating
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (Transport chair)

Functional Level:
Bed Mobility
Rolling Left: Maximum Assist (between 50-74% help needed)
Rolling Right: Maximum Assist (between 50-74% help needed)
Supine to Sit: Moderate Assist (between 25-49% help needed)
Sit to Supine: Maximum Assist (between 50-74% help needed)
Scooting: Maximum Assist (between 50-74% help needed)
Transfers
Sit<>Stand: Dependent (greater than 75% help needed)
Stand <> Sit: Dependent (greater than 75% help needed)

Interventions:
Therex: Edu on hip extension ex in SL - performed x20 AAROM hip extension exercises
Theract: Rolling B, then to EOB. Dependent for footwear. STS x1 with total assistance of two, pt declines second stand and requests to lay down Extensive time spent edu son Louis on goal of SNF rehab, importance of having correct equiptment and training for safety prior to returning home. Son upset that she does not already have prosthetic and that she is not doing more. Feels like when she was in rehab in the past, she was in bed and getting weaker there
Balance/Neuro Re-ed:
Gait Training:

ASSESSMENT/PLAN

Jeanne was seen for a bed level exercise that she was able to complete with help from her son. Pt able to dangle EOB with mod-max A and then attempt a partial stand with total 2 person assistance. Pt declined second stand and urgently laid backwards on bed, dependent to return to supine and reposition. Education provided to pts son on goal of SNF, post op amputee expectations (if she is a prosthesis candidate she will not obtain one for months to years), and that SNF is for temporary rehab to prepare her and Louis for home. Pt is making progress compared to eval, but cognition and communication with pt are barriers to progress in addition to comborbidities, nutrition, etc

Barriers to Discharge: Currently dependent for all cares, pt family does not have proper training/equipment to manage her care at home at this time

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Not Progressing
Goal: Sit unsupported for (30 min)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes
Estimated Completion Date: 01/24/25
Goal Status: Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: dangle EOB/scooting? sling for L UE PRN

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: Lift for transfers to TIS chair

- Beta hydroxybutyrate elevated
- UA for ketones (difficult as incontinent, unless we straight cath)
-S/p D5 1/2NS for mIVF for 1L, restarted PO diet as above
- VBG with normal PH and normal LA

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- Staples out after 2/21/25.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consulted placed to P&O for hard shell protective AKA boot.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic).

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.

Clinical Notes (group 12 of 17) (continued)

-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent
- ongoing **concerns regarding Louis' insight - he shared that he wants pt to go somewhere she can 'make her own meals and take a bath' independently, both of which seem like very unrealistic goals to me at this point. She is bedridden, immobile. She has limitations of upper extremities with new pacer and lower extremities with amputation. On 1/28 he told me he would be okay with the patient going to a rehab facility for a short stay while he works on long term housing.**

#FEN:
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
- s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily

#T2DM
- Discontinued SSI since not triggering insulin

#s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
dressing per vascular
NWB LLE once able to get up

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet

Illness Severity

Stable

Patient Summary

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent
Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

2300-0700
Unable to determine orientation. Sometime able to answer yes/no questions. Mildly agitated, able to take Melatonin but very aspiration risk. Pt won't swallow apple sauce and pills, needs a lot of encouragement. Oral care done. Audible crackles noted, sating 100% on room air. Turn q2hrs with 2PA. Mepilex on sacrum and spine. Using purewick. Pt frequently removed her pulse oximeter, No order for continues O2 monitoring, pulse ox removed. Son at bedside sleeping most of the time.

Action Items

*Nubain comes from pharmacy overfilled by 0.05 mL, double check volume prior to administration. Nubain to be given IV over 2-3 minutes.
-Concern for pressure injury risk - try to clean up incontinence quickly
-Feed/drink with spoon as able with aspiration precautions when lucid.

Situational Awareness

- Louis (son) at bedside; can be difficult to give education - has cared for her and other family members for some time
- Recently removed from housing (October), now lives in tent with son. SW aware and addressing
- Severe hard of hearing, use whiteboard to communicate
-Pill crusher in room with patient label

Electronically signed by Dela Cruz, Catherine B, RN at 1/30/2025 3:06 AM

Crowley, Chad T, CPO at 1/30/2025 1120

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

Service :
Ms. Hoffman was seen on 7SA for prosthetic intervention, per order. The patient presents with left AKA (1/9/25) outside hospital. The patient was lying in bed with left Una boot style Ace wrap over her residual limb. Presents with disorientation and delirium. Prosthetic introduction to her son. We discussed the prosthetic process and time line with her son. He reports that he is her primary caregiver. Her current Ace wrap appears to provide appropriate protection at this time. Discussed with her son that a hard shell splint will not stay in place due to her trans femoral level. If her dressings need support then we usually recommend incorporating a trans femoral retention sock with a waist belt. Once her staples are removed she will benefit from a trans femoral shrinker sock. The prosthetic team will continue to follow for any further intervention if needed.

Assessment/Plan

ASSESSMENT/PLAN

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium

#Delirium
#Agitation
Intermittent delirium and agitation, seemingly worse at night and likely precipitated by pain. While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID. Stopped 1/15 with improved MS and clearing of sedation. On 1/25, 1/26, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough
- **Continue guanfacine 1mg BID as it helped when she was in the MICU (restarted 1/27)**

- Discussed with Louis about plan going forward. I expressed my concerns about his moms nutritional status in the setting of the delirium. I am concerned about her ability to recover overall post op, after prior aspirations, and her current starvation ketosis. However given some improvement noted on the guanfacine with increased PO intake, participation in PT, more alertness, will attempt for SNF referrals.
- delirium precautions
- treatment pain where able as below (attempting to minimize deliriogenic meds)
- consider further infectious workup if continues with delirium esp if there is evidence of other lab abnormalities
- CXR with stable consolidation. Given this stability and normal vitals, no white count I have a low suspiction for a PNA causing her delerium.

#Aspiration risk
-Current picture c/w aspiration
-Afebrile, not hypoxic, no abx for now
-SLP evaluated the patient. Son was at bedside. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. As such, ordered for minced diet with thin liquids and strict aspiration precautions.
-Frequent oral care 5-6x per day. Oral swab and suction;Suction toothbrush/toothette

#Hoarse/soft voice, improving
New, per son. Per RN team, previously could verbalize. Son states her hoarseness is improving
- consider OTO c/s for laryngoscopy if not continuing to improve, but she would need to be cooperative

#Acute Pain:
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
- s/p Ropivacaine
- APAP 650 mg q8 -> **rectal tylenol if concerned that she cannot swallow PO**
- Buprenorphine patch 5mcg q7 days
- **DC Nalbuphine 1/30**

#Anion gap metabolic acidosis
2/2 starvation ketosis
- Beta hydroxybutyrate elevated
- UA for ketones (difficult as incontinent, unless we straight cath)
-S/p D5 1/2NS for mIVF for 1L, restarted PO diet as above
- VBG with normal PH and normal LA

#Acute limb ischemia
#S/p L AKA (1/9/25)
#PAD
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Consulted placed to P&O for hard shell protective AKA boot.
- Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are

in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this tomorrow**

#Right lower extremity swelling:
Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anemia
-Hct stable
-thought chronic disease, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3.
4. #Disposition planning
5. -SW following, see notes
6. - She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
7. - currently unhoused, living in tent. However is working with bainbridge locals on establishing community emergency response team housing.
8. -Patient son has agreed for a short SNF stay to allow his mom to recover from the AKA.
9.
10. #FEN:
11. At high risk of refeeding given inadequate oral intake >5 days.
12. - Vitamin D 2000IU daily
13. - zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
14. - Daily thiamine
15. - s/p high dose thiamine
16. - Prenatal multivitamin
17. - Ascorbic acid 500 mg BID x 14 days PO
18. -Vit B12 daily
19.
20. #T2DM
21. - Discontinued SSI since not triggering insulin
22.
23. #s/p LLE acute limb ischemia now s/p L AKA (1/9/25, Smith).
24. dressing per vascular
25. NWB LLE once able to get up
26.
27. **Inpatient Checklist:**

28. Fluids/Electrolytes/Nutrition: Regular CC diet
29. Prophylaxis: SQ heparin for DVT
30. Lines/Drains/Airways: PIV
31. Disposition: DNR/DNI
32. Code Status: Full Code
33. Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
34.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: SNF for short term rehab
Potential barriers/concerns: Nonpermanent housing - living in Yurt; connected to housing org outpatient
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker - waxes and wanes, Has son, Louis DPOA

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Placement - Skilled Nursing Facility;Discharge planning

Covering SW attended rounds and reviewed chart. Per handoff, pt's son only interested in SNF for short term rehab, not interested in LTC or applying for Medicaid (LTC coverage).

SW reviewed the SNF referrals sent yesterday for their responses. A couple interested facilities were requiring LTC Medicaid. 3 other facilities had expressed interest without requiring LTC Medicaid (Ballard Center, Washington Care Center, and Valley View SNF).

SW met with pt and son in family lounge, pt sitting up in wheelchair with tomato soup nearby but very somnolent and asking where she is. Son using whiteboard to write responses as pt does not have working hearing aids at this time. SW presented pt's son with list of 3 facilities above. We discussed the options and he would like to call/visit the facilities before making any decisions. It's important to him that the facility is easy to access via public transit. SW encouraged him to use the weekend to narrow down his choices, so that we could begin requesting insurance authorization on Monday at the latest.

PLAN or OUTCOME:
SW to f/u with pt's son about facility choice for SNF on Monday.

MSW to update APS CM upon discharge - Caroline, APS CM (360.814.9682, fax 360.478.4570).

-APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
-s/p Ropivacaine
-APAP 650 mg q8 -> **rectal tylenol if concerned that she cannot swallow PO -- and consider increasing on 2/1 -- note the son seems to believe APAP causes sedation, so may need to negotiate increases (e.g. would prefer to do 1000mg Q6H standing to maximize pain control)**
-Buprenorphine patch 5mcg q7 days
-D/C'd Nalbuphine 1/30

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**.
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
-Consulted placed to P&O for hard shell protective AKA boot.
-Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Right lower extremity swelling:
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted. DVT ultrasound negative.
-Continue to monitor

#Anion gap metabolic acidosis, resolved (suspect was 2/2 starvation ketosis)
-Beta hydroxybutyrate was elevated
-S/p D5 1/2NS for mIVF for 1L, restarted PO diet as above
-VBG with normal pH and normal lactiac acid
-monitor with daily BMP

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia
-repleting to goal 4.0
-rechecking in AM

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent. However is working with bainbridge locals on establishing community emergency response team housing.
-Patient son has agreed for a short SNF stay to allow his mom to recover from the AKA.

#FEN:
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
- s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily
-daily BMP & lytes

#T2DM
- Discontinued SSI since not triggering insulin

#IV access
-lost IV, is ok without one for the time being (as of 1/31) but will re-evaluate daily based on clinical status

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV
Disposition: DNR/DNI
Code Status: Full Code
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY: Patient is up in a wheelchair today, more awake. Her son is at her side. I write questions on a board: "how are you?" She shrugs; "any questions?" She shakes her head no. Later in the conversation with her son, she asks when she's going home (it's hard for me to understand her, but that's how he explains what she has tried to verbalize). We discussed increasing her acetaminophen to try to help with pain, and he's ok with this. He would like to review her entire med list with me tomorrow.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 1 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- potassium chloride ER, 40 mEq, BID
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4-8 mg, q8h PRN
- polyethylene glycol 3350, 17 g, Daily PRN
- senna, 17.2 mg, BID PRN

Objective

OBJECTIVE

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

#Delirium
-Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain.
-While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID (off label usage for delirium). Stopped 1/15 with improved MS and clearing of sedation. On 1/25, 1/26, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough
-**continue guanfacine 1mg BID as it seemingly helped when she was in the MICU (restarted 1/27) -- will discuss taper off this with her son**
-prior hospitalist discussed with Louis about plan going forward, expressing concerns about his mom's nutritional

status in the setting of the delirium, with aspiration risk
-given some improvement noted on the guanfacine with increased PO intake, participation in PT, more alertness, now pursuing SNF referrals
-continue delirium precautions
-proactively treat pain as below (attempting to minimize deliriogenic meds)
-monitor for infection or other complications

#Aspiration risk
-current picture c/w aspiration
-1/27 CXR with stable consolidation, but given lack of cough, fever, hypoxemia, or leukocytosis, there's been low suspiction for PNA, and she remains off abx
-monitor mild tachypnea
-SLP evaluated the patient. Son was at bedside. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. As such, ordered for minced diet with thin liquids and strict aspiration precautions.
-Frequent oral care 5-6x per day. Oral swab and suction;Suction toothbrush/toothette

#Hoarse/soft voice, improving
-New, per son. Per RN team, previously could verbalize. Son states her hoarseness is improving
-consider OTO c/s for laryngoscopy if not continuing to improve, but she would need to be cooperative

#Acute Pain 2/2 recent L above knee amputation
-APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
-s/p Ropivacaine
-increasing APAP to 1000mg Q8H, with additional 500mg daily PRN
-Buprenorphine patch 5mcg q7 days
-D/C'd Nalbuphine 1/30

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
-Consulted placed to P&O for hard shell protective AKA boot.
-Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Right lower extremity swelling
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but it was a limited study
-continue to monitor

#Anion gap metabolic acidosis, resolved (suspect was 2/2 starvation ketosis)
-Beta hydroxybutyrate was elevated
-S/p D5 1/2NS for mIVF for 1L, restarted PO diet as above
-VBG with normal pH and normal lactiac acid
-monitor with daily BMP

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia
-repleting to goal 4.0
-rechecking in AM

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed.
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
36. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
37. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#Disposition planning
-SW following, see notes
- She has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- currently unhoused, living in tent. However is working with bainbridge locals on establishing community emergency response team housing.
-Patient son has agreed for a short SNF stay to allow his mom to recover from the AKA.

#FEN
At high risk of refeeding given inadequate oral intake >5 days.
- Vitamin D 2000IU daily
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- Daily thiamine
    - s/p high dose thiamine
- Prenatal multivitamin
- Ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily
-daily BMP & lytes

#T2DM
- Discontinued SSI since not triggering insulin

#IV access
-lost IV, is ok without one for the time being (as of 2/1) but will re-evaluate daily based on clinical status

27. **Inpatient Checklist:**

Subjective

SUBJECTIVE

INTERVAL HISTORY: Patient is more alert today. Son is at bedside. She's more interactive than I've observed previously. Doesn't speak, but does nod and interact, holding my hand, gesturing to him, etc. Her son and I discuss a number of issues. He's concerned about her keeping her mouth open, and how this leaves her mouth dry. I encourage discussion with S&S about safe mouth/oropharynx hydrating strategies. I reiterate our concerns about aspiration risk. I also review all of her medications with him. We agree to start trying to titrate the guanfacine given her improvement. He says she wants to go home. He describes that "home" is currently a sizeable plastic tent on Bainbridge Island. I express my concern that such a place is not appropriate for someone like her who is recovering from major surgery, especially in winter. I encourage pursuing SNF.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

#Delirium
-Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain
-While in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID (off label usage for delirium). Stopped 1/15 with improved MS and clearing of sedation. On 1/25, 1/26, has been having waxing/waning mental status with hypo and hyperactive delirium. Possible aspiration pneumonitis is contributing given new cough
-start to titrate guanfacine down, today going from 1mg BID to 0.5mg BID -- will d/w Pharmacy on 2/3 about a taper plan beyond this
-continue delirium precautions
-proactively treat pain as below (attempting to minimize deliriogenic meds)
-monitor for infection or other complications
-she continues to improve overall, more alert & interactive -- I've observed no agitation

#Aspiration risk
-current picture c/w chronic aspiration
-1/27 CXR with stable consolidation, but given lack of cough, fever, hypoxemia, or leukocytosis, there's been low suspicion for PNA, and she remains off abx
-mild tachypnea has resolved
-SLP evaluated the patient. Son was at bedside. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. As such, ordered for minced diet with thin liquids and strict aspiration precautions.
-prior hospitalist also discussed with pt's son (Louis) about the challenge of the patient's nutritional status in the setting of the delirium, with aspiration risk
-frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette
-at least one RN has raised concern about the son: *"He is attempting to aggressively give fluids to his mother... she is in turn coughing and having difficulty swallowing... Refuses to let us crush her meds for easier swallowing and refuses mouth swabs and is instead forcing large sips of water."*
-will ask S&S if they can speak with the son again on 2/3 about safer strategies to promote hydration

#Hoarse/soft voice, improving
-New, per son. Per RN team, previously could verbalize. Son states her hoarseness is improving
-consider OTO c/s for laryngoscopy if not continuing to improve, but she would need to be cooperative

#Acute Pain 2/2 recent L above knee amputation
-APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
-s/p Ropivacaine
-APAP 1000mg Q8H, with additional 500mg daily PRN
-Buprenorphine patch 5mcg q7 days
-D/C'd Nalbuphine 1/30

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Per Troy Decker Vasc Surgery; Planning to see her Monday, 1/27
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
-Consulted placed to P&O for hard shell protective AKA boot.
-Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.

- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Anion gap metabolic acidosis, resolved (suspect was 2/2 starvation ketosis)
-Beta hydroxybutyrate was elevated

Patient Summary

100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

2300-0700:
-AOX:3 Disoriented to year. aspiration risk, coughs with po meds intake.
-VS: SBP in the 130's Stable on RA
-I/O: Low PO intake on my shift. High aspiration risk.
-BM/UOP:Diminished urine output. Pure wick removed by Pt. Incontinent Bowel/Bladder.
-PAIN: Denies
-OTHER:
-Sacral Mepilex
-SLP evaluation 2/3

Speech Language Pathology Progress

Patient Name: Jeanne Leonie Hoffman
MRN: U8170135
Date of Service: 02/03/25
Treatment Duration: 35 Minutes (swallow tx)

Subjective

Patient Report/Self-Assessment: RN cleared SLP for entry. Pt initially sleeping, but woke up easily and was fully awake/alert. Supportive son at bedside.
Patient Stated Goal: Per son, to resume PO intake and avoid NGT placement

Prior Function

Prior Function: Patient was seen by SLP november 2023: "She demonstrated mild oral deficits and 1 cough that was not repeated with further trials of thin liquids (silent aspiration cannot be ruled out at bedside). Unclear if mild dysphagia vs presbyphagia related changes complicated by ill fitting dentures and recent thrush. Given her performance, recommend thin liquids and soft and bite sized solids (son assisting to self select softer solids as needed" She reports she mainly eats puree and soft solids at baseline. Son endorses coughing with thin liquids when laying in bed, but not when in chair/at table
IADLs: Requires assist

Objective

Patient Information
Temperature: Afebrile
Respiratory Status: Room air
Behavior/Cognition: Alert;Distractible (confused but engaged; motivated to self-feed ice cream bar)
Patient Positioning: Upright in bed

Consistencies Assessed: 0-Thin Liquids;Soft solids (transitional solid: chocolate dipped vanilla ice cream bar)

Consistencies Assessed Comment: Jeanne held and sel-fed the ice cream bar with occasional assist to keep it from falling apart, needed some more assist to navigate biting from the popsicle stick successfully
Oral Phase: Within Functional Limits

Signs/Symptoms of Penetration/Aspiration: Wet vocal quality;Cough - immediate;Cough - delayed (infrequent

coughing, coarse and non-productive)
Strategies Used: Other strategies used

Aspiration precautions reviewed with Louis. Bullet point list handout made and given for easy reference

Patient/Caregiver Training: SLP ordered mouth moisturizer from materials management. Also, requested trial of humidified air via face tent to MD.

Clinical Notes (group 12 of 17) (continued)

Oral Mechanism Examination
Dentition: Other (dentures not placed for this visit)

ASSESSMENT/PLAN

Pt seen for swallow tx with Louis present. Louis is concerned regarding Jeanne's dry mouth r/t mouth breathing. SLP ordered mouth moisturizer and recommended trial of face tent for humidification. SLP also trialed ice cream bar with Jeanne. (Intended to trial a popsicle, but unwrapping revealed a chocolate dipped vanilla bar). Jeanne was very motivated and engaged, and actually held and self-fed the bar. Intermittent coarse coughing noted, c/f aspiration. Given pt/family GOC, recommend continue minced and moist diet and thin liquids. Please provide careful 1:1 feeding vs supervision, adhere to strict aspiration precautions and d/c PO w/ inadequate alertness/mentation.

Dysphagia: Other (?presbyphagia + superimposed acute dysphagia i/s/o delirium)
Aspiration Risk: Moderate;High

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: Delirium
Prognosis: Fair

Evaluation/Treatment Tolerance: Patient tolerated treatment well

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow treatment;Patient/family education
SLP Frequency: 1-3x/week

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations
Diet Recommendations: 5-Minced and moist;0-Thin liquids
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time;1:1 feeding;Upright for 30 minutes after eating

Goals
Short Term Goal: Tolerate least restrictive diet
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Electronically signed by Cipolaro, Janine M, CCC-SLP at 2/3/2025 4:17 PM

Decker, Troy, PA-C at 2/3/2025 1346

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

Jeanne Hoffman is a 100-year-old woman with status post left above-the-knee amputation for ischemic limb on 1/9/2025. She has baseline delirium, agitation, and is hard of hearing. Her son was with her again today. Hospitalist asked that I come to see the leg. The incision is well-approximated, without erythema and drainage. Much less edema than last week. No infection. Despite her nutritional status and age, she is showing some signs of healing the skin edge. I will visit weekly.

Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY: Patient had a bit of a rough night and morning. More agitated this AM, and with a new cough. Son also concerned about her AKA stump, saying it's bothering her more, and there's some redness. We unwrap it with the RN present, take photos, and Vascular Surgery comes by to assess it and are not concerned. S&S speak with him and see patient, see below for more details. Nutrition will reassess today.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily

- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4-8 mg, q8h PRN

Objective

OBJECTIVE

T: 36.6 °C (02/03/25 0854) **BP: 115/87 (02/03/25 0854)** **HR:** 73 (02/02/25 2238)

Physical Exam

Elderly woman lying in bed, seems a bit more fatigued from prior, coughing productive occasionally, overall is fairly calm, but seems a bit less settled than prior
Anicteric, slightly dry MM
Equal chest rise, some rhonchorus sounds anteriorly, R > L, no work of breathing
Heart regular
Abdomen soft, NTND
Extremities warm and well-perfused, her right lower extremity has 1+ pitting edema, which is stable, and she has a left above-knee amputation, dressing c/d/I, removed to reveal her stump

2/3 CXR -- reviewed by me -- some RLL opacities, but diaphragm now present (wasn't on 1/27 CXR), overall seems somewhat improved from prior

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

#Delirium
-intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain
-overall trend has been improving, but still waxes and wanes
-hearing impairment makes communication w/patient difficult
-while in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID (off label usage for delirium) -- **start to titrate guanfacine down, on 2/2 went from 1mg BID to 0.5mg BID -- Pharmacy recommends stopping entirely in a few days (e.g. 2/5) -- given long half-life, medication will self-taper**
-possible aspiration pneumonitis is contributing given cough
-continue delirium precautions
-proactively treat pain as below (attempting to minimize deliriogenic meds)
-monitor for infection or other complications

#Aspiration risk, ongoing
-current picture c/w chronic aspiration
-1/27 CXR with stable consolidation, but given lack of cough, fever, hypoxemia, or leukocytosis, there's been low suspicion for PNA, and she remains off abx
-2/3 CXR appears slightly improved
-intermittent mild tachypnea
-SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions
-minced diet with thin liquids and strict aspiration precautions
-2/3 trying mouth moisturizer - coconut oil-based lubricant, rubbed on mouth mucosa
-2/3 trying humidified face tent
-2/3 learned pt loves popsicles and ice cream bars -- she did very well with these -- son going out to buy a box of popsicles
-prior hospitalist also discussed with pt's son (Louis) about the challenge of the patient's nutritional status in the setting of the delirium, with aspiration risk
-frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette
-at least one RN has raised concern about the son: *"He is attempting to aggressively give fluids to his mother... she is in turn coughing and having difficulty swallowing... Refuses to let us crush her meds for easier swallowing and refuses mouth swabs and is instead forcing large sips of water."* -- encouraged d/w SW as needed

#Acute pain 2/2 recent L above knee amputation
-APS signed off on 1/18 given significant improvement in pain. Will engaged PRN.
-s/p Ropivacaine

-was getting APAP PO 1000mg Q8H, with additional 500mg daily PRN -- then 2/3 with confusion, wasn't able to take this, so changed to rectal APAP 650mg Q4H PRN
-Buprenorphine patch 5mcg q7 days
-D/C'd Nalbuphine 1/30

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**
- No restrictions from anticoagulation.
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.

-Consulted placed to P&O for hard shell protective AKA boot.
-Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)
-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia, resolved
-repleted to goal 4.0
-monitoring

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 12 of 17) (continued)

Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
20. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
21. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#FEN
-Nutrition following
-son has been feeding her
-has been deemed at risk of refeeding given inadequate oral intake >5 days, but haven't seen significant electrolyte abnormalities (just mild hypokalemia)
-see above re: intermittent starvation ketosis
-Vitamin D 2000IU daily
-zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
-s/p high dose thiamine, continue daily thiamine
-prenatal multivitamin
-ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily
-regular diet (not carb controlled) started 2/3
-daily BMP & lytes

#T2DM
-discontinued SSI since not triggering insulin
-monitor now that carb controlled diet has been removed as noted above

#IV access
-lost IV, is ok without one for the time being (as of 2/2) but will re-evaluate daily based on clinical status

#Disposition planning
-son and she are currently unhoused, living in a tent on Bainbridge Island
-son is working with bainbridge locals on establishing community emergency response team housing.
-SW following, see notes
-she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
-continue to see how she participates in PT
-continue to pursue SNF referrals

Inpatient Checklist:

Inpatient Follow Up Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Recommendations/Interventions:
ORAL NUTRITION:
- consider liberalizing diet, remove carb restriction
- encourage oral nutrition supplements: Ensure Plus and Thrive Gelato
- appreciate nursing documentation of %meals consumed

VITAMINS/SUPPLEMENTS:
- thiamine 100 mg po daily
- Cholecalciferol 2000 internation units daily for maintenance

Subjective

Current Nutrition Assessment:
INTERIM:
- TF not within GOC

FEN:
- visited pt/family at bedside, pt is drinking x1 Ensure HP, 25% of small meals such as oatmeal with ice cream and peanut butter or soup with mashed potatoes. Son states intake improved today, ate an ice cream bar, agreed to try Benecalorie mixed with food and Thrive Gelato. Discussed oral nutrition supplements, encouraged Ensure Plus over Ensure HP, Son states the HP are easier to open.
- per nursing documentation:

	Percent Meals Eaten (%)
02/03/25 1436	50
02/02/25 0600	100
02/02/25 0200	0

Active Diet Order: Yes
Diet: General Heart Healthy Carb Managed

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan
Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
02/03/25 1515	52.5 kg (115 lb 11.9 oz)
02/01/25 0600	52 kg (114 lb 10.2 oz)
01/31/25 1500	52.2 kg (115 lb 1.3 oz)
01/30/25 0800	52.4 kg (115 lb 8.3 oz)
01/28/25 1100	52.3 kg (115 lb 4.8 oz)

Current Body mass index is 22.6 kg/m².

Estimated Nutrition Needs
Using lowest wt, 43.7 kg
Energy: 1092-1311 kcal (25-30 kcal/kg)
Protein: 56-66 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing

Inadequate oral intake related to dysphagia and dry mouth as evidenced by difficulty swallowing solid foods

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Malnutrition Assessment: Severe malnutrition
Malnutrition: Present at admission?: Yes

Interventions:
Coordination of Care:
Chart reviewed.
Discussed current intake and tolerance with family.

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

Language Support:

No interpreter needed (documented language preference is English)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Nutrition following
See treatment team for RD contact
Weekend pager: 989-1191

Chen, Tiffany Chia-An, MD at 2/4/2025 0754

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- ongoing delirium
- RN note reporting overnight unable to arouse enough to take PO meds
- full w/u yesterday showing stump not appearing infected, no co2 retention, e/o starvation ketosis iwith respiratory compensation, noleukocytosis, urine is concentrated. There is + LE, + N, + bacteria in UA but also a dirty catch. Very concentrated urine
- CXR reating "pulmonary edema, bibasilar atelectasis, moderate bilateral pleural effusions"
- low uop based on purewick
- son at bedside reports feeling like she is doing better compared to yesterday and last week. This is incongruent with PCT whom reports they feel like patient has gotten worse over last week. Patient unfortunately new to RN today and to me
- I share that I am concerns that she is not doing well and that her cognition may not improve/recover from this serious medical event
- he says that her mentation was normal prior to hospitalization ("even went to a birthday party". although was WC bound. They were living in an apt but unfortunately this was lost and they were set up in emergency housing (plastic temporary housing) which does have water, electricity? And he is amenable to temporary SNF placement but would like to tak eher home and plan sto provide her with 24/7 care.
- son is thrilled about the measures taken yesterday to help moistern he rmouth
- PCT feels her mentation is worse than prior
- documented BM yesterday

History limited from patient due to AMS

SCHEDULED MEDICATIONS:
- [Held By Provider] acetaminophen, 1,000 mg, q8h

- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4-8 mg, q8h PRN

Objective

OBJECTIVE

T: 36.6 °C (02/04/25 0753) **BP: 134/75 (02/04/25 0704)** **HR:** 76 (02/04/25 0704)
RR: 18 (02/04/25 0704) **SpO2:** 95 % (02/04/25 0704) 3 L/min
T range: Temp Min: 35.9 °C Max: 36.6 °C
Admit weight: 45.5 kg (100 lb 6.4 oz) (01/09/25 1033)
Last weight: 52.5 kg (115 lb 11.9 oz) (02/03/25 1515)

Intake/Output Summary (Last 24 hours) at 2/4/2025 0754
Last data filed at 2/4/2025 0540

Intake	0 ml
Output	110 ml
Net	**-110 ml**

Physical Exam

Elderly frail appearing woman
Initially not very responsive even to moderate tactile stimuli
Spontaneously kind of aroused later in visit and was oriented to self (wrote her first name) and was able to follow 1 step command (to wigle toes on RLE)
S/nt/nd
No LE edema
Stump site looks c/d/I

PVR normal

Labs (*last 24 hours*):

Chemistries				CBC			LFT		Gases, other	
141	108	13	141	10.8			AST: 14	ALT: 4	-/-/-/- | 7.46/35/44/25	
4.2	19	0.63		7.08	><	202	AP: 66	T bili: 0.5	Lact (a): -	Lact (v): 1.7
eGFR: >60		Ca: 8.0		34			Prot: 5.7	Alb: 2.9	Trop I: -	D-dimer: -
Mg: 1.8		PO4: 2.8		ANC: 4.37					BNP: -	Anti-Xa: -
				ALC: 1.59					INR: -	

CXR 2/3--I personally reviewed, bilateral pleural effusions and increased crowding of lung markers with bibasilar atelectasis esp on right. Looks similar to 1/27/25 CXR

Looking back at other CXRs--she had worse LLL consolidation before but the effusion is more on L and the R sided effusion is worse compared to earlier in the month

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

#Delirium
-intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain
-overall trend has been improving (?), but still waxes and wanes
-hearing impairment makes communication w/patient difficult
-while in ICU, trialed seroquel without improvement and then was started on guanfacine 1mg BID (off label usage for delirium) -- **start to titrate guanfacine down, on 2/2 went from 1mg BID to 0.5mg BID -- Pharmacy recommends stopping entirely in a few days (e.g. 2/5) -- given long half-life, medication will self-taper**
-possible aspiration pneumonitis is contributing given cough
-continue delirium precautions
-proactively treat pain as below (attempting to minimize deliriogenic meds)
-monitor for infection or other complications--**has a dirty UA, but was unable to on 2/5 attempted to get an I/o cath as patient non cooperative/bearing done with attempt . In absence of suprapubic tender, fever, leukocytosis will hold on repeat attempt**

#Aspiration risk, ongoing
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. He is fixated on her dry mouth which was aggressively addressed on 2/3 (See note) and seems to be better.
-minced diet with thin liquids and strict aspiration precautions
-frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when path was accidentally stopped/fell off on 1/24.
-s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days--> **this was started for acute surgical post op pain and might consider asking pharmacy/APS for help with a plan to taper off this eventually**

#PAD, c/b

#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing it daily.
- **Staples out after 2/21/25**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.

-Consulted placed to P&O for hard shell protective AKA boot.
-Saw patient and felt that the current ACE wraps provide enough protection. Once staples are out, recommend trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- Follow-up with vascular surgery for appropriate postoperative wound care.
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks (1/31/25 approximately) or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)
-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia, resolved
-repleted to goal 4.0
-monitoring

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

43. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
44. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#FEN
-Nutrition following
-son has been feeding her
-has been deemed at risk of refeeding given inadequate oral intake >5 days, but haven't seen significant electrolyte abnormalities (just mild hypokalemia)
-see above re: intermittent starvation ketosis
-Vitamin D 2000IU daily
-zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
-s/p high dose thiamine, continue daily thiamine
-prenatal multivitamin
-ascorbic acid 500 mg BID x 14 days PO
-Vit B12 daily
-regular diet

#T2DM
-discontinued SSI since not triggering insulin
-monitor now that carb controlled diet has been removed as noted above

#IV access
-lost IV, is ok without one for the time being (as of 2/2) but will re-evaluate daily based on clinical status

#Disposition planning
-son and she are currently unhoused, living in a tent on Bainbridge Island
-son is working with bainbridge locals on establishing community emergency response team housing.
-SW following, see notes
-she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
-continue to see how she participates in PT
-continue to pursue SNF referrals

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV
Disposition: DNR/DNI

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless

Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Placement - Skilled Nursing Facility;Discharge planning

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Pt's son Louis is amenable to short-term rehab (not LTC Medicaid). Per AIDA, pt has accepting SNFs. Per SW handoff, three SNFs willing to accept for short-term rehab w/o Medicaid application (Ballard Center, Washington Care Center, and Valley View).

Call placed w/ son Louis via room phone to f/u re: SNF decision. Per Louis, he has not had an opportunity to visit facilities yet.

PLAN or OUTCOME:
F/u re: SNF ref, f/u w/ son Louis

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Patient reported history is limited by AMS.
- Son at bedside and reports recent events during rounds today. He endorses that Jean was having some leg and stomach cramping earlier today but this improved after getting rectal Tylenol.
- He feels that her oropharynx and tongue are improving a little bit with humidified air via facemask. She continues to take small amounts of food and requires one-to-one feeding and encouragement. They have been fortifying food with supplements per nutritional team.
- She has had 3 bowel movements in the last 24 hours that were pasty and her son feels appropriate for her.
- We reviewed the 3 skilled nursing facilities that have accepted her and he is most interested in Ballard Care Center, has spoken with them on the phone.
- seen by EP team yesterday for 2 week incision check, no concerns. Son wants to enroll in remote monitoring clinic and discussed with with EP.

Follow-up in PM:
- son expressed to nursing he would like to reconsider tube feeding given her poor PO intake.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN

Heart and mediastinum: Unchanged.

Last TTE 1/10/2025 while she was having symptomatic bradycardia:
Normal systolic function
Moderate AS w/o regurg
Mild elevated PASP 34-39mmHg

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium.

Below plan is based on the note by Dr. Tiffany Chen dated 2/4/2025 with updates made to reflect changes to the medical decision making and plan today.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain **with overall trend toward slow improving (per family report), but still waxes and wanes**
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough, see aspiration precautions below
- Pain 2/2 recent amputation: appears to be improving
- monitor for infection: unable to get I/I cath for urinalysis, purewick sample dirty (2/4) but in absence of suprapubic tender, fever, leukocytosis no empiric treatment

Treatments/Interventions:
- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopping entirely 2/5 (anticipate remaining self-taper due to long half-life).**

- continue delirium precautions
- pain treatment as below

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance)
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- son requesting discussion about NG tube feeding again; previously reported as not within goals of care. Considerations I will offer:
    - consider short-term NG trial to see if this improves energy; long-term NG feeding is not sustainable at SNF or likely home
    - risks include: worsening delirium (due to tether) including potential need for restraints to maintain tube; aspiration of TF if patient pulls tube out when feeds running
- notable intermittent starvation ketosis but **electrolytes only with hypoMg today which was supplemented.**
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- dry mouth has been a significant concern for son: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days--> **started for acute surgical post op pain, can consider future taper off but still having pain at present so will continue.**

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he

was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.
- avoid IVF due to third spacing

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)
-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia, resolved
-repleted to goal 4.0
-monitoring

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
42. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
43. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #T2DM
4. BG in low 100s
5. -discontinued SSI since not triggering insulin
6.
7. #IV access
8. -lost IV, is ok without one for the time being (as of 2/2) but will re-evaluate daily based on clinical status
9.
10. #Disposition planning
11. -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
12. -son is working with Bainbridge locals on establishing community emergency response team housing.
13. -SW following, see notes
14. -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
15. -patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
16. -SNF referrals made, some acceptances, son interested in Ballard Care Center
17. -Needs repeat PT and OT assessments for insurance approval of SNFs.
18.

19. **Inpatient Checklist:**
20. Fluids/Electrolytes/Nutrition: Regular CC diet
21. Prophylaxis: SQ heparin for DVT
22. Lines/Drains/Airways: PIV
23. Disposition: see above, considering SNF.
24. Code Status: DNR/DNI
25. Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
26.
27. I spent a total of 65 minutes for the patient's care on the date of the service.
28.

Hunt, Susan Elizabeth, MD at 2/6/2025 0812

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- frequent BMs (x7) recorded in last 24hrs, per nursing and son these are very small smears, soft. No concerns about diarrhea.
- more alert this morning, took a wheelchair ride with her son for over an hour. He feels her mental status is improving today, she was requesting to go outside and to go home.
- son feels her PO intake is slowly improving but still below baseline. Took about 25% of the 8oz smoothie he made today (with oatmeal, fruit, etc). She has been taking about 1 ensure bottle per day; at home previously she would take 4-6 per day. He wonders if she would do better with home-made foods that she prefers. He has been adding beneprotein to food intake. Son continues to feel that discomfort with swallowing was the limiting factor for intake and this appears to be improving (less grimacing when swallowing).
- I reviewed the potential risks and benefits of NG placement and tube feeding, including potential for worsening delirium (due to tether), potential need for restraints to maintain tube; aspiration of TF if patient pulls tube out when feeds running, inability to support NG TF as outpatient (SNF or home). He agrees to holding off at this time.
- patient was able to answer yes/no questions today when written on the white board. Denied pain (including dysuria) or other concerns. Her urine is dark/concentrated appearing but otherwise clear.
- son reports if patient discharges to home eventually, would prefer not on Sat/Sun as the buses on Bainbridge do not run those days.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily

- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4-8 mg, q8h PRN

Objective

OBJECTIVE

T: 36.1 °C (02/05/25 1700) **BP: 132/70 (02/05/25 1700)** **HR:** 71 (02/05/25 1700)

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake which appears to be slowly improving.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain **with overall trend toward slow improving (per family report), but still waxes and wanes**
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough, see aspiration precautions below
- Pain 2/2 recent amputation: appears to be improving
- monitor for infection: **2/4 urine culture w/<100k E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis), will hold on treatment.**
- mild increased stool frequency but no features of infectious diarrhea (watery, increased volume).

Treatments/Interventions:
- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopping entirely 2/5 (anticipate remaining self-taper due to long half-life).**
- continue delirium precautions
- pain treatment as below

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- notable intermittent starvation ketosis but **electrolytes only with hypoMg today which was supplemented.**
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12
- zinc sulfate 220 mg daily x 14 days PO (initiated 1/15)
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days--> **started for acute surgical post op pain, can consider future taper off but still having pain at present so will continue.**

#PAD, c/b

#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.
- avoid IVF due to third spacing

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)
-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted

Physical Therapy Treatment

Jeanne Leonie Hoffman
U8170135

2/6/2025
Duration of session: 54 Minutes

Subjective
Patient Report/Self-Assessment: Pt opening eyes to loud voice, otherwise generally maintaining eyes closed

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Lives in tent with flooring and heating
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (Transport chair)

Functional Level:
Bed Mobility
Supine to Sit: Maximum Assist (between 50-74% help needed)
Transfers
Sit<>Stand: Dependent (greater than 75% help needed)

Interventions:
Therex: sling transfer from TIS chair back to bed positioned in supine, flat, L hip gently stretched into neutral then slight extension, light pressure, myofacial release type of stm. Trial of bridging with R UE in hooklying. Manual cues for hip exetnsion during bridge, pt not able to carryout the activity pt assisted to sitting, provided with gentle lumbar thoracic stretch in sitting. Pt able to breifly maintain upright sitting, easier with pressure thru R knee to. Gentle stretch for hip, knee flexion prior to trial of stand. two trials of sit to stand with R shoe on, blocking R foot. 2 person dependent transfer into standing for 10 seconds X 2. Assisted to supine for rest after standing. Additional time spent for therapeutic rest, caregiver questions.
Theract:
Balance/Neuro Re-ed:
Gait Training:

ASSESSMENT/PLAN

Jeanne Hoffman demonstrated fair tolerance of therapeutic exercise today, including hip extensor stretching, sitting balance activites and 2 trials of standing on R LE. Limited due to fatigue (activity only stimulated minimal interaction, son states that often she is more alert). Also limited due to weakness, decreased ROM, pain. Anticipate prolonged rehabilitation course.

Barriers to Discharge: Currently dependent for all cares, pt family does not have proper training/equipment to manage her care at home at this time

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 01/31/25
Goal Status: Not Progressing
Goal: Sit unsupported for (30 min)
Estimated Completion Date: 01/31/25
Goal Status: Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes
Estimated Completion Date: 01/24/25
Goal Status: Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: postural control, caregiver training, therex PROM, Stump shrinker when ready.

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: Sling to chair 3 X day. Allow oppotunities for L hip to stretch into extension in supine to limit contracture risk.

Portante, Katie, LSWAIC at 2/7/2025 1000

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Care Coordination;Chart Review/Screening;Discharge planning;Placement - Skilled Nursing Facility

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Pt's son Louis is amenable to short-term rehab (not LTC Medicaid). Son Louis agreeable to d/c to Ballard Care Center.

Updated PT note received; MSW reached out to Ballard Center to initiate insurance authorization.

MSW attempted to place call to son Louis to provide update on insurance auth process; per phone message, number temporarily unavailable and MSW unable to LVM.

PLAN or OUTCOME:
F/u re: insurance auth; transportation

Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:

Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:

Son not at bedside today as he went home to work on some preparations.

- worked with PT yesterday with stretching, sitting balance activities and trials of standing on R LE. Limited by fatigue and weakness.
- BM recorded x3 yesterday. Much of urine unmeasures when she was up to wheelchair (not on purewick).
- this morning she was more agitated with nursing, calling out, refusing to allow oral care or take PO meds. Speech also assessed at 11am and she refused to participate.
- I saw her shortly after the Speech Therapy visit; she had calmed some, awakened to light touch. Allowed me to swab her mouth with the moistened sponge.
- endorsed pain in her back this morning. She did have any episode of pain yesterday afternoon while son was attempting to transfer her with lift independently.
- nursing placed PIV this morning due to concerns about ability to take PO meds in setting of her mental status.

SCHEDULED MEDICATIONS:

- acetaminophen, 1,000 mg, q8h
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:

- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN

Physical Exam:

General: lying in bed in NAD
Psych: awakened to voice, responded to questions written on the small white board. Some verbal responses but difficult to understand without dentures.
HEENT: tachy mucous membranes, no coating on tongue or thrush noted.
Respiratory: Clear to auscultation bilaterally
Cardiovascular: Regular rate and rhythm, normal S1-S2, no murmur, no LE edema in R leg.
Abdomen: Occasional bowel sounds, soft, nontender to palpation.
MSK: L stump wrapped with ACE wrap.

Labs (*last 24 hours*):

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who was slowly improving with some increased confusion and reported pain today.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but possible backslide today. Differences today include new report of back pain, possibly related to difficult transfer on 2/6) and her son's absence from bedside (which is a stabilizing factor for her mental status). Her guanfacine was also stopped on 2/5 with expected self-taper due to half-life, so the waning of this medication may be contributing, though I think this is less likely.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough, see aspiration precautions below
- Pain 2/2 recent amputation, improving; **new back pain 2/7 AM (see management below)**
- monitor for infection: 2/4 urine culture w/<100k E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis), not treating as likely contaminant (sample from chronic purewick)
- stools frequent but soft, not liquid.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopped 2/5 (anticipate remaining self-taper due to long half-life).**
- continue delirium precautions

- pain treatment as below

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP QOD**
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days--> **started for acute surgical post op pain, can consider future taper off but still having pain at present so will continue.**

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.
- avoid IVF due to third spacing

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated

-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)
-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia, resolved
-repleted to goal 4.0
-monitoring

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #T2DM
4. BG in low 100s
5. -discontinued SSI since not triggering insulin
6.
7. #IV access
8. -lost IV, is ok without one for the time being (as of 2/2) but will re-evaluate daily based on clinical status
9.
10. #Disposition planning
11. -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
12. -son is working with Bainbridge locals on establishing community emergency response team housing.
13. -SW following, see notes
14. -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
15. -patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
16. -SNF referrals made, some acceptances, son interested in Ballard Care Center
17. -Needs repeat PT and OT assessments for insurance approval of SNFs.
18.
19. **Inpatient Checklist:**
20. Fluids/Electrolytes/Nutrition: Regular CC diet
21. Prophylaxis: SQ heparin for DVT
22. Lines/Drains/Airways: PIV
23. Disposition: see above, considering SNF.
24. Code Status: DNR/DNI

Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

I spent a total of 43 minutes for the patient's care on the date of the service.

Inpatient Follow Up Nutrition Assessment

PI: Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Recommendations/Interventions:
ORAL NUTRITION:
- Diet per SLP /MD currently Level 5 Minced and Moist and Thin Liquids
- Offer supplements PRN if Pt asks - Ensure Plus and Thrive Gelato
- appreciate nursing documentation of %meals consumed

VITAMINS/SUPPLEMENTS:
Current
cholecalciferol, 2,000 units, Oral, Daily
cyanocobalamin, 500 mcg, Oral, Daily
prenatal multivitamin iron-folic acid, 1 tablet, Oral, Daily
thiamine mononitrate, 100 mg, Oral, Daily Not sure pt will continue to need this, seems it can be dc'd

Subjective
Current Nutrition Assessment:
INTERIM:
- TF not within GOC

FEN:
2/7
- visited pt at bedside. Son and staff assisting with adding benecalorie to oatmeal each breakfast. She has been only taking 25% of supplements Continues with reduced intake for the past 24-48 hrs just taking ice creams, italian ices.
- Declining Ensures for the past 3-4 days
- per nursing documentation:
Patient Vitals for the past 168 hrs:

	Percent Meals Eaten (%)
02/06/25 1200	25
02/05/25 1642	50
02/05/25 1400	75
02/04/25 1600	100

	Oral Nutritional Supplement Intake (mL)
02/06/25 0800	0 ml
02/05/25 1130	0 ml
02/04/25 0800	0 ml
02/03/25 1130	0 mL
02/03/25 0800	0 mL
02/02/25 1700	0 mL
02/02/25 1130	40 mL
02/02/25 0800	60 mL
02/01/25 1700	240 mL
02/01/25 1130	0 mL
01/31/25 1700	80 mL
01/31/25 1500	240 mL
01/31/25 1236	100 mL
01/31/25 1130	0 mL
01/31/25 0800	60 mL
01/30/25 1730	0 mL

SLP eval 2/7 Intermittent coarse coughing noted during ST visit this am, c/f aspiration. Given pt/family GOC, recommend continue oral care and offering small amounts minced and moist diet and thin liquids when Patient alert and willing to participate and as tolerated by Patient iso of strict aspiration precautions including 1:1 supervision. d/c PO w/ inadequate alertness/mentation. ST communicated Patient current status to Care Team.

2/3:
- estimate pt consumed ~300 kcal and 20 gm pro daily for the last few days
- po intake less than 40% of estimated needs last 8 days, 60% or less since admit, no po intake x5 days pta per nutrition hx (PO <75% of estimated needs x30 days)

GI: dysphagia LBM 2/6 x 2; has bowel meds not taking daily
Edema/Fluid: +2 RLE
Weight: wt gain since admit d/t fluids, stable since 1/26
Wounds Present: Yes, L BKA, partial thickness wound to perineum, stage 1 pressure injury to back

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Assessment/Plan

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
UBW: 125 lb per son 1/16
UBW%: 80%

Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
02/07/25 0803	50.2 kg (110 lb 10.7 oz)
02/06/25 0600	50.4 kg (111 lb 1.8 oz)
02/05/25 0600	49.2 kg (108 lb 7.5 oz)
02/04/25 0800	52.7 kg (116 lb 2.9 oz)
02/03/25 1515	52.5 kg (115 lb 11.9 oz)
02/01/25 0600	52 kg (114 lb 10.2 oz)
01/31/25 1500	52.2 kg (115 lb 1.3 oz)

Current Body mass index is 21.61 kg/m².

Estimated Nutrition Needs
Using lowest wt, 43.7 kg
Energy: 1092-1311 kcal (25-30 kcal/kg)
Protein: 56-66 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status

Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing

Inadequate oral intake related to dysphagia and dry mouth as evidenced by difficulty swallowing solid foods

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Malnutrition Assessment: Severe malnutrition
Malnutrition: Present at admission?: Yes

Interventions:
Coordination of Care:
Chart reviewed.
Discussed current intake and tolerance with family.

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

Language Support:
No interpreter needed (documented language preference is English)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Clinical Notes (group 13 of 17) (continued)

Oral Mechanism Examination
Dentition: Other (Dentures not in place for this visit)
Oral mucosa: Dry (Patient mouth breathing)
Observations: Jeanne refused oral care from ST and refused ST attempts to initiate Patient trial of ice chips at bedside. Jean maintained a constant open mouth posture and rejected oral care and P-O trial by turning head and momentarily closing mouth. Spontaneous movements were symmetric

ASSESSMENT/PLAN

Pt seen for swallow tx with no family present at bedside. Family currently not wanting to pursue alternative means of nutrition/hydration with focus on Patient taking small amounts of P-O. During today's swallow follow up, Pt moaning and at times crying out in bed and refusing ST attempts to initiate oral care even with encouragement of ST by writing on white board and offering Patient soft oral swab. Patient observed to cough intermittently on saliva. RN reports Patient coughing on P-O trials this morning. Intermittent coarse coughing noted during ST visit this am, c/f aspiration. Given pt/family GOC, recommend continue oral care and offering small amounts minced and moist diet and thin liquids when Patient alert and willing to participate and as tolerated by Patient iso of strict aspiration precautions including 1:1 supervision. d/c PO w/ inadequate alertness/mentation. ST communicated Patient current status to Care Team.

Dysphagia: Other (?presbyphagia + superimposed acute dysphagia i/s/o delirium)
Aspiration Risk: Moderate;High

Impact on Function: Risk for respiratory complications;Risk for not meeting oral nutrition
Confounding Factors: Delirium
Prognosis: Fair

Evaluation/Treatment Tolerance: Treatment limited secondary to agitation

Plan
SLP Plan: Skilled SLP
Treatment/Interventions: Swallow treatment;Patient/family education
SLP Frequency: 1-3x/week

Discharge Recommendations
No follow up SLP indicated

Daily Recommendations
Swallow Recommendations

Diet Recommendations: 5-Minced and moist;0-Thin liquids
Medication Administration Recommendations: Meds whole/halved in puree;Meds crushed in puree
Oral care: Frequency: 5-6x per day;Oral swab and suction;Suction toothbrush/toothette
Aspiration Precautions: As upright as medically possible for all oral intake;1:1 supervision/assistance;Fully alert for all PO intake;Small bites;Small sips;Slow rate;One sip at a time;1:1 feeding;Upright for 30 minutes after eating

Goals
Short Term Goal: Tolerate least restrictive diet
Estimated Completion Date: 02/22/25
Goal Status: Not Progressing

Patient/caregiver will participate in education regarding: Dysphagia
Estimated Completion Date: 02/22/25
Goal Status: Progressing

Electronically signed by Welsh, Kathryn R, CCC-SLP at 2/7/2025 12:28 PM

Hunt, Susan Elizabeth, MD at 2/8/2025 0805

Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- continued to be more agitated through yesterday, crying out. Received nalbuphine x2 doses.

- continues with poor PO intake which has worsened over the last 3 days, only 25% of recommended nutrition for last day. Son confirms this morning that she only took about 1oz of the nutritional shake he made her yesterday. This morning labs consistent with volume depletion (new hyperNa).
- she denied pain on my initial inquiry but after pulling back covers to examine her abdomen and L stump she was moaning in pain.
- remains more agitated and less interactive over last 2 days.

SCHEDULED MEDICATIONS:
- acetaminophen, 1,000 mg, q8h
- albumin human, 12.5 g, Once
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cefTRIAXone, 1 g, q24h
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- magnesium sulfate, 2 g, Once
- [Held By Provider] omeprazole, 20 mg, Daily empty stomach
- pantoprazole, 40 mg, Daily
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- senna, 17.2 mg, BID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN

Objective

OBJECTIVE

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who was slowly improving with some increased confusion and reported pain today.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for now due to abnl on 2/8.**
- volume repletion with 5% albumin 12.5g x1 today to see if this can increase alertness and intake.
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but possible backslide today. Differences today include new report of back pain, possibly related to difficult transfer on 2/6) and her son's absence from bedside (which is a stabilizing factor for her mental status). Her guanfacine was also stopped on 2/5 with expected self-taper due to half-life, so the waning of this medication may be contributing, though I think this is less likely.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board

- possible aspiration pneumonitis is contributing given cough, see aspiration precautions below
- Pain 2/2 recent amputation, improving; **ongoing stump pain with movement/manipulation, feels improved with nalbuphine (readded 2/7)**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) and have been holding on treatment, **HOWEVER, given no other driver of delirium and steady worsening for last 2 days with possible abdominal pain (based on pushing away exam), will treat for short course with ceftriaxone 1gm IV q24h x3 days.**
- stools frequent but soft, not liquid.

Treatments/Interventions:

- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopped 2/5 (anticipate remaining self-taper due to long half-life).**
- continue delirium precautions
- pain treatment as below

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24.
s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days
- nalbuphine readded 2/7 for back pain and intermittent stump pain as potential drivers of her delirum.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.
- avoid IVF due to third spacing

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-working on PO diet, trying to avoid IVF unless necessary (since the latter would not be compatible with ability to discharge)

-monitor with daily BMP

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
-monitoring

#Mild hypokalemia, resolved
-repleted to goal 4.0
-monitoring

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
31. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
32. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #T2DM
4. BG in low 100s
5. -discontinued SSI since not triggering insulin
6.
7. #IV access
8. -lost IV, is ok without one for the time being (as of 2/2) but will re-evaluate daily based on clinical status
9.
10. #Disposition planning
11. -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
12. -son is working with Bainbridge locals on establishing community emergency response team housing.
13. -SW following, see notes
14. -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
15. -patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
16. -SNF referrals made, some acceptances, son interested in Ballard Care Center
17. -Needs repeat PT and OT assessments for insurance approval of SNFs.
18.
19. **Inpatient Checklist:**
20. Fluids/Electrolytes/Nutrition: Regular CC diet
21. Prophylaxis: SQ heparin for DVT
22. Lines/Drains/Airways: PIV
23. Disposition: see above, considering SNF.
24. Code Status: DNR/DNI
25. Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
26.

27. I spent a total of 43 minutes for the patient's care on the date of the service.
28.

Patient Summary

100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

1900-0700:
* BED ALARM/DNR DNI
-AOX:4 Sling to chair.Unable to assess orientation
-VS:SBP in the 140's team aware. Other VSS RA
-PAIN: Mananged well with IV tylenol
-BM/UOP: (+)BM DUOP Incontinent of bowel/ bladder. Pure wick applied
-I/O: No PO intake on my shift
-OTHER:
-Use white board for communication
-Unable to take PO meds this shift, MD aware.IV tylenol ordered. Team to reassess 2/9
-LLE dressing taken off by Pt
-RLE heel with a pressure injury, Elevated
-Left chest pace maker
-Message sent to the team by another RN: family member came to nurses station proclaiming "just so you know, she's committing suicide by starvation." and continued on about allegations of "this is what happens when she has been told to just wash in a bucket or not reach out for help." I imagine he's having a hard time coming to terms with pts. situation...but Just wanted team to be aware of his outburst/concerns.
-Pts son claims jennifer campbell (previous landlord) is trying to kill the pt, states he's getting threats through email and text's about someone wanting her to die?

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who was slowly improving with some increased confusion and reported pain today.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia**
- additional volume repletion with NS 500ml x1 today.
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but possible backslide today. Differences today include new report of back pain, possibly related to difficult transfer on 2/6) and her son's absence from bedside (which is a stabilizing factor for her mental status). **Her guanfacine**

was also stopped on 2/5 with expected self-taper due to half-life, so the waning of this medication may be contributing.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough, see aspiration precautions below
- Pain 2/2 recent amputation, improving; **restarted nalbuphine 2/7 due to possible pain although unclear if pain alone or agitation; complicated by increased somnolence after this med.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) and have been holding on treatment, **HOWEVER, given no other driver of delirium and steady worsening 2/6-2/8 with possible abdominal pain (based on pushing away exam), started short course with ceftriaxone 1gm IV q24h x3 days.**
- stools frequent but soft, not liquid.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopped 2/5 (anticipate remaining self-taper due to long half-life).**
- continue delirium precautions
- trial of restart guanfacine at last/lowest dose 0.5mg PO BID for agitation

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24.
s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days
- nalbuphine readded 2/7 for back pain and intermittent stump pain as potential drivers of her delirum.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.
- monitor closely for third spacing with IVF given 2/9

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid

-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
29. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
30. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

1. -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
2.
3. #T2DM
4. BG in low 100s, discontinued SSI since not triggering insulin
5.
6. #IV access
7. Difficult access, lost 2/2 but was replacement 2/7.
8.
9. #Disposition planning
10. -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
11. -son is working with Bainbridge locals on establishing community emergency response team housing.
12. -SW following, see notes
13. -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
14. -patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
15. -SNF referrals made, some acceptances, son interested in Ballard Care Center
16. -Needs repeat PT and OT assessments for insurance approval of SNFs.
17.
18. **Inpatient Checklist:**
19. Fluids/Electrolytes/Nutrition: Regular CC diet
20. Prophylaxis: SQ heparin for DVT
21. Lines/Drains/Airways: PIV
22. Disposition: see above, considering SNF.
23. Code Status: DNR/DNI

Patient Summary

100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

1900-0700:
* BED ALARM/DNR DNI
-AOX:0 Sling to chair.Unable to assess orientation
-VS:SBP in the 150's team aware. Other VSS RA
-BM/UOP: (+)BM DUOP Incontinent of bowel/ bladder. Pure wick applied
-I/O: No PO intake on my shift. Pt tried to spit/punch me while attempting to administer PO med.
-OTHER:
-Use white board for communication
-Unable to take PO meds this shift, MD aware.
-LLE dressing taken off by Pt
-RLE heel with a pressure injury, Elevated
-Left chest pace maker
-Mepilex on back and tailbone changed.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- remains very confused and sleepy throughout yesterday. No able to take any significant PO. Lost PIV and unable to replace, even with STAT nurse attempt.
- This morning patient was getting cleaned up from a bowel movement when I arrived and was crying out in pain during that process with every wipe. Following that she settled into the bed and was more comfortable.
- When questioned after settling back in bed patient shook her head no when asked about back pain or shortness of breath. She did indicate by pointing that she wanted the TV changed and confirmed this when I wrote on the white board. She also endorsed thirst when I read on the whiteboard by nodding. She subsequently fell back asleep when I was not stimulating her by touching and speaking loudly.
- Her son reports that she did take some p.o. this morning including a third of an Ensure bottle and approximately 30 to 45 mL of soup. He does feel that she did much better yesterday after receiving the first dose of guanfacine.
- We spent some time discussing that overall her nutrition has been quite poor and worsening over the last week which is concerning to the medical team and to Louis. I discussed the possibility of talking to our palliative care team about her overall picture and next steps.

SCHEDULED MEDICATIONS:
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cefTRIAXone, 1 g, q24h
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- [Held By Provider] omeprazole, 20 mg, Daily empty stomach
- pantoprazole, 40 mg, Daily
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and decreased PO intake over the last 3-4 days.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/9 (2 doses) due to lack of other driver of delirium worsening mental status but

without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel, tried guanfacine 1mg BID (off label usage for delirium) which was then weaned down and **stopped 2/5 (anticipate remaining self-taper due to long half-life).**
- continue delirium precautions
- **trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (started 2/9)**

- Palliative Care consult: reengaged 2/10 give changes in her mental status and complexity of determining interventions that will help her meet goals.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia and hypoK, will replete IF ABLE based on access and mental status for PO intake.**
- additional volume repletion with NS 500ml x1 2/9 without change in Na
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12 **- holding while unable to take PO**
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days
- nalbuphine readded 2/7 for back pain and intermittent stump pain as potential drivers of her delirum.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
28. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
29. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

- -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
-
- **#T2DM**
- BG in low 100s, discontinued SSI since not triggering insulin
-
- **#IV access**
- Difficult access, lost 2/2 but was replacement 2/7.
-
- **#Disposition planning**
- -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
- -son is working with Bainbridge locals on establishing community emergency response team housing.
- -SW following, see notes
- -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- **-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA**
- **-SNF referrals made, some acceptances, son interested in Ballard Care Center**
- **-Needs repeat PT and OT assessments for insurance approval of SNFs.**
-
- **Inpatient Checklist:**

- Fluids/Electrolytes/Nutrition: Regular CC diet
- Prophylaxis: SQ heparin for DVT
- Lines/Drains/Airways: PIV
- Disposition: see above, considering SNF.
- Code Status: DNR/DNI
- Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
-
- I spent a total of 46 minutes for the patient's care on the date of the service.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

Jeanne Hoffman is a 100-year-old woman with status post left above-the-knee amputation for ischemic limb on 1/9/2025. She has baseline delirium, agitation, and is hard of hearing. Her son was with her again today. I've come by weekly. The incision is well-approximated, without erythema and drainage. Minimal edema. No infection. She continues to show healing at the skin edge. Her nutritional status and age make musculocutaneous flap healing questionable. Typically we wait at least 6 weeks on these. We can set her up for follow up if she finds a SNF to transfer this week.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless

Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Care Coordination;Chart Review/Screening;Discharge planning;Placement - Skilled Nursing Facility

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Pt's son Louis is amenable to short-term rehab (not LTC Medicaid). Son Louis agreeable to d/c to Ballard Care Center.

Per update from Ballard Care Center admissions via AIDA, insurance auth still pending.

MSW, MD met w/ pt and son Louis at bedside. MD provided update on pt status and care plan, discussed additional Palliative Care consult; Louis agreeable. MSW provided update on status of insurance auth for Ballard Care Center and possible next steps.

PLAN or OUTCOME:
F/u re: insurance auth; transportation

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: acute limb ischemia s/p L AKA, delirium, malnutrition, GOC, support, palliative care.

INTERVAL HISTORY:
Jeanne previously seen by palliative care immediately following her AKA for ongoing support and GOC. At that time. Jeanne and her son Louis were longevity focused, hoping for smooth recovery from AKA and expressed a desire to return home.
Discussed case with Dr. Hunt (med E attending) and bedside RN. Since our last visit, Jeanne has been struggling with delirium, decreased PO intake resulting in malnutrition. She is high risk for aspiration and TF are not in line with her GOC. Jeanne has continued to become weaker now has electrolyte derangements related to her poor PO intake (hypernatremia, hyponatremia). Son Louis has been at bedside and helping her to eat small amounts. Jeanne intermittently cries out in pain.

The palliative care team (myself, Beth Chance MSW, Laura Katers PA) met with Jeanne and Louis in the family waiting room. Jeanne was in a wheelchair. She was alert for most of or visit but did not engage in conversation.

Louis spoke on Jeanne's behalf. He shared many details about their prior living situation, loss of housing, and hopes to have their living situation improved. There were periods where Louis was tangential. He was also difficult to redirect. Highlights of our conversation are below:

-Louis shared that Jeanne was living a full life before her acute limb ischemia. She enjoyed traveling and spending time with her friends. Loved going to Starbucks.
-Louis had noticed her leg getting worse (possibly infected). He really wanted her to make it to her 100th birthday so he used to antibiotics he had at home and she ended up at the hospital shortly after her 100th birthday.
-Louis says that his mom is not happy with having the AKA and is having trouble adjusting. It is hard on her to be in the hospital. Louis said that Jeanne is not eating. He said that she is starving herself because she is frustrated and stubborn and also said that she has had delirium that makes it difficult to eat. He understands that she is an aspiration risk. He has been helping her to eat pureed foods. She did eat ~1oz of food today.
-Louis wants to work with teams that are positive about his mom. He does not want her to receive less care or different care just because she is 100--age is just a number.
-Louis understands th-at his mom is close to the end of her life (since she is 100, not because of her current medical situation). He hopes for her to have a good QOL. This means being home and spending time how she wants.
-Louis worries that his mom would die if she went to a SNF--thinks she would only last 30-60 days.
-Louis has cared for Jeanne for 35 years. He also cared for his grandmother. She went to a SNF for care at the end of her life and died at the SNF. He does not want this for his mom.
-If Jeanne were at EOL she would want to be home. Louis shared that if Jeanne's doctors knew that she was terminal, he would want to take her home to Bainbridge ASAP.
-Louis expressed a desire to partner with the medical team. Jeanne's long term PCP retired recently and this has been a loss for them.

PHYSICAL EXAM:
BP 116/61 (Patient Position: Lying) | Pulse 67 | Temp 36 °C (Temporal) | Resp 18 | Ht 5' (1.524 m) | Wt 47.4 kg (104 lb 8 oz) | SpO2 95% | BMI 20.41 kg/m²
Gen: Jeanne was sitting in a wheelchair, she was intermittently alert but did not participate in the conversation verbally, she did occasionally gesture to her L leg, she had some moments where she grimaced and cried out in pain, she also slept other times in our visit.
HEENT: tongue dry with food specs present, lips dry
Resp: some upper airway gurgling noted, regular respirations, breathing comfortably
Neuro: does not participate in conversation or track conversation, seems confused, not agitated

IMPRESSION: Jeanne has experienced ongoing decline following her AKA. She has had delirium and ongoing poor PO intake resulting in new electrolyte derangements. Jeanne's son Louis has shared a hope for Jeanne to get stronger and eventually return home. He would like to avoid SNF if able, especially long term. Louis would like for Jeanne to have a good QOL for the remainder of her life and he also values longevity. He did share that if Jeanne's doctors all felt that she were terminal he would want to know so that he could prioritize getting her back home.

RECOMMENDATIONS:
-Palliative care will continue to follow and engage in discussions with Louis.
-If there are specific decisions that need to be made regarding Jeanne's care, it would be beneficial for palliative care and the primary team to meet with Louis together to discuss. -Tentatively made plans to follow up with Louis tomorrow given Jeanne's electrolyte abnormalities and limitations of repletion.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 115 minutes for the patient's care on the date of the service.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Patient reported history is limited by mental status, she only answered a few written questions. Son and nursing provide hx.
- continues with minimal PO intake yesterday and overnight. PIV replaced yesterday afternoon, received D5 NS + 20mEq KCl x1L.
- she shrugged when I asked about pain and did not answer when I asked about breathing difficulties.
- son reports he was able to get her up to a wheelchair today and they went on a ride around the unit and to the visitor waiting room to look at the view. She continues to tell him that she wants to go home. She endorses wanting to see friends on Bainbridge.

I was able to visit with Palliative Care Team members as well today. We discussed the following:
- shared concerns that Jeanne is not taking adequate oral intake to maintain nutrition or hydration. We started IVF last night to support her hydration and electrolytes. IV support is a temporary measure.
- shared my concern that Jeanne has not been improving despite extensive attempts to address underlying drivers of delirium (as outlined in A/P below). Louis acknowledges he also hoped she would improve but has not been seeing that over the last few days.
- reviewed the complexity of her hospital stay and strain this had on her body, my medical opinion that even in best case, Jeanne is not likely to be as strong or functional as she was prior to this hospital stay.
- Louis continues to stress that Jeanne would want to be back on Bainbridge and visiting with friends if she were at the end of her life.
- Palliative Care team reviewed some potential options if Jeanne is not able to start eating and drinking enough to support physical recovery/improvement in her activity, including hospice in their current homestead situtation, possible inpatient hospice or SNF. Given their complex home situation and living on Bainbridge, will need to do more assessment of which of these options are available.

SCHEDULED MEDICATIONS:

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake for last 5 days c/b volume depletion.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/10 (3 doses) due to lack of other driver of delirium worsening mental status but without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel
- continue delirium precautions
- trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (restarted 2/9)

- Palliative Care consult following, will look into options for hospice support on Bainbridge w/SW team in case this is needed.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia and hypoK.**
- additional volume repletion with D5 1/2 NS plus 20Kcl x1 L; repleting her potassium slowly to avoid pain with higher dose IV potassium or risk losing PIV.

- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12 **- holding while unable to take PO**
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

- -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
-
- **#T2DM**
- BG in low 100s, discontinued SSI since not triggering insulin
-
- **#IV access**
- Difficult access, lost 2/2 but was replacement 2/7.
-
- **#Disposition planning**
- -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
- -son is working with Bainbridge locals on establishing community emergency response team housing.
- -SW following, see notes
- -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- **-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA**
- **-SNF referrals made, some acceptances, son interested in Ballard Care Center**
- **- considering hospice based on symptoms, monitoring.**
-
- **Inpatient Checklist:**
- Fluids/Electrolytes/Nutrition: Regular CC diet
- Prophylaxis: SQ heparin for DVT
- Lines/Drains/Airways: PIV
- Disposition: see above, considering SNF.
- Code Status: DNR/DNI
- Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
-
- I spent a total of 62 minutes for the patient's care on the date of the service.

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: acute limb ischemia s/p L AKA, delirium, malnutrition, GOC, support, palliative care.

INTERVAL HISTORY:
-IV placed last night and Jeanne receive IV fluids with potassium.

Dr. Hunt and the palliative care team (myself, Beth Chance MSW, Laura Katers PA) met bedside with Jeanne and her son Louis. Jeanne was unable to meaningfully participate in today's discussion.

Louis shared that Jeanne has been telling him that she wants to go home. She wants to see her best friend Lou. Louis shared that Jeanne has not had improvement in her eating or drinking. Dr. Hunt confirmed this and shared that she has had to start artificial hydration. This is a temporary measure that we can to to support her and see if she improves but cannot be done long term. Louis expressed understanding. He said that he told Jeanne that if she does not start eating she will die. Dr. Hunt agreed wit this assessment. Discussed that without adequate hydration, Jeanne will not be able to maintain.

We discussed continuing IV fluids for a few days and seeing how Jeanne does. If she begins to improve, then a best case scenario is that she improves enough to sustain herself and can go to a SNF for short term rehab. If she does not improve, then we would shift our focus to end of life care and do hospice. Louis is familiar with hospice. Based on what Louis shared with our team yesterday and what he is saying today, it is clear that it is important for Jeanne to be able to be home if possible for EOL care. Louis was in agreement with this. We asked if home means just Bainbridge or if it specifically means their homestead. Louis was open to both options. If those did not work, then Louis said that hospice could be done in Seattle at a facility.
We agreed to follow up with Louis later in the week to see how things are progressing with Jeanne's oral intake.

PHYSICAL EXAM:
BP 131/78 (Patient Position: Lying) | Pulse 72 | Temp 36.4 °C (Temporal) | Resp 18 | Ht 5' (1.524 m) | Wt 45.5 kg (100 lb 5 oz) | SpO2 95% | BMI 19.59 kg/m²
Jeanne was propped up in bed, intermittently had her eyes open, mouth open with tongue protruding, tongue try, Jeanne intermittently cried out during our visit.

IMPRESSION: Jeanne has had ongoing poor intake and now has dehydration and malnutrition. Her son Louis appreciates that if her intake does not improve she will continue to decline and will be at end of life. He is in agreement with a trial of IV fluids to see if Jeanne improves and can start taking PO on her own. If she does not improve in the coming days, then he is open to exploring hospice as a possibility.

RECOMMENDATIONS:
-Agree with trial of IV fluids to see if Jeanne has any clinical improvement. Will re-evaluate later this week.
-Will coordinate with social work the possibility of looking into hospice options on Bainbridge (home hospice and hospice at a facility).
-Palliative care will continue to follow for ongoing support and GOC.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 75 minutes for the patient's care on the date of the service.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Hospital Day : 34
Overnight RN reports reviewed

Per son patient had PO intake
mIVF d/c at 0400
Bedside discussion today :
Patient was coughing on at arrival

Son reports that patient had Oatmeal and one full bottle of Ensure
We discussed aspiration , son informs that he is advising her to breath with sound and cough
Son enquires about prosthesis and transfer to HMC for the same
Discussed patient's hypernatremia, and current nutritional status
We discussed concern with hypernatremia,
Patient lost another PIV and order placed for PICC - has no veins

SCHEDULED MEDICATIONS:
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- cyanocobalamin, 500 mcg, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- [Held By Provider] omeprazole, 20 mg, Daily empty stomach
- pantoprazole, 40 mg, Daily
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- saliva substitute, 15 mL, TID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q6h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4-8 mg, q8h PRN
- senna, 17.2 mg, BID PRN

Objective

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 13 of 17) (continued)

OBJECTIVE

T: 36.1 °C (02/12/25 0418) BP: 100/62 (02/12/25 0418) HR: 70 (02/11/25 1638)

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake for last 5 days c/b volume depletion.

Below plan is based on the note by Dr. Hunt dated 2/11/25with updates made to reflect changes to the medical decision making and plan today.
Delirium
#Hypernatremia
#Hypkalemia

#Hypernatremia
Initiate D5W 50 ml/hr
Na Q 6 hrs

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/10 (3 doses) due to lack of other driver of delirium worsening mental status but without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel
- continue delirium precautions
- trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (restarted 2/9)

- Palliative Care consult following, will look into options for hospice support on Bainbridge w/SW team in case this is needed.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia and hypoK.**
- additional volume repletion with D5 1/2 NS plus 20Kcl x1 L; repleting her potassium slowly to avoid pain with higher dose IV potassium or risk losing PIV.
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12 **- holding while unable to take PO**
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily

Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.

- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in

uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):
1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#T2DM
BG in low 100s, discontinued SSI since not triggering insulin

#IV access
Difficult access, lost 2/2 but was replacement 2/7.

#Disposition planning
-son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
-son is working with Bainbridge locals on establishing community emergency response team housing.
-SW following, see notes
-she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
-SNF referrals made, some acceptances, son interested in Ballard Care Center
- considering hospice based on symptoms, monitoring.

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV
Disposition: see above, considering SNF.

23. Code Status: DNR/DNI
24. Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
25.
26. I spent a total of 62 minutes for the patient's care on the date of the service.
27.

Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Hospital Day : 35
Overnight RN reports reviewed

Per son patient had PO intake

Bedside discussion today :
Patient is much more awake and oriented today she was able to participate in some conversation with cues on white board
-1 asked how she was doing - shrugged and smiled
-2.Asked if she was in pain - nodded no
-3 discussed about IV access, asked her if we lose the pIV what she would want - wrote plan options of CVC vs Comfort, patient initially said " let go" then shrugged and pointed to son and gestured to do as per him
Discussed with son - informed that a Central line was not recommended in patient's situation and advocated against
Son is very optimistic, shared that the line will last
However if it falls he will take her home
We talked about patients PO intake, discussed that even though patient is not coughing she could be aspirating
Son reports that patient had Oatmeal and one full bottle of Ensure

SCHEDULED MEDICATIONS:
- aspirin, 81 mg, Daily
- atorvastatin, 10 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- cholecalciferol, 2,000 units, Daily
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- [Held By Provider] omeprazole, 20 mg, Daily empty stomach
- pantoprazole, 40 mg, Daily
- polyethylene glycol 3350, 17 g, Daily
- prenatal multivitamin iron-folic acid, 1 tablet, Daily
- saliva substitute, 15 mL, TID
- thiamine mononitrate, 100 mg, Daily
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:

- acetaminophen, 650 mg, q4h PRN
- [Held By Provider] acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- nalbuphine, 2.6 mg, q6h PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4-8 mg, q8h PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake for last 5 days c/b volume depletion.

#Hypernatremia-resolved
Since patient continues to have poor PO intake she remains at risk for Hypernatremia, will continue low volume D5W and trend Na, space out checks to q 12 hrs
Continue D5W 50 ml/hr
Na Q 12 hrs

 # GOC
Multidisciplinary meeting with for GOC.
100 F HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14. Now on hospital day 35. Course c/b, Severe malnutrition and poor PO intake. Patient is high aspiration risk , son at bedside is very attentive and caring for patient, she has intermittent hypernatremia that's responding to free water via IVF. Patient has fragile veins and loses her PIV frequently, PICC line assessment revealed that her largest vein was 2.5 mm and not a candidate for PICC. Patient's nutritional requirements are not met with her current PO intake. Her mental status waxes and wanes, however when she was clear she has clearly expressed to several providers that she wishes to die in her home , and not in the hospital. Patient's son who is attentive and caring appears to be very optimistic. He has capacity to make decisions however its difficult to assess his insight into patients current needs and care needed.
In light of these issues a multidisciplinary team meeting was requested discus patient's care.
We discussed patient's stated goal of wanting to die at home
We discussed current challenges of patient's nutritional needs, her ability to participate in PT/OT , her healing including risk for infection, aspiration pneumonia. These constraints were independent of patient's age.
We discussed that her current PO intake is not sustainable with her precarious PIV situation. Even if the PIV lasts for a week or so as the son believes , patient's clinical course may not improve to meet her expressed goals
We discussed that patient has lived 100 years and we should respect her goal since the alternative was a risk of passing in the hospital
We discussed that based on current available information and clinical scenario, the team should work towards trying to get patient back to her home with as much care as can be provided.
Continue current care
Ok for PIV placement
No escalation to CVC placement
PT/OT for baseline evaluation
Work towards discharge to residence/placement next week
SW working on finding best options to assist with making this transition with goal for continued care as long as patient will need.
Appreciate multidisciplinary team members in making time for discussing patient's care and plans.

Below plan is based on the note by Dr. Hunt dated 2/11 /25 with updates made to reflect changes to the medical decision making and plan today.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/10 (3 doses) due to lack of other driver of delirium worsening mental status but without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.
Treatments/Interventions:
- ICU interventions: no improvement with seroquel
- continue delirium precautions
- trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (restarted 2/9)
- Palliative Care consult following, will look into options for hospice support on Bainbridge w/SW team in case this is needed.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia and hypoK.**
- additional volume repletion with D5 1/2 NS plus 20Kcl x1 L; repleting her potassium slowly to avoid pain with higher dose IV potassium or risk losing PIV.
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12 **- holding while unable to take PO**
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study

-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

28. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
29. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

-Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.

#T2DM
BG in low 100s, discontinued SSI since not triggering insulin

#IV access
Difficult access, lost 2/2 but was replacement 2/7.

#Disposition planning
-son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
-son is working with Bainbridge locals on establishing community emergency response team housing.
-SW following, see notes
-she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA
-SNF referrals made, some acceptances, son interested in Ballard Care Center
- considering hospice based on symptoms, monitoring.

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: Regular CC diet
Prophylaxis: SQ heparin for DVT
Lines/Drains/Airways: PIV
Disposition: see above, considering SNF.
Code Status: DNR/DNI
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

I spent a total of 90 minutes for the patient's care on the date of the service.

Palliative Care Service: Follow-up

Palliative care social worker attended multidisciplinary care meeting regarding next steps for Jeanne. Coordinated with multiple providers and service social worker to consider paths forward.

Please see palliative care physician Katie Schlenker's note for details and summary of this meeting.

CONTACTS:
Extended Emergency Contact Information
Primary Emergency Contact: Hoffmann Alloin,Louis Charles
Address: 321 High School Road NE
STE D3 PMB 292
Bainbridge Island, WA 98110 UNITED STATES
Home Phone: 206-780-6885
Mobile Phone: 206-780-6885
Relation: Son
Primary Contact Role: Medical POA
No emergency contact information on file.

Health Care Agent: Hoffmann Alloin,Louis Charles - Son - 206-780-6885

POLST: Received

Thank you for asking the Palliative Care team to be involved. Please page the team via the paging operator with any specific questions or concerns.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

Clinical Notes (group 13 of 17) (continued)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Palliative Care Consult

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs.

F/u message left w/ Ballard Care Center (253-302-9500) re: status of insurance auth.

MSW received VM from APS investigator Eric Cook (206-437-3675) after visiting w/ pt and son Louis in hospital. F/u call placed, provided update on pt status. MSW to follow up w/ Eric when d/c plan more clear.

MSW participated in interdisciplinary meeting for care planning. Per Palliative care team, son Louis is more open to hospice. MSW placed hospice referrals for Bainbridge Island per recommendation of leadership to explore available options.

Return call from Ballard Care Center admissions (253-302-9500), insurance auth still pending. Confirmed they can also accept pt under Medicaid coverage if needed.

PLAN or OUTCOME:
F/u re: insurance auth; transportation

Physical Therapy Treatment

Jeanne Leonie Hoffman
U8170135

2/13/2025
Duration of session: 40 Minutes

Subjective
Patient Report/Self-Assessment: Opened eyes and agreeable to PT for bed exercises
Patient Stated Goal(s): son's goal is for her to be home with him taking care of her

Home Living
Home Living Comments: Jeanne and her son were evicted from their apartment in Oct 2024 and was living in a hotel until Dec 2024. They now live in a tent on Bainbridge Island
Type of Home: Homeless
Lives With: Son
Lives with Comments: Lives in tent with flooring and heating
Assistance Available at Home : 24 hour assistance
Mobility Equipment Owned: Front wheeled walker, Other (Transport chair)

Functional Level:

Interventions:
Therex: Supine LE therex with son with written communication to the patient via a white board with extra time needed for this R HS and HC stretch 3 times 30 seconds issued written handouts
Theract:
Balance/Neuro Re-ed:
Gait Training:

ASSESSMENT/PLAN

Jeanne was willing to do PT but extra time was needed for communication and for her son's questions and concerns. She tolerated in bed LE exercises and stretches with written handouts given to her son and ques via a white dry erase communication board to the patient. Her son deferred transfer training for now due to concerns about her R UE IV and not wanting it to dislodge. Will continue to follow and progress as able.

Barriers to Discharge: Currently dependent for all cares, pt family does not have proper training/equipment to manage her care at home at this time

Discharge Equipment: TBD, unclear discharge disposition

Goals:
Goal: Bed mobility, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 02/20/25
Goal Status: Progressing
Goal: Transfer with AD, Contact guard assist (touching/steadying assistance)
Estimated Completion Date: 02/20/25
Goal Status: Not Progressing
Goal: Sit unsupported for
Estimated Completion Date: 02/20/25
Goal Status: Not Progressing
Goal: Pt will be able to tolerate sitting in her w/c for > 30 minutes
Estimated Completion Date: 02/20/25
Goal Status: Progressing

Goal: Patient to need only a little bit of assist from her son for her home exercise program
Estimated Completion Date: 02/20/25
Goal Status: Progressing

PT Plan of Care:
Treatment/Interventions: Therapeutic exercise, Therapeutic functional activities
PT Plan: Skilled PT
PT Dosage: 2-3x/week
Plan for Next Session: postural control, caregiver training, therex PROM, Stump shrinker when ready.

Other Recommendations:
Recommendation for further PT: Will need follow up PT at next level of care
PT Daily Recommendations: Sling to chair 3 X day. Allow oppotunities for L hip to stretch into extension in supine to limit contracture risk.

Progress Notes

Schlenker, Kathryn Ann Vogelsang, DO at 2/13/2025 2249

PALLIATIVE CARE SERVICE: FOLLOW UP--Non Face to Face Visit

ID/CC: acute limb ischemia s/p L AKA, delirium, malnutrition with electrolyte abdnormalities, GOC, support, palliative care.

INTERVAL HISTORY:
-Discussed Jeanne's care with Dr. Pilllai. Jeanne lost her IV yesterday. Was seen by PICC team but is not a candidate for PICC. Had new PIV placed but there is concern it may not last long.
-Dr. Pillai shared that Jeanne was more alert today. She expressed ambivolence about how to proceed if her PIV were to fall out. She discussed in detail with son/DPOA Louis and he ultimately decided that his mom would not want aggressive measures such as a central line and if her IV came out and not be replaced, then he would want to take her home.

I participated in a multidisciplinary meeting to discuss Jeanne's care.
We Jeanne's case and her current medical situation.
Discussed that Jeanne has been declining, not eating or drinking. Sodium is improved with IVF but this is not a long term therapy and if she cannot drink and eat on her own she will be at end of life soon.
Reviewed prior conversations we have had with Louis regarding EOL preferences.
Discussed plan to move forward with hospice referrals to best honor Jeanne and Louis' wishes for her to be home at EOL. Will do our best to support Jeanne in improving but seems unlikely that she will.
Would be ideal if we could have hospice in place on Bainbridge (either at their homestead or in a facility). However, if Jeanne looses her IV and Louis expresses a desire to take her home without hospice support in place, we would all be in support of this. Louis has cared for Jeanne for years and she has made clear to her medical providers that she trusts him and looks to him to support her with decisions.
Made plans for medicine and palliative care teams to round together tomorrow to further discuss plans for home with Louis.

I spent a total of 69 minutes of non-face to face time for the patient's care associated with the visit dated 2/11/2025.

Details of time spent:
Discussed case with Dr. Pillai from 12:55-12:59 and 1:02-1:05.
Participated in multidisciplinary meeting via zoom from 2:30-3:30.

Electronically signed by Schlenker, Kathryn Ann Vogelsang, DO at 2/13/2025 11:27 PM

Knowling, Molly Christine, RD at 2/14/2025 1112

Inpatient Follow Up Nutrition Assessment

PI: 100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Recommendations/Interventions:
ORAL NUTRITION:
- Diet per SLP /MD currently Level 5 Minced and Moist and Thin Liquids
- Offer supplements PRN if Pt asks - Ensure Plus and Thrive Gelato
- appreciate nursing documentation of %meals consumed

VITAMINS/SUPPLEMENTS:
- OK to d/c MVI, cholecalciferol, thiamine

Nutrition support:
- Not w/in GOC

Subjective

INTERIM:
- TF not within GOC
- Plan to d/c pt home/placement
- Pt refusing PO intake

Current Nutrition Assessment:
FEN: Minimal PO intake. Sips of ensure, bites of oatmeal yesterday
GI: dysphagia and likely aspirating w/ PO intake - SLP following . Daily BM
Edema/Fluid: None
Weight: Steadily trending down for past ~ 3 weeks
Wounds Present: Yes, multiple. See wound care sheet

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Active Diet Order: Yes
Diet: General
Dysphagia Modification: 5-Minced and Moist and 0-Thin Liquids

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan
Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
02/13/25 1539	45.6 kg (100 lb 8.5 oz)
02/11/25 1138	45.5 kg (100 lb 5 oz)
02/10/25 1600	47.4 kg (104 lb 8 oz)
02/09/25 0754	46.6 kg (102 lb 11.8 oz)

Current Body mass index is 19.63 kg/m².

Estimated Nutrition Needs
Using lowest wt, 43.7 kg
Energy: 1092-1311 kcal (25-30 kcal/kg)
Protein: 56-66 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing
Inadequate oral intake related to dysphagia and dry mouth as evidenced by difficulty swallowing solid foods

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Severe malnutrition present on admission

Interventions:
Coordination of Care:
Chart reviewed.
Sent secure message to APP

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.

To support anabolism.

Language Support:
No interpreter needed (patient not a participant in teaching)

Plan / Monitoring and Evaluation:
Monitor oral intake and tolerance.
Monitor nutrition lab trends, weight trends.

Nutrition following
See treatment team for RD contact

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Discharge planning;Hospice Referral;Care Coordination

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Pt accepted at Ballard Care Center, insurance auth pending. Ballard Care Center can also accept pt under Medicaid benefit if needed.

F/u w/ Ballard Care Center; insurance auth still pending.

Per AIDA, updates from the following three hospice agencies on Bainbridge:
- Envision Hospice (360-350-4875); will only accept pt if pt is discharged to a facility.
- Franciscan Hospice (Julie, 253-209-2554); per Julie w/ intake, they can accept unhoused pts but will need a) a safe, secure mailing address for supplies to be delivered b) a place for safe storage of controlled substances c) an address/location for services.

MSW met w/ pt and son Louis at bedside; pt alert and responded to greeting at entry but unable to meaningfully participate in conversation. MSW spoke at length w/ Louis. Provided update on status of pending insurance auth for Ballard Care Center. Louis discussed his current focus on resolving pt's medical issues, but that his "plan A" would be rehab and "plan B" would be returning to Bainbridge with pt if rehab is denied. Louis provided additional information on his dwelling set-up. Louis states he receives assistance from the Bainbridge CERT (Community Emergency Response Team) volunteer organization, and safety support from the Bainbridge Fire and Police Departments. He would need to re-set up the dwelling in order to prepare for discharge if the plan were to return to Bainbridge. Louis confirmed the dwelling is wheelchair accessible, and heat is provided from a propane camp stove with a hot water tank. He would have access to electricity via solar panels. When asked if SW should coordinate with the BIFD, Louis stated it wasn't necessary, as he would reach out to them. When asked about transportation, Louis states he "has a wheelchair van company" and he was able to bring pt in on admission. When asked specifically about the plan for transportation at discharge, Louis outlined a plan to travel by public transit and ferry. MSW ended conversation with agreeing to follow up with Louis after the weekend and holiday.

Please page weekend SW team for any needs over weekend/holiday: 206-645-0792.

PLAN or OUTCOME:
F/u re: insurance auth; transportation

Illness Severity
Stable.

Patient Summary
100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart
block requiring temporary TVP, now s/p PPM 1/13.

1500-2300: Difficult to determine A&O status, patient hard of hearing and visually impaired. FLACC scale used for pain score. Patient screaming in pain at start of shift, once pain medication given patient calmed down. Pain management and reposition has helped to manage discomfort..
-Skin: wound dressing intact on left BLE. Changed x2.
-GI/GU: Minimal PO intake. High aspiration risk, 1:1 Supervision done and aspiration precautions followed. +flatus. +small incontinent BM. Difficult to determine UOP due to incontinence and patient removing purewick.
-Mobility: 2PA for q2turns.

SUBJECTIVE

INTERVAL HISTORY:
Hospital Day : 37
Overnight RN reports reviewed

Per son patient had PO intake

Bedside discussion today :

Seen seated in the family room with son
Enjpying the view
She greets me with a smile
Convo on white board " how are you"
Responds - I am doing great - she has dysarthria , but better and some words are clear
Asks me " how are you doing"
Then points outside and says " its a good day"- it was

But after that she was saying things me or Louis couldn't understand, she smiled intermittently

Discussed with Louis that she was ready for discharge , I can discharge her today
He said his home wasn't ready
I asked about details
He says he has power with solar panel
He says that he can cook and he will do the cooking with propane but is getting a stove
He says that Firetruck can approach his home
He says the can fit in a hospital bed but would need to make arrangements - wouldn't be able to get it ready for a hospital bed today
I asked him if he had a picture and he said he had it on his laptop

We discussed that she is as good as we can get her
I have informed Louis that she is ready, he told me that he will take her home on Tuesday
He will work on making the home ready for her on Monday

SCHEDULED MEDICATIONS:
- aspirin, 81 mg, Daily
- buprenorphine, 1 patch, q7 days SCH
- guanFACINE, 0.5 mg, BID
- heparin, 5,000 units, q12h SCH
- lidocaine, 1 patch, q24h
- OLANZapine, 2.5 mg, q HS
- omeprazole, 20 mg, Daily empty stomach
- polyethylene glycol 3350, 17 g, Daily
- saliva substitute, 15 mL, TID
- timolol maleate, 1 drop, BID

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- acetaminophen, 500 mg, Daily PRN
- bisacodyl, 10 mg, Daily PRN
- lidocaine-prilocaine, 1 application, Once PRN
- melatonin, 3 mg, q HS PRN
- ondansetron, 4 mg, q8h PRN
- ondansetron, 4-8 mg, q8h PRN
- senna, 17.2 mg, BID PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake for last 5 days c/b volume depletion.

#Hypernatremia-resolved

 # GOC
Multidisciplinary meeting with for GOC.
100 F HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14. Now on hospital day 37. Course c/b, Severe malnutrition and poor PO intake. Patient is high aspiration risk , son at bedside is very attentive and caring for patient, she has intermittent hypernatremia that's responding to free water via IVF. Patient has fragile veins and loses her PIV frequently, PICC line assessment revealed that her largest vein was 2.5 mm and not a candidate for PICC. Patient's nutritional requirements are not met with her current PO intake. Her mental status waxes and wanes, however when she was clear she has clearly expressed to several providers that she wishes to die in her home , and not in the hospital. Patient's son who is attentive and caring appears to be very optimistic. He has capacity to make decisions however its difficult to assess his insight into patients current needs and care needed.
In light of these issues a multidisciplinary team meeting was requested discus patient's care.

We discussed patient's stated goal of wanting to die at home

We discussed current challenges of patient's nutritional needs, her ability to participate in PT/OT , her healing including risk for infection, aspiration pneumonia. These constraints were independent of patient's age.

We discussed that her current PO intake is not sustainable with her precarious PIV situation. Even if the PIV lasts for a week or so as the son believes , patient's clinical course may not improve to meet her expressed goals

We discussed that patient has lived 100 years and we should respect her goal since the alternative was a risk of passing in the hospital

We discussed that based on current available information and clinical scenario, the team should work towards trying to get patient back to her home with as much care as can be provided.

Continue current care
Ok for PIV placement
No escalation to CVC placement
PT/OT for baseline evaluation
Work towards discharge to residence/placement next week
SW working on finding best options to assist with making this transition with goal for continued care as long as patient will need.
Appreciate multidisciplinary team members in making time for discussing patient's care and plans.

Below plan is based on the note by Dr. Hunt dated 2/11 /25 with updates made to reflect changes to the medical decision making and plan today.

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:

- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/10 (3 doses) due to lack of other driver of delirium worsening mental status but without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.

Treatments/Interventions:

- ICU interventions: no improvement with seroquel
- continue delirium precautions
- trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (restarted 2/9)

- Palliative Care consult following, will look into options for hospice support on Bainbridge w/SW team in case this is needed.

#Aspiration risk, ongoing
#malnutrition, protein-calorie, worsening since admission
SLP has been following & coordinating with son. Had a risk:benefit discussion, explained the patient will always be an aspiration risk. TF are not

within GOC and son understands the challenge of her nutrition status in setting of delirium and aspiration risk. He acknowledges the aspiration risk and would like to continue PO nutrition with strict aspiration precautions. PO intake has been overall low since admission with contributors including delirium and need for 1:1 feeding, poor appetite. Repeat discussion of possible NG and TF on 2/6, risks outweigh benefits. To support wound healing she has been supplemented with zinc x14 days, ascorbic acid 500 mg BID x 14 days, high-dose thiamine (then maintenance).
- continues on 1:1 feeding with minced diet with thin liquids and strict aspiration precautions; son has been feeding her.
- prior intermittent starvation ketosis, **monitoring with BMP increased to daily for hypernatremia and hypoK.**
- additional volume repletion with D5 1/2 NS plus 20Kcl x1 L; repleting her potassium slowly to avoid pain with higher dose IV potassium or risk losing PIV.
- continue vitamin supplements: Vitamin D 2000IU daily, daily maintenance thiamine, prenatal MVI, vitamin B12 **- holding while unable to take PO**
- dry mouth has been a significant concern for son, now improving: frequent oral care 5-6x per day. Oral swab and suction; suction toothbrush/toothette

#Acute pain 2/2 recent L above knee amputation
#new back pain 2/7, presumed MSK related to sling transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
- APAP Q8H
-Buprenorphine patch 5mcg q7 days

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly (next anticipated visit 2/10/2025)**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up
- Continuing on ASA 81 mg daily, atorvastatin 10 mg daily
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- Plan to consult P&O once staples are out, for trans femoral shrinker sock.
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#bilateral pleural effusions
Present since admission with some increase from mild on 1/9 to moderate on 1/27 and stable since then. Concurrent presence of pulmonary edema indicates extracellular volume overload as likely cause. While her BNP 2/4 was elevated, her cardiac function appeared normal on 1/10 (albeit while bradycardic). Her albumin has been downtrending so she may have third spacing related to low protein and malnutrition. Currently she does not have respiratory symptoms (SOB or hypoxia). In this setting I think direct intervention (either diuresis or thoracentesis) would be more harmful than beneficial; I reviewed this with her son on 2/4 and he was in agreement. Overall improving her nutrition (and subsequently her albumin) may help, see nutrition section above.

#Mild anion gap metabolic acidosis, intermittent
-VBG with normal pH and normal lactic acid
-beta hydroxybutyrate elevated
-suspect was 2/2 starvation ketosis
-continue working on PO diet

#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
-continue to monitor

#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 14 of 17) (continued)

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
Noted to be bradycardic to the 20-30's post-operatively, asymptomatic and hemodynamically stable. Became symptomatically bradycardic on 1/10 despite dopamine gtt and atropine pushes, taken to cath lab for TVP placement with interventional cardiology. PPM placement on 1/13. Paced at 70bpm, hemodynamically stable off pressors.
-Added to EP follow up list and will be called to schedule an appointment.
Device care instructions:
- May shower, gently clean wound with soap and water without scrubbing; do not soak/immerse until incision is **fully** healed
- Wound check clinic in 7-14 days. (Due 1/20-1/27)
- Activity restriction (for 30 days after implantation- 2/13):

1. No pushing, pulling, straining, twisting, or sudden jerking motions with the arms or upper body.
2. For the ipsilateral arm: no lifting > 10 lbs, no lifting the elbow above shoulder level or raising the arm above head, and no placing the arm behind the back.

- -Full device care instructions to be provided to the patient by a Cardiac Electrophysiology team provider prior to discharge.
- **#T2DM**
- BG in low 100s, discontinued SSI since not triggering insulin
- **#IV access**
- Difficult access, lost 2/2 but was replacement 2/7.
- **#Disposition planning**
- -son and she are currently unhoused, living in a temporary plastic tent/house space on Bainbridge Island
- -son is working with Bainbridge locals on establishing community emergency response team housing.
- -SW following, see notes
- -she has designated Louis as her decision maker and very clearly stated her DC plans are up to him
- **-patient's son has tentatively agreed to a short SNF stay to allow his mom to recover from the AKA**
- **-SNF referrals made, some acceptances, son interested in Ballard Care Center**
- **- considering hospice based on symptoms, monitoring.**
- **Inpatient Checklist:**
- Fluids/Electrolytes/Nutrition: Regular CC diet
- Prophylaxis: SQ heparin for DVT
- Lines/Drains/Airways: PIV
- Disposition: see above, considering SNF.
- Code Status: DNR/DNI
- Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885
- I spent a total of 90 minutes for the patient's care on the date of the service.

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Ready for transfer to acute care as of 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
Hospital Day : 38

Overnight RN reports reviewed
RRT was called overnight for aspiration
Patient with Acute hypoxic Respiratory failure 2/2 aspiration event

This morning met with Louis and Jeanne at bedside
Initially Jeanne was able to open eyes and make eye contact
She has significantly declined since yesterday
She is tachypneic with a mask, saturations vary 88-93 mostly in the high 80's
She attempts to remove the mask , but is too weak

Bedside discussion today :

Louis and I discussed about plans and how to go forward
I informed Louis that patient is very close to end of life, we have tried everything
Louis understands this
I asked if he can take her home today if we make her comfortable
He said it would be impossible for him to do anything since its Sunday

I shared with Louis that Ms.Hoffman may pass today and its difficult to anticipate that she will sustain till Tuesday,
I shared that if transportation to his house was the issue then we could arrange for transportation
Louis shared that he did not want to take her in an ambulance since that would be in the bottom, he wanted to take her in a wheel chair so she

could say bye to the surroundings and see the people
He would like her to visit their local star bucks and some local stores that she has enjoyed and wanted them to say bye to her

While I was in the room Ms Hoffman had another bout of cough, and I suctioned her , she had thick copious secretions moderate volume
She continues to have increased work of breathing and using all her accessory muscles

SCHEDULED MEDICATIONS:

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake for last 5 days c/b volume depletion.

#Acute Encephalopathy
#Acute respiratory failure with hypoxia
#Aspiration pneumonitis /pneumonia
#Severe malnutrition
 # GOC
Patient post acute aspiration having difficulty regaining respiratory status despite recurrent suctioning and ongoing copious secretions and hypoxia
Patient has very poor peripheral veins and yesterday the vascular team had called and shared that her PIV is too frail to try
Louis and I discussed regarding options.

-It is a very ambitious expectation , but plan for Louis to take Jeanne home no earlier than Tuesday according to him
-He is aware that she could pass at any time and it could be as early as today
-recommended NPO , comfort focused care
-per request from Louis to try and see if we can place PIV and try to keep patient till Tue -
-Addendum - despite sever tries form our vascular team experts a peripheral access was unsuccessful
Addendum PM - I revisited bedside , Louis was sharing that the tourniquet wasn't tight enough for PIV, requested to try again with him tying the the tourniquet, I politely declined and informed that we trust our experts and they were qualified for safe and effective practice
He enquired about central line and stated she had a temp PPM and she did well with vein in the neck, he also shared that she does better on that rather than PIV
I am unsure if a CVC is going to really change the outcome , however Louis has currently altered his goal to just being able to take her to her home on Tuesday , based on our ethics meeting CVC wasn't requested Louis wants to try and pursue finding PIV
I asked Louis if we could start Jeanne on Comfort focussed care with prn agents such as morphine, he declined
During my PM visit Jeanne was in tachypnea , continued have increased wob, but opened her eyes looked at me and raised her right hand and waved , she was weak and went on to keep eyes closed and didn't participate in further discussion
GOC : based on discussion Continue current care

#Acute pain 2/2 recent L above knee amputation
#New Back Pain 2/7, Presumed MSK Related To Sling Transfer
APS signed off on 1/18 given significant improvement in pain. Will engaged PRN. Note she initially had difficult to control pain which improved with buprenorphine patch and was able to DC PRN nalbuphine. Still having some pain on mobilization of stump but otherwise seems pretty comfortable. There was c/f withdrawal/pain when patch was accidentally stopped/fell off MAR on 1/24. s/p Ropivacaine
APAP Q8H-rectal
Buprenorphine patch 5mcg q7 days

#Delirium
Intermittent hypoactive & hyperactive with agitation, seemingly worse at night and likely precipitated by pain with prior slowly improving wax/wane trend but now appears to be worsening since 2/7. Review of contributors, work-up and interventions below; I am concerned that her progressively worsening nutritional status is both causing worsening delirium and exacerbated by it (as she is not alert enough to eat and drink safely) in a cycle that is difficult to break. Her labs show hypernatremia and hypokalemia consistent with poor intake; unable to obtain a new PIV after she lost hers on 2/9 evening, I think a central line is high risk and do not recommend this.
Regarding potential contributors to ongoing delirium and related assessments:
- hearing impairment: talk directly to patient or write on white board
- possible aspiration pneumonitis is contributing given cough but no worsening or WBC to indicate infection that requires treatment, see aspiration precautions below
- Pain 2/2 recent amputation, improving; tried nalbuphine 2/7-2/8 but she was more sleepy and did not appear to have clearing mental status; **at rest she denies pain.**
- monitor for infection: 2/4 urine culture w/<100k pan-sensitive E. Coli; no referrable symptoms (suprapubic tender, fever, leukocytosis) trial of treatment with ceftriaxone 2/8-2/10 (3 doses) due to lack of other driver of delirium worsening mental status but without any clear improvement.
- stools frequent but soft, not liquid, no pain on abd palpation, no elevated WBC.

Treatments/Interventions:
- ICU interventions: no improvement with seroquel
- continue delirium precautions
- trial of restarting guanfacine at last/lowest dose 0.5mg PO BID for agitation (restarted 2/9)

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
Seen by vascular surgery weekly, last 2/10 with well approximated incision.
- No activity restrictions from AKA standpoint for PT/OT. Fall risk.
- Dressing management in orders.Betadine paint, dry dressing, ACE wrap for compression. Nursing doing this daily.
- **Staples out after 2/21/25, vascular will check in weekly**
- NWB LLE per Vascular Surgery
- Dressing management per Vascular; will need outpatient follow-up

D/c ASA, Atorva 2/2 severe aspiration and respiratory failure with severe encephalopathy
Per PMR
- nutrition and proper wound care in the recovery of the residual limb.
- Agree with physical therapy consult to work on functional transfer, therapeutic exercise, appropriate wheelchair fit recommendations and other equipment needs such as shower bench, commode chair.
- **Plan to consult P&O once staples are out, for trans femoral shrinker sock.**
- Recommend supine left lower extremity hip extension exercises, as tolerated, to prevent left hip flexion contractures.
- Consider mirror therapy or visualization techniques to help with phantom limb sensation (ie feeling that the left foot or ankle are in uncomfortable positions).
- **Ensure the patient has follow-up in rehab amputee clinic after discharge ~2 weeks or next available (may be available at Harborview Medical Center limb loss clinic). --> Will need to change this**

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
#Bilateral Pleural Effusions
#Hypernatremia-resolved
#Aspiration Risk, Ongoing
#Malnutrition, Protein-Calorie, Worsening Since Admission
#Mild anion gap metabolic acidosis, intermittent suspect was 2/2 starvation ketosis
#Right lower extremity swelling, stable
-Swelling noted 1/21 w/cool temperature. Pulses easily palpable. Very likely to have PAD in RLE. No superficial infection, ulcerations, or other ischemic changes noted
-1/21 venous doppler RLE w/o clot but note it was a limited study
#Mild normocytic anemia, stable
-thought 2/2 chronic disease and recent surgery, no changes while inpatient
#T2DM
BG in low 100s, discontinued SSI since not triggering insulin

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: npo
Prophylaxis:
Lines/Drains/Airways: PIV
Disposition: see above, considering SNF.

#Acute Encephalopathy
#Acute respiratory failure with hypoxia
#Aspiration pneumonitis /pneumonia
#Severe malnutrition
#Acute pain 2/2 recent L above knee amputation
#New Back Pain 2/7, Presumed MSK Related To Sling Transfer
 # GOC
Patient post acute aspiration having difficulty regaining respiratory status despite recurrent suctioning and ongoing copious secretions and hypoxia
Patient has very poor peripheral veins and yesterday the vascular team had called and shared that her PIV is too frail to try anymore
- Several discussions with Louis at bedside
- discussed pain management initially Louse did not want to use morphine since patient ws too sleepy , subsequently agreed
-order placed for oral morphine solution since the morphine concentrate not on formulary
-RN requested rectal morphine
- order placed for rectal morphine
-Pharmacy requested to discontinue one of the orders , hence oral morphine discontinued
-Louis was informed that patient may pass soon
-he wanted to take patient home
-I called ED SW per rec from CN , who informed that it was too complicated and they couldn't help
-I paged on call SW without response x 2 after 8:30
- I gave my phone number to the ED SW who informed that the main SW will call
-Called the main SW - pls see note on file , patient with high O2 , cannot be transported by road
-Called Franciscan Hospice to see if there was any progress , went to VM that they work Mon-Fri 8-1
-Louis informed me that he would like a PIV placed, when I shared that it was tried by experts he asked if he could help with tourniquet, I informed him that that wasn't an option since we have certified experts , louis was ok
-he asked if central line was an option , I informed that based on our multidisciplinary discussion that was considered not within GOC for patient

-Current plan: continue attempt for PIV if we have anyone that can place it, rectal morphine prn, NPO, SW consult to help with transportation

Koschik, Hannah Leigh at 2/17/2025 0959

Weekend Social Work:

Referral: Weekend social work team contacted through the triage pager from Dr. Pillai. SW support requested for exploring possibility of getting patient home for end of life.

Data:
Per chart review, patient is Jeanne Leonie Hoffman, 100 year old, female, admitted for Arterial occlusion [I70.90] Acute lower limb ischemia [I99.8].
Patient's home address is listed as: 321 HIGH SCHOOL RD NE
STE D3 PMB 292
BAINBRIDGE ISLAND WA 98110.
Payor Source: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO SNP / Product Type: Medicaid.

Intervention:
Weekend social worker reviewed chart and prior SW notes. Note from SW on 2/14 reports that plan is for rehab at a SNF, referrals were still pending at this time. Plan B was for patient to DC home to Bainbridge. In this case, patient's son, Luis, would need to re-set up the dwelling in order to prepare for discharge. Notes report that the dwelling is wheelchair accessible, and heat is provided from a propane camp stove with a hot water tank and electricity via solar panels. Per chart review, son is well connected with the local fire department and familiar with resources for cabulance rides.

Clinical Notes (group 14 of 17) (continued)

At this time, provider reports that patient is actively dying and likely will not make it over night. Dr. Pillai outlines goal of discharging home to pass at home. Discussed patient status and medical needs. Patient is currently on a heated high flow face mask, receiving 70L/min / 70% FiO2.

MSW confirmed with AMR that they are only able to provide up to 15L in transport.

MD aware that we are unable to support with transportation out of the hospital due to no transport options being able to accommodate for oxygen needs.

Dr. Pillai agreeable to reach out to holiday SW should other SW needs arise.

Hannah Koschik, MSW

Callahan, Hailey Michelle, RCP at 2/18/2025 1116

Son requested to speak with RT, had lengthy conversation expressing his concerns about his mothers condition. Requested RT to assess for NG tube and IV placement. RT stated this is not within my scope of practice and he should discuss this with the team during rounds. Patient's son stated he would like to take his mother to a different facility where they could place NG tube. Advised that HHFM is a barrier to transport and we can work towards transitioning to a different O2 device.

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care.

INTERVAL HISTORY:

Today Beth Chance PC SW and I met at Jeanne bedside with Dr. Pillai (Med Att), Allen Porter RN and Louis (Jeanne

son), to discuss Jeanne clinical status and care plan.

We all introduced ourselves Louis and Jeanne (although Jeanne was very limited in her ability to interact with us). Louis knew the rest of the team and I was a new provider for him.

When we entered the room, Jeanne was vocalizing in a way that appeared to me that she might be uncomfortable. Louis said first that she is not in pain, but rather just crying. That's her way of getting out some anxiety. I asked him how he knew she was not in pain, and he said well she is in pain due to stomach pain from not eating, and if we let her eat, she would not be in pain.

I asked him how he knew it was hunger pain and he said I've taken care of her for 35 years, so I know.

I expressed appreciation for all the care he has provided her over these decades and acknowledged he knows him mom well. We tried using the white board with simple words to assess her pain, and as best we would get she put her two fingers together when asked if her "leg hurt," suggesting it hurt a little.

With permission I pivoted the conversation to explore with Louis what he is hoping for his mom, as I had heard he had wanted to get home, but that was when she was doing a bit better. He said now that she is not eating, I'm worried she is starving. I shared it seems like you would really like to see how she responds to some artificial nutrition to see if she might improve to her previous baseline. He said yes, otherwise I would feel like I failed her.

I talked through the idea that artificial feeding and NGT can come with some risks including pain, increased agitation, sometimes a need for restraints due to pulling at the NGT and aspiration. And at the same time, we won't really know how she does unless it is tried if he would really like to see if she can improve with some feeding. He shared that she had always been OK with the idea of artificial feeding (of note, she has a POLST from 2018, and that document notes a preference for long term artificial nutrition).

We shared it can be tried as a temporary measure to see if it helps her improve to her previous baseline. I also shared if she pulls it out, we may need to rediscuss the idea of replacing. I also touched upon the topic that is she does not improve with artificial feeds we may not have a path to convert it to a PEG tube (longer term option) and then we may have to discuss different approaches to her care. He endorsed appreciating this fact and that he feels she would want him and us to try an NGT.

We then reviewed the need for a peripheral IV or possibly a central line. He was in support of either if needed and he felt she would not pull at a central line if it was needed.

I explored with him that I had been given report that he was asking about changing her code status. I reviewed with him that if she experienced a cardiac arrest that would likely mean her heart was weakened due to a general decline in her overall health, e.g., a weakened body. I shared that if we tried to reverse death with CPR, her heart would be in the same weakened body, and thus it would either likely not work or only temporarily work and then stop again. Therefore, I shared that based on our medical opinion we would not offer CPR. He said if he is at bedside he would like to try CPR and he knows she is frail so it would be "very gentle CPR like baby CPR." We all encouraged him not to do that and he did not otherwise disagree with our statement that we would not do CPR.

We also touched on the role of a ventilator and life support, and said in theory a ventilator could be beneficial if she got a PNA or something that was reversible and therefore if he wanted a trial of ventilator support could be offered. We noted that it is very likely if she were intubated that should would not be medically able to be removed from the ventilator, and he stated he is Ok with that risk and would think about what to do if she can't wean at that time.

The last thing we discussed was treating her symptoms, he feels she has more anxiety than pain, he felt the ativan is most helpful for her and endorsed supporting the use of ativan and if needed at times some morphine or hydromorphone.

We expressed appreciation for his willingness to talk with us, and he expressed appreciation for being willing to trial some artificial feeding.

PHYSICAL EXAM:
Vitals:

	02/18/25 1035
BP:	
Pulse:	74
Resp:	20
Temp:	
SpO2:	98%

Gen: Jeanne sitting in bed, minimally opens her eyes and will turn to people at times. Audibly moaning at times, and sometimes rubbing her leg.
HEENT: tongue dry with food specs present, lips dry
Resp: some increased work of breathing, Hiflo tent mask in place
Neuro: does not participate in conversation or track conversation, seems confused, agitated

Labs (*last 24 hours*):

Chemistries				CBC	LFT		Gases, other	
-	-	-	-	-	AST: -	ALT: -	-/-/-/- | -/-/-/-	
-	-	-		- >< -	AP: -	T bili: -	Lact (a): -	Lact (v): -
eGFR: -		Ca: -		-	Prot: -	Alb: -	Trop I: -	D-dimer: -
Mg: -		PO4: -		ANC: -			BNP: -	Anti-Xa: -
				ALC: -			INR: -	

IMPRESSION: Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. In the last 36 hours her ability to interact has decreased and her ability to take PO went from poor to not taking any. There was plan in the works to consider going home with hospice, but with this recent turn of events, her son wants a trial of artificial nutrition to see if she might improve to her baseline. It is also noteworthy to share that although going home with hospice was being discussed her son feels she could still live or another 5-10 years and therefore, his interest in hospice seemed mostly to come from it being a way to get her home and then he could work on getting her stronger.

Goals of care: DNR, intubation Ok. Otherwise he is interested in a trial of artificial nutrition and generally open to fairly intensive medical measures with the hope she might get stronger and improve.

RECOMMENDATIONS:
- Palliative care will continue to follow and engage in discussions with Louis, happy to co-round with primary team if helpful
- trial NGT with artificial feeding

1) generalized pain:
Continue Butrans 5mcg/hr TD q7days

If has an IV, can given morphine 0.5-1mg IV q3hrs prn for pain
If no IV, but has an NGT, can give Morphine 3mg NGT q3hrs prn
If no IV and NGT, could do oral morphine concentrate 3mg between gum and cheek q3hrs prn

2) agitation/anxiety:
Pt responded well to ativan, could change to
Ativan 0.25mg IV q6hrs prn (if we have an IV).
If not IV, can do ativan 0.25mg SQ q6hrs PRN

If has NGT, could switch IV/SQ to ativan 0.25mg NGT q6hrs prn.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 143 minutes for the patient's care on the date of the service.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Acute Encephalopathy
#Acute respiratory failure with hypoxia
#Aspiration pneumonitis /pneumonia
#Severe malnutrition
#Acute pain 2/2 recent L above knee amputation
#New Back Pain 2/7, Presumed MSK Related To Sling Transfer
 # GOC
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. Low suspicion for an ongoing pneumonia at this time. Pt without current IV access due to poor peripheral veins. Not a PICC or midline candidate either. There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her.
- Wean oxygen (now on room air)
- Pursuing NGT and tube feeds; hoping to place NGT under fluoro 2/20
- If unable to place 2/20, would pursue central line for electrolyte repletion and fluids
- DCS meeting completed 2/19
- Pain regimen hydromorphone 0.5 every 6 hours, morphine suppository 5 mg rectal every 6, buprenorphine 5 mcg/h patch
- Ativan 0.25mg IM q8h PRN agitation/anxiety
- Palliative care following, appreciate recs

#Abdominal pain, diffuse
CTAP without acute finding to explain her abdominal pain. Her distended gallbladder is likely related to prolonged NPO. If continues to have significant pain, will consider RUQUS to further assess.

#Hypokalemia
If unable to get NGT 2/20, will need to pursue central line as she has no other access options.

#PAD, c/b
#Acute limb ischemia

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care.

INTERVAL HISTORY:

Today we (Dr. Fancher-Dominguez, Beth Chance PC SW and I) met at Jeanne and Louis at Jeanne's bedside. Jeanne was not able to interact with the whiteboard, she was resting at times and other times quite restless and possibly in pain. She appears to possibly be holding her abdomen at times, but was not able to affirm if she was having abdominal pain. Louis shared he thinks if she is holding her belly its due to hunger pains.

Louis shared that he has appreciated the efforts to try to get an NGT placed, and he is hoping we might be able to do it today. We reviewed a plan to ask for consultant support for placement and by end of day a plan was being explored with interventional radiology.

Overall, Louis again reiterated how important he thinks getting nutrition will be. He also shared that at times since yesterday she has been more interactive with him but he could not get an answer from her about being hungry.

We discussed getting an abdominal CT and Louis was in support of this plan.

I also participated in a multidisciplinary meeting over the noon hour to discuss the patients plan of care and possible options for post-hospitalization care.

PHYSICAL EXAM:

Vitals:

	02/19/25 1551
BP:	**(!) 169/71**

IMAGING

Reviewed imaging and imaging reports

IMPRESSION: Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. Over the weekend, her ability to interact has decreased and her ability to take PO went from poor to not taking anything by mouth. There was plan in the works to consider going home with hospice, but with this recent turn of events, her son wants a trial of artificial nutrition to see if she might improve to her baseline. It is also noteworthy to share that although going home with hospice was being discussed her son feels she could still live or another 5-10 years and therefore, his interest in hospice seemed mostly to come from it being a way to get her home and then he could work on getting her stronger.

Goals of care: DNR, intubation Ok. Otherwise he is interested in a trial of artificial nutrition and generally open to fairly intensive medical measures with the hope she might get stronger and improve. Also of note the patient has a POLST from 2018 that she signed noting full code, full treatment, use antibiotics for life prolongation, and long term artificial nutrition. She also signed multiple power of attorney documents (under media in EHR) naming her son as her agent

for decision making.

RECOMMENDATIONS:
- Palliative care will continue to follow and engage in discussions with Louis, happy to co-round with primary team if helpful
- trial NGT with artificial feeding

1) generalized pain:
Continue Butrans 5mcg/hr TD q7days

If has an IV, can given morphine 0.5-1mg IV q3hrs prn for pain
If no IV, but has an NGT, can give Morphine 3mg NGT q3hrs prn
If no IV and NGT, could do oral morphine concentrate 3mg between gum and cheek q3hrs prn

2) agitation/anxiety:
Pt responded well to ativan, could change to
Ativan 0.25mg IV q6hrs prn (if we have an IV).
If not IV, can do ativan 0.25mg SQ q6hrs PRN

If has NGT, could switch IV/SQ to ativan 0.25mg NGT q6hrs prn.

3) advance care planning: per the patients POLST and multiple power of attorney documents she has expressed wishes to pursue longevity focused care and has named her son on many occasions as her agent. Early in the hospital course, she verbally reiterated her wish to allow her son to speak on her behalf if she cannot. He appears to be requesting care that aligns with her previously stated wishes.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 97 minutes for the patient's care on the date of the service.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube band feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her.
- Pursuing NGT and tube feeds; hoping to place NGT under fluoro 2/20
    - Will treat w/ ativan 0.5mg IM prior to procedure. Thanks to excellent coordination by her RN team, there will be several nurses available to accompany her to fluoro
- If unable to place 2/20, would pursue central line for electrolyte repletion and fluids
- DCS meeting completed 2/19
- Pain / anxiety treatment as outlined below

#Acute encephalopathy
Waxes and wanes -- hypoactive and hyperactive. She does have mild hypernatremia, but likely not to the degree that it is causing her altered mentation. Nutrition / hypovolemia could be contributing. Uncontrolled pain (though unclear where) could also be contributing. She is having small Bms and does not have evidence of significant stool burden on her CT, so constipation is less

likely a contributor. No new s/s of ongoing infection. She is not having focality to her symptoms to suggest a structural lesion or stroke.
- Attempting to obtain NGT to address her nutrition status as directed by her son who feels this is what she would want
- Delirium precautions
- Talk directly to patient / use white board due to hearing impairment
- Ongoing GOC discussions

#Acute respiratory failure with hypoxia -- resolved
#Aspiration pneumonitis -- resolved
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment.
- Monitor O2
- Strict NPO

#Chronic pain r/t prior L AKA
#Anxiety
- Pain regimen hydromorphone 0.5 every 6 hours, morphine suppository 5 mg rectal every 6, buprenorphine 5 mcg/h patch
- Ativan 0.25mg IM q8h PRN agitation/anxiety
- Palliative care following, appreciate recs

#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
At this time we are pursuing NGT placement as described above. If unable to place under fluoro, pursuing central line to treat hypovolemia and hypokalemia. However, this will be informative for ongoing goals of care conversation with Louis, as we will need to discuss next steps if fluoro NG fails.

#Hypokalemia
If unable to get NGT 2/20, then will plan for CVC w/ MICU assistance this afternoon 2/20.

#Abdominal pain, diffuse
CTAP without acute finding to explain her abdominal pain. Her distended gallbladder is likely related to prolonged NPO. If continues to have significant pain, will consider RUQUS to further assess. Seems improved 2/20.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- When access is obtained, consider resumption of ASA 81mg daily & atorvastatin

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
PPM functioning appropriately at this time.

#Bilateral Pleural Effusions, likely r/t poor nutrition status and third-spacing; TTE 1/10/25 with nrml LVEF but unable to assess diastolic function

#Mild normocytic anemia, stable

#T2DM - no current insulin requirements

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: NPO, pursuing NGT
Prophylaxis: Lovenox

Lines/Drains/Airways: None currently
Disposition: Acute care. Dispo ongoing conversation.
Code Status: DNR Intubation OK (No CPR)
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care.

INTERVAL HISTORY:

Today we (Dr. Fancher-Dominguez, Beth Chance PC SW, Lauren Wrisley, PC NP and I) met at Jeanne and Louis at Jeanne's bedside. Jeanne was resting initially, at times became restless. She was off O2.

Plan is to go down to fluoroscopy to attempt NGT placement and then start feeds, if NGT is placed.

Son was hoping this plan will workout.

We also reviewed that if the NGT is not able to be placed, she may need a central line for fluids, Louis was in support of this if needed.

Lastly we touched on the fact that if an NGT is placed and she is starting to show some improvement, but gains are slow, we may need to explore a SNF placement as we may have one that would accept her with an NGT. Louis said, if that is needed he would be OK with it in principle. Of course he would want to know the facility and review it before such a decision was made.

We shared the update from her CT and labs a well.

PHYSICAL EXAM:
Vitals:

	02/20/25 0859
BP:	**(!) 143/60**
Pulse:	81
Resp:	18
Temp:	36.4 °C
SpO2:	95%

Gen: Jeanne laying flat in bed, minimally opens her eyes and will turn to people at times. Audibly moaning at times, and sometimes rubbing her leg or abdomen
HEENT: tongue dry with food specs present, lips dry
Resp: breathing comfortable on room air
Neuro: does not participate in conversation or track conversation, seems confused, agitated

IMPRESSION: Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. Over the weekend, her ability to interact has decreased and her ability to take PO went from poor to not taking anything by mouth. There was plan in the works to consider going home with hospice, but with this recent turn of events, her son wants a trial of artificial nutrition to see if she might improve to her baseline. It is also noteworthy to share that although going home with hospice was being discussed her son feels she could still live or another 5-10 years and therefore, his interest in hospice seemed mostly to come from it being a way to get her home and then he could work on getting her stronger.

Goals of care: DNR, intubation Ok. Otherwise he is interested in a trial of artificial nutrition and generally open to fairly intensive medical measures with the hope she might get stronger and improve. Also of note the patient has a POLST from 2018 that she signed noting full code, full treatment, use antibiotics for life prolongation, and long term artificial nutrition. She also signed multiple power of attorney documents (under media in EHR) naming her son as her agent for decision making.

RECOMMENDATIONS:
- Palliative care will continue to follow and engage in discussions with Louis, happy to co-round with primary team if helpful
- trial NGT with artificial feeding

1) generalized pain:
Continue Butrans 5mcg/hr TD q7days

If has an IV, can given morphine 0.5-1mg IV q3hrs prn for pain
If no IV, but has an NGT, can give Morphine 3mg NGT q3hrs prn
If no IV and NGT, could do oral morphine concentrate 3mg between gum and cheek q3hrs prn

2) agitation/anxiety:
Pt responded well to ativan, could change to
Ativan 0.25mg IV q6hrs prn (if we have an IV).
If not IV, can do ativan 0.25mg SQ q6hrs PRN

If has NGT, could switch IV/SQ to ativan 0.25mg NGT q6hrs prn.

3) advance care planning: per the patient's POLST and multiple power of attorney documents she has expressed wishes to pursue longevity focused care and has named her son on many occasions as her agent. Early in the hospital course, she verbally reiterated her wish to allow her son to speak on her behalf if she cannot. He appears to be requesting care that aligns with her previously stated wishes.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 43 minutes for the patient's care on the date of the service.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Care Coordination;Consult with healthcare team/provider/community;Chart Review/Screening;Care/Family conference facilitated

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Ballard Care Center received auth for pt. Per MD update, team attempting to place NGT today. Update provided to Ballard Care Center re: possibility of NGT placement.

PLAN or OUTCOME:
F/u re: d/c plan, f/u w/ SNF; transportation

Inpatient Follow Up Nutrition Assessment

PI: 100YO w/ PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13.

Recommendations/Interventions:
Nutrition support:

- Holding per team. Pt with insufficient access att.
- If GOC is to d/c home or to SNF placement, PN support not indicated as would limit options.

LABS:
- significant risk of refeeding syndrome, consider potassium/magnesium/phos BID checks

VITAMINS/SUPPLEMENTS:
- **Start IV thiamine 100 mg daily until nutrition support plan/PO intake initiated**

Subjective

Interim:
- NGT placement under fluoro unsuccessful 2/20
- Unable to place CVC 2/20.
- GOC discussion 2/21. Plan to start PIV w/ MIVF in hopes that pt will improve enough to be alert and able to safely take PO by mouth
- Team holding on starting thiamine d/t tenuous IV access

Current Nutrition Assessment:
FEN: NPO d/t AMS, aspiration. Started D5 today.
GI: dysphagia. LBM 2/18
Edema/Fluid: Generalized
Weight: fluctuates w/ fluid shifts. Down 9% in last 5 days
Wounds Present: Yes, multiple wounds, see wound care sheet

Nutrition-Focused Physical Assessment:
Completed: Yes, Date: 1/10/25

Objective

Labs:

Active Diet Order: Yes
Diet: NPO

Nutrition Support: No

Admission Anthropometrics:
Weight: 45.5 kg (100 lb 6.4 oz)
Admit kg/m2

UBW: 125 lb per son 1/16
UBW%: 80%

Assessment/Plan

Current Anthropometrics:
Weight for the past 168 hrs:

	Weight
02/21/25 0749	45.7 kg (100 lb 12 oz)
02/17/25 1647	46.7 kg (102 lb 15.3 oz)
02/16/25 0937	50.1 kg (110 lb 7.2 oz)

Current Body mass index is 19.68 kg/m².

Estimated Nutrition Needs
Using lowest wt, 43.7 kg
Energy: 1092-1311 kcal (25-30 kcal/kg)
Protein: 56-66 gm daily (1.2-1.4 gm/kg)
Fluid: 1 ml/kcal or per MD goals for fluid/Na+ balance

Evaluation of Nutritional Status
Nutrition Diagnosis:
Increased nutrient needs related to L AKA and partial thickness wound as evidenced by calculated kcal/pro needs for wound healing
Inadequate oral intake related to dysphagia and dry mouth as evidenced by difficulty swallowing solid foods

Malnutrition Assessment: Severe malnutrition
Malnutrition Diagnosis:
Severe malnutrition present on admission

Interventions:
Coordination of Care:
Chart reviewed.
Discussed status, point of care/goals with physician.
Sent secure message to attending

Goals of Interventions:
To maintain nutritional status/weight.
To support healing/repletion.
To support anabolism.

Language Support:
No interpreter needed (patient not a participant in teaching)

Plan / Monitoring and Evaluation:
Follow nutrition support plan.
Monitor nutrition lab trends, weight trends.

Nutrition following
See treatment team for RD contact

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025

Code Status: DNR Intubation OK (No CPR)

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- VSS, NAEON
- Unable to get FT tube yesterday
- Unable to get CVC yesterday but RN able to get pIV this AM!
- Pt remains the same; intermittently moaning and restless
- Long GOC discussion with palliative care (Dr. Fausto, Lauren Wrisley PC NP), bedside RN (Julia), and Louis while in the presence of Jeanne
- We discussed that we have attempted multiple different ways and unable to get NGT due to inability for pt to cooperate and discomfort/agitation with NG placement
- Louis is hopeful that she will 'perk up' and be able to eat after getting a couple days of fluids
- He would like to pursue NG with endoscopic placement if she doesn't perk up
- We discussed that if we try this options and she does not improve (or worsens) then we would consider her to be at end of life due to inability to eat. We hope that she does improve.
- Louis expressed understanding.
- Please see pall care note from 2/21 for additional details

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- lidocaine, 1 patch, q24h
- saliva substitute, 15 mL, TID
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- dextrose 5% and sodium chloride 0.45% with KCl 20 mEq/L, 100 mL/hr, Continuous, Last Rate: 100 mL/hr (02/21/25 0944)

PRN MEDICATIONS:
- acetaminophen, 650 mg, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.5 mg, q3h PRN **OR** HYDROmorphone, 0.5 mg, q3h PRN
- ipratropium-albuterol, 3 mL, q4h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- LORazepam, 0.25 mg, q6h PRN **OR** LORazepam, 0.25 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN
- phenol, 1 spray, Q2 Hours PRN
- sodium chloride, 4 mL, q4h PRN
- white petrolatum, , TID PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube band feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
- Unable to place NGT under fluoro with minimal sedation 2/20
- Able to get pIV 2/21 and running D5 1/2 NS + Kcl @ 100cc/hr
- Repeat BMP, phos, mg 2/22 AM
- If no improvement in mentation with fluids, will have GI / anesthesia assess for endoscopic NGT placement
- If unable to have endoscopic placement or does not improve, would consider pt to be at end of life due to inability to not eat
- Please see pall care note from 2/21 (Dr. Fausto) for additional details
- Pain / anxiety treatment as outlined below

#Acute encephalopathy
Waxes and wanes -- hypoactive and hyperactive. She does have mild hypernatremia, but likely not to the degree that it is causing

her altered mentation. Nutrition / hypovolemia could be contributing. Uncontrolled pain (though unclear where) could also be contributing. She is having small Bms and does not have evidence of significant stool burden on her CT, so constipation is less likely a contributor. No new s/s of ongoing infection. She is not having focality to her symptoms to suggest a structural lesion or stroke.
- Nutrition plan as discussed above
- Delirium precautions
- Talk directly to patient / use white board due to hearing impairment
- Ongoing GOC discussions

#Acute respiratory failure with hypoxia -- resolved
#Aspiration pneumonitis -- resolved
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment.
- Monitor O2
- Strict NPO

#Chronic pain r/t prior L AKA
#Anxiety
- Pain: Buprenorphine 5mcg/h patch; hydromorphone 0.5mg IV q3h prn OR if no IV access HM 0.5mg SQ q3h prn
- Anxiety: Ativan 0.25mg IV q6h prn OR if no IV access ativan 0.25mg SQ q6h prn
- Palliative care following, appreciate recs

#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
Has pIV now and getting fluids as above. IF doesn't perk up with fluids then will plan to pursue NGT with GI endoscopically.

#Hypokalemia
- D5 1/2 NS w/ Kcl now running @ 100cc/hr
- Re-check BMP, mg, phos 2/22 AM

#Abdominal pain, diffuse
CTAP without acute finding to explain her abdominal pain. Her distended gallbladder is likely related to prolonged NPO.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- When enteral access is obtained, consider resumption of ASA 81mg daily & atorvastatin

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
PPM functioning appropriately at this time.

#Bilateral Pleural Effusions, likely r/t poor nutrition status and third-spacing; TTE 1/10/25 with nrml LVEF but unable to assess diastolic function

#Mild normocytic anemia, stable

#T2DM - no current insulin requirements

Inpatient Checklist:

Brief Progress Note – **Spiritual Care & Wellbeing**

Encounter Details
- Referral From: RN

- Requested by: RN
- Form of Contact: In person
- Present at Encounter: Patient and caregivers
- Visit Type: Initial
- Location: UWMC (Montlake) 7SA

- **Summary of Encounter**

Visited with Jeanne and her son at bedside. She was unable to communicate and was lying in bed with her mouth wide open and her facial expressions were in a grimace that looked like she might be in pain. She sometimes pointed to her mouth, or clasped her hands across her stomach. I noted concern for her pain level, asking if we should get the RN, and her son explained that he didn't think it denoted pain but "just that she's crying" and he tried to soothe her by holding her hand and caressing her shoulder. He shared that yesterday she "hugged him and said thank you" and feels like they still have meaningful moments of connection.

He spoke lovingly about his mother and his hopes - and conviction - that she will get better. He said this is what he is trying to focus on and that because of this perspective, he has "said no to morphine but allowed some anxiety medication."

I shared my experience of Jeanne seeming to be in pain with both the RN and MD, along with a debrief of my visit.

- **Standard Interventions**
  - Spiritual Care Assessment,
- **Plan of Care**
  - Follow-up Plan: No further needs at this time Will request spirtual care as desired
  - To Provide:
- **Visit Duration**
  - Direct Time: 30

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care.

INTERVAL HISTORY:

Today we (Dr. Fancher-Dominguez, Lauren Wrisley, PC NP, Julia Walsh RN and I) met at Jeanne and Louis at Jeanne's bedside. Jeanne was resting initially, at times became restless. She was off O2.

Unfortunately, an NGT was not able to be placed despite the assistance of fluoroscopy. A peripheral IV was able to be placed and Jeanne is getting IVF now.

We discussed with Louis a plan to see if IVF help Jeanne improve enough to start being more alert, focused and maybe to then try eating by mouth.

We shared that if she does not improve with a trial of IVF and she can't eat, the ability to not eat can be a form of a terminal condition in a very debilitated. Louis asked if she does not improve over the weekend could we explore having an NGT placed via endoscopy with anesthesia. We did not promise this could occur, but said we would explore this option should she not improve with fluids.

He was able to share if we do place tube by endoscopy and she does not respond to artificial feeding or if we end up not being able to place the tube and she has not improved with IVF, he realizes that would mean she is at end of life. He asked us to pray that she turns a corner soon and we all acknowledge a wish that should could turn a corner, while continuing to worry she may not.

While in the room she was moaning a lot, he said she was crying, we tried to explore why she might be crying and he said that maybe agitation or it could be pain sometimes.

I let him know that earlier in the week she was getting hydromorphone and doing better with hydromorphone, so I'm going to suggest we return to hydromorphone. He was OK with this suggestion.

PHYSICAL EXAM:
Vitals:

	02/21/25 0747
BP:	**(!) 106/54**
Pulse:	72
Resp:	20
Temp:	36.5 °C
SpO2:	96%

Gen: Jeanne laying flat in bed, minimally opens her eyes and will turn to people at times. Audibly moaning at times, and sometimes rubbing her leg or abdomen
HEENT: tongue dry, lips dry
Resp: breathing comfortable on room air
Neuro: does not participate in conversation or track conversation, seems confused, agitated

IMPRESSION: Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. Over the weekend, her ability to interact has decreased and her ability to take PO went from poor to not taking anything by mouth. There was plan in the works to consider going home with hospice, but with this recent turn of events, her son wants a trial of artificial nutrition to see if she might improve to her baseline. It is also noteworthy to share that although going home with hospice was being discussed her son feels she could still live or another 5-10 years and therefore, his interest in hospice seemed mostly to come from it being a way to get her home and then he could work on getting her stronger.

Goals of care: DNR, intubation Ok. Otherwise he is interested in a trial of artificial nutrition and generally open to fairly intensive medical measures with the hope she might get stronger and improve. Also of note the patient has a POLST

from 2018 that she signed noting full code, full treatment, use antibiotics for life prolongation, and long term artificial nutrition. She also signed multiple power of attorney documents (under media in EHR) naming her son as her agent for decision making.

RECOMMENDATIONS:
- Palliative care will continue to follow and engage in discussions with Louis, happy to co-round with primary team if helpful
- trial of IVF with hope she may improve enough for oral feeding to be considered.
If she does not, team will explore if endoscopic NGT could be placed for a trial of artificial feeding as Louis feels he really has to try this trial if he is going to honor the wishes and preferences she has told him she wanted any time they discussed advanced directives.

1) generalized pain:
Continue Butrans 5mcg/hr TD q7days
Change morphine 0.5mg IV q3hrs prn to hydromorphone 0.5mg IV q3hrs prn, as she was receiving hydromorphone SQ this week and was doing better with pain.

IF she loses her IV, hydromorphone 0.5mg SQ q3hrs prn can be given instead of the IV

2) agitation/anxiety:
Pt responded well to ativan, could change to
Ativan 0.25mg IV q6hrs prn (if we have an IV).
If she loses her IV, ativan 0.25mg SQ q6hrs prn can be given, this would be preferred over IM dosing. Although our order for ativan does not show a SQ option, you can select "see comments" and in the comments write in SQ.

3) advance care planning: per the patient's POLST and multiple power of attorney documents she has expressed wishes to pursue longevity focused care and has named her son on many occasions as her agent. Early in the hospital course, she verbally reiterated her wish to allow her son to speak on her behalf if she cannot. He appears to be requesting care that aligns with her previously stated wishes.

Patient discussed with nursing and Discussed with primary team

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 97 minutes for the patient's care on the date of the service.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR Intubation OK (No CPR)

CHIEF CONCERN / IDENTIFICATION:

01/09/2025 - ED to Hosp-Admission (Discharged) in UWMC MONTLAKE TOWER 7SA (continued)

Clinical Notes (group 15 of 17) (continued)

Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- VSS
- Ongoing pain / discomfort this AM and pt's spouse reportedly declining pain medications. Ultimately overnight provider and RN able to talk to him and give pt pain medication.
- Per report, son also yelling at mom and getting in her face, imitating her cries overnight
- Pt requesting peripheral nutrition today so Jeanne can get some zinc and micronutrients / vit / minerals
- We talked about the fact that PPN/TPN is reserved for patients with intestinal failure, which is not Jeanne's issue
- We also discussed that I worry about losing her peripheral IV if we were to start PPN
- We are going to plan to stick with fluids over the weekend and discuss re: next steps on Monday w/ palliative care
- I shared we will give Jeanne some magnesium today and start checking her blood glucose because it was elevated on labs today
- I encouraged gentle conversation and encouragement but not aggressive
- I reinforced that patient should not be up in wheelchair as she does not have the strength / safety to support herself
- Can discuss with nursing about facing bed toward the window for different view
- I also reinforced that it is important that we give Jeanne medications to treat her pain, anxiety, and distress as we don't want her to be uncomfortable

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- lidocaine, 1 patch, q24h
- saliva substitute, 15 mL, TID
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- dextrose 5% and sodium chloride 0.45% with KCl 20 mEq/L, 100 mL/hr, Continuous, Last Rate: 100 mL/hr (02/21/25 0944)

PRN MEDICATIONS:
- acetaminophen, 1,000 mg, Once PRN
- acetaminophen, 650 mg, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- HYDROmorphone, 0.5 mg, q3h PRN **OR** HYDROmorphone, 0.5 mg, q3h PRN
- ipratropium-albuterol, 3 mL, q4h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- LORazepam, 0.25 mg, q6h PRN **OR** LORazepam, 0.25 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN
- phenol, 1 spray, Q2 Hours PRN
- sodium chloride, 4 mL, q4h PRN
- white petrolatum, , TID PRN

Objective

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube band feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
- Unable to place NGT under fluoro with minimal sedation 2/20
- Able to get pIV 2/21 and running D5 1/2 NS + Kcl @ 100cc/hr
- Repeat BMP, phos, mg 2/22 AM --> **replete Mg w/ 2g IV; will f/u phos 2/23 as it is only mildly low and would like to preserve IV as much as able**
- If no improvement in mentation with fluids, will have GI / anesthesia assess for endoscopic NGT placement
- If unable to have endoscopic placement or does not improve, would consider pt to be at end of life due to inability to not eat
- Please see pall care note from 2/21 (Dr. Fausto) for additional details
- Pain / anxiety treatment as outlined below

- **I discussed with Louis that I would not recommend PPN given tenuous nature of IV access and that this should be reserved for pts with intestinal failure, which Jeanne does not have**

#Acute encephalopathy
Waxes and wanes -- hypoactive and hyperactive. She does have mild hypernatremia, but likely not to the degree that it is causing her altered mentation. Nutrition / hypovolemia could be contributing. Uncontrolled pain (though unclear where) could also be contributing. She is having small Bms and does not have evidence of significant stool burden on her CT, so constipation is less likely a contributor. No new s/s of ongoing infection. She is not having focality to her symptoms to suggest a structural lesion or stroke.
- Nutrition plan as discussed above
- Delirium precautions
- Talk directly to patient / use white board due to hearing impairment
- Ongoing GOC discussions

#Acute respiratory failure with hypoxia -- resolved
#Aspiration pneumonitis -- resolved
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment.
- Monitor O2
- Strict NPO

#Chronic pain r/t prior L AKA
#Anxiety
- Pain: Buprenorphine 5mcg/h patch; hydromorphone 0.5mg IV q3h prn OR if no IV access HM 0.5mg SQ q3h prn
- Anxiety: Ativan 0.25mg IV q6h prn OR if no IV access ativan 0.25mg SQ q6h prn
- Palliative care following, appreciate recs

#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
Has pIV now and getting fluids as above. IF doesn't perk up with fluids then will plan to pursue NGT with GI endoscopically.

#Hypokalemia
#Hypomag
#Hypophos
- D5 1/2 NS w/ Kcl now running @ 100cc/hr
- Mg 2g IV x1 2/22
- Holding off on phos repletion given only mildly low
- Repeat 2/23

#Abdominal pain, diffuse
CTAP without acute finding to explain her abdominal pain. Her distended gallbladder is likely related to prolonged NPO.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- When enteral access is obtained, consider resumption of ASA 81mg daily & atorvastatin

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
PPM functioning appropriately at this time.

#Bilateral Pleural Effusions, likely r/t poor nutrition status and third-spacing; TTE 1/10/25 with nrml LVEF but unable to assess diastolic function

#Mild normocytic anemia, stable

#**T2DM** - no current insulin requirements

Inpatient Checklist:

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- Some episodes of hypertension; otherwise VSS & NAEON
- Received HM x2 yesterday and x2 thus far today
- Received lorazepam x2 so far today and x2 yesterday
- Pt had acute de-sat event this AM to the 70s requiring initiation of HF mask w/ RT
- Louis believes this is related to receiving pain medications and anxiety medications
- Louis thought she looked more restless and uncomfortable this AM and now he is worried because he can't talk to her
- I discussed with Louis that I feel Jeanne is reaching the end of her life. I shared that I do not think tube feeds is going to fix all the things that we are seeing (agitation, confusion, pain, hypoxemia, etc).
- I discussed with him that I would not recommend intubation for Jeanne. I do not think that she will be able to return to a quality of life where she is able to do the things that she enjoyed doing. I do not think that she would meaningfully recover from being intubated based on her current functional status.
- Louis was tearful and expressed just wanting to see how things look over today and that we can re-assess tomorrow or later today
- I again expressed, that she is on maximum high flow oxygen and that next steps would include the MICU and intubation if we were unable to wean her oxygen or she is worsening. And I again expressed that I do not think this is a path that would be beneficial for Jeanne and I would recommend DNR/DNI code status. He wanted time to think about this and see how she does.
- He has been worried about her blood pressure. I shared that high blood pressure is often a sign of discomfort from pain or anxiety and that her blood pressure improves when we treat these symptoms for Jeanne.
- I shared that I worry Jeanne could potentially pass as early as today. He said if that happens, so be it. His preference would be to take her home.
- I encouraged that he continue to share moments with Jeanne and offer a familiar voice.

SCHEDULED MEDICATIONS:

- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- insulin LISPRO, 0-5 units, q6h SCH
- lidocaine, 1 patch, q24h
- potassium phosphate, 40 mEq, Once
- saliva substitute, 15 mL, TID
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:
- dextrose 5% and sodium chloride 0.45% with KCl 20 mEq/L, 75 mL/hr, Continuous, Last Rate: 75 mL/hr (02/23/25 1259)

PRN MEDICATIONS:
- bisacodyl, 10 mg, Daily PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.2-0.4 mg, q3h PRN **OR** HYDROmorphone, 0.2-0.4 mg, q3h PRN
- ipratropium-albuterol, 3 mL, q4h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- LORazepam, 0.25 mg, q6h PRN **OR** LORazepam, 0.25 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN
- phenol, 1 spray, Q2 Hours PRN
- sodium chloride, 4 mL, q4h PRN
- white petrolatum, , TID PRN

- Able to get pIV 2/21 and running D5 1/2 NS + Kcl @ 100cc/hr
- If no improvement in mentation with fluids, will have GI / anesthesia assess for endoscopic NGT placement
- If unable to have endoscopic placement or does not improve, would consider pt to be at end of life due to inability to not eat
- Please see pall care note from 2/21 (Dr. Fausto) for additional details
- Pain / anxiety treatment as outlined below
- I discussed code status with Louis 2/23, but he declined to change it at this time. I recommended DNR/DNI. He requested that I f/u later to discuss again.

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. I plan to recommend cessation of fluids, repletion of lytes, and a dose of diuretics 2/23 PM.

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- Will recommend cessation of IV fluids & a dose of lasix PM 2/23
- Currently on HF mask
- Continue to discuss code status (currently DNR, ok to intubate)

- Decreased pain medications due to concern that they contributed to hypoxemia
- Monitor O2
- Strict NPO

#Acute encephalopathy
Waxes and wanes -- hypoactive and hyperactive. She does have mild hypernatremia, but likely not to the degree that it is causing her altered mentation. Nutrition / hypovolemia could be contributing. Uncontrolled pain (though unclear where) could also be contributing. She is having small Bms and does not have evidence of significant stool burden on her CT, so constipation is less likely a contributor. No new s/s of ongoing infection. She is not having focality to her symptoms to suggest a structural lesion or stroke.
- Nutrition plan as discussed above
- Delirium precautions
- Talk directly to patient / use white board due to hearing impairment
- Ongoing GOC discussions

#Chronic pain r/t prior L AKA
#Anxiety
- Pain: Buprenorphine 5mcg/h patch; hydromorphone 0.2-0.4 mg IV q3h prn OR if no IV access HM 0.2-0.4 mg SQ q3h prn (**HM reduced 2/23**)
- Anxiety: Ativan 0.25mg IV q6h prn OR if no IV access ativan 0.25mg SQ q6h prn
- Palliative care following, appreciate recs

#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
Has pIV now and fluids as above. IF doesn't perk up with fluids then will plan to pursue NGT with GI endoscopically.

#Hypokalemia
#Hypomag
#Hypophos
- D5 1/2 NS w/ Kcl now running @ 100cc/hr
- Plan for Kphos 2/23

#Abdominal pain, diffuse
CTAP without acute finding to explain her abdominal pain. Her distended gallbladder is likely related to prolonged NPO.

#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
- When enteral access is obtained, consider resumption of ASA 81mg daily & atorvastatin

#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
PPM functioning appropriately at this time.

#Bilateral Pleural Effusions, likely r/t poor nutrition status and third-spacing; TTE 1/10/25 with nrml LVEF but unable to assess diastolic function

#Mild normocytic anemia, stable

#T2DM - no current insulin requirements

Admit Date: 1/9/2025
Code Status: DNR Intubation OK (No CPR)

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
- VSS, remains on HF mask sat'ing in 90s
- UOP 1500cc

Long GOC discussion with myself, Louis (son), Jeanne (present but not contributing), Lauren Wrisley PC ARNP, Beth Chance PC SW, and Allen Porter bedside RN. Please see pall care note from 2/24 for full details. Ultimately we talked we described to Louis that Jeanne appears to be at the end of life. We trialed IVF and it made her worse due to pulmonary edema. Her respiratory status is too tenuous to pursue endoscopic EGD or any aggressive sedation to pursue a NG or central line. Furthermore, we discussed that this would be unlikely to significantly improve her current status and may actually lead to further harm. We discussed that our focus at this point as Jeanne is in the final stages of her life should transition to treating her symptoms and keeping her comfortable. Louis agreed that if there was nothing else that could be done to improve her situation, that we should make her comfortable. He would like to take her home if possible, but we described that she would be unlikely to survive transport at this time. If she were to remain alive on lower amt of oxygen and able to be transported, then it may be something we can pursue. However, I would anticipate that she will day in the coming hours to days. We described that we will work on making the hospital as comfortable as possible as we keep her comfortable. He assented and agreed with DNR/DNI and comfort measures given there are no further interventions that would be recommended for Jeanne at this time.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- enoxaparin, 30 mg, q HS
- insulin LISPRO, 0-5 units, q6h SCH
- lidocaine, 1 patch, q24h
- saliva substitute, 15 mL, TID
- timolol maleate, 1 drop, BID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- bisacodyl, 10 mg, Daily PRN
- dextrose, 25 mL, PRN
- dextrose, 50 mL, PRN
- glucagon, 0.5 mg, PRN
- glucagon, 1 mg, PRN
- HYDROmorphone, 0.2-0.4 mg, q3h PRN **OR** HYDROmorphone, 0.2-0.4 mg, q3h PRN
- ipratropium-albuterol, 3 mL, q4h PRN
- lidocaine-prilocaine, 1 application, Once PRN
- LORazepam, 0.25 mg, q6h PRN **OR** LORazepam, 0.25 mg, q6h PRN
- ondansetron, 4-8 mg, q8h PRN
- phenol, 1 spray, Q2 Hours PRN
- sodium chloride, 4 mL, q4h PRN
- white petrolatum, , TID PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube band feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. Pt will transition to comfort measures only at this time. She will likely pass in hours to days.

- CMO
- Pain: HM 0.2-0.4 q1hr prn
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- SW will come by to talk with Louis and discuss next steps

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix.

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

#Acute encephalopathy
#Chronic pain r/t prior L AKA
#Anxiety
#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
#Hypokalemia
#Hypomag
#Hypophos
#Abdominal pain, diffuse
#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
#Bilateral Pleural Effusions
#Mild normocytic anemia
#T2DM

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Discharge planning

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Ballard Care Center received auth for pt. Per MD update, pt back on high flow O2. Update provided to Ballard Care Center.

Update from MD that pt now on comfort care. Per MD and bedside RN, pt's son Louis requesting to speak to SW.

MSW met w/ Louis at bedside; when asked about questions for SW, Louis states he has none and there is "nothing you can do". MSW provided support to Louis as he described at length his frustration with the course of pt's care; feels like she was "pronounced dead" and given a "death sentence" during admission solely because of her age. MSW reviewed photos of pt's life and travels with Louis. MSW offered UWMC Patient Relations information to Louis if he wanted to discuss concerns; Louis not interested at this time. MSW sat with Louis as he shared his grief at losing his best friend.

PLAN or OUTCOME:
SW to continue to follow.

Wrisley, Lauren Jean, ARNP at 2/24/2025 1336

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care

PARTICIPANTS:

Jeanne, Louis, Dr. Fancher-Dominguez (primary attending), Lauren Wrisley PC ARNP, Beth Chance PC SW, Allen Porter bedside RN

INTERVAL HISTORY:
- Prior to seeing Jeanne and Louis reviewed chart and communicated with primary team.
- Over the weekend, Jeanne's respiratory status became worse and at one point she was requiring 100% FiO2. Multiple conversations were had with Louis by the primary team recommending to change Jeanne's code status to DNI. Louis wanted to take some time and see how Jeanne did overnight before making any changes.
- We then visited Jeanne with Louis at her bedside. I Explained to Louis that on Friday we had agreed to trial some IVF in the hopes that Jeanne may perk up and be interested in taking food. Unfortunately, we think the fluid probably made her worse as now her lungs are making Jeanne very sick. I also explained that because Jeanne's lungs are so sick, that she is not a candidate for a feeding tube to be placed under anesthesia. I shared that while I wished things had gone differently over the weekend, that we think Jeanne is facing the end of her life.
- Louis told us that if Jeanne is at the end of life, that he would like to try and get her back to Bainbridge. We shared with Louis that while we would hope for that too, that right now Jeanne is needing too much oxygen to survive a trip back to the island.
- Louis told us he wished we had been able to get a feeding tube in sooner, and that he believes this would have made a big difference for Jeanne. Dr. Fancher-Dominguez shared that we had take a step-wise approach to the feeding tube, and that we wouldn't have been able to go straight to an endoscopically placed tube with GI and anesthesia. She also explained that placing a tube at this point might even hasten Jeanne's death.
- I gently recommended that we transition the rest of our focus to keeping Jeanne comfortable in the time she has left. Louis agreed that if there was nothing else to be done, then yes he would want to keep her comfortable. Louis asked how long Jeanne has to live, and I explained that while we are bad at predicting our best guess would be hours to days.
- Beth Chance told Louis that if we cannot get Jeanne home, then would would create a calming and safe environment here in the hospital of Jeanne's final days.
- Louis told us Jeanne would want to be buried, but he had worries about how to pay for it. We offered to reach out to the primary social work to see about additional resources for family's at end of life.

PHYSICAL EXAM:
Jeannie is laying in bed, oxygen mask in place but she is keeps trying to remove it. She had brief periods of rest during our visit, but had several episodes of crying out and moaning.

IMPRESSION:
Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. We trialed IVF fluids over the weekend to see if this might help Jeanne's energy level and interest in food, but unfortunately she became hypoxic and is now requiring high flow oxygen. Multiple unsuccessful attempts at NGT placement have been made (including fluoroscopy), and she is not a candidate for endoscopically placed feeding tube due to her respiratory status. Per discussion with Louis, we believe that Jeanne is at end of life and will transition the rest of her care to keeping her comfortable with the time she has left.

RECOMMENDATIONS:
- Transition to comfort focused care, DNI by assent

#Dyspnea/Pain
- Would increase frequency of SQ Hydromorphone from 0.2-0.4 q3h prn --> q1h prn for pain and/or dyspnea
- Defer to primary team, but could consider discontinuing Butrans patch to minimize polypharmacy

#Agitation/anxiety
- Would increase dose of her SQ Lorazepam from 0.25mg -->0.25-0.5mg q6h prn

Brief Progress Note – Spiritual Care & Wellbeing

Encounter Details

- Referral From: Palliative Care
- Requested by: Family
- Form of Contact: In person
- Present at Encounter: Patient and caregivers
- Visit Type: Palliative care Follow-up
- Location: UWMC (Montlake) 7SA

Summary of Encounter

I visited with Jeanne and Louis this morning for spiritual support as Jeanne officially transitioned to comfort care. Their community pastor was present with them holding Jeanne's hand. Jeanne was clearly uncomfortable with air hunger and moaning. I observed this with Louise and he seemed interested in more medication to make her more comfortable. Louise shares some of his concerns about Jeanne's care leading up to this moment. We discuss how having love at bedside is most important at this time. Louise notes that Jeanne was Catholic, but that she would not likely appreciate having a priest visit for sacraments. Offered simple blessing of peace. I updated our Palliative provider to help with symptom control. We circled back later in the day and Jeanne appeared sleeping and much more comfortable.

Please feel free to page spiritual care at any time for additional needs. I will round as available.

SUBJECTIVE

INTERVAL HISTORY:
- NAEON
- Pt's son continues to request NGT this AM
- On arrival this AM, Jeanne is resting comfortably and does not wake while we are talking around her

Joint visit with Lauren Wrisley PC ARNP & nurse manager Irene Krall RN. This morning Louis was very focused on getting Jeanne an NG tube. He expressed that he thinks nutrition is going to allow her to interact more with him and keep her from starving to death. We re-iterated that we are unable to place an NG tube at this time due to the risks associated with this (such as risk of anesthesia, risk of worsening her aspiration). He said he was willing to take that risk even if she "dies on the table". He feels we should get an NG tube in her even if we have to put her in some kind of body mold to completely hold her down or sedate her completely. We re-iterated that would not be an acceptable risk to take. He reported he was not going to let her have more medication today as he wants to talk to her. We expressed that Jeanne is at the end of her life and it is important that we continue to treat her symptoms associated with this. Please see Lauren Wrisley's note from 2/25/25 for additional details.

Later in the day, Louis requested transfer to Harborview for NG tube placement. I discussed with him that this would not be possible nor indicated. I discussed this with Dr. Marcinkevicius at HMC thru the transfer center due to patient request. She agreed that it would not be an appropriate transfer given she is medically tenuous and it would be unlikely that GI at HMC would have a different perspective on risks compared with the GI at UWMC. Louis was informed by the 7SA staff that txfr was declined.

APS visited Louis (has had an open case for some time). This caused him to become upset and suspicious of the staff and providers taking care of Jeanne, as he was worried that someone called them today and gave them additional information. He requested to transfer to a different floor. I encouraged him to talk with the patient advocate, as he had been given the number already. We again reiterated that an NG tube is not possible and that Jeanne is at the end of her life. At this time, we will continue to keep her comfortable. He agreed that she was at the end of her life and he thinks she has 3-5 more days. He reported he told her this. He wanted to talk to her more before we gave additional medications for discomfort. Jeanne appeared uncomfortable and distressed while Lauren and I were in the room this afternoon. She was grimacing, crying out, intermittently shaking, and had increased work of breathing with weak/gurgle-y cough. We expressed that Jeanne looked significantly uncomfortable and urged use of medications to help keep her comfortable as she nears the end of her life. He said the RN could come in about 5 minutes and will plan for lowest dose of SQ HM. He in some ways expressing acceptance/realization regarding the fact that Jeanne is at the end of her life -- e.g. he told Jeanne she was at the end of her life, is looking into funeral homes on Bainbridge, has told friends that Jeanne is at the end of her life.

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25

with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube band feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. Pt will transition to comfort measures only at this time. She will likely pass in hours to days.
Please see above under "subjective" for conversations held today with Louis. She will continue on CMO. WE continue to express that NG tube is not a possibility and Jeanne is at the end of her life.
- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- Multidisciplinary meeting planned for tomorrow including ethics, nursing, pall care, etc
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access.

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC:
Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care

PARTICIPANTS:
Jeanne, Louis, Dr. Fancher-Dominguez (primary attending), Lauren Wrisley PC ARNP, Irene Krall RN manager

INTERVAL HISTORY:
- We met with Louis this morning at Jeanne's bedside. When we arrived, Louis was going through a slideshow with Jeanne with music and pictures of trips that they had been on together over the years.
- Louis told us he was hoping to talk with everyone this morning because he's not giving up on Jeanne. He asked again about sedating her to place a feeding tube. Louis feels confident that with some nutrition, Jeanne would get better
- We explained that because of how sick Jeanne is, she cannot safely have a feeding tube placed under sedation. Louis said that he is willing to take the risk she might die, because it wouldn't change anything anyway.
- We explained that the doctors who reviewed Jeanne's case think that the likelihood is extremely high of causing more harm than good in sedating Jeanne, and that while we wish it was different that is unfortunately not an option right now. We also explained that even IF Jeanne could get a feeding tube, the risk of her aspirating and making her lungs worse is extremely high, and therefore feeding her might even hasten her death.
- Louis asked about IV nutrition. We explained that unfortunately Jeanne has shown us that her body cannot tolerate additional fluid because of her lungs. We also explained that we have no IV access right now and no way to safely obtain any.
- Louis told us that he doesn't want to give up and wants to make sure we've tried everything. We let Louis know that he has done a great job advocating and supporting Jeannie. We also let Louis know that Jeanne's medical team has tried every possible intervention, and that sometimes even modern medicine has limitations.
- We reiterated to Louis that Jeanne is at the end of her life, and like we discussed yesterday we will do our best to keep her comfortable in the time she has left.
- Louis told us he would like to take Jeanne home. We told him that we unfortunately did not think Jeanne would survive the trip back to Bainbridge with how sick she is.
- Louis expressed that he didn't want Jeanne to receive any more pain medication that would sedate her. We explained that it's always a balance and we want to have Jeanne be as awake as possible, while also treating her pain.
- Louis told us he knows Jeanne is dying but that he is not going to give up on her. Louis thanked us for our time, and we assured him we would continue to support him and Jeanne.

PHYSICAL EXAM:
Jeanne was laying in bed sleeping comfortably during our visit. She did not wake to interact with us today.

IMPRESSION:

Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. We trialed IVF fluids over the weekend to see if this might help Jeanne's energy level and interest in food, but unfortunately she became hypoxic and is now requiring high flow oxygen. Multiple unsuccessful attempts at NGT placement have been made (including fluoroscopy), and she is not a candidate for endoscopically placed feeding tube due to her respiratory status. She was transitioned to comfort measures yesterday after discussion with Louis. Today, Louis had more questions about both enteral and parenteral nutrition, and we explained to him that unfortunately neither would a safe option for Jeanne right now. We reiterated that Jeanne is at the end of her life, and that our interventions are focused on keeping her comfortable in the time she has left.

RECOMMENDATIONS:
- Continue comfort focused care
- Our team will continue to follow along for support.

#Dyspnea/Pain
- After further multidisciplinary discussion, would actually add back Butrans 5mcg/hr patch q7 days. Could provide basal rate and perhaps decrease the amount of pokes she is getting from SQ injections
-Continue SQ Hydromorphone from 0.2-0.4 q1h prn for pain and/or dyspnea

#Agitation/anxiety
- Continue SQ Lorazepam 0.25-0.5mg q6h prn
- Continue Haldol 2.5-5mg SQ prn q4hr if Lorazepam is not effective

patient discussed with nursing Yes
discussed with primary team Yes

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Care/Family conference facilitated;Consult with healthcare team/provider/community;Chart Review/Screening;Care Coordination

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Per MD report, pt on comfort care and no longer on supplemental O2.

Pt's son Louis spoke w/ SW outside of pt's room. Louis asked to speak with "dean of medicine or someone in charge" regarding his concerns about pt's care and that he can no longer "trust" floor staff. MSW advised Louis to start by contacting Patient Relations to establish a formal complaint; Louis agreeable, MSW provided contact information.

PLAN or OUTCOME:
SW to continue to follow.

PALLIATIVE CARE SERVICE: FOLLOW UP

PARTICIPANTS:
- Called to bedside this afternoon by nursing for support. Today, Louis has been down to the ED to ask if they could place a feeding tube for Jeanne. He has also asked about a transfer to HMC, which was explored but is unfortunately Jeanne was not accepted as a transfer. Additionally, APS came to the room to talk with Louis this afternoon as there

had already been a case open. Louis also communicated with nursing he was upset APS came by.
- Met with Louis along with Dr. Fancher-Dominguez at bedside. Louis told us all of the events of the afternoon and that he doesn't feel like he can trust anyone since be believes someone called APS. We told Louis that to our knowledge, no one called APS today but think they may have come by given there was already an active case open. Louis told us that he already has a close relationship with APS, and so we encouraged him to continue talking with them at his discretion.
- Louis acknowledged to us that he knows Jeanne is dying, but that he's not going to give up as long as there are still things we can do. Louis told us it's hard because Jeanne wasn't dying when she came to the hospital, and he thinks if he could have been a stronger advocate for Jeanne that we wouldn't be in this situation.
- We acknowledged that Louis has been an incredible advocate for Jeanne this entire time, and that her medical team has also offered every possible intervention to prolong Jeanne's life. We explained that her body has gone through a lot of changes since she was first admitted, and that unfortunately there is nothing more reversible for Jeanne that can be done.
- We again told Louis that Jeanne is at the end of her life and that it is our goal to keep her from suffering. Louis agreed he doesn't want Jeanne to suffer.
- Jeanne was moaning, grimacing, and appeared dyspneic during our visit. I told Louis I am worried Jeanne is suffering right now and that we can help her symptoms with small doses of pain medication.
- Louis worried that pain medication wouldn't allow Jeanne to communicate with him and wanted to talk to Jeanne about it after we left. I asked Louis if Jeanne had been talking with him at all and he said she hadn't. I told Louis that as people approach end of life, they often lose the ability to communicate with us and we have to look for other signs of discomfort. I let him know that when we see those signs, we would treat Jeanne with small amounts of pain medication. I told Louis our goal is never to sedate Jeanne, but to keep her from suffering.
- Louis agreed that he didn't want Jeanne to suffer, and that she would get some medication but still wanted to talk with her privately. We gave Louis some time and space to do so, and let him know Jeanne's nurse would be in soon to treat her symptoms.

RECOMMENDATIONS:
- Please see my note from earlier today to reference her symptom management plan.
- Our team will continue to follow along for support, appreciate excellent care from nursing and primary team.

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
No overnight significant medical events.
Patient's son requested to remove CMO overnight.

This morning Louis was giving Jeanne small sips of water but was mostly using the oral hygiene sponge. He feels she is making progress. Louis has been removing her oxygen when he feels it's appropriate and replacing it when her sats decrease. She has stayed >90% on RA for the most part. He is hoping to have her discharged to a SNF that can help with cares while he continues to give her water. I explained that we are not going to advance her NPO status given repeated aspirations but that if Louis feels comfortable giving her liquids, then that would be okay since she is CMO at this time. I explained that she is still quite tenuous to support sedation for any tube placements.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- lidocaine, 1 patch, q24h
- saliva substitute, 15 mL, TID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- atropine, 2 drop, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- camphor-menthol, , BID PRN
- artificial tears, 1 drop, q1h PRN
- haloperidol lactate, 0.5-2 mg, q4h PRN
- HYDROmorphone, 0.2-0.4 mg, q1h PRN **OR** HYDROmorphone, 0.2-0.4 mg, q1h PRN
- LORazepam, 0.25-0.5 mg, q6h PRN **OR** LORazepam, 0.25-0.5 mg, q6h PRN
- phenol, 1 spray, Q2 Hours PRN
- scopolamine, 1 patch, q72h PRN
- white petrolatum, , PRN

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. She will likely pass in a matter of days.
Please see "subjective" for conversations held today with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible. Our present plan is to discharge the patient to hospice with the son is agreeable to.
- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x

dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to minimal if any at all.

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

#Acute encephalopathy
#Chronic pain r/t prior L AKA
#Anxiety
#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
#Hypokalemia
#Hypomag
#Hypophos
#Abdominal pain, diffuse
#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
#Bilateral Pleural Effusions
#Mild normocytic anemia
#T2DM

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: I'm okay with diet advancement to CLD for son to trial liquids GIVEN we accept she is a high risk and also CMO. Son acknowledges this.
Prophylaxis: None, CMO
Lines/Drains/Airways: None
Disposition: Acute care; CMO
Code Status: DNR DNR/DNI

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care

PARTICIPANTS:

Jeanne, Louis, Dr. Daniel Stenberg (primary attending), Lauren Wrisley PC ARNP, Beth Chance PC ARNP

INTERVAL HISTORY:
- We met again with Louis at Jeanne's bedside this morning. Louis had music playing and was going through more pictures of their train travels over the years.
- Jeanne's eyes were intermittently open today, and she was able to tell us hello. During our visit, Jeanne had periods that she was resting comfortably punctuated by several episodes of agitation. Jeanne's oxygen was off for most of our visit, with SpO2 sats varying from the high 80s to mid 90s.
- Louis showed us how he has been giving Jeanne mouth swabs and told us that he thinks this is the beginning of Jeanne's recovery. We hoped with him that was the case, but told Louis we still think Jeanne is at end of life and that Jeanne is still not strong enough to undergo sedation or more invasive procedures right now. Louis was understanding of this.
- We told Louis that on Monday we were worried Jeanne wouldn't survive a trip back to Bainbridge Island. Seeing her today, we told him that she might be able to get back closer to home if that were something still important to them.
- Louis said he would like to get her back home. We offered to speak with social work about reaching out to some skilled nursing facilities. We also told Louis that because Jeanne would not qualify for rehab and we do still believe Jeanne is at end of life, and so the best way to get her to another facility close to home would be with Hospice. We told Louis that if Jeanne does show signs of improvement, she could always graduate from hospice. We also told Louis that there is a real chance Jeanne could aspirate again or become sicker again prior to transfer, and that she still might die here in the hospital.
- Louis expressed that he would like to begin the process of transferring to a SNF closer to home. We explained we could start that process today, and that in the meantime we would not make any changes to the care we are giving Jeanne here in the hospital.
- Louis also expressed his concern that he thinks someone called APS yesterday, and that he feels distrustful of the hospital staff. We told Louis that we don't know about anyone calling APS, and they may have just come by due to a case already being open. We encouraged Louis to continue to talk to APS at his discretion, and to communicate with patient affairs (he already has their number).
- We offered to continue to check in on Louis and Jeanne throughout the week.

PHYSICAL EXAM:
Jeanne was laying in bed, alternating between periods of wakefulness and agitation. Able to say "hello" but was otherwise not participating in our visit today.

IMPRESSION:
eanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. She has had at least two episodes of aspiration with increased O2 requirements of the weekend, which seem to be improving somewhat today though she remains tenuous. Multiple unsuccessful attempts at NGT placement have been made (including fluoroscopy), and she continues to not be a candidate for endoscopically placed feeding tube due to her respiratory status. Today, we discussed initiating a transfer to a SNF with hospice which Louis is interested in pursuing.

RECOMMENDATIONS:
- Appreciate social work assistance to initiate hospice referrals
- Continue comfort focused care

#Dyspnea/Pain
- Continue Butrans 5mcg/hr patch q7 days.
- Continue SQ Hydromorphone from 0.2-0.4 q1h prn for pain and/or dyspnea

#Agitation/anxiety

- Continue SQ Lorazepam 0.25-0.5mg q6h prn
- Continue Haldol 2.5-5mg SQ prn q4hr if Lorazepam is not effective

patient discussed with nursing Yes

Progress Note

Jeanne Leonie Hoffman ("Jeanne") - DOB: 1/6/1925 (100 year old female)
Gender Identity: Female Pronouns: she/her/hers
Admit Date: 1/9/2025
Code Status: DNR DNR/DNI

Jeanne Hoffman is a 100-year-old woman with status post left above-the-knee amputation for ischemic limb on 1/9/2025. I was asked to come at look at removing staples. She has baseline delirium, agitation, and is hard of hearing. Her son was with her again today. She was much more alert and cooperative to exam today. I removed all the staples. The incision is well approximated and there is no edema in the stump. Minimal erythema and no drainage. The medial incision has minimal eschar. Dry dressings only.

The son expressed a desire to get a prosthetic. She will need PMR to see over at Harborview limb loss clinic. I told the son that it's very rare for a 100 y/o to walk after AKA. It takes 80% more energy to walk than with her own legs. She would need to have minimal hip contraction and strength in her right leg and arms to prevent falls while using a prosthetic.

Thank you for asking us to participate in the vascular care of this patient. We are happy to return if the need arises. Please don't hesitate to call us.

Wrisley, Lauren Jean, ARNP at 2/27/2025 1435

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care

PARTICIPANTS:
Jeanne, Louis, Dr. Daniel Stenberg (primary attending), Lauren Wrisley PC ARNP, Beth Chance PC ARNP, Mike Yonkers Spiritual care, Katie Portante SW

INTERVAL HISTORY:
- Prior to seeing Jeanne we reviewed her chart. It appears Jeanne has on RA for much of the night.
- Met with Jeanne and Louis at bedside this morning. Jeanne had her eyes open today, but otherwise did not interact with us. Louis told us he has been giving her fluids on mouth swabs and that she has also drank half a bottle of water using a straw.
- We discussed that Jeanne's lungs do seem to be a bit better this morning. We explained two paths forward to Louis.
- In the first path, Dr. Stenberg could reach back out GI since Jeanne's oxygenation appears a bit better to see if they would be willing to place either a dobhoff tube vs a PEG tube. We explained that with this option, specifically with dobhoff placement, that it might be more difficult to get to a SNF.
- In the second path, we would continue our current plan of focusing on Jeanne's comfort and attempt to transfer her to SNF. Katie let Louis know that Jeanne has been accepted to Ballard SNF and they could take her in the near future.
- Louis said he's like another day to try and see if Jeanne will take more by mouth. We explained she remains a very high aspiration risk with any amount of oral intake, and that even if she could get a feeding tube would still be a high aspiration risk. Louis voiced his understanding of her aspiration risk.
- Dr. Stenberg offered to reach out to GI to see if Jeanne would be a candidate for tube placement in the meantime. Dr. Stenberg offered to circle back in the afternoon with Louis.

PHYSICAL EXAM:
Jeanne is laying in bed, eyes open intermittently. Does not appear to be in significant distress this morning. Did not interact during our visit.

IMPRESSION:
Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. She has had at least two episodes of aspiration with increased O2 requirements, which seem to be improving somewhat. Dr. Stenberg will reach out to GI to ensure that Jeanne is not a candidate for feeding tube placement, which I suspect she is likely not. In that case, we would still have no additional treatments we could offer Jeanne and it would still be appropriate to transfer to a SNF with hospice care. Louis is in agreement with this plan.

RECOMMENDATIONS:
- Appreciate social work assistance for SNF referrals
- Continue comfort focused care

#Dyspnea/Pain
- Continue Butrans 5mcg/hr patch q7 days.
- Continue SQ Hydromorphone from 0.2-0.4 q1h prn for pain and/or dyspnea

#Agitation/anxiety
- Continue SQ Lorazepam 0.25-0.5mg q6h prn
- Continue Haldol 2.5-5mg SQ prn q4hr if Lorazepam is not effective

Gastroenterology Brief Note
Jeanne Leonie Hoffman | U8170135 | 2/27/2025

4:42 PM

Jeanne Leonie Hoffman is a 100 year old female with PMH HTN, T2DM, HLD, prior DVT, PAD p/w ALI on 1/9/25, now s/p L AKA (Smith 1/9/25). Post-op course c/b post-op bradycardia & new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM (1/13/25). Remains inpatient 2/2 delirium, poor PO intake, electrolyte derangements. GI is being re-engaged for endoscopic NGT placement vs PEG placement at the request of the patient's DPOA.

Records reviewed, patient not seen. On review, although the patient now appears to be on room air, upon discussion with the primary team attending (Dr. Stenberg) and his discussion with patient's bedside nurses, patient is actually not on room air - she is receiving 15L O2 via blow-by face mask although it is not being charted as such because she is not wearing the mask on her face. Per nursing staff reports, while she is satting well in this setting at rest, she desats swiftly and reliably on mobilization. Dr. Stenberg also saw her desat to 70% without the blow-by oxygen in the room.

In this setting, it appears that her respiratory status does remain tenuous and unstable. We still feel that she would have a very low likelihood of successful sedation - as such the very likely risks of procedural intervention still far outweigh the potential benefits, and we are not offering endoscopically guided NGT placement or PEG placement at this time.

If the patient were to be intubated for ay other reason, the primary team is welcome to re-engage us for enteral access if bedside NGT placement or NGT placement under fluoroscopic guidance is unsuccessful at that time - though per discussion with Dr. Stenberg, the patient's code status has changed to DNR/DNI since our last discussion regarding this patient, and she is receiving comfort-focused care.

Staffed with GI attending Dr. Saxena.

Code Status: DNR DNR/DNI

CHIEF CONCERN / IDENTIFICATION:
Jeanne Leonie Hoffman is a 100 year old female with history notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13. Transferred to acute care 1/14.

Subjective

SUBJECTIVE

INTERVAL HISTORY:
No significant overnight events.
Vital signs have remained stable however worth noting that the patient is requiring 15 L of oxygen typically delivered to a nonrebreather though it is being placed on a blow-by method that the patient's son has clipped to her hospital gown. Patient will intermittently, and especially with exertion, desaturate down to the 80s, 70s, 60s, and occasionally 50s as witnessed by bedside nurse.
Patient's son is showing me how he has been able to give her small amount of liquid and that she does not have episodes of aspiration or coughing and he is hoping to gradually increase the amount that he is feeding her. I explained that we are still going to recommend no additional feeding as it would likely result in an aspiration as has happened twice already. But given that the patient is presently comfort measures only, the patient's son is allowed to feed her as long as the risk is knowledged.
Was able to have sutures removed from surgical leg today.
Discussed with GI providers regarding possible feeding tube placement. Patient's vital signs are still too tenuous and would not be safe for anesthesia. Thus, we would not recommend additional intervention for feeding.

SCHEDULED MEDICATIONS:
- buprenorphine, 1 patch, q7 days SCH
- lidocaine, 1 patch, q24h
- saliva substitute, 15 mL, TID

INFUSED MEDICATIONS:

PRN MEDICATIONS:
- acetaminophen, 650 mg, q6h PRN
- atropine, 2 drop, q4h PRN
- bisacodyl, 10 mg, Daily PRN
- camphor-menthol, , BID PRN
- artificial tears, 1 drop, q1h PRN
- HYDROmorphone, 0.2-0.4 mg, q1h PRN **OR** HYDROmorphone, 0.2-0.4 mg, q1h PRN
- LORazepam, 0.25-0.5 mg, q6h PRN **OR** LORazepam, 0.25-0.5 mg, q6h PRN
- phenol, 1 spray, Q2 Hours PRN
- scopolamine, 1 patch, q72h PRN
- white petrolatum, , PRN

Objective

OBJECTIVE

T: (not recorded) **BP:** **(!) 142/67** (checking upon pt's son request) (02/27/25 0854) **HR:** 91 (02/27/25 0854)
RR: (not recorded) **SpO2:** 92 % (02/27/25 1116) Room air
T range: No data recorded
Admit weight: 45.5 kg (100 lb 6.4 oz) (01/09/25 1033)
Last weight: 45.7 kg (100 lb 12 oz) (02/21/25 0749)

I&Os:
Intake/Output Summary (Last 24 hours) at 2/27/2025 1824
Last data filed at 2/27/2025 0900

Intake	237 ml
Output	100 ml
Net	**137 ml**

Physical Exam
General - patient laying in bed. Son had put her dentures in and she had the hydration sponge stick in her mouth. Was mostly calm but intermittently agitated, crying out, grimacing, and had increased WOB.
HEENT - NCAT, edentulous
Pulmonary - no supplemental oxygen needed. Minimal WOB. No cough. Decreased air movement. Crackles bilaterally mild.
Skin - no rash or concerning lesion of exposed skin.
Neuro - Does not answer questions.

Labs (*last 24 hours*):

I have reviewed the prior chart notes on this patient.

Assessment/Plan

ASSESSMENT/PLAN

100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA and course c/b post-op bradycardia w/ mobitz II HB requiring pacemaker placement (1/13/25). She remains inpatient due to delirium, poor oral intake, electrolyte derangements, and goals of care.

Dispo: As a presently stands, this patient is still comfort measures only with some knowledgeable great area on the low interventional and as to what we would normally not provide versus what the patient's son/DPOA is recommending would make the patient comfortable. We are not recommending placement of a feeding tube, we are not recommending aggressive intervention including daily labs, we are not recommending tube feeds or TPN or PPN. Patient's son is allowed to assist with nutrition at bedside as he is acknowledged aspiration risk. Present plan is to discharge patient to Bainbridge or palliative care on hospice acknowledging that she may graduate from this. Discontinued Haldol today from MAR.

#Goals of care
There have been extensive discussions with her son, Louis, who would like to pursue all possible avenues to get Jeanne home. He would like to pursue feeding tube and feels that she would want this as she values nutrition. Louis does not feel that the patient is at the end of her life. Per providers who have taken care of Jeanne before, the patient (when lucid) has continued to express she would want Louis to make decisions for her. DCS meeting completed 2/19.
Please see "subjective" for GOC discussion from 2/24. Full details in palliative care (Lauren Wrisley PC ARNP) from 2/24. She did transition to comfort measures only 2/25. She will likely pass in a matter of days.

Please see "subjective" for conversations held today and the last two days with Louis. She will continue on CMO. We continue to express that NG tube is not a possibility and Jeanne is at the end of her life. Though her O2 requirement has improved, her vitals are still too tenuous to support sedation. If son wants to continue to give small amounts of fluid then that is permissible. Our present plan is to discharge the patient to hospice with the son is agreeable to.
- CMO
- Pain: HM 0.2-0.4 q1hr prn (**if Louis is requesting morphine instead, can do 2-5mg SQ q1hr**)
- Anxiety: lorazepam 0.25-0.5mg q6h prn
- Secretions: atropine SL; scopolamine patch 2nd line
- Other comfort meds also placed
- If Louis is wanting to take patient out of the hospital against medical advice, he would be decisional to do this as long as he is able to understand and accept all the risks (worsening of her hypoxemia, inability to adequately treat pt's agitation/pain/anxiety, death during transport related to hypoxemia). If an ambulance would be able to be arranged then we should try to do that if he is leaving. He should sign AMA form. There should also be thorough documentation of the risks, benefits, alternatives discussion.

#Pulmonary edema
Pt now has evidence of volume overload likely related to the fluid she has been receiving. Fluids stopped 2/23 PM and given 1x dose of IV lasix while she still had IV access. Since lost IV access but O2 requirement has come down to 15L on blow by from which the patient still has significant desaturations

#Acute respiratory failure with hypoxia
#Aspiration pneumonitis
Patient had worsening respiratory status due to aspiration, which is likely what is seen on her CTAP from 2/19. This improved without antibiotic treatment. She again had worsening respiratory status on 2/23. The acute nature suggests aspiration as a component on top of pulmonary edema seen on CXR.
- CMO as above

#Acute encephalopathy
#Chronic pain r/t prior L AKA
#Anxiety
#Severe protein-calorie malnutrition
#Hypovolemia
#Hypernatremia
#Hypokalemia
#Hypomag
#Hypophos
#Abdominal pain, diffuse
#PAD, c/b
#Acute limb ischemia
#S/p L AKA (1/9/25, Smith)
#Symptomatic bradycardia
#2nd degree AV block
#S/p Transvenous pacemaker placement (1/10)
#S/p PPM placement (1/13)
#Bilateral Pleural Effusions
#Mild normocytic anemia
#T2DM

Inpatient Checklist:
Fluids/Electrolytes/Nutrition: I'm okay with diet advancement to CLD for son to trial liquids GIVEN we accept she is a high risk and also CMO. Son acknowledges this.
Prophylaxis: None, CMO
Lines/Drains/Airways: None
Disposition: Acute care; CMO
Code Status: DNR DNR/DNI
Contacts: Primary Emergency Contact: Hoffmann Alloin,Louis Charles, Home Phone: 206-780-6885

PALLIATIVE CARE SERVICE: FOLLOW UP

ID/CC: Altered mental status, acute limb ischemia s/p L AKA, malnutrition, palliative care

INTERVAL HISTORY:
- Met Louis at Jeanne's bedside along with Dr. Stenberg and Katie Portante SW.
- Louis told us that Jeanne is still continuing to take in fluids that he is offering her. Jeanne is sitting up in bed today, eyes open. She is not wearing oxygen and is intermittently desatting to 80s.
- Louis had some concern that Jeanne has a new mass on her L cheek, which was evaluated by Dr. Stenberg. He offered to prescribe Jeanne a short course of antibiotics for sialadenitis.
- Katie shared that Jeanne has been accepted by Bainbridge SNF and will likely be able to initiate transfer in the coming days.
- We discussed that our priority will be working towards a safe transfer for Jeanne closer to home, with no other major changes to the plan for today.

PHYSICAL EXAM:
Jeanne is sitting up in bed eyes open, not in distress. Looks at us but is otherwise non-communicative.

IMPRESSION:
Jeanne is 100 year old female with a PMH notable for HTN, T2DM, HLD, prior DVT, PAD who initially presented to the hospital on 1/9/25 with acute limb ischemia, now s/p L AKA. Course complicated by post-operative bradycardia and new intermittent Mobitz II heart block requiring temporary TVP, now s/p PPM 1/13 with course c/b delirium and poor PO intake who has had increased sleepiness, agitation and inadequate PO intake over the last weeks. Jeanne is not a candidate for feeding tube placement, due to her respiratory status and was transitioned to comfort measures earlier this week. She has been accepted to Bainbridge Island Health and Rehab and will hopefully be able to transfer in the coming days.

RECOMMENDATIONS:
- Appreciate social work assistance for SNF referral
- Continue comfort focused care

#Dyspnea/Pain
- Continue Butrans 5mcg/hr patch q7 days.
- Continue SQ Hydromorphone from 0.2-0.4 q1h prn for pain and/or dyspnea

#Agitation/anxiety
- Continue SQ Lorazepam 0.25-0.5mg q6h prn

Thank you for asking the Palliative Care team to be involved in the care of this patient. Please page the team via the paging operator with any specific questions or concerns.

I spent a total of 35 minutes for the patient's care on the date of the service.

Social Work Progress Note

ASSESSMENT:
Admit reason: This is a 100 year old old female admitted for Arterial occlusion [I70.90]
Acute lower limb ischemia [I99.8].
Anticipated disposition/needs: TBD
Potential barriers/concerns: Homeless
Funding: Payor: MOLINA HEALTHCARE MEDICARE / Plan: MOLINA MEDICARE OPTIONS PLUS HMO D-SNP / Product Type: Medicaid
Primary Decision Maker: Patient is their own decision maker

Outpatient Providers:
Patient Care Team:
Navalurkar, Reema, MD as PCP - General (Geriatric Medicine Res/Flw)
Luu, Paul, MD (Wound Ostomy)
Vincler, Catherine, LICSW as Social Worker (Clinical Social Worker)

INTERVENTIONS and REFERRALS:
The following interventions and referrals have been initiated: Consult with healthcare team/provider/community;Discharge planning;Placement - Skilled Nursing Facility

MSW reviewed chart, participated in multidisciplinary rounds to discuss ongoing medical plan and discharge needs. Per MD report, pt on comfort care.

MSW, MD, Palliative team met w/ pt and son Louis at bedside. Provided update on acceptance at Bainbridge Island Health and Rehab; Louis prefers to move forward with Bainbridge SNF as it is closer to home.

F/u call from Lisa at Bainbridge admissions (206-5138-4425); auth for rehab was submitted today, requesting HCS referral be submitted for LTC Medicaid as back-up. HCS referral completed, faxed to Region 2S King Co (p: 206-341-7750, f: 206-373-6855). MD, Palliative team updated.

ADDENDUM: MSW attempted to fax HCS ref 4x; unsuccessful. Will continue to attempt to fax referral.

PLAN or OUTCOME:
SW to continue to follow.

Katie Portante, LSWAIC
