Practice Name : **LK Archive**

Release Date: **04/30/2025**

Patient Name : **Jeanne Hoffman**

Date of Birth : **01/06/1925**

Chart No : **1908754**

MRN : **U8170135**

Encounter : **1816189282, 1816359831, 1816548532, 1816924475, 1817318909, 1817665626, 1817668230, 1818107345, 1818105980, 1818515624, 1818514952, 1818722172, 1818721272, 1818914367, 1818914496, 1818913793, 1819105532, 1819103285, 1819462693, 1819461887, 1819866053, 1820276449, 1820276967, 1822154111, 1822153686, 1822555219, 1822554870, 1823161723, 1732847854, 1731403589, 1728455221, ECGU8170135201302, 1737923854, 1735769167, 1726628667, 1724264674, 1720918879, 1720749936, 1717038574, 1716973203, 1716044223, 1713032157, 1713032132, 1710832588, 1710089791, 1710089461, 1710089414, 1709905468, 1715225401, 1715622750, 1715441572, ECGU8170135200703, 1714788322, ECGU8170135200702, 1714407542, 1713693453, 1714073094, 1709331813, 1708525207, 1708302500, 1707888546, 1702404350, 1702032161, 1701775083, ECGU8170135201507, 1789525192, 1789525190, 1700989206, 1700985931, HXU81701351003586562, HXU8170135349005, HXU8170135349006, HXU8170135349007, HXU8170135349011, HXU8170135349015, HXU8170135349019, HXU8170135349020, HXU8170135349021, HXU8170135349022, HXU8170135349023, HXU8170135349024, HXU8170135349025, HXU8170135349026, HXU8170135349028, HXU8170135349029, HXU8170135349030, HXU8170135349032, HXU8170135349033, HXU8170135349034, HXU8170135349035, HXU8170135349036, HXU8170135349037, HXU8170135349038, HXU8170135349039, HXU8170135349040, HXU8170135349044, HXU8170135349045, HXU8170135349048, HXU81701353955, HXU817013512346, HXU817013521513, HXU817013521514, HXU817013521515, HXU817013526725, HXU817013529382, HXU817013533741, HXU8170135527653, HXU8170135540131, HXU8170135592051, HXU81701351004177498, HXU8170135617422, HXU8170135674904, HXU8170135631090, HXU8170135631091, HXU8170135628792, HXU8170135640189, HXU8170135651570, HXU8170135662990, HXU8170135676730, HXU8170135686029, HXU8170135696997, HXU8170135713635, HXU8170135732295, HXU8170135741008, HXU8170135757151, HXU8170135767621, HXU8170135767622, HXU8170135773000, HXU8170135810539, HXU8170135812926, HXU8170135854884, HXU8170135871077, HXU8170135880743, HXU8170135900490, HXU8170135905544, HXU8170135920323, HXU8170135929639, HXU8170135939632, HXU8170135954596, HXU8170135961938, HXU8170135975393, HXU8170135983412, HXU81701351004449, HXU81701351004377470, HXU81701351035197, HXU81701351047669, HXU81701351004400468, HXU81701351103031, HXU81701351115186,**

IMPORTANT EMERGENCY DEPARTMENT COMMUNICATION AFTER YOUR VISIT:

If you have questions about your ED visit, please call:
Harborview Medical Center ED: 206-744-3074

You may receive a phone call from us in the next few days to ensure that you are improving. Please be sure that we have an accurate phone number and address for you.

To assist us with continuing to improve the quality of the Emergency Care we provide, we would like your input. In the coming weeks, you may receive a survey in the mail about our processes. Please complete this and return it to us. Our goal is to provide you with excellent medical care. If we have not reached this goal, please let us know how we can improve our services.

Harborview Medical Center would like to thank you for allowing us to assist you with your healthcare needs.

It is important to see your doctor or primary care provider. Emergency Care may be incomplete without proper follow-up. For help scheduling your UW Medicine or Harborview Clinic doctor appointment, call the Patient Contact Center at 206.520.5000 or toll free at 877.520.5000.

If you become worse in any way, it is important that you call your doctor, or return to the Emergency Department. Please remember to take these instructions to your next doctor's appointment.

Additional Information/Special Instructions

Suicide Prevention
If you or someone you know is thinking about harming yourself or attempting suicide, there are resources available to help 24/7. Call the toll-free National Suicide Prevention Lifeline to speak with a trained counselor or find a suicide crisis center near you.
Telephone: (800) 273-8255
TTY: (800) 799 - 4889

Antibiotics & You:
Antibiotics treat or prevent infections. If your provider prescribed this medicine for you, take it exactly as instructed. If you do not take it as prescribed, your infection can get worse or start to resist treatment. Please call your provider if you have problems taking your medicines, or if you have side effects.

ID / CC / REASON FOR REFERRAL:
Pt is 95 y/o female BIB ALNW s/p altered mental status and febrile. SW recvd referral from off going shift to follow pt.

HISTORY OF PRESENT ILLNESS:
Per previous shift SW pt resides with son on Bainbridge Island. Son contacted SW earlier when pt arrived and reported pt is normally active. Son reported he and pt live together. Per previous shift son reported he would remain available.

SW then notified pt was medically cleared for discharge and would be ready to return home . SW then attempted to call pt's son to get address and ensure he would be available to receive pt. SW also needed to verify address. Pt is hard of hearing and SW was unable to get close to pt as she was still COVID pending at time of discharge. SW called son approx 6 times and left two messages. Son never called back.

During this time pt became feverish again. SW then informed MD that pt's son was not able to be reached to ensure safe dispo. MD then elected to admit pt.

HEALTH CARE DECISION MAKING:
CONTACT IN FOLLOWING ORDER FOR LEGAL NEXT OF KIN DECISION MAKING:
1 : Louis Alloin , son , 206-708-6885 .

LANGUAGE:
Language: English.

IMPRESSION:
Pt sleeping when SW attempted to engage pt. Pt also very hard of hearing. .

PLAN:
Pt admitted to inpatient service. SW remains available to assist should further needs arise.

QUALITY MEASURES:
Internal SW Data: M18.
Internal SW Data: O30, O36, O42.

EDSW- discharge issues

ASSESSMENT:
Assessment: Notable events: pt admitted from ER around 0100

Assumed care 0100-0700

Neuro: Pt A&Ox3, follows commands

CV: VSS, pulses palpable in all extremities, afebrile, no edema

Respiratory: RRR, room air

Pain: denies pain

Mobility: bedrest

Skin: chronic venous ulcers to BLE, dry dressings c/d/i

IV: right AC, saline locked

Plan: Will continue to monitor for any acute changes.
.
No restraints indicated.

MOBILITY:
Mobility goal for today: passive ROM.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was passive ROM.

PLAN:
PLAN OF CARE Interventions/Outcomes

```
      5/28/2020 1:16          HMC Fall Risk Interventions              Bed in lowest position
        with brakes on, Toileting, Maintain adequate lighting in room, Maintain call bell
        within reach of patient, Provided socks with non-skid soles
                              Skin Interventions       Elevate/offload heels, Pain management
        effective, Turn q2 Hrs, Assist patient to obtain adequate nutrition, Educate pt re:
        appropriate pressure redistribution technique, HOB < 30 degrees, Moisturize skin
                              Acute/chronic confusion
                                  Neuro Goal           Maintains usual level consciousness,
        cognition
                                  Neuro Interventions  Minimize unnecessary stimulation and
        noise, Mobilize 3x/day, Assess pain & sedation, Monitor for neuro/cognitive signs &
        symptoms, Maintain sleep/wake cycle, allow for periods of rest
                                  Neuro Target Date    6/1/2020
                                  Neuro Plan Assessment Met, continue with goal & plan  .

Nursing Progress Note - HMC

Wound Care Consult

REFERRED BY: Nursing

CC: Venous ulcers to bilateral LEs

HPI: Jeanne Hoffman is a 95 year old woman who is very hard of hearing who is seen at nursing request to evaluate wounds to bilateral lower extremities. History is obtained from patient, nursing and chart review.
Patient reports she has had these wounds for many years on and off. She reports they are intermittently very painful, especially with wound care, and at times itchy. She does not feel the wounds are significantly worse than they have been recently. Denies subjective fevers or chills and has been afebrile today. White count 15 on 5/27. She follows at NWH Wound Clinic for routine wound care and per chart review is believed to have mixed vascular disease causing ulcerations to her legs. Appears she was last seen in the wound clinic 10/2019 where she had her wounds debrided. RN reports patient to discharge home today.

Patient with HTN, HLD, chronic venous stasis wounds who presented 5/27/20 with AMS, fever. She was felt to have cellulitis of the right lower extremity and possible atypical pneumonia and was started on Augmentin and Doxycycline. Covid negative.

SOCIAL HISTORY: Lives with son on Bainbridge Island

ALLERGIES:
nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

Medial:

Etiology: Venous ulcers
Wound bed: Scattered openings with pink moist tissue and yellow fibrinous exudate
Edges: Attached
Undermining: N/A
Tunneling: N/A
Exudate: Moderate serosanguineous
Periwound: Hemosiderin staining. No significant erythema, warmth, induration or fluctuance.
Pain: Patient endorses moderate pain with wound care, none at rest.
Odor: Mildly malodorous

IMPRESSION & RECOMMENDATIONS:
Jeanne Hoffman is a 95 year old woman with chronic ulcerations to her bilateral lower extremities consistent with venous stasis ulcerations. The wounds do not appear to be acutely infected. Wounds would benefit from a moist wound healing environment to promote autolytic debridement of avscular tissue and a dressing that will address exudate. She would also benefit from a local antimicrobial to address bioburden in these chronic wounds, given the mild malodor noted today. **After discharge patient should follow up at NWH Wound Clinic.**

Local treatment recommendations are as follows:

Right and left lower extremity wounds:
- Cleanse all affected areas with soap and water or normal saline
- Gently remove loose/dried exudate during cleansing as able.
- Pat dry
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to prevent maceration
- Cut Medihoney alginate to fit the wound beds (Medstores #53045)
- Cover with Mepilex nonbordered (Medstores #49218
- Secure with Kerlix and tape
- Change every 3 days or as needed with soiling

Alternative treatment recommendations for daily wound care if patient remains inpatient:
- Cleanse wound with soap and water OR normal saline
- Gently remove loose/dried exudate as able
- Pat dry
- Apply no-sting barrier to periwound skin and allow to dry for at least 30 seconds to prevent maceration
- Cover open wounds with Xeroform
- Secure Xeroform with Kerlix and tape
- Change daily or as needed with soiling, saturation or dislodgement

Discussed with RN, Andrew.

Wound care signing off but will be happy to see patient again for any new concerns. Please re-consult if indicated.

For questions please call the Wound Care Team at 744-7590.

Thank you

Wound Care Consult

TRANSITION PLANNING NOTE:

ASSESSMENT NOTE TYPE

In Person Assessment Note:

Continuity of Care Nurse met with patient/family to discuss care coordination needs during and after this hospital stay. Patient/family preferences, availability of medical services close to home and insurance network options for home health, home equipment/supplies, medications and follow-up are all included in transition plans.

ADMISSION INFORMATION

Admit diagnosis:

95 year old woman who presents with AMS

Patient admitted within the last year

DISCHARGE INFORMATION:

Anticipated discharge date: 5/28/2020

DC date comments:

If medically stable

Discharge destination: Home

DC destination comments: Lives with son on Banibridge Island. Pt's son confirmed he is able and available to be with pt 24/7 to assist her w/care at home after discharge

Discharge transportation: Cabulance

DC transportation comments: CCN faxed Hopelink Cabulance request on Will Call. Pt. & her son need to be at GWL before 5:30pm to get her ride home. RN aware

MEDICATIONS

Pharmacy where patient will pick up current discharge medications:

HMC

Community pharmacy:

Safeway on Bainbridge Island

FOLLOW-UP PLAN

Primary care provider: Neighbor Jr, MD, William E
Primary care clinic:
PCP verified at HH. Phone: 206-685-1011.

per chart, hx.of:
HTN - not on any meds
DM2 - not on any meds
HLD
H/o DVTs, previously on warfarin
Chronic venous insufficiency
7/2019 GLF with R sided rib fractures, R hemothorax, non-operative pelvic fractures

Primary care provider follow up:
06/10/2020 10:00 AM

CONTACTS
Family member/ Legal next of kin (LNOK) / Durable power of attorney (DPOA):
Son, also is pt. POA. Louis Charles Hoffmann Alloin. Phone: 206-780-6885
Address prior to admit:
Address in ORCA verified w/pt's son Louis.

321 HIGH SCHOOL ROAD NE
STE D3 PMB 292
BAINBRIDGE ISLAND, WA 98110

Phone: 206-780-6885

FINANCIAL SCREENING
Current funding:
Medicare and QMB Medicaid

VULNERABILITY SCREENING
FUNCTIONAL LIMITATIONS PRIOR TO ADMIT
Per pt.'s son Louis. Pt. is independent with ambulation, bathe, dress and cook herself at home. Has a seated walker, in her hospital room.
LIVING/SOCIAL/EDUCATIONAL STATUS PRIOR TO ADMIT
Stable Housing: Per pt;s son, he lives upper half and pt. lives in bottom half of the house. Per Son, there are railing around the house, so pt. can hold on to the rail when get around inside the house. Per son, he stays upper portion of the house, often check in on pt. Son confirmed with CCN that he will be staying with pt. pt. 24/7 for few days to help her w/care until pt. back to her previous independent status.
Social Supports: Family and friends able to help.
ACCESS TO HEALTHCARE PRIOR TO ADMIT
No/minimal barriers to healthcare.
Interpreter needed
No.
Resources Provided
Primary care provider appointment.

Discharge Summary

DATE OF ADMISSION: 05/27/2020

DATE OF DISCHARGE: 05/28/2020

PCP: William Neighbor

DISCHARGE TEAM & ATTENDING: H Medicine Hospitalist 4 (Brusati, Allison)

DISCHARGE DIAGNOSIS:
Community acquired pneumonia, atypical
Cellulitis, acute on chronic
Venous stasis
Hearing loss
Hypertensive disorder
Hyperlipidemia
Type 2 diabetes mellitus

DISCHARGE FOLLOW-UP VISITS/APPOINTMENTS:

06/10/20 at 10:00 am
William Neighbor
Hall Health
4060 East Stevens Way NE
Seattle, WaPhone: 206-685-1011
Comment: This appointment is for post hospitalization follow up with your primary care provider.
The clinic will contact you if there will be any change to the appointment. Please check in at 9:45am

PENDING RESULTS THAT REQUIRE FOLLOW-UP: *(as of this summary)*
Culture Blood, Bact, Peripheral Collect

DIAGNOSTIC STUDIES RECOMMENDED:
Lab and/or Radiology Follow Up: None

INCIDENTAL FINDING THAT REQUIRE FOLLOW-UP: None

THERAPEUTIC RECOMMENDATIONS:
Equipment: None
Diet: Regular
Activity: ad lib with stand-by assistance from family (son Louis)
General Care and/or Wound Instructions:
Ms. Hoffman was treated for both a pneumonia and for cellulitis. She was started on 2 antibiotics (Cefpodoxime and Doxycylcine) and she should continued on these medications for a total of 5 days.

Our wound care team evaluated her leg wounds and made recommendations for wound care.

Patient at Risk For: Diabetic foot ulcers
Seizure Precautions: None

ALLERGIES: Sulfa drugs; penicillin; Adhesive Bandage; aspirin - reaction(s): Rash; nitrofurantoin

DISCHARGE MEDICATIONS:
1. atorvastatin 20 mg oral tablet Dose: 20 mg PO Daily
2. atorvastatin 20 mg oral tablet Dose: 10 mg PO Daily
3. cefpodoxime 100 mg oral tablet Dose: 100 mg PO Q12 Hours for 5 day(s)
4. cholecalciferol 1000 intl units (25 mcg) oral tablet Dose: 2,000 units PO Daily
5. doxycycline hyclate 100 mg oral tablet Dose: 100 mg PO Q12 Hours for 5 day(s)
6. lactobacillus acidophilus oral tablet Dose: 1 tab PO BID
7. lidocaine topical (lidocaine 4% topical solution) Dose: See Instructions Apply daily for wound care, bilateral leg wounds
8. lidocaine topical (lidocaine 2% topical spray) Dose: See Instructions Apply daily for wound care
9. multivitamin (Multiple Vitamins oral tablet) Dose: 1 tab PO Daily
10. pentoxifylline 400 mg oral tablet, extended release Dose: 400 mg PO TID
11. timolol ophthalmic (Betimol 0.5% ophthalmic solution) Dose: 1 drop(s) EYE-Both BID
12. acetaminophen 500 mg oral tablet Dose: 500 mg PO BID PRN for pain
13. acetaminophen-codeine # 3 300 mg-30 mg oral tablet Dose: See Instructions as needed for pain Take 0.5 - 1 tablet twice daily as needed for pain

REASON FOR ADMISSION: *(Initial consult note by Dr. Brustin with Internal Medicine on 5/28/2020)*
Ms. Hoffman is a 95 year old woman with HTN, HLD, chronic venous stasis wounds who presents with AMS, fever.

Per ED, patient's son report progressive somnulence over the course of the day and requested airlift to HMC. Stroke code was called. Vitals signs were notable for a temp of 106 en route. Her son that previously she had behaved this way when overdosing on codeine. Narcan was given in CT scanner and patient normalized within a few minutes. CTH and CTA negative.

In the ED, patient was febrile with Tmax 38.8, mildly hypertensive, otherwise normal vitals. ED was concerned for L leg cellulitis superimposed on chronic wounds and ?PNA given CXR with bilateral patchy infiltrates. Given doxycycline. Felt stable to return home however transportation not possible at late hour given lives on Bainbridge. Given CXR findings, ruling out for COVID.

Jeanne, was sound asleep when I met her, and as reported to me by the ED, extremely hard of hearing. She was able to deny pain, cough, shortness of breath, chest pain. Said her leg was not worse but not sure if she understood the question. Denied fevers.

HOSPITAL COURSE:
Atypical CAP: Ms. Hoffman was admitted to the COVID-19 isolation unit and was started on treatment for CAP with Azithromycin. COVID-19 PCR was obtained (5/27) and was NEGATIVE. The patient had minimal respiratory symptoms, but had diffuse finding on CXR.

Altered Mental Status: Likely toxic encephalopathy from her active infections. Her confusion was largely resolved upon arrival to HMC.

Cellulitis/Acute on Chronic Venous Stasis: Slight increase warmth on right leg compared to left. Bilateral chronic leg wounds were evaluated

by wound care. Fevers in the ED, which resolved. She was started on Doxycycline for possible cellulitis.

Family: Spoke with son Louis Alloin at the bedside. We reviewed the plan and they were provided with supplies for wound care.

DISPOSITION: Self care Home/Apt, Shelter/Respite, Street (01)

PHYSICAL EXAM:
Vitals *(Most recent and 24 hour range.)*

~RADIOGRAPH OF THE CHEST, 1 VIEW
CLINICAL INDICATION:
fever
COMPARISONS:
8/1/2019
FINDINGS AND IMPRESSION:
There is new patchy opacification within the bilateral mid and lower lungs and increased prominence of the interstitium which may represent mild superimposed edema. Findings are concerning for multifocal pneumonia in setting of fever including atypical/viral pneumonia.
No effusion or pneumothorax.
Heart size is normal and unchanged.
No acute osseous abnormality. The right AC joint is not visualized. Mild left AC joint and shoulder osteoarthritis. Soft tissues are normal.

CTA Neck (05/27/2020 18:12)
~EXAMINATION:
CTA NECK ANGIO
CLINICAL INDICATION:
Stroke Code
TECHNIQUE:
CTA Head and Neck Stroke (N-48)
1. Non-contrast head: MDCT scanning was obtained through the head without contrast.
2. CTA Head/Neck: MDCT was obtained from the aortic arch to the vertex during bolus infusion of contrast. Slab 3D-MIP reformatted images of extracranial and intracranial vessels were obtained in multiple planes.

3. Post-contrast head: MDCT was obtained through the head after contrast injection.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
CONTRAST:
Omnipaque 350 mg-ml 80 ml 05/27/2020 06:08 PM INTRAVENOUS
COMPARISON:
CT head without contrast 7/24/2019
FINDINGS:
NON-CONTRAST HEAD CT:
MASS EFFECT & VENTRICLES: No midline shift shift. The lateral ventricles are symmetric. Incidentally noted is a septum cavum pellucidum. Prominence of the ventricular system and extra-axial spaces is commensurate with mild cerebral volume loss. Basal cisterns are patent. No downward herniation.
BRAIN: No acute infarct, hemorrhage or mass lesion is seen. Mild periventricular and deep subcortical white matter hypodensities likely representing small vessel ischemic changes. Bilateral basal ganglia mineralization. Similar left parietoccipital calcification.
VASCULAR: Moderate calcification of bilateral cavernous carotids and intracranial segments of the vertebral arteries.
EXTRA-AXIAL: No abnormal extra-axial fluid collections or masses.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Bilateral lens replacement. Orbits are otherwise normal.
POST-CONTRAST HEAD CT:
ENHANCEMENT: Normal intracranial enhancement.
HEAD CTA:
ARTERIES: Normal intracranial arteries. No aneurysm, AVM, stenosis or occlusion.
VARIANTS: Circle of Willis is normally developed. No other vascular anatomic variants.
VEINS: Dural sinuses and deep venous structures are normal.
NECK CTA:
AORTIC ARCH: Common origin of the brachiocephalic and left common carotid arteries from the arch, a normal variant anatomy.
CAROTIDS: Common carotid vessels are normal. Mild calcified plaque at the carotid bulbs/origins of the bilateral ICAs without significant stenosis. Additional calcified plaque within the bilateral carotid canals, cavernous carotids and supraclinoid ICAs. Fusiform aneurysmal dilation of the right supraclinoid ICA to the circle of Willis measuring up to 0.6 cm. Internal carotid artery origins show no stenosis. Cervical ICA's are normal.
VERTEBRALS: Focal calcifications at the origins of the bilateral vertebral arteries without significant stenosis. There is flattening of the left vertebral artery within the V3 segment (12/132), although the more distal segments are well perfused. Right cervical segments are normal. Right vertebral artery is dominant.

IMPRESSION:
1. Head CT
- No acute infarct, hemorrhage or mass effect.
- Mild cerebral volume loss and sequela of chronic ischemic microvascular disease.
2. CTA head
- No high-grade stenosis or occlusion.
- Fusiform aneurysmal dilation of the right supraclinoid ICA measuring up to 0.6 cm.
3. CTA of the neck vessels
- No high-grade stenosis, dissection or occlusion.
- Mild calcified plaque in the bilateral carotid bulbs without significant ICA stenosis.
Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.
This is a preliminary report by Dr. Aaron Daub (PGY-5). A final report will be available by 10:00 AM on the following morning, or after 3 PM on weekends and holidays. Unless a final report appears below, an attending Radiologist has not yet reviewed the images.
ATTENDING FINAL REPORT
I agree with the preliminary report with the following comment(s) (Cat 2):
There is a 5 mm smooth, non-spiculated nodular density in the right medial lung (series 12, images 1 through 3).
IMPRESSION:
See impression above.
PULMONARY NODULE MANAGEMENT RECOMMENDATIONS:

Time: > 30 minutes were spent in the care and arrangement of this patients discharged plans.

Hospital Medicine Service (HMS)

After patient was discharged, the micobiology lab alerted the team that 1 or 2 blood cultures were found to be growing GPC's in clusters (5/27).

The patient and his son Louis were alerted and the team will reach out to PCP to assist with clincial follow-up and possible repeat cultures.

Discharge Hygiene Instructions: May shower, Assistance needed with transferring in and out of shower/ tub

Discharge Wound Instr

Discharge Wound Instructions, Additional:

Right and left lower extremity wounds:
- Cleanse all affected areas with soap and water or normal saline - Gently remove loose/dried exudate during cleansing as able
- Pat areas dry
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to prevent maceration
- Cut Medihoney alginate to fit the wound beds
- Cover with Mepilex nonbordered
- Secure with Kerlix and tape
- Change every 3 days or as needed with soiling

Alternative treatment recommendations for daily wound care if patient remains inpatient:
- Cleanse wound with soap and water OR normal saline
- Gently remove loose/dried exudate as able
- Pat dry
- Apply no-sting barrier to periwound skin and allow to dry for at least 30 seconds to prevent maceration
- Cover open wounds with Xeroform
- Secure Xeroform with Kerlix and tape
- Change daily or as needed with soiling, saturation or dislodgement)

Your Follow-up Visits/Appointments:

When:	06/10/20 at 10:00 am
Clinic Address:	UWMC - Hall Health 4060 East Stevens Way Univ. of WA Campus Seattle, WA 98195 (206) 616-2495
Comments:	This appointment is for post hospitalization follow up with your primary care provider, Dr. William Neighbor. The clinic will contact you if there will be any change to the appointment. Please check in at 9:45am

Allergies:
nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

Medication List:
It is important to know what medicines you are taking.

Update your list if your medicines or dosages change.

Keep a list of your medicines with you. A good place to put your list is in your wallet or purse.

Give all your health care providers a list of all the medicines you take including any vitamins, supplements, or medicines you bought without a prescription.

If a medication is not on this list, contact your provider to discuss whether it should be discontinued.

MEDICATIONS TO BE TAKEN AT HOME:

Medication	AM	Noon	PM	Bed	Comments
atorvastatin 20 mg oral tablet 20 mg by Mouth daily					
atorvastatin 20 mg oral tablet 10 mg by Mouth daily					
cefpodoxime 100 mg oral tablet 100 mg by Mouth every 12 hours Take for:5 day(s)					
cholecalciferol 1000 intl units (25 mcg) oral tablet 2,000 unit(s) by Mouth daily					
doxycycline hyclate 100 mg oral tablet 100 mg by Mouth every 12 hours Take for:5 day(s)					
lactobacillus acidophilus oral tablet 1 tablet(s) by Mouth twice daily					
lidocaine topical (lidocaine 4% topical solution) Apply daily for wound care, bilateral leg wounds					
lidocaine topical (lidocaine 2% topical spray) Apply daily for wound care					
multivitamin (Multiple Vitamins oral tablet) 1 tablet(s) by Mouth daily					

pentoxifylline 400 mg oral tablet, extended release 400 mg by Mouth three times daily					
timolol ophthalmic (Betimol 0.5% ophthalmic solution) 1 drop(s) Each EYE twice daily					
acetaminophen 500 mg oral tablet 500 mg by Mouth twice daily as needed for pain					
acetaminophen-codeine # 3 300 mg-30 mg oral tablet as needed for pain Take 0.5 - 1 tablet twice daily as needed for pain					

Additional medication information:

Patient Instructions:

Signs/Symptoms

Call if following Signs/Symptoms Appear:

Fever greater than 101.5F
Increased pain
Change in color of affected extremity
Change in color of affected extremity unrelieved by elevation
Change in sensation of affected extremity unrelieved by elevation
Change in temperature of affected extremity
Change in temperature of affected extremity unrelieved by elevation
Swelling, pain or tenderness in a calf
Call 911 if unrelieved chest pain

Activity Instructions

Discharge Activity/Instructions:

Activity as tolerated
Needs assistance when walking

Hygiene Instructions

Discharge Hygiene Instructions:

May shower
Assistance needed with transferring in and out of shower/ tub

Wound Instructions

Discharge Wound Instructions, Additional:

Right and left lower extremity wounds:
- Cleanse all affected areas with soap and water or normal saline - Gently remove loose/dried exudate during cleansing as able
- Pat areas dry
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to prevent maceration
- Cut Medihoney alginate to fit the wound beds
- Cover with Mepilex nonbordered
- Secure with Kerlix and tape
- Change every 3 days or as needed with soiling

Alternative treatment recommendations for daily wound care if patient remains inpatient:
- Cleanse wound with soap and water OR normal saline
- Gently remove loose/dried exudate as able

- Pat dry
- Apply no-sting barrier to periwound skin and allow to dry for at least 30 seconds to prevent maceration
- Cover open wounds with Xeroform
- Secure Xeroform with Kerlix and tape
- Change daily or as needed with soiling, saturation or dislodgement)

Nutrition Instructions

Discharge Diet / Nutrition Instructions: Diet as tolerated
Thin Liquids

Special Instructions/Info

Discharge Special Instructions: Ms. Hoffman was treated for both a pneumonia and for cellulitis. She was started on 2 antibiotics (Cefpodoxime and Doxycylcine) and she should continued on these medications for a total of 5 days.

Our wound care team evaluated her leg wounds and made recommendations for wound care.

Transportation to Follow Up Appointment: Patient/caregiver to arrange transportation to follow up

Belongings_

Belongings returned at discharge: Yes

Your Discharge Education:

No additional handouts

Yes - PATIENT/CAREGIVER/FACILITY PROVIDED COPY OF PRINTED DISCHARGE INSTRUCTIONS

Additional Information/Special Instructions
If you experience chest pain or difficulty breathing - **CALL 911**

Quit Smoking
Quitting smoking or other tobacco use is the most important thing a person can do for their health. If you or a family member smokes, call the National Tobacco Quitline toll-free at 1-800-QUIT-NOW (1-800-784-8669) & talk to your primary care provider (PCP).

Suicide Prevention
If you or someone you know is thinking about harming yourself or attempting suicide, there are resources available to help 24/7. Call the toll-free National Suicide Prevention Lifeline to speak with a trained counselor or find a suicide crisis center near you.
Telephone: (800) 273-8255
TTY: (800) 799 - 4889

Opioid Safe Storage & Disposal
Only take opioids if you have strong pain that does not lessen by other methods.
Do not share your medications with others. Do not sell your medication.
Keep your medication in a safe place away from children and pets.
Discard expired or unused medication by taking it to a safe disposal location which can be found at www.takebackyourmeds.org
Naloxone is a prescription medicine that temporarily reverses an opioid overdose. In the state of Washington you can get naloxone without a prescription from any pharmacy. Cost may vary.

Antibiotics & You
Antibiotics treat or prevent infections. If your provider prescribed this medicine for you, take it exactly as instructed. If you do not take it as prescribed, your infection can get worse or start to resist treatment. Please call your provider if you have problems taking your medicines, or if you have side effects.

Nursing Progress Note - HMC

Asked for consultation by emergency medicine team (Dr. Badulak attending) for evaluation of decreased responsiveness, facial droop and possible stroke. I saw and evaluated patient. I agree with the findings and plan as detailed in resident physician Dr. Kazanci's 5/27/20 note. Date of service: 5/28/20

Briefly, pt is a 95 yo W h/o multiple vascular risk factors with decreased responsiveness, diffuse weakness, L facial droop concerning for acute stroke. Patient reportedly took medication for back pain, possibly more than prescribed, then was noted by son to be less and less responsive. Patient noted to improved after administration of IV narcan. Non-contrast head CT and CTA head and neck were without acute abnormality; CTA with 6mm Rt fusiform aneurysmal dilation of the right supraclinoid ICA and mild calcified plaque in the bilateral carotid bulbs without significant stenosis. Patient was noted to be febrile with chest X-ray concerning for pneumonia so was started on antibiotics after being assessed for COVID infection.

On exam, patient alert though very hard of hearing so with limited communication. Mild L facial droop at rest but symmetric smile. Full ocular versions, equal pupils. Absent pronator drift and symmetric grip, arm extension and flexion. Full strength in bilateral hip flexion. Normal FNF without ataxia.

Presumed toxic-metabolic encephalopathy in setting of underlying infection and increased dose of psychoactive medications for pain. No evidence of vascular occlusion or stenosis to suggest TIA. Recommend continued treatment of pneumonia and cellulitis. Would consider low dose aspirin for multiple vascular risk factors if no increased bleeding risk.

DIAGNOSIS CLARIFICATIONS:

1. Sepsis, unspecified, Present on Admit, 2/2 atypical pneumonia and bilateral LE cellulitis- Pt. with HTN, HLD, chronic venous stasis wounds who presented with AMS, fever. Patient's son reported progressive somnolence over the course of the day and requested airlift to HMC. Vitals signs were notable for a temp of 106 en route.
In the ED, patient was febrile with Tmax 38.8, mildly hypertensive, otherwise normal vitals. WBC=15.32. ED was concerned for L leg cellulitis superimposed on chronic wounds and ?PNA given CXR with bilateral patchy infiltrates. Given doxycycline.
Atypical CAP: treated with Azithromycin. COVID-19 test negative. The patient had minimal respiratory symptoms, but had diffuse finding on CXR.
Altered Mental Status: Likely toxic encephalopathy from her active infections.
Cellulitis/Acute on Chronic Venous Stasis: Slight increase warmth on right leg compared to left. Bilateral chronic leg wounds were evaluated by wound care.

2. Anemia, unspecified, Present on Admit- Initial Hct level on day of admit was 30. Previous record showed a Hct of 25 checked on 8/4/2019.

ED Triage Form

NEUROLOGY CONSULTATION NOTE

REASON FOR CONSULT: We are asked by Dr.Badulak Jenelle to consult regarding altered mental status .

CC/ID: Altered mental status, code stroke

HISTORY OF PRESENT ILLNESS:

The history was obtained from chart review as the patient is not able to participate in history taking.
As per the son his mother lives with him. She is a right-handed, active 95 year woman. This morning the patient woke up in her usual state and they had a meal together. The patient reported some back pain and he told her to take her medication. The son believes that she may have taken too much of her medications as it happened in the past.

Last known well around 1500. As per the son the patient became less and less responsive in the afternoon. Upon arrival in the ED the patient had a BP of 149/64 mmHg and a blood glucose of 224. A stat non-con head was obtained which did not show an acute territorial infarct or a haemorrhage. The CTA head and neck did not show a LVO.
Of note, it is reported that the patient has a temperature of 100.6 F. In the ED the patient had a CXR with bilateral patchy infiltrates, concerning for PNA. The patient was given doxycycline. Currently ruling out for COVID.

[x] Patient unable to provide past medical history, family history, or social history due to abnormal mental status

PAST MEDICAL HISTORY:
[x] Patient cannot provide due to abnormal mental status
HTN, not on meds
DM2, not on meds

IMAGING:
CT head non-con from 05/27/2020
CTA head and neck from 05/27/2020
IMPRESSION:
1. Head CT
- No acute infarct, hemorrhage or mass effect.
- Mild cerebral volume loss and sequela of chronic ischemic microvascular disease.
2. CTA head
- No high-grade stenosis or occlusion.
- Fusiform aneurysmal dilation of the right supraclinoid ICA measuring up to 0.6 cm.
3. CTA of the neck vessels
- No high-grade stenosis, dissection or occlusion.
- Mild calcified plaque in the bilateral carotid bulbs without significant ICA stenosis.

SUMMARY & RECOMMENDATIONS:

This is a 95 year old right-handed woman with history of HTN who was brought in by EMS with altered mental status. As per the son who provided history over the phone to the ED attending, the patient progressively became less responsive in the afternoon. Stroke code was called.

Upon my arrival the patient was normotensive and euglycemic. NIHSS was 14, points given for lack of cooperation and inability to follow commands. Non-con head CT did not show a haemorrhage or a large territorial infarct. Given the fact that the patient did not have any lateralizing findings on the neuro exam and had a temperature of 100.6, an ischemic stroke was deemed less likely. Hence, no tPA was offered. No LVO seen on CTA head and neck, therefore, no thrombectomy candidate.

The etiology of the altered mental status is most likely toxic-metabolic. The mental status improved in the CT suite after administration of IV narcan.

Recommendation
- Work-up for toxic-metabolic encephalopathy
- No further neurologic work-up indicated.

I have viewed and reviewed the patient's labwork and neuroimaging.The case was discussed with the neurovascular attending on call Dr. Taylor. The patient will be staffed with the neurology attending Dr. Khot on 5/28/2020.

Thank you for the opportunity to participate in this patient's care. Please contact neurology consults with any questions.

ID / CC / REASON FOR REFERRAL:
Pt is a 95 yo female who was airlifted from Bainbridge to HMC ED for r/o CVA. SW fielded a phone call from pt's son just as pt arrived to the ED.

HISTORY OF PRESENT ILLNESS:
Son reports his mother lives with him and he provides care as needed. He states his mother is an active 95 yo. This morning she woke up in her usual state and they had a meal together. He reports his mother said she had some back pain and he told her to take her medication. Son thinks maybe she took too much of her meds as that has happened to her in the past. SW collect son's contact information as he states he is his mother's POA. SW shared son's contact information with MD who called son while pt was in imaging.

Son reported he would be coming to hospital tomorrow, not tonight, but he is available by phone at any time..

HEALTH CARE DECISION MAKING:
CONTACT IN FOLLOWING ORDER FOR LEGAL NEXT OF KIN DECISION MAKING:
1 : Louis Alloin , son/POA , 206-780-6885 .

LANGUAGE:
Language: English.

IMPRESSION:
Pt is altered in her mentation and not able to participate in care planning. Pt's son reports being POA and care giver for his mother. Son available to medical team via telephone and called to ED just as his mother arrived.

PLAN:
Pt continues to be medically evaluated. SW will remain available to pt should additional needs arise.

QUALITY MEASURES:
Internal SW Data: M16.
Internal SW Data: O30, O42.

Electronically Reviewed/Signed On: 05/27/20 at 19:08

EDSW - TC from son

PHYSICIANS PRESENT:
The following resident(s) participated in the care and documentation of this patient:
Marolf MD, Marissa Dee.

ID/CC:
95 yo with a history of chronic venous stasis and lower extremity wounds, prior DVTs/PEs, and chronic lower back pain who was airflighted from Bainbridge Island after being found with a decreased LOC

HISTORY OF PRESENT ILLNESS:

Per her son, Louis, the patient was last seen normal at 1500 today, when she was drinking tea and eating crumpits. She had not been having any symptoms prior to that, including fever, cough, shortness of breath, abdominal pain, etc. Medics arrived, and she reportedly had a GCS of 3 at one point. Vital signs were all within normal limits, except for a fever of 106. The decision was made to Air Flight patient to Harborview.

On arrival, she had a GCS of 9 but could not answer any questions or follow commands. She remained hemodynamically stable. She was rushed to CT as a code stroke. Her son was reached via phone, who expressed concern that she may have taken too much codeine, which has happened before, requiring Narcan a few years ago. The decision was made to give her 0.2 mg of Narcan, which seemed to improve her mental status rapidly. Within 10 minutes, her GCS was 15, and she was A&Ox4, answering all questions appropriately.

History is somewhat limited because patient is hard of hearing and without her hearing aids; however, she says earlier today she said she "didn't feel quite right" but could not pinpoint why. She denies taking any extra codeine. Her only symptom was bad lower back pain. She hasn't felt chest pain, abdominal pain, shortness of breath, cough, or any other new symptoms.

PAST MEDICAL HISTORY:
chronic venous stasis and lower extremity wounds, prior DVTs/PEs, and chronic lower back pain

PROBLEM LIST:

MRSA
1) Created via Discern Rules based on patient history/lab results
MRSA
1) Created via lab_mrsa_check Discern Rule based on patient lab results
Supratherapeutic INR

MEDICATIONS:
Taken from the chart:
acetaminophen PRN
atorvastatin 20 MG
Calcium Carbonate 500 MG Oral Chew Tab PRN
Lactobacillus (ACIDOPHILUS) 0.5 MG PRN
pentoxifylline ER 400 MG TID

ALLERGIES:

nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

FAMILY HISTORY:
non-contributory

SOCIAL HISTORY:
Lives with son Louis

REVIEW OF SYSTEMS:
A complete ROS was performed and is negative, except as noted above.

RADIOLOGICAL STUDIES:
Radiology Results
XR Chest (05/27/2020 18:14)
~RADIOGRAPH OF THE CHEST, 1 VIEW
CLINICAL INDICATION:
fever
COMPARISONS:
8/1/2019
FINDINGS AND IMPRESSION:
There is new patchy opacification within the bilateral mid and lower lungs and increased prominence of the interstitium which may represent mild superimposed edema. Findings are concerning for multifocal pneumonia in setting of fever including atypical/viral pneumonia.
No effusion or pneumothorax.
Heart size is normal and unchanged.
No acute osseous abnormality. The right AC joint is not visualized. Mild left AC joint and shoulder osteoarthritis. Soft tissues are normal.

CTA Neck (05/27/2020 18:12)
~EXAMINATION:
CTA NECK ANGIO
CLINICAL INDICATION:
Stroke Code
TECHNIQUE:
CTA Head and Neck Stroke (N-48)
1. Non-contrast head: MDCT scanning was obtained through the head without contrast.
2. CTA Head/Neck: MDCT was obtained from the aortic arch to the vertex during bolus infusion of contrast. Slab 3D-MIP reformatted images of extracranial and intracranial vessels were obtained in multiple planes.
3. Post-contrast head: MDCT was obtained through the head after contrast injection.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
CONTRAST:
Omnipaque 350 mg-ml 80 ml 05/27/2020 06:08 PM INTRAVENOUS
COMPARISON:
CT head without contrast 7/24/2019
FINDINGS:
NON-CONTRAST HEAD CT:
MASS EFFECT & VENTRICLES: No midline shift shift. The lateral ventricles are symmetric. Incidentally noted is a septum cavum pellucidum. Prominence of the ventricular system and extra-axial spaces is commensurate with mild cerebral volume loss. Basal cisterns are patent. No downward herniation.
BRAIN: No acute infarct, hemorrhage or mass lesion is seen. Mild periventricular and deep subcortical white matter hypodensities likely representing small vessel ischemic changes. Bilateral basal ganglia mineralization. Similar left parietoccipital calcification.
VASCULAR: Moderate calcification of bilateral cavernous carotids and intracranial segments of the vertebral arteries.
EXTRA-AXIAL: No abnormal extra-axial fluid collections or masses.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Bilateral lens replacement. Orbits are otherwise normal.
POST-CONTRAST HEAD CT:
ENHANCEMENT: Normal intracranial enhancement.
HEAD CTA:
ARTERIES: Normal intracranial arteries. No aneurysm, AVM, stenosis or occlusion.
VARIANTS: Circle of Willis is normally developed. No other vascular anatomic variants.

VEINS: Dural sinuses and deep venous structures are normal.
NECK CTA:
AORTIC ARCH: Common origin of the brachiocephalic and left common carotid arteries from the arch, a normal variant anatomy.
CAROTIDS: Common carotid vessels are normal. Mild calcified plaque at the carotid bulbs/origins of the bilateral ICAs without significant stenosis. Additional calcified plaque within the bilateral carotid canals, cavernous carotids and supraclinoid ICAs. Fusiform aneurysmal dilation of the right supraclinoid ICA to the circle of Willis measuring up to 0.6 cm. Internal carotid artery origins show no stenosis. Cervical ICA's are normal.
VERTEBRALS: Focal calcifications at the origins of the bilateral vertebral arteries without significant stenosis. There is flattening of the left vertebral artery within the V3 segment (12/132), although the more distal segments are well perfused. Right cervical segments are normal. Right vertebral artery is dominant.
IMPRESSION:
1. Head CT
- No acute infarct, hemorrhage or mass effect.
- Mild cerebral volume loss and sequela of chronic ischemic microvascular disease.
2. CTA head
- No high-grade stenosis or occlusion.
- Fusiform aneurysmal dilation of the right supraclinoid ICA measuring up to 0.6 cm.
3. CTA of the neck vessels
- No high-grade stenosis, dissection or occlusion.
- Mild calcified plaque in the bilateral carotid bulbs without significant ICA stenosis.
Internal carotid artery origin stenosis by NASCET criteria: No significant stenosis by NASCET criteria.
This is a preliminary report by Dr. Aaron Daub (PGY-5). A final report will be available by 10:00 AM on the following morning, or after 3 PM on weekends and holidays. Unless a final report appears below, an attending Radiologist has not yet reviewed the images.

ED COURSE & MEDICAL DECISION MAKING:

95 yo with a history of chronic venous stasis and lower extremity wounds, prior DVTs/PEs, and chronic lower back pain who was airflighted from Bainbridge Island after being found with a decreased LOC. On arrival, patient had a GCS of 9, and was unable to follow commands. She was able to gag and phonate, demonstrating good protection of airway. Vital signs were within normal limits. She was taken immediately to CT for a code stroke. CT/CTA showed no acute stroke or intracranial abnormality. Collateral was obtained from the son via the phone. He noted a history of codeine overdose and expressed concerns that this could be the cause of her current decreased conciousness, though he had not actually witnessed it. For this reason, she was given Narcan 0.2 mg. Within the next 10-15 minutes, her mental status improved significantly, and she became fully oriented, able to answer questions. Given her fever to 106 F while en route, we began an infectious work up. Interview was non-focal; patient only endorsed her chronic lower back pain. Exam was only notable for increased painful, erythema on her L anterior shin below her knee in association with mulitiple chronic venous stasis ulcers. To work up her LOC and fever, we obtained: CXR, ECG, CBC, CMP, coags, tylenol level (given initial concern of tylenol with codeine intake) trops, U/A, and Utox.

Update: Work up is only significant for: 1) leukocytosis to 15, and 2) a CXR shows a new patchy opacity and increased interstitial prominence, concerning for possible pneumonia. She is currently not endorsing any respiratory symptoms, but her right leg is concerning for a mild cellulitis. As her vitals have been fine and she has returned to her baseline, will prescribe doxycycline to cover for both cellulitis and pneumonia. At this point, we suspect that the patient was not feeling "quite right" today as a result of an infection, but given the impressive response to Narcan (and her history of a similar codeine overdose), her decreased level of conciousness was likely a result of codeine. Given how well she is doing, it would be reasonable to manage her cellulitis and possible pneumonia as an outpatient. I called Louis to inform him of this plan. Unfortunately, he doesn't have anyone available to pick her up. We are working on obtaining a taxi.

Update: Patient's son cannot be reached, and it would not be safe for her to go home alone. I contacted medicine, and they will admit the patient for further monitoring/management until a safe outpatient plan can be enacted.

Attending of record is Jenelle Badulak MD.

DISPOSITION/PLAN:
Final disposition:
Admit to med/surg bed.
Admitting Service:
Medicine.

IMPRESSION/DIAGNOSIS:

No diagnoses documented
codeine overdose
cellulitis
possible pneumonia

ATTENDING STATEMENT:
Code activated:
Stroke.
Attending Statement
A laboratory evaluation was ordered and I have personally reviewed all of these findings.
A radiology evaluation was ordered and I have personally reviewed all of these findings.
A ECG evaluation was ordered and I have personally reviewed all of these findings.
I have personally reviewed the medical records accompanying this patient from an outside institution.
This patient's prior medical records at the University of Washington healthcare system were reviewed and contributed to this ED medical evaluation.
I was the supervising attending involved in this patient's Emergency Department care. I have personally obtained a history and evaluated this patient and discussed the history, physical exam, diagnostic studies, and treatment plan with the resident. I agree with their documentation and where necessary for either clarification or accuracy, I have added directly to the above note or provided additional comments below.

ED NOTE

HOSPITAL DAY: 0

CHIEF CONCERN:
This is a 95 year old woman who presents with AMS

PCP: William Neighbor

HISTORY OF PRESENT ILLNESS:
Ms. Hoffman is a 95 year old woman with HTN, HLD, chronic venous stasis wounds who presents with AMS, fever.

Per ED, patient's son report progressive somnulence over the course of the day and requested airlift to HMC. Stroke code was called. Vitals signs were notable for a temp of 106 en route. Her son that previously she had behaved this way when overdosing on codeine. Narcan was given in CT scanner and patient normalized within a few minutes. CTH and CTA negative.

In the ED, patient was febrile with Tmax 38.8, mildly hypertensive, otherwise normal vitals. ED was concerned for L leg cellulitis superimposed on chronic wounds and ?PNA given CXR with bilateral patchy infiltrates. Given doxycycline. Felt stable to return home however transportation not possible at late hour given lives on Bainbridge. Given CXR findings, ruling out for COVID.

Jeanne, was sound asleep when I met her, and as reported to me by the ED, extremely hard of hearing. She was able to deny pain, cough, shortness of breath, chest pain. Said her leg was not worse but not sure if she understood the question. Denied fevers.

[x] Patient unable to communicate and provide ROS or details of past medical, social, or family history - *limited by severe hard of hearing*
PAST MEDICAL HISTORY:
HTN - not on any meds
DM2 - not on any meds
HLD
H/o DVTs, previously on warfarin
Chronic venous insufficiency
7/2019 GLF with R sided rib fractures, R hemothorax, non-operative pelvic fractures

MEDICATIONS PRIOR TO ADMISSION:
atorvastatin 20mg qd
cholecalciferol 2000U qd
lactobacillus
MVI
tylenol
tylenol with codeine

ALLERGIES:
nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

HABITS:
Denies smoking or drinking

SOCIAL HISTORY:
Lives on Bainbridge with son? was not able to confirm

FAMILY HISTORY:
[x] Unable to Obtain due to Patient Condition

REVIEW OF SYSTEMS: Complete ROS has been performed. Positive and pertinent negatives listed in HPI. All other systems negative.

VITALS: *(Most recent and 24 hour range.)*

ASSESSMENT / PLAN:

#Fevers
#Cellulitis
#?CAP
#Concern for COVID-19
Very challenging to get history from patient. Denies symptoms to me, told ED that she felt "off" this morning. Did have fever in ED. Right leg notably warm and erythematous compared to left. Does have CXR findings that could be consistent with atypical pneumonia. Would cover for both for now. Stable to DC home when transportation set up.
-f/u COVID swab
-augmentin + doxycycline for CAP v cellulitis

#AMS
Now resolved. Related to infection v ? codeine use - did response to Narcan
-f/u long tox

#Chronic venous stasis ulcers
Was supposed to see wound care outpatient
-wound care consult

#Osteoarthritis
-prn tylenol
-holding opioids at this time
-trial voltaren gel

#HLD
-continue home atorvastatin

FEN: general diet
VTE prophylaxis: enoxaparinContacts: LOUIS CHARLES HOFFMANN ALLOIN Son (360)649-5702
Code status: Full code presumed - could not hold in depth conversation with her
Discharge plan: can likely DC home tomorrow to Bainbridge

Patient Information for Inclusion in the UW Medicine Patient Directory

Please Read this Statement Carefully

I understand that I have a choice as to whether or not to be included in the UW Medicine patient directory. My name and location will be included in the patient directory unless I would prefer not to receive phone calls or visitors. My decision is indicated by marking a box and signing this form.

☐ **YES, please include me in the Patient Directory.** The hospital has informed me that my name and location will be included in its hospital directory. This information will be made available to people who ask for me by name such as my relatives, friends and fellow employees.

- Harborview Medical Center
- University of Washington Medical Center – Northwest
- University of Washington Medical Center – Montlake / Seattle Cancer Care Alliance
- Valley Medical Center

If I have provided my religious affiliation to UW Medicine in the past or if I provide my religious affiliation to UW Medicine now, I authorize its disclosure to clergy of my religious affiliation. Disclosure of my religious affiliation may result in a visit from a clergy member of my affiliation while I am being treated at UW Medicine.

If you have provided your religious affiliation to UW Medicine in the past and do not want a visit from a clergy member of your affiliation, please inform the registration staff.

☐ **NO, please do not include me in the Patient Directory.** I do not want my name or location included in the UW Medicine Patient Directory. **If this is my choice, I understand UW Medicine staff will not be able to confirm I am a patient or share my location with any family or friends. I also understand that by choosing not to be in the directory, UW Medicine will be unable to deliver items *(for example, flowers and gifts)* addressed to me.** Unable

For Staff Use Only

☐ **ADMIN OPT-OUT:** Please provide reason for Administrative Opt-Out

☐ Crime Victim ☐ Employee ☐ Incarcerated Patient
☐ Involuntary Commitment ☐ Unable to Interview Patient ☐ Media Interest

Name of person requesting opt out *(if other than patient)*:_____

By signing below, it shows that you have read this document. If there is any part of this form that is unclear, be sure to ask questions about it.

Date	Signature *(Patient or Person Authorized to Give Authorization)*

IF SIGNED BY PERSON OTHER THAN PATIENT, CHECK RELATIONSHIP TO PATIENT:

☐ 1. Guardian ☐ 2. Durable Power of Attorney for Health Care ☐ 3. Spouse/registered domestic partner
☐ 4. Adult Child(ren) ☐ 5. Parent(s) ☐ 6. Adult Brother(s)/Sister(s)

FOR MINOR PATIENTS:

☐ 1. Guardian/legal custodian ☐ 2. Court-authorized person for child in out-of-home placement ☐ 3. Parent(s)
☐ 4. Holder of signed authorization from parent(s) ☐ 5. Adult representing self to be a relative responsible for the minor's health

Financial Agreement & Acknowledgement

y signing below, I agree:

1. That Harborview Medical Center and Clinics (HMC), University of Washington Medical Center and Clinics (UWMC), Valley Medical Center and Clinics (VMC), UW Medicine Neighborhood Clinics (UWNC), UW Medicine Sports Medicine Clinic (UW Sports Med), Hall Health Primary Care Center (HHPCC), and University of Washington Physicians (UWP) (collectively known as "UW Medicine"), University of Washington School of Dentistry (SOD), Children's University Medical Group (CUMG) and Seattle Cancer Care Alliance (SCCA) may share any financial information I provide to facilitate payment.
2. To pay UW Medicine, SOD, CUMG and/or SCCA for balances remaining after insurance benefits are paid, unless prohibited by law or contract.
3. To notify UW Medicine, SOD, CUMG and/or SCCA of changes to my insurance coverage and/or address.
4. That UW Medicine, SOD, CUMG and/or SCCA may impose reasonable interest, late charges, costs and/or reasonable attorney's fees should my account become delinquent.
5. To notify UW Medicine, SOD, CUMG, and/or SCCA if I am not able to pay my balance due within 30 days of receipt.
6. To apply to other financial programs that I may qualify for as requested by UW Medicine, SOD, CUMG and/or SCCA, should I be unable to pay my account.
7. That any lawsuit for collection of my account may be brought in King County, Washington.
8. To receiving information related to treatment, payment or health care operations, including receiving autodialed and prerecorded message calls and/or text messages, at any number I have provided or, if not current, to any number I am reasonably found to be associated with.
9. That UW Medicine may, at its discretion, disclose to appropriate parties my medical records or information from my records for treatment, payment and health care operation purposes.

By signing this page, I acknowledge that I have read and agreed to the terms on both sides of this form.

FINANCIAL AGREEMENT & ACKNOWLEDGEMENT
Page 1 of 2

WHITE – MEDICAL RECORD
CANARY – PATIENT

UH1865 REV JAN 20

Financial Agreement & Acknowledgement

Understand that:

- Each UW Medicine entity, SOD, CUMG, and/or SCCA bill separately for their services.
- Patients who receive outpatient services at UWMC or HMC sites generally receive two bills: one bill from the physician or other provider (for the costs of the professional services) and one bill from the hospital (for the facility costs, i.e. building, equipment, supplies, staff time). Each of these bills may incur a co-payment or co-insurance responsibility, depending on my insurance coverage. The exact amount of the co-insurance or co-payment will depend upon the actual services provided and the coverage provisions of any insurance I have. Sometimes patients will pay more for certain outpatient services and procedures at hospital-based outpatient locations. The amount will depend on my insurance. I may review my insurance benefits or contact my insurer to learn what my policy will pay and what out-of-pocket expenses I may need to pay. At my request, clinic staff will provide me with an estimate of the billed charges for outpatient services I am likely to receive.
- UW Medicine requests and, if I provide it, will use my Social Security Number to facilitate access to any potential federal or state health care benefits, to verify my identity, or to facilitate discharge planning. Providing my Social Security Number is voluntary except when applying for state and federal health care benefits.
- My Consumer Credit Report information may be accessed for the following reasons: to make determination of available financial assistance, assistance in managing the payment process, or if I report that my identity has been stolen.

Statement to Permit Payment of Medicare or Insurance Benefits to Provider

I request payment of authorized Medicare or insurance benefits for any services furnished to me by UW Medicine, SOD, CUMG, and/or SCCA. I authorize any holder of medical and other information about me to release to Medicare [and its agents] or other insurance providers any information needed to determine these benefits for related services.

UH1865 REV JAN 20 BACK

CARE AGREEMENT

This form contains facts you should know about your health care at UW Medicine and from Children's University Medical Group, University of Washington Dentists and Oral Surgeons, and Seattle Cancer Care Alliance. If there is any part of this form that is unclear you can ask questions about it. At the bottom of the form there is a place for you to sign your name so that we know you have read this form (or had it read to you) and agree to receive health care from us.

UW Medicine includes:

- Harborview Medical Center and Clinics
- Northwest Hospital & Medical Center and Clinics
- University of Washington Medical Center and Clinics
- Airlift Northwest
- UW Medicine Neighborhood Clinics
- Hall Health Primary Care Center
- Summit Cardiology, and
- UW Physicians

Your health care team consists of medical doctors, doctors in training (residents and fellows), nurses, other health care professionals, and students of the health sciences. They will work together to diagnose and treat you. You will have an attending physician. This is the doctor who has primary responsibility for your care.

Photographs, videotapes, or other images of you may be used to keep a record of your care and treatment (including surgery). These images may become part of your medical record. Part of your care may take place through telemedicine technology, which may mean 1) live video between your care team members *(in which you also may be involved)*, or 2) "remote" review by your care team of the images described above.

SIGNATURE Unable

By signing below, it shows that you have read this document and agree to receive health care from UW Medicine. If there is any part of this form that is unclear, be sure to ask questions about it.

AN IMPORTANT MESSAGE FROM MEDICARE ABOUT YOUR RIGHTS

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-1019

YOUR RIGHTS AS A HOSPITAL INPATIENT:

- You can receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- You can be involved in any decisions about your hospital stay.
- You can report any concerns you have about the quality of care you receive to your QIO at: KEPRO 1-888-305-6759. The QIO is the independent reviewer authorized by Medicare to review the decision to discharge you.
- You can work with the hospital to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.
- You can speak with your doctor or other hospital staff if you have concerns about being discharged.

YOUR RIGHT TO APPEAL YOUR HOSPITAL DISCHARGE:

- You have the right to an immediate, independent medical review (appeal) of the decision to discharge you from the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you choose to appeal, the independent reviewer will ask for your opinion. The reviewer also will look at your medical records and/or other relevant information. You do not have to prepare anything in writing, but you have the right to do so if you wish.
- If you choose to appeal, you and the reviewer will each receive a copy of a detailed explanation about why your covered hospital stay should not continue. You will receive this detailed notice only after you request an appeal.
- If the QIO finds that you are not ready to be discharged from the hospital, Medicare will continue to cover your hospital services.
- If the QIO agrees services should no longer be covered after the discharge date, neither Medicare nor your Medicare health plan will pay for your hospital stay after noon of the day after the QIO notifies you of its decision. If you stop services no later than that time, you will avoid financial liability.
- If you do not appeal, you may have to pay for any services you receive after your discharge date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 2067449535

Please sign below to indicate you received and understood this notice.

I have been notified of my rights as a hospital inpatient and that I may appeal my discharge by contacting my QIO.

Patient Name: JEANNE HOFFMAN
Printed/Viewed By: rebeca3
Printed/Viewed: 04/30/2025 09:59:00 AM

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
  - Here is the contact information for the QIO:
    KEPRO:
    Toll-free Phone: 1-888-305-6759
    Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.

- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☒ HMC: Medicare Provider Number ☒ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO REQUEST AN APPEAL, YOU MAY HAVE OTHER APPEAL RIGHTS:

- If you have Original Medicare: Call the QIO listed on Page 1.
- If you belong to a Medicare health plan, call your plan at: _____, _____
  (plan name) (plan phone number)

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0938- 0692. The time required to complete this information collection is estimated to average 15 minutes per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. If you have comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: CMS, 7500 Security Boulevard, Attn: PRA Reports Clearance Officer, Mail Stop C4-26-05, Baltimore, Maryland 21244-1850.

May. 28. 2020 5:26PM No. 3470 P. 1

AN IMPORTA... MESSAGE FROM MEDICARE ABC... YOUR RIGHTS

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-1019

YOUR RIGHTS AS A HOSPITAL INPATIENT:

- You can receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- You can be involved in any decisions about your hospital stay.
- You can report any concerns you have about the quality of care you receive to your QIO at: KEPRO 1-888-305-6759. The QIO is the independent reviewer authorized by Medicare to review the decision to discharge you.
- You can work with the hospital to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.
- You can speak with your doctor or other hospital staff if you have concerns about being discharged.

YOUR RIGHT TO APPEAL YOUR HOSPITAL DISCHARGE:

- You have the right to an immediate, independent medical review (appeal) of the decision to discharge you from the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you choose to appeal, the independent reviewer will ask for your opinion. The reviewer also will look at your medical records and/or other relevant information. You do not have to prepare anything in writing, but you have the right to do so if you wish.
- If you choose to appeal, you and the reviewer will each receive a copy of a detailed explanation about why your covered hospital stay should not continue. You will receive this detailed notice only after you request an appeal.
- If the QIO finds that you are not ready to be discharged from the hospital, Medicare will continue to cover your hospital services.
- If the QIO agrees services should no longer be covered after the discharge date, neither Medicare nor your Medicare health plan will pay for your hospital stay after noon of the day after the QIO notifies you of its decision. If you stop services no later than that time, you will avoid financial liability.
- If you do not appeal, you may have to pay for any services you receive after your discharge date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206 744 9535

Please sign below to indicate you received and understood this notice.

I have been notified of my rights as a hospital inpatient and that I may appeal my discharge by contacting my QIO.

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
  - Here is the contact information for the QIO:
    KEPRO:
    Toll-free Phone: 1-888-305-6759
    Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.

- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☒ HMC: Medicare Provider Number ☒ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO REQUEST AN APPEAL, YOU MAY HAVE OTHER APPEAL RIGHTS:

- If you have Original Medicare: Call the QIO listed on Page 1.
- If you belong to a Medicare health plan, call your plan at: _____, _____
  (plan name) (plan phone number)

For more information, call 1-800-MEDICARE (1-800-633-4227), or TTY: 1-877-486-2048.
CMS does not discriminate in its programs and activities. To request this publication in an alternate format, please call: 1-800-MEDICARE or email: AltFormatRequest@cms.hhs.gov.

AN IMPORTA MESSAGE FROM MEDICARE ABC YOUR RIGHTS

5/28/2020 07:25:29 PM

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-1019

YOUR RIGHTS AS A HOSPITAL INPATIENT:

- You can receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- You can be involved in any decisions about your hospital stay.
- You can report any concerns you have about the quality of care you receive to your QIO at: KEPRO 1-888-305-6759. The QIO is the independent reviewer authorized by Medicare to review the decision to discharge you.
- You can work with the hospital to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.
- You can speak with your doctor or other hospital staff if you have concerns about being discharged.

YOUR RIGHT TO APPEAL YOUR HOSPITAL DISCHARGE:

- You have the right to an immediate, independent medical review (appeal) of the decision to discharge you from the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you choose to appeal, the independent reviewer will ask for your opinion. The reviewer also will look at your medical records and/or other relevant information. You do not have to prepare anything in writing, but you have the right to do so if you wish.
- If you choose to appeal, you and the reviewer will each receive a copy of a detailed explanation about why your covered hospital stay should not continue. You will receive this detailed notice only after you request an appeal.
- If the QIO finds that you are not ready to be discharged from the hospital, Medicare will continue to cover your hospital services.
- If the QIO agrees services should no longer be covered after the discharge date, neither Medicare nor your Medicare health plan will pay for your hospital stay after noon of the day after the QIO notifies you of its decision. If you stop services no later than that time, you will avoid financial liability.
- If you do not appeal, you may have to pay for any services you receive after your discharge date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206 744 9535

Please sign below to indicate you received and understood this notice.

I have been notified of my rights as a hospital inpatient and that I may appeal my discharge by contacting my QIO.

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
    - Here is the contact information for the QIO:
      KEPRO:
      Toll-free Phone: 1-888-305-6759
      Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.

- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☒ HMC: Medicare Provider Number ☒ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
    - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
    - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO REQUEST AN APPEAL, YOU MAY HAVE OTHER APPEAL RIGHTS:

- If you have Original Medicare: Call the QIO listed on Page 1.
- If you belong to a Medicare health plan, call your plan at: _____, _____
  (plan name) (plan phone number)

For more information, call 1-800-MEDICARE (1-800-633-4227), or TTY: 1-877-486-2048.
CMS does not discriminate in its programs and activities. To request this publication in an alternate format, please call: 1-800-MEDICARE or email: AltFormatRequest@cms.hhs.gov.

AN IMPORTA MESSAGE FROM MEDICARE ABC YOUR RIGHTS

5/28/2020 03:26:46 PM

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-1019

YOUR RIGHTS AS A HOSPITAL INPATIENT:

- You can receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- You can be involved in any decisions about your hospital stay.
- You can report any concerns you have about the quality of care you receive to your QIO at: KEPRO 1-888-305-6759. The QIO is the independent reviewer authorized by Medicare to review the decision to discharge you.
- You can work with the hospital to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.
- You can speak with your doctor or other hospital staff if you have concerns about being discharged.

YOUR RIGHT TO APPEAL YOUR HOSPITAL DISCHARGE:

- You have the right to an immediate, independent medical review (appeal) of the decision to discharge you from the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you choose to appeal, the independent reviewer will ask for your opinion. The reviewer also will look at your medical records and/or other relevant information. You do not have to prepare anything in writing, but you have the right to do so if you wish.
- If you choose to appeal, you and the reviewer will each receive a copy of a detailed explanation about why your covered hospital stay should not continue. You will receive this detailed notice only after you request an appeal.
- If the QIO finds that you are not ready to be discharged from the hospital, Medicare will continue to cover your hospital services.
- If the QIO agrees services should no longer be covered after the discharge date, neither Medicare nor your Medicare health plan will pay for your hospital stay after noon of the day after the QIO notifies you of its decision. If you stop services no later than that time, you will avoid financial liability.
- If you do not appeal, you may have to pay for any services you receive after your discharge date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206 744 9535

Please sign below to indicate you received and understood this notice.

I have been notified of my rights as a hospital inpatient and that I may appeal my discharge by contacting my QIO.

ASSESSMENT:
Assessment: Assumed care 2300. Pt AOx4, though severely HOH. VSS, afebrile. MAE, CMS+. Dressings CDI to BLE. Pt denies significant pain, managed with tylenol. Satting >95% on RA. LSC, deep breathing encouraged with IS. Pulling ~1500, PIC score 9. Adequate PO intake. Voiding via briefs, will call to get cleaned up following void. BM+ 8/4. Pt 1PA with FWW. No visitors at bedside, plan for SNF vs home, pending family/DPOA continued discussion.

All needs met at this time, will continue to monitor..
No restraints indicated.

MOBILITY:
Mobility goal for today: active ROM/in bed activity.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was active ROM/in bed activity.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 8/4/2019 8:00 - 8/4/2019 21:00).

EVALUATION:
Pt NOT progressing in these areas: Dispo plan, continued care/monitoring.

CT Lumbar Spine (07/24/2019 14:35)
~EXAMINATION:
CT T SPINE WO CONT, CT L SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT thoracic spine without contrast: routine (N-65) MDCT scanning was obtained through the thoracic spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560201), CT Lumbar Spine without contrast: routine (N-65) MDCT scanning was obtained through the lumbar spine without contrast. Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560202)
Superior Extent: T1
Inferior Extent: Sacrum
COMPARISON:
MRI thoracic spine 9/17/2018, radiographically lumbar spine 10/22/2014, and other priors
FINDINGS:
ALIGNMENT: Minimal anterolisthesis of L5 on S1. Left convex scoliosis of the lumbar spine with a Cobb angle of approximately 21 degrees.
VERTEBRAE/BONES: Again seen are chronic compression fractures of T12-L3. Cortical irregularity at the posterior aspect of the L1 vertebral body with correlate on MRI dated 9/17/18. Consider repeat MRI if pain persists in this region. No acute vertebral fractures. Diffuse osteopenia.
Partially visualized multiple rib fractures, some of which are chronic:
-Chronic fracture deformities of the right 10-12th posterior ribs.
-Acute mildly displaced fractures of the right posterior 8th and 9th ribs.
Partially visualized right femoral head/neck instrumental fixation.
Minimally displaced right sacral zone 1 fracture (604B/74 and 305B/166) with intra-articular extension into the SI joint.
HARDWARE: No spinal hardware present.
CORD: Visualized throracic cord and conus medularis are normal size.
SOFT TISSUES: Please refer to same day CT chest abdomen and pelvis for extraspinal findings. Paravertebral, interspinous, and posterior soft tissues are normal.
LEVELS: No central stenosis. Mild bony right neural foramen narrowing at L5-S1. ABNORMAL LEVELS: Partial bony fusion of T3-T4. Severe disc space narrowing at L4-L5.
IMPRESSION:
No acute thoracolumbar spinal fractures or malalignment. Again seen are chronic compression fractures of T12-L3, with posterior cortical irregularity at L1. If patient's back pain persists, consider repeat MRI for further evaluation.
Minimally displaced right sacral zone 1 fracture with intra-articular extension into the SI joint.
Acute displaced fractures of the right posterior eighth and ninth ribs.
Chronic fracture deformities of the right 10th-12th posterior ribs. Please

refer to same day chest, abdomen, and pelvis CT for further description of rib fractures.
Moderate to severe multilevel degenerative changes of the thoracolumbar spine as detailed above.
The above findings were communicated to Nemanich by Moran at 7/24/2019 3:23 PM.

CT Chest Abdomen Pelvis (07/24/2019 14:02)
~EXAMINATION:
CT CHEST ABDOMEN AND PELVIS W CONTRAST
CLINICAL INDICATION:
GLF. Additional history: 94-year-old female patient with a ground level fall yesterday presented with the back, right side and right hip pain.
TECHNIQUE:
CTB A15 CT Chest Abdomen Pelvis with IV contrast.
Contiguous axial sections were obtained through the chest, abdomen and pelvis with IV contrast only. Multiplanar reformatted images were performed.
Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.
CONTRAST:
Omnipaque 350 mg-ml 88@2.2 ml 07/24/2019 02:03 PM INTRAVENOUS
COMPARISON:
None.
FINDINGS:
CHEST:
Thyroid: Unremarkable.
Thoracic lymph nodes: No lymphadenopathy by size criteria.

Mediastinum and esophagus: Moderate sliding hiatus hernia.
Heart and vasculature: Moderate to severe coronary artery disease. Atherosclerotic changes of the aorta. Aortic wall calcifications.
Lungs: Unremarkable.
Pleura: Right sided hydropneumothorax with no mediastinal shift. Trace left pleural effusion.
Chest wall: Slightly displaced fracture right posterior eighth and ninth rib. No fracture is noted involving right seventh rib at the costovertebral junction.
ABDOMEN:
Liver: Unremarkable.
Gallbladder: Distended with no opaque stones
Bile ducts: Prominent CBD measuring 9 mm (601/54) with associated mild intrahepatic biliary radical dilatation. CBD seen) distally towards the pancreas with no obvious lesions in the periampullary region.
Spleen: Unremarkable.
Pancreas: Unremarkable.
Adrenals: Unremarkable.
Kidneys and Ureters: Bilateral renal cortical hypodense lesions, the small lesions are too small to characterize while the larger lesions are likely cysts.
Abdominal Lymph Nodes and Retroperitoneum: No lymphadenopathy by size criteria.
Vasculature: Moderate aortobiiliac atherosclerotic disease with no aneurysmal dilatation of the aorta.
Bowel: Unremarkable.
Peritoneum and Abdominal Wall: Mild ascites. No abdominal collections. No pneumoperitoneum.
PELVIS:
Pelvic Viscera: Unremarkable.
Bladder: Unremarkable.
BONES:
-Two fracture lines involving the right inferior pubic ramus (3/213-216).
-Severe spondylo-degenerative changes of the spine with scoliotic deformity and mild wedging of L2 and T11 vertebral bodies, age indeterminate.
-Osteopenia. Right hip arthroplasty.
IMPRESSION:
1. Multiple right-sided rib fractures with right-sided hydropneumothorax.
2. Fracture right inferior pubic ramus. L2 and T11 vertebral body age-indeterminate wedge fracture.
3. Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if clinically indicated.

CT Cervical Spine (07/24/2019 13:30)
~EXAMINATION:
CT C SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
Cervical Spine wo contrast: routine (N-53)
MDCT scanning was obtained through the cervical spine without contrast.
Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
Inferior Extent: T4
COMPARISON:
C-spine CT 12/7/2012
FINDINGS:
ALIGNMENT: Normal alignment.
VERTEBRAE: Vertebral body height and density are normal. No fractures or destructive lesions.
HARDWARE: No hardware present.
DISCS: Normal disc height
SOFT TISSUES: Prevertebral, interspinous, and posterior soft tissues are normal. Multiple tiny hypodense thyroid nodules.
AXIAL DISCS AND FORAMINA:
Similar posterior subluxation of the right atlantoaxial articulation (602/91).
Moderate degenerative changes of the cervical spine including multilevel disc height loss, mild facet arthropathy, and fusion of the C4-5 posterior elements. Diffuse osteopenia.
C2-3: No central or foraminal stenosis.
C3-4: No central or foraminal stenosis.
C4-5: No central or foraminal stenosis.
C5-6: No central or foraminal stenosis.
C6-7: No central or foraminal stenosis.
C7-T1: No central or foraminal stenosis.
Right small-to-moderate pneumothorax.
IMPRESSION:
1. No acute fractures of the cervical spine. Stable degenerative changes. Diffuse osteopenia.
2. Right small to moderate pneumothorax.
The above findings were communicated to Antonia Nemanich M.D. by Thomas Eggert M.D. PGY-3 at 7/24/2019 2:04 PM.

CT Head (07/24/2019 13:30)
~EXAMINATION:
CT HEAD WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT Head Routine wo contrast (N-1)
Contiguous axial sections were obtained through the head without contrast.
Patient age specific scan parameters were used for radiation exposure.
COMPARISON:
CT head 3/29/2018.
FINDINGS:
Field-of-view does not contain the anterior mandible.
MASS EFFECT & VENTRICLES: No midline shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: Mild to moderate cerebral volume loss. Few unchanged scattered parenchymal calcifications. Unchanged mild to moderate periventricular white matter hypoattenuation. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Severe vascular calcifications involving of the common carotids and cavernous ICAs.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Orbits are normal.
IMPRESSION:
No acute intracranial hemorrhage, infarct, or masses.
Similar cerebral volume loss and periventricular white matter hypoattenuation consistent with chronic microvascular ischemia.

.

REASON FOR ADMISSION:
Per Dr. Pupi's admission note of 7/25: " Per Dr. Wettstein's note: "The patient is a 94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia who presents after a ground-level fall yesterday (no head trauma, no LOC and was able to ambulate right after), complaining of right-sided rib pain and hip pain. The patient states that she was attempting to open her refrigerator yesterday, when the door suddenly gave way and she fell backwards, landing on her right side. She denies hitting her head. She has been unable to walk since the fall. She also complains of shortness of breath. The

patient's son is at bedside and assists with history. He reports that after the accident, he checked his mother for any signs of bony tenderness, bruising, or swelling and she had none so he thought that she was okay to remain at home. Today, however, due to her worsening pain and shortness of breath, they decided to present to the ED."
Patient was seen first at UWMC ED, where labs were drawn and reviewed which were significant for a subtherapeutic INR of 1.3 but otherwise unremarkable. Pan Scan was ordered showing no multiple right-sided rib fractures, a right hemopneumothorax, and a right pubic ramus fracture. Large-bore 28 F chest tube placement was performed under sedation obtaining 30 cc. The post procedure CXR showed a small right pneumothorax but markedly improved. Chest tube was put on suction and patient was transferred to HMC for further care. She arrived to the ICU in stable condition. On arrival, she is breathing comfortably on RA, with good pain control with PO regimen>"

HOSPITAL COURSE:
Per Dr. Glann's imterim summary of 7/27 and 7/29: "
Patient continued to be hemodynamically stable and placed on rib fracture protocol w/ CT kept to suction w/ f/u imaging to reassess pulmonary status. Her therapeutic anticoagulation was held given the hemothorax in the setting of pt w/ supratherapeutic INR. She was started on multimodal pain medication w/ APS consulted given pt marginal PIC scores of 6-7
Orthopedic Pelvis surgery was consulted for right inferior pubic ramus fracture w/ subsequent imaging done w/ plan for nonoperative measures w/ PT/OT assistance.. Geriatric Med was consulted given pt age and additional medical problems. (recurrent DVTs and need for recs given therapeutic AC along w/ review of hypertension, HLD, chronic wounds of BLE w/ no need for Palliative consult) As patient was normotensive, her home losartan was held w/ statin restarted. HMC wound care was consulted to assist w/ care of BLE. SW was consulted to assist w/ anticipated DC planning.w/ home safety eval done. A bedside swallow was done w/ pt able to be placed on a diet. On evening of HD #1, pt had soft SBP (80s) w/ MAPs >60 but noted to have (+) leg lift test and was given a 500cc bolus w/ crystalloids w/ improvement in BP
By 7/26, patient continued to be HD stable w/ DVT ppx held in anticipation of possible regional block by APS. However, after evaluating patient, it was felt her pain control had improved along w/ steady improvement in PIC scores that they signed off. Of note, patient had been started on Ketorlac x 48 hrs along w/ APAP and prn oxycodone. Her DVT ppx was restarted. With regards to use of therapeutic anticoagulation, Geri Med recommended that this medication be held and to f/u w/ PCP to determine if it would be needed. Additionally, they recommended for : Wound care consult BLE; nutrition consult; iron studies; geriatric dosing of meds, delirium precautions, fall precautions, consider bisphosphonate in outpt setting (please refer to consult note for specifics)
With regards to Right inferior pubic ramus fracture, patient continued w/ WBAT BLE w/ PT/OT and plan for need of inlet/outlet pelvis views when pt able to weight bear.In terms of CT management, it was placed to water seal w/f/u imaging showing very small apical pneumothorax. As her overall status continued to be stable/improved, she was made ward status.
By 7/27, patient continued to be hemodynamically stable w/ f/u CXR stable that patient was able to have CT discontinued w/ f/u CXR stable post removal. Ketorolac was discontinued w/ patient pain well controlled.

Patient has been wards status for the past 3 days and has been awaiting bed placement.

She continued to be HD stable. Of note, at time of CT placed to water seal on 7/26 had small apical pneumothorax but pt on RA, HD stable w/o issue. CT dc'd on 7/27 w/ f/u CXR w/ small, stable apical pneumothorax w/ continued HD stability and tolerating RA. CXR f/u 7/28 w/ possible stable apical pneumothorax from before vs artifact/skin fold but patient continued to be HD stable.
Patient found to be MRSA positive during this interval and placed on precautions
PT/OT/SW cont to follow pt and give recs for dispo
Pt has been awaiting inlet/outlet imaging but delayed as pt not able to stand for long periods due to pain/frailty.
F/u W/ Ortho Pelvis on 7/28, advised that pt needs to be standing for imaging w/ information communicated to RN staff"

7/30- 8/5: She remained stable on the floor without acute event. Her post mobilization pelvis films were stable and she is allowed to be WBAT. She worked with therapies and it was felt that SNF would be the best place for her. She and her son refused to go initially, but decided that SNF would be appropriate. She was accepted to SNF on 8/5. Her follow up and care instructions are outlined below.

PHYSICAL EXAMINATION:
Constitutional:
Vital signs : Vital Signs Data

8/5/2019 8:55	Temperature - C	37 degC
	Temperature Source	Temporal Artery
	Heart Rate	85 bpm
	Respiratory Rate	16 br/min
	SBP - Noninvasive	108 mmHg
	DBP - Noninvasive	**51 mmHg Low**
	MAP - Noninvasive	72 mmHg
	BP Method	Automatic
	BP Extremity	RIGHT, Arm, Upper
	Vital Sign Reason	Routine
8/5/2019 2:53	Temperature - C	36.7 degC
	Temperature Source	Temporal Artery
	Heart Rate	69 bpm
	SBP - Noninvasive	118 mmHg
	DBP - Noninvasive	**54 mmHg Low**
	MAP - Noninvasive	80 mmHg
	BP Method	Automatic
	BP Extremity	LEFT, Arm, Upper
	Vital Sign Reason	Routine .

GEN: Elderly female, thin, resting in no acute distress. HEENT: Normocephalic, atraumatic. No scleral icterus or conjunctival injection. CV: Extremities warm and well perfused. RESP: Regular work of breathing on room air. Equal chest rise bilaterally.SKIN: Warm and dry. Lower extremity venous stasis wounds
GI: Abdomen soft, non-distended. MUSC/SKEL: No gross deformities noted, b/l leg dressing in place NEURO: Moves all extremities spontaneously. Alert and oriented x3 PSYCH: Appropriate mood and affect.

DISPOSITION:
Discharge to: skilled nursing facility.

DISCHARGE CARE INSTRUCTIONS:
Discuss repeat DEXA scan if not recently done with your PCP. Also discus spossible bone strenghtening mediciens (Bisphosphonate therapy)

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling
- Your Losarten and Warfarin remain held, discuss with PCP at SNF and at follow up with your PCP
- General diet
- Cough, deep breathe, do IS or acapella 10x/hour while awake to prevent pneumonia
- Take bowel medications as needed to prevent/manage constipation associated with pain medications and following surgery. Avoid straining. Hold dose of bowel medication if experiencing loose stools
- Take pain medications as prescribed and taper off of opioid pain medications
- Do not drink alcohol while taking opioid pain medications
- Do not drive or operate heavy machinery while taking opioid pain medications
- Seek medical care for: fever, chills, malaise, somnolence, SOB, chest pain, nausea, vomiting, worsening pain, or any changes to your wound (ie erythema/induration/purulent drainage, worsening tenderness) - or for any other concerning symptom

Discuss the following CT dingins with yourt PCP:
" Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if clinically indicated"

General Surgery Trauma Discharge Summary

ASSESSMENT:
Per chart: Pt is a 94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Wknd SW received referral to assist with discharge planning. .
.
INTERVENTION:
SW met with patient and patient's son Louis Hoffman (360-649-5702). SW informed them that pt has been accepted to Kline Galland. Pt and pt's son were agreeable to going to Kline Galland at 3:00pm today. SW connected with Edzal (206.805.2372) at Kline Galland and confirmed that the pt can be admitted there. SW faxed over PT, OT, Nursing Notes, Scripts, and Patient Summary. SW completed PASRR and completed pt's packet and handed it off to PSS. SW scheduled ride for pt through Trimed Cabulance. SW sponsored ride $65.00. SW informed Loosik..
.
PLAN OR OUTCOME:
Patient set to discharge to Kline Galland at 3:00pm today. Packet left on 6E with PSS..
.

Medication List:

It is important to know what medicines you are taking.

Update your list if your medicines or dosages change.

Keep a list of your medicines with you. A good place to put your list is in your wallet or purse.

Give all your health care providers a list of all the medicines you take including any vitamins, supplements, or medicines you bought without a prescription.

If a medication is not on this list, contact your provider to discuss whether it should be discontinued.

MEDICATIONS TO BE TAKEN AT HOME:

Medication	AM	Noon	PM	Bed	Comments
acetaminophen 500 mg oral tablet 1,000 mg by Mouth three times daily					
atorvastatin 10 mg oral tablet 10 mg by Mouth every evening					
cholecalciferol 1000 intl units oral tablet 1,000 unit(s) by Mouth daily					
glucagon (Glucagon Emergency Kit for Low Blood Sugar 1 mg injection) 1 mg Injected under the Skin one time only Inject one syringe (1mg) as directed for blood sugar < 70 in emergency situations if the patient is unable to take oral sugar (such as juice or glucose tablests).					
glucagon (GlucaGen HypoKit 1 mg injection) 1 mg do not give more than 1 mg intravenously					
insulin LISPRO (insulin lispro 100 units/mL injectable solution) LOW Correction-Premeal Injected under the Skin three times daily before meals << Sliding Scale Comments >> Blood sugar = Dose 151-199 = 1 unit (2 units if no nutritional insulin given) 200-249 = 2 units 250-299 = 3 units 300-349 = 4 units					

>349 = recheck blood sugar once now, then give 5 units. << Sliding Scale Comments >>					
multivitamin with minerals (Multiple Vitamins with Minerals oral tablet) 1 tablet(s) by Mouth daily					
polyethylene glycol 3350 (MiraLax oral powder for reconstitution) 17 g by Mouth daily Dissolve in water or juice					
senna 8.6 mg oral tablet 17.2 mg by Mouth twice daily					
timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) 1 drop(s) Each EYE twice daily					
calcium carbonate 500 mg (200 mg elemental calcium) oral tablet, chewable 1,000 mg Chew three times daily as needed Indigestion/Heartburn					
glucose 50% intravenous solution 12.5 g Intravenously on call as needed Blood Glucose Abnormal					
glucose 50% intravenous solution 25 g Intravenously on call as needed Blood Glucose Abnormal					
ondansetron 4 mg oral tablet 4 mg by Mouth every 8 hours as needed Nausea/Vomiting					
oxyCODONE 5 mg oral tablet 2.5-5 mg by Mouth twice daily as needed Wound Care

Discharge Orders Form finalized by Connor PA-C, Kathleen M on 08/05/19 11:27:16

Discharge Orders Form reviewed by UDF/Discharge RN Stephens RN, Mulumebeth B on 08/05/19 12:44:17

Your Discharge Education:
PELVIC FRACTURE

Pelvic Fracture

You have a break or fracture of the pelvic bone. Your fracture is stable because the bones are not out of place and there are no signs of serious internal bleeding. No surgery or other special treatment will be needed. As long as your pain is controlled by oral medicine, you can be treated at home. A broken pelvis will take about 6 to 8 weeks to heal. It can be painful to move for the first 3 to 4 weeks.

Home care

- Bed rest and pain medicine is the only treatment required. Stay in bed for the first 2 to 3 days to reduce pain with movement. During this time, you will need help bathing, using the bathroom, and meals. A bedpan or bedside commode may be easier to use than getting up to use the bathroom. As soon as possible, begin sitting or walking to avoid problems with prolonged bed rest (muscle weakness, worsening back stiffness and pain, blood clots in the legs). A walker, crutches, or cane will make walking easier in the first 3 weeks.
- Home healthcare may be available to provide in-home nursing services. Check with your healthcare provider, the hospital's social service department or a private nursing agency to see if your insurance will cover this kind of care.
- During the first 2 days after the injury there will probably be localized swelling and bruising on the skin over the pelvis. During this time apply an ice pack to the painful area for no more than 20 minutes every 1 to 2 hours to reduce swelling and pain. Wrap the ice pack in a thin towel. Never put ice or an ice pack directly on your skin.
- You may use over-the-counter pain medicine to control pain, unless another medicine was prescribed. Take pain medicine as directed. Call your healthcare provider if your pain is not well-controlled. A dose change or stronger medicine may be needed. If you have chronic liver or kidney disease, talk with your healthcare provider before using pain medicine.

Follow-up care

Follow up with your healthcare provider, or as advised. This will help to make sure the bone is healing properly.

If X-rays were taken, you will be told of any new findings that may affect your care.

Call 911

Call 911 if you have:

- Swelling, pain or redness below your knee
- Chest pain or shortness of breath

When to seek medical advice

Call your healthcare provider right away if any of these occur:

- Pain becomes worse or you are unable to walk with help for more than three days
- Blood in your urine or bleeding from the urethra (the opening where urine comes out)
- Difficulty passing urine or unable to pass stool due to pain
- Fever of 100.4°F (38°C) or higher, or as directed by your healthcare provider

Medication List:
It is important to know what medicines you are taking.

Update your list if your medicines or dosages change.

Keep a list of your medicines with you. A good place to put your list is in your wallet or purse.

Give all your health care providers a list of all the medicines you take including any vitamins, supplements, or medicines you bought without a prescription.

If a medication is not on this list, contact your provider to discuss whether it should be discontinued.

MEDICATIONS TO BE TAKEN AT HOME:

Medication	AM	Noon	PM	Bed	Comments
acetaminophen 500 mg oral tablet 1,000 mg by Mouth three times daily					
atorvastatin 10 mg oral tablet 10 mg by Mouth every evening					
cholecalciferol 1000 intl units oral tablet 1,000 unit(s) by Mouth daily					
glucagon (Glucagon Emergency Kit for Low Blood Sugar 1 mg injection) 1 mg Injected under the Skin one time only Inject one syringe (1mg) as directed for blood sugar < 70 in emergency situations if the patient is unable to take oral sugar (such as juice or glucose tablests).					
glucagon (GlucaGen HypoKit 1 mg injection) 1 mg do not give more than 1 mg intravenously					
insulin LISPRO (insulin lispro 100 units/mL injectable solution) LOW Correction-Premeal Injected under the Skin three times daily before meals << Sliding Scale Comments >> Blood sugar = Dose 151-199 = 1 unit (2 units if no nutritional insulin given) 200-249 = 2 units					

250-299 = 3 units 300-349 = 4 units >349 = recheck blood sugar once now, then give 5 units. << Sliding Scale Comments >>					
multivitamin with minerals (Multiple Vitamins with Minerals oral tablet) 1 tablet(s) by Mouth daily					
polyethylene glycol 3350 (MiraLax oral powder for reconstitution) 17 g by Mouth daily Dissolve in water or juice					
senna 8.6 mg oral tablet 17.2 mg by Mouth twice daily					
timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) 1 drop(s) Each EYE twice daily					
calcium carbonate 500 mg (200 mg elemental calcium) oral tablet, chewable 1,000 mg Chew three times daily as needed Indigestion/Heartburn					
glucose 50% intravenous solution 12.5 g Intravenously on call as needed Blood Glucose Abnormal					
glucose 50% intravenous solution 25 g Intravenously on call as needed Blood Glucose Abnormal					
ondansetron 4 mg oral tablet 4 mg by Mouth every 8 hours as needed Nausea/Vomiting					
oxyCODONE 5 mg oral tablet 2.5-5 mg by Mouth twice daily as needed Wound Care					

Additional medication information:

Patient Instructions:

Signs/Symptoms

Call if following Signs/Symptoms Appear:	Fever greater than 101.5F Increased confusion Increased pain Increase in redness, drainage, pus, swelling, warmth, and/or odor from incision/wound If wound/incision is opening Increased bleeding Call 911 if unrelieved chest pain Shortness of breath
Other, Call for following Signs/Symptoms:	Seek medical care for: fever, chills, malaise, somnolence, SOB, chest pain, nausea, vomiting, worsening pain, or any changes to your wound (ie erythema/induration/purulent drainage, worsening tenderness) - or for any other concerning symptom

Activity Instructions

Discharge Activity/Instructions:	Do Not Drive Do Not Drive while taking medication that could cause drowsiness Needs 24 hour Supervision for Safety Needs assistance when walking Needs help getting in and out of chair/wheelchair
Other, Discharge Activity/Instructions:	weightbearing as tolerated continue physical therapy continue occupational therapy

Hygiene Instructions

Discharge Hygiene Instructions:	May shower

Wound Instructions

Discharge Wound Instructions:	Change dressing once a day
Discharge Wound Instructions,	Bilateral lower extremities: - Cleanse area with soap and water or normal saline - Gently remove loose/dried exudate as able - Apply

Additional:	no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage - Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape - Change daily and as needed with soiling Alternative multiday dressing recommendation to consider on discharge: - Cleanse area with soap and water or normal saline - Gently remove loose/dried exudate as able - Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage - Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix - Change every other day or as needed with soiling

Nutrition Instructions

Discharge Diet / Nutrition Instructions:	Regular diet
Other, Discharge Diet / Nutrition Info:	Regular, Other: 1;1 Supervision with feeding

Special Instructions/Info

Discharge Special Instructions:	Discuss repeat DEXA scan if not recently done with your PCP. Also discuss possible bone strenghtening mediciens (Bisphosphonate therapy) Your Losarten and Warfarin remain held, discuss with PCP at SNF and at follow up with your PCP Cough, deep breathe, do IS or acapella 10x/hour while awake to prevent pneumonia- Take bowel medications as needed to prevent/manage constipation associated with pain medications.. Avoid straining. Hold dose of bowel medication if experiencing loose stools Take pain medications as prescribed and taper off of opioid pain medications- Do not drink alcohol while taking opioid pain medications Do not drive or operate heavy machinery while taking opioid pain medications- Discuss the following CT dingins with your PCP: " Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if clinically indicated"

Your Discharge Education:
PELVIC FRACTURE

Pelvic Fracture

You have a break or fracture of the pelvic bone. Your fracture is stable because the bones are not out of place and there are no signs of serious internal bleeding. No surgery or other special treatment will be needed. As long as your pain is controlled by oral medicine, you can be treated at home. A broken pelvis will take about 6 to 8 weeks to heal. It can be painful to move for the first 3 to 4 weeks.

Home care

- Bed rest and pain medicine is the only treatment required. Stay in bed for the first 2 to 3 days to reduce pain with movement. During this time, you will need help bathing, using the bathroom, and meals. A bedpan or bedside commode may be easier to use than getting up to use the bathroom. As soon as possible, begin sitting or walking to avoid problems with prolonged bed rest (muscle weakness, worsening back stiffness and pain, blood clots in the legs). A walker, crutches, or cane will make walking easier in the first 3 weeks.
- Home healthcare may be available to provide in-home nursing services. Check with your healthcare provider, the hospital's social service department or a private nursing agency to see if your insurance will cover this kind of care.
- During the first 2 days after the injury there will probably be localized swelling and bruising on the skin over the pelvis. During this time apply an ice pack to the painful area for no more than 20 minutes every 1 to 2 hours to reduce swelling and pain. Wrap the ice pack in a thin towel. Never put ice or an ice pack directly on your skin.
- You may use over-the-counter pain medicine to control pain, unless another medicine was prescribed. Take pain medicine as directed. Call your healthcare provider if your pain is not well-controlled. A dose change or stronger medicine may be needed. If you have chronic liver or kidney disease, talk with your healthcare provider before using pain medicine.

Follow-up care

Follow up with your healthcare provider, or as advised. This will help to make sure the bone is healing properly.

If X-rays were taken, you will be told of any new findings that may affect your care.

Call 911

Call 911 if you have:

- Swelling, pain or redness below your knee
- Chest pain or shortness of breath

When to seek medical advice

Call your healthcare provider right away if any of these occur:

- Pain becomes worse or you are unable to walk with help for more than three days
- Blood in your urine or bleeding from the urethra (the opening where urine comes out)
- Difficulty passing urine or unable to pass stool due to pain
- Fever of 100.4°F (38°C) or higher, or as directed by your healthcare provider

Yes - PATIENT/CAREGIVER/FACILITY PROVIDED COPY OF PRINTED DISCHARGE INSTRUCTIONS

Additional Information/Special Instructions
If you experience chest pain or difficulty breathing - **CALL 911**

Quit Smoking
Quitting smoking or other tobacco use is the most important thing a person can do for their health. If you or a family member smokes, call the National Tobacco Quitline toll-free at 1-800-QUIT-NOW (1-800-784-8669) & talk to your primary care provider (PCP).

Suicide Prevention
If you or someone you know is thinking about harming yourself or attempting suicide, there are resources available to help 24/7. Call the toll-free National Suicide Prevention Lifeline to speak with a trained counselor or find a suicide crisis center near you.
Telephone: (800) 273-8255
TTY: (800) 799 - 4889

Antibiotics & You
Antibiotics treat or prevent infections. If your provider prescribed this medicine for you, take it exactly as instructed. If you do not take it as prescribed, your infection can get worse or start to resist treatment. Please call your provider if you have problems taking your medicines, or if you have side effects.

ASSESSMENT:
Assessment: A&Ox4. HOH, but with hearing aids in, hears fairly well. MAE, VSS on RA. BG checked as ordered and no insulin required. Eating and drinking 100% of meals. Large, pre-existing venous stasis ulcers to BLEs mid-shins and ankles; dressing changes done by RN as ordered this morning; xeroform, abd pads, kerlix, burn netting. R chest old chest tube site dressing changed as well per protocol, sutures in place, no drainage. CMS intact per pt. Voiding QS incontinent in pullups. Last stool yesterday.

Son and his friend at bedside this morning and SW and MD came to discuss plan of care and discharge plan; pt's son agreed that she could discharge to a SNF to regain her strength. Discharged to Kline Galland via cabulance at 1515 today. Stood and took a couple of steps with min assist to transfer from bed to wheelchair. Report called to RN Marie at the SNF, including her medical history, medications, course of care at harborview this admission, etc. Pt discharged with her hearing aids in place and her glasses on. Her dentures were in her bag of belongings that she brought to the SNF. She refused to wear the dentures today, saying that "they don't fit" anymore to nursing. Pleasant and funny, cooperative with care..
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist, transfer to chair, stand at bedside, dangle at bedside.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was ambulating w/assist less then 10 feet, standing at bedside, dangling at bedside.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 8/5/2019 9:00 - 8/5/2019 9:00).

EVALUATION:
Pt progressing towards discharge: discharged to SNF at 1515 today via cabulance.

ASSESSMENT & PLAN:
94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Currently awaiting dispo, likely SNF, pending coordination with family/DPOA.

#Fracture of ribs 8, 9 with hemopneumothorax
Small R apical pneumothorax, stable on repeat CXR (7/29)
- repeat CXR 8/1- stable
-pain control
-PT/OT

#Hyperglycemia
Hx of A1C range 6.2-9.2 spring 2019
-low dose SSI

#Geriatrics
Appreciate Med G recs:
-Wound care consult: completed (7/25 note)
-Avoid ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

Chronic/stable:
#Recurrent DVTs on warfarin - per outpt PCP notes pt was no longer taking warfarin
#HTN - holding home losartan
#HLD - atorvastatin
#Chronic BLE wounds - wound care following

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

OT: Recommend moderate assist for ADLs.
Recommend moderate assist of 1, hospital staff for functional transfers.

DVT PPX: SQH q8h
Code: DNR, Intubation ok
DISPO: SNF approved, DPOA and pt deciding on home vs snf

MDA
DD:08/04/19

ASSESSMENT:
Per chart: Pt is a 94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Wknd SW received referral to assist with discharge planning.
.
INTERVENTION:
Per chart: Kline Galland can admit patient today but as of yesterday, pt and her son/DPOA have not decided whether pt will go to SNF at discharge or return home. Pt has Medicare A/B and CNP Medicaid and can d/c this wknd to the SNF w/out the need for insurance authorization.

SW spoke with GS team who reports that they attempted to call pt's son several times yesterday to discuss discharge planning but son's phone went straight to voicemail. Pt reported to GS team that her son left his phone on the ferry. GS team discussed discharge plan with pt but she has not made a decision regarding SNF v. home.

SW l/m for admissions at Kline Galland to confirm whether they are able to admit pt today.

SW attempted to call pt's son, Louis Hoffman (360-649-5702), several times but call went straight to voicemail. SW l/m for pt's son requesting a call back to discuss discharge plan as pt is ready to discharge today.

SW met with pt at bedside to discuss discharge planning. Pt reports that she would prefer to go home at discharge but she would like her son, Louis, to make the decision regarding her discharge plan. Pt reports that Louis is not coming to HMC today but will he will be here tomorrow and she is not sure what time. She reports that the only contact for Louis is his cellphone - 360-649-5702. SW l/m on Louis' cellphone this morning and is awaiting a call back. Pt reports that she lives with Louis and he can provide her assistance at discharge. SW page GS team with update that discharge dispo plan is still pending.
.

Social Work Progress Note

ASSESSMENT:
Assessment:
Neuro: Pt is A&Ox4, calm and coopreative. Very hard of hearing, does not have hearing aids with her. MAE, CMS intact, PERRL

Pain: c/o minimal discomfort to old chest tube site on R chest, PRN tylenol available

Resp: pt on RA, lungs CTA

C/V: VSS, afebrile

Skin: R chest old chest tube site, RLE venous stasis ulcers - xero, abd, kerlex change daily

GI: tolerating general diet, ACHS blood sugars, denies N/V, +BT, BM x1 today

GU: incontinent, brief changed

Activity: pt OOB with 1PA and walker, up to chair today, remind patient to turn when in bed

Pending / Plan: d/c pending therapy rec and placement
.
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was ambulating w/assist 10 - 50 feet.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

EVALUATION:
Pt progressing towards discharge: awaiting placement.

Nursing Progress Note - HMC

ASSESSMENT:
Wknd SW received a request to continue d/c planning for pt. Pt. has been accepted by Kline Galland but the pt. prefers to d/c home instead and pt.'s son who is DPOA has gone back and forth on whether he is okay w/ a SNF d/c vs. home. The plan was for the Gensurg1 team to talk with the pt. and son further regarding the recs for SNF and if they agree then SW would facilitate a d/c to Kline. Pt. has Medicare A/B and CNP Medicaid and can d/c this wknd to the SNF w/out the need for insur. auth..
.
INTERVENTION:
SW spoke w/ Gensurg1 MD who plans to f/u w/ pt. and son and will call SW back. SW spoke w/ Kline Galland who confirmed they can admit pt. this wknd but won't have a female bed available until Sunday. SW paged team this afternoon for an update on conversation w/ the pt/son and awaiting a call back.

Sunday SW to f/u.

Update: SW received a call back from the team that they still need to talk w/ the son and pt. and hope to do that tonight..
.
PLAN OR OUTCOME:
SW to continue to follow pt..

ASSESSMENT & PLAN:
94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Currently awaiting dispo, likely SNF, pending coordination with family/DPOA.

#Fracture of ribs 8, 9 with hemopneumothorax
Small R apical pneumothorax, stable on repeat CXR (7/29)
- repeat CXR 8/1- stable
-RFP
-pain control
-PT/OT

#Hyperglycemia
Hx of A1C range 6.2-9.2 spring 2019
-low dose SSI

#Geriatrics
Appreciate Med G recs:
-Wound care consult: completed (7/25 note)
-Avoid ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

Chronic/stable:
#Recurrent DVTs on warfarin - per outpt PCP notes pt was no longer taking warfarin
#HTN - holding home losartan
#HLD - atorvastatin
#Chronic BLE wounds - wound care following
Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling
Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline

- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

OT: Recommend moderate assist for ADLs.
Recommend moderate assist of 1, hospital staff for functional transfers.

DVT PPX: SQH q8h
Code: DNR, Intubation ok
DISPO: SNF approved, DPOA and pt deciding on home vs snf

Nursing Progress Note - HMC

TREATMENT PROVIDED:
Time spent:
Session: 1 , Start Time: 0957, End Time: 1026, Total treatment time: 29 minutes, Total timed codes: 29 minutes.
Self care/home mngmt Include assist tech home (97535) for 29 minutes.

PRECAUTIONS:
Precautions:
Spine: Spines cleared.
Patient received with: RN/family member present.
Patient left with: RN/family member present.

SUBJECTIVE:
Pain: L hip and lower back pain in standing
RN aware and pt medicated.

OBJECTIVE:
Interpreter needed? No.
Edema: minimal edema to B ankles.
Skin Integrity: wounds to B ankles/feet dressed and wrapped, with minimal drainage.
ROM/Strength: B shoulders to ~100 degrees flexion, with grossly decreased ROM through wrist/digit ROM d/t baseline arthritis
B hips/knees to 90 degrees flexion on BSC
R ankle DF to neutral actively, L ankle lacking 10deg from neutral
.
Cognition: -alert, cooperative, with slow processing speed and requiring 1 step instructions throughout.

INTERVENTION:
ADLs: -toileting: moderate assist, for pericare
-lower body dressing: moderate assist, to thread BLE and to hike over hips in standing
-upper body dressing: set-up assist, cues for thoroughness
-oral hygiene: seated, minimal assist, for opening/applying toothpaste, cues for thoroughness.
Functional Mobility: -sit to stand from BSC: moderate assist--pt's son recalls method; however, requires repeated cues for hand placement and sequencing (to have pt scoot hips forward and maintain 1 hand on armrails/1 on FWW, etc.)
-standing balance: minimal assist, unable to offweight BUE to assist with clothing management--with kyphotic posture, unable to acheive full upright with cues/facilitation
-lateral steps: minimal assist, with minimal foot clearance bilaterally
.
Adaptive Equipment/DME: per pt's son, family with a myriad of DME/AE options upon discharge--encouraged son to use only FWW for stand pivot transfers at this time (he is offering to use hiking poles, quad cane, single

point cane, etc.) They has a shower chair, grab bars and bedside commode as well.

DAILY RECOMMENDATIONS:
Mobility Recommendations:
Encourage participation in BADLs.
Mobility: dangle, bedside chair.
Level of Assist Needed: assist of one RN staff member with all mobility.
Device Needed: gait belt, front wheel walker.
Self Care Recommendations:
Toileting: bedside commode.
Eating: in bedside chair.
Grooming: in bedside chair.
Bathing: requires a shower chair.

ASSESSMENT:
Pt continues to benefit from acute OT intervention, following simple commands consistently and motivated to return home--however, pt is amenable to short rehab facility stay in order for son receive proper training and to alliviate caregiver burden upon discharge. Pt requiring moderate assist with sit to stand and with lower body dressing/pericare following toileting. Pt able to ambulate a few lateral steps with minimal assist utilizing FWW. Pt requires minimal assist with upper body dressing and set-up with cues to complete seated grooming tasks. OT assisted pt's son in completing several transfers this session and son with moderate carryover from previous session; however, with continue require consistent education re: proper hand positioning and cuing for pt in order to provide safe support to pt. Pt continues with decreased functional independence with self care and mobility due to decreased activity tolerance, strength, ROM, balance. Main barriers are pain, unclear functional baseline. Main strengths are pt's motivation and family support. Appreciate consistent and frequent opportunities to mobilize and participate in self care tasks with RN staffing while in house.

Acute OT will continue to follow for progression of self care/mobility and family training goals.

Recommending pt discharge to location that can provide assist with all self care and mobility and ongoing OT--in order to provide further family training prior to discharge home. Pt and son both agreeable after this session, to a short stay at a rehabilitation facility for further training to promote safer discharge home when family able to demonstrate good carryover re: safe assist with mobility/self care. .

PLAN OF CARE:
Frequency: 1-3 days a week,
Basic Activities of Daily Living:
Bathing: Sitting, Set-up assist.
Upper body dressing: Independent.
Lower body dressing: Modified independent.
Toileting: Modified independent.
Functional mobility and transfers:
Bed mobility: Independent.
Toilet transfer: Modified independent.
Functional mobility: Modified independent.
Patient/family goals: increase independence with ADLs.

.
Plan: ADL training, Functional mobility training.
Goal Review Date: 8/23/2019.

RECOMMENDATIONS:
Current functional recommendations:
Recommend moderate assist for ADLs.
Recommend moderate assist of 1, hospital staff for functional transfers.
Discharge recommendations:
OT will continue to follow while at HMC; If patient discharges today, will need OT follow up at next level of care as determined by primary team.

Denominational Spiritual Care Note

ASSESSMENT:
Assessment: A&Ox4. VSS and WNL. No c/o pain at rest, brief mild pain with dressing change but resolved following cleansing of wounds. Severely HOH, uses amplifier. Using IS without cueing needed. Excellent PO intake, see iView for blood sugars. Incontinent of urine. BLE wounds with moderate yellow drainage, wound bed red, edges irregular, attached. Wounds cleansed and redressed per order with xeroform, ABD, kerlix and surginet. 1 assist out of bed to chair/commode with gait belt. On attempt of ambulation, 1 assist with FWW and gait belt but moderate assist, gait unsteady, only made it about 5 feet. Continue ambulation, increase activity as tolerated. Pt with resistance bands at bedside for strengthening. Pt son, POA, amenable to up to two weeks at SNF for rehab. Call light within reach. .
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was ambulating w/assist less then 10 feet.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
PLAN OF CARE Interventions/Outcomes

8/2/2019 9:00	HMC Fall Risk Interventions		Bed alarm at all times, Bed in lowest position with brakes on, Maintain adequate lighting in room, Maintain call bell within reach of patient, Pt to dangle legs 20 sec before standing
8/2/2019 8:26	HMC Fall Risk Interventions		Bed alarm at all times, Bed in lowest position with brakes on, Maintain adequate lighting in room, Maintain call bell within reach of patient, Pt to dangle legs 20 sec before standing
	Skin Interventions		Elevate/offload heels, Pain management effective, Patient on pressure redistribution surface, Patient working with PT/OT, Turn q2 Hrs, No sting skin prep barrier, Use disposable wicking underpad, Zinc Oxide moisture barrier, Assist patient to obtain adequate nutrition, Plan for nutritional support effective, Educate pt re: appropriate pressure redistribution technique, Elevate / offload heels, Moisturize skin
	Acute pain		
		Pain Goal	Verbalize min pain interference w/ rest&sleep btw activities
		Pain Interventions	Assess pain, relief, side effects Q4 & PRN, Explain plan-assessment/multimodal approach/self-management, Educate pt on pain med regime, including frequency, Offer prn analgesics prior to painful activities, Treat pain w/prn meds, Pace activities/Energy control, Relaxation techniques, Reposition for comfort
		Pain Target Date	8/1/2019
		Pain Plan Assessment	Met, continue with goal & plan
	Ineffective breathing pattern		
		Respiratory Goal	Lung sounds clear
		Respiratory Interventions_	Cough/deep breathe, Elevate head of bed >30 degrees, Pulmonary hygiene, Use IS 10x Q 1hr, Implement rib fracture protocol
		Respiratory Target Date	8/1/2019
		Respiratory Plan Assessment	Met, continue with goal & plan
	Activity intolerance		

Mobility Goal Increasing physical activity and strength
Mobility Interventions Participate with Physical Occupational Therapy sessions, Use assistive devices as needed, i.e. gait belt/walker, Out of bed & in chair for afternoon periods, including meals, Turn Q2hr
Mobility Target Date 8/1/2019
Mobility Plan Assessment Met, continue with goal & plan
Impaired skin/tissue integrity
Skin Goal Remains free of further skin breakdown
Skin Interventions_ Assess site, monitor length, width, depth, drainage & odor, Keep skin clean and dry, Change dressings per order
Skin Target Date 8/1/2019
Skin Plan Assessment Met, continue with goal & plan
8/2/2019 8:00 Skin Interventions Elevate/offload heels, Pain management effective, Patient on pressure redistribution surface, Patient working with PT/OT, Turn q2 Hrs, No sting skin prep barrier, Use disposable wicking underpad, Zinc Oxide moisture barrier, Assist patient to obtain adequate nutrition, Plan for nutritional support effective, Educate pt re: appropriate pressure redistribution technique, Elevate / offload heels, Moisturize skin .

EVALUATION:
Pt NOT progressing in these areas: Increase activity tolerance, strength. .

ASSESSMENT & PLAN:
94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Currently awaiting dispo, likely SNF, pending coordination with family/DPOA.

#Fracture of ribs 8, 9 with hemopneumothorax
Small R apical pneumothorax, stable on repeat CXR (7/29)
- repeat CXR 8/1- stable
-RFP
-pain control
-PT/OT

#Hyperglycemia
Hx of A1C range 6.2-9.2 spring 2019
-low dose SSI

#Geriatrics
Appreciate Med G recs:
-Wound care consult: completed (7/25 note)
-Avoid ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

Chronic/stable:
#Recurrent DVTs on warfarin - per outpt PCP notes pt was no longer taking warfarin
#HTN - holding home losartan
#HLD - atorvastatin
#Chronic BLE wounds - wound care following
Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling
Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able

- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

OT: Recommend moderate assist for ADLs.
Recommend moderate assist of 1, hospital staff for functional transfers.

DVT PPX: SQH q8h
Code: DNR, Intubation ok
DISPO: SNF, pending coordination with patient's son who is DPOA

ASSESSMENT:
Assessment: Pt is a/o x4, VSS, afebrile, lungs are clear on RA. Abdomen is flat and soft, BT present. Pt is eating well, carb.managed diet. No insulin was needed for coverage at breakfast and lunch time as well. BLE dressing change is done with xeroform and kerlix. Pt reported no pain during wound care. Pt reported pain on the hips when sitting on the chair but no pain when in bed. Pt sat down on the bedside chair for few hours. . No restraints indicated.

MOBILITY:
Mobility goal for today: transfer to chair.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was transfering to chair with pivot transfer.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 8/1/2019 8:00 - 8/1/2019 10:28).

EVALUATION:
Pt progressing towards discharge: Trasfers to chair with 1 person assist, pain only with movement and when sitting on chair. .

CCN Discharge Planning Note

ASSESSMENT:
Jeanne Hoffman is a 94 y/o F who sustained a GLF. Resulted in right rib 8-9 fx, hemopneumothorax, right inf pubic ramus fx
.
.
INTERVENTION:
SW received call from pt son, Louis (360.649.5702). SW had previously spoken with PT who reported a belief that pt would strongly benefit from SNF placement vs. home with out patient as she is still a fall risk. Louis reported more concerns with SNF placement. Stated that he thought at pt age that if she went to SNF she would likely need to stay there for life and never make progress home. SW explained that pt would be going for rehab with a goal to return home at her same level of independence PTA. Pt son continues to refuse the idea of SNF placement. Stated a belief that he would be able to care for pt as good or better than staff at SNF once he was trained properly.
SW reported that she would speak to the primary team further about this and have primary team staff speak with pt/son about concerns with pt going home vs. SNF. Louis reported that he would be at HMC tomorrow.
.
.
PLAN OR OUTCOME:
SW will continue to follow.
.

Social Work Progress Note

PHYSICAL THERAPY NOTE:
Note Type: Progress Note.

TREATMENT PROVIDED:
Time Spent:
Session 1 : Start Time: 1100, End Time: 1131, Total treatment time: 31 minutes.
Total timed codes: 31 minutes. Therapeutic Functional Activity/Bed Mobility: for 31 minutes.

PERTINENT PATIENT INFORMATION:
Diagnosis: 94 y/o F admitted after a mechanical GLF with:

-R ribs 8/9 fractures
-R hemo-pneumothorax (s/p chest tube)
-R inferior pubic ramus fracture (non-op).
Past Medical History: History of DVTs, on warfarin
HTN
Chronic BLE wounds.
Precautions
Activity: Ambulate as tolerated.
Weightbearing precautions LE: WBAT L LE, WBAT R LE.
Fall History - Fall Risk Assessment:
Fall risk: Patient is high fall risk.
Have you fallen in the past year? Pt reports she sometimes looses her balance posteriorly, but she generally catches herself. Son reports this is the first time she has injured herself from falling in ~10 years. Both pt and son were vague about her fall history/circumstances, but generally agree there have been other falls.
Prior functional status:
Mod I using 4WW. Son reports pt mobilizes independently, but he sometimes pushes her in her 4WW for longer distances (son reports they do not like wheelchairs because it's "too dangerous on the hills").

HOME ENVIRONMENT:

Lives with son in a single story home. Son reports ongoing disagreements with landlord surrounding updates to make the space more accessible (i.e. grab bars). Son can provide assist and reports plan that "I need her to see how important it is to do these exercises. I have exercise books and I will have her do these same exercises I did when I had a hip replacement."

BEHAVIOR:
Alert.
Pt is reserved and speaking minimally, though more engaged when addressed directly. Used pocket talker, as pt HOH..

Fully oriented.
Following commands.
Tangential.

PAIN:
Pt reports moderate pain to R hip and B ankles with exercises and mobility..

CARDIOPULMONARY:
Vital signs stable throughout intervention
Per signs/symptoms.
Oxygen requirements:
Room air.

MUSCULOSKELETAL:
Range of Motion:
B UEs WFL, though B shoulder and wrist/digit movement is limited (pt reports this is baseline)

BLE: WFL except B hip flexion to 80deg sitting EOB, R ankle DF lacking 5deg from neutral, L ankle lacking 10deg from neutral
Strength:
anti-gravity strength throughout.

INTEGUMENTARY:

dressings to B ankles

MOBILITY:
Bed Mobility
Supine to sit: surface elevated HOB, patient requires minimal assistance, increased time to perform task..
Transfers
Sit to stand: (stand to sit) using a front wheel walker, min to modA. Pt requires increased time to perform task and cues to place feet on floor and scoot to edge of chair. Pt's son demonstrates one transfer sit to/from stand without AD. Pt pulling pt forward with B hands and poor body mechanics. Educated pt on importance of hand positioning on pelvis, avoiding pulling pt from UEs. Also discussed importance of using walker to provide more assist and support for pt. Noted pt able to place R foot flat on floor, though maintains L ankle PF position in standing posture and with flexed trunk and knee position..
Stand pivot: bedside chair, using a front wheel walker, moderate assistance, Pt's son demonstrates assist, though hands placed underneath armpit and pt standing in front of walker with limited support of pt. Pt required additional assist of therapist to transition from bed to chair and facilitation for upright trunk posture. Pt with poor eccentric control on descent due to fatigue and weakness..
Ambulation
Distance: 3ft.
Device utilized: front wheel walker.

Level of assist: with minimal assistance.
Quality of ambulation: shuffling, slow, toe-walking throughout gait cycle; decreased foot clearance bilaterally, worse on the R..

BALANCE:
Sitting: Assistance: patient requires supervision.
Standing:
Static standing: Assistance - the patient needs minimal assistance, with FWW. With cues for upright trunk posture, as pt with thoracic kyphosis, B knee flexion, and B ankle PF (L>R)..

EQUIPMENT:

Owns 4WW. Loaner FWW at bedside.

PATIENT EDUCATION:
Topics: Home exercise program,
role of PT, plan of care, goals of session, ongoing therapy, recommendations for safety with mobility, extensive conversation with son regarding need for further family training to ensure safe mobility prior to pt discharging home which is best completed in short SNF stay.
Individuals present for education: patient, family Son, Louis.
Teaching method: verbal, written, pictures/video, demonstration.
Challenges to learning: decreased activity tolerance, pain.
Teaching outcome: demonstrates task, cueing required, will require continued reinforcement.

GOALS:
Short term goals:
To be met by 8/10:
Pt will complete bed mobility with mod I
Pt will sit<>stand with supv and LRAD
Pt will transfer to/from chair with supv and LRAD
Pt will ambulate x50ft with SBA and LRAD
Pt will be independent in HEP
Pt's son will be trained to assist pt (as needed for discharge).
Patient/family goals: return to previous level of activity, to be able to walk, to get stronger.
Goals reviewed and unchanged.

DAILY RECOMMENDATIONS:
Activity transfer status: stand pivot.
Transfers level of assistance: one person assist.
Device: walker.

IN HOUSE THERAPY PLANS:

Plan

Treatment plan:

Range of motion and positioning.
Strength training.
Mobility training.
Patient and family education/instruction.
Equipment assessment.

Patient will be seen:

2-3x/week.

The above goals and treatment plan have been discussed and agreed upon with:

Patient.
Family.

ASSESSMENT:

Seen by PT for progression of mobility and ongoing education following pelvic fractures. Pt continues to present with impairments in UE and ankle ROM, LE strength, balance, and activity tolerance. Pt presents as high fall risk due to deficits, as well as pain and high level of fatigue with limited mobility. Pt also with baseline ankle contractures which greatly impact stability with standing activities. Pt's son adamant that he can provide assist for pt upon discharge, though does not demonstrate safe technique during session. He is receptive to education and training during session, though will likely require more repetition and consistency of training than can be provided in acute care setting.

With more education regarding frequency of therapy available via home health vs. SNF, pt's son appears more agreeable to transitioning to rehab facility for short stay prior to discharge home. Spoke with GS resident and SW to update on d/c plans.

Pt will likely be best served by a discharge setting that can provide ongoing therapy and assist for all mobility, providing further family training prior to discharge home..

RECOMMENDATIONS:

Current functional recommendations:

Recommended level of assist for household mobility: min-mod A for bed mob, transfers, and few steps with FWW.

Discharge recommendations:

PT will continue to follow while at HMC; If patient discharges today, will need PT follow up at next level of care as determined by primary team.

Physical Therapy Note - HMC Acute-Progre

ASSESSMENT:
Assessment: Pt transferred to 8E from 2WB. Assumed care from ~21:00-07:00. Pt A&O x4, very HOH, hearing aids in Property Safe, using pocket talker. MAE with good strength and normal sensation. BLE wounds covered with Xeroform and Kerlix. Given 5mg oxycodone for wound care, otherwise, pt reports no pain. Tolerating a general diet, no c/o N/V, poor PO intake per ICU RN report. Incontinent of urine, had a BM yesterday (7/30), up to BSC with FWW gait belt and 1PA. L ac PIV patent, saline-locked. Pending SNF placement..
No restraints indicated.

MOBILITY:
Mobility goal for today: transfer to chair.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was active ROM/in bed activity.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 7/29/2019 5:59 - 7/30/2019 21:00).

Discharge Placement Center Note

ASSESSMENT:
Jeanne Hoffman is a 94 y/o F who sustained a GLF. Resulted in right rib 8-9 fx, hemopneumothorax, right inf pubic ramus fx
.
.
INTERVENTION:
SW went to bs to meet with pt and DPOA/son (Louis) to discuss d/c plan. Pt was mostly asleep during time SW spent in the room. ICU SW previously met with pt/Louis in the ICU and son initially was agreeable with SNF placement at a particular facility (Park Ridge), however pt has been denied. Louis then called ICU SW and LM reporting that he no longer wanted pt to go to SNF and would rather take her home. Louis explained to SW that their apartment is ADA.
Louis presents as tangential when speaking with SW. Often reporting to SW that he is highly knowledgeable in the medical field and asked SW for information on pt pelvic fracture (wants to see the x-ray) so he can 'have more knowledge' on pt condition. Louis reported that at baseline pt does ambulate with a walker and also showed SW that she has a cane and two walking sticks. Louis reported that he does not want pt to use a w/c as he believes that in older age she should continue to walk and use her muscles and going into a w/c will case pt to deteriorate.
SW encouraged Louis to speak more with PT/OT about techniques to use in the home for pt as he no longer wants her to go to SNF. Louis reported that he had previously spoken to PT in the ICU and will be at bs most of the day while pt is here.
Louis explained to SW that he has contacted Kitsap Therapy (an out patient clinic) that he hopes that pt can go to when she d/c from HMC.
SW explained primary role in d/c planning to facilities. Reported that if pt does go home then CCN will coordinate. SW previously received pg from RN on 8E requesting that SW call pt pastor (Dave - 314.853.2695). SW asked pt and Louis if she could call Dave. Louis reported that Dave is a good support system however "we have different opinions." Louis gave SW consent to call Dave, however clarified with SW that he is legal DPOA (SW confirmed this with ppwk in ORCA) and is the decision maker. .
.
PLAN OR OUTCOME:
SW will follow up as needed. Pt son/DPOA not agreeable to SNF placement at this time, has a desire for pt to return home. SW updated primary team on this discussion. .

ASSESSMENT & PLAN:

94 F with history of recurrent DVTs on warfarin, HTN, HLD with fractures of right ribs 8 and 9, hemopneumothorax and non-operative pelvic fracture sustained after GLF. Currently awaiting dispo, likely SNF, pending coordination with family/DPOA.

#Fracture of ribs 8, 9 with hemopneumothorax
Small R apical pneumothorax, stable on repeat CXR
-RFP
-pain control
-PT/OT

#Hyperglycemia
Hx of A1C range 6.2-9.2 spring 2019
-low dose SSI

#Geriatrics
Appreciate Med G recs:
-Wound care consult: completed (7/25 note)
-Avoid ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

Chronic/stable:
#Recurrent DVTs on warfarin - per outpt PCP notes pt was no longer taking warfarin
#HTN - holding home losartan
#HLD - atorvastatin
#Chronic BLE wounds - wound care following
Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

ASSESSMENT:
Assessment: AAOX4, calm and cooperative with care. Patient very HOH, pocket talker at bedside. Patient MAE with CMS+. Full strength to BUE, 4/5 strength to BLE. WBAT to BLE. Patient refused to attempt mobilization this shift, stating, "I just can't today. Tomorrow I will sit in the chair." Patient did agree to q2 turns and able to turn self independently in bed when needed. Had episode of lethargy after 5 mg prn oxycodone given. Very difficult to arouse patient 1-2 hrs post medication administration. Three hours post medication administration, patient again AAOX4 with no problems. VSS on RA, HRR, Lung sounds CTA. Patient using IS at bedside reaching 1000-1250. BLE dressing change this shift per order, patient refused pain medication prior to dressing change, requested medication post dressing change. BS+, patient passing gas with no problems, reports LBM, "yesterday." Incontinent of urine this shift, voiding CYU. Tolerating general diet, with good fluid intake. Resting in bed at this time, in no distress. .
No restraints indicated.

MOBILITY:
Mobility goal for today: active ROM/in bed activity.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was active ROM/in bed activity.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PROBLEMS / ASSESSMENT / PLAN:
94F with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia with presents after a ground-level fall 7/24.
Pt continues to be HD stable, awaiting disposition.

#Fracture right posterior 8-9 Rib with associated Hemopneumothorax
CT placement in the ED with post-procedure CXR that showed significant resolution; PIC scores now >8
CT to water seal w /stable, very small right apical pneumothorax on water seal; APS eval 7/26 and pt did not require regional anesthetic, so s/o; PIC scores >8; Pt on RA/eupneic; CT dc'd 7/28 f/u CXR w/ tiny right apical pneumothorax. F/U CXR have been stable
-RFP/ BHP q 4
-multimodal pain regimen, APS evaluated pt, does not require block, signed off, SW advised w/chart biopsy that pt seen by APS at another facilty, will f/u
-PT/OT following, pt will require therapy 2-3x/wk please refer to their note for details
-DVT ppx w/ SQH q8

#Hyperglycemia, may be due to inflammation but no fever or leukocytosis, h/o HgAIC 6.2-->9.2 range as outpt in spring 2019, well controlled, required 5u Insulin over past 24 hrs)
-SSI w/ low dose
-RD consult
- will touch base with med G recs regarding glucose management

#Elderly patient
Frailty score-->uses walker, cane
-Med G consultation(recs):
-Wound care consult: completed (7/25 note)
-Nutrition consult
-Iron studies
-Stop ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

 # Right inferior pubic ramus fracture
- upright XR pelvis 7/29/19
-Orthopedic Pelvis consulted, recommendations (7/30/19): start **lovenox 30 mg bid x6 wks to end 9/4/19 when pt is cleared by other services. ==> poor renal function**
-Non-op treatment trial
-WBAT BLE
-PT/OT

CHRONIC/STABLE
#Anemia, acute on chronic, transfuse for Hct <21
#s/p Hypotension, *resolved,* MAPs >60, felt due to hypovolemia as (+) straight leg test and improved w/ 500cc cyrstalloid bolus
-Orthostatics ordered. supine SBP in 90-100s, seated SBP high 80s low 90s(;on 7/26)
#Recurrent DVTs on warfarin
-initially held therapeutic anticoagulation in the setting of hemopneumothorax-
-Geri Med note on 7/25--> *Per outpatient PCP notes, patient was not taking warfarin and PCP had decided not to continue it at that time*
#Hypertension

currently normotensive
-Holding home losartan
#HLD
-atorvastatin restarted
#Chronic wounds of the bilateral lower extremities
-Wound care team following

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

#Dispo
f/u Ortho Pelvis once pelvic imaging done for final recs to determine DC needs
SW aware of PT/OT rec and plan w/ need to f/u imaging

#TICU Checklist
Analgesia/Sedation: scheduled tylenol (geritatic dosing)
FENGI: General diet
TLD: 2 PIVs,
ABX: NI
GI ppx: NI
Glucose: NI
VTE prophylaxis: SQH for now; poor renal function for Lovenox (ortho recs)
Spine: Cleared
Activity: TICU mobility
Labs: QOD
Code status: DNR, ok to Intubate
Dispo: Ward status w/ Gen Surg Team 1, currently awaiting dispo plan

Attending Addendum:

I saw and evaluated this patient today with Dr. Jiang and agree with her note.

Concurrent care was necessary because the patient required continuous physician observations and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

ICU progress note

ASSESSMENT:
SW involved for continued support of patient and Son Louis. Per chart, 94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

.
.
INTERVENTION:
Met with patient and Son Louis at bedside. Patient initially not agreeable to SNF "I won't do it, I won't give in" but ultimately agreeable to SNF for a short period of time with the eventual goal of discharging to home with Louis. Son Louis is fearful patient will lay around in bed all day without progression. Louis requests SNF referral to Park Ridge where patient has been to in the past. Louis reports that additional social support from Sound Cross Church are planning to visit with patient tomorrow.

SNF referrals initiated via AllScripts - appreciate DPC assistance

Provided list of SNFs referrals were sent to, to Son Louis.

Foss Home and Village - Interested in accommodating
Park Ridge - Decline
Park Shore - Decline
Columbia Lutheran Home - awaiting response
Ida Culver House - Accept

Son Louis declines desire for patient to discharge to Ida Culver House. Believes it is a facility where individuals primarily go to die. Still considering patient returning home immediately following discharge.

LVM for APS King County and inquired re assigned investigator and requested return phone call 1-866-221-4909.
.
PLAN OR OUTCOME:
SW to continue assisting patient accordingly.

Discharge Placement Center Note

PHYSICAL THERAPY NOTE:
Note Type: Progress Note.

TREATMENT PROVIDED:
Time Spent:
Session 1 : Start Time: 0955, End Time: 1048, Total treatment time: 53 minutes.
Total timed codes: 53 minutes. Therapeutic Exercise/Procedure:
For 10 minutes.
Active range of motion lower extremities, pelvic fx handout.
Therapeutic Functional Activity/Bed Mobility: for 43 minutes.

PERTINENT PATIENT INFORMATION:
Diagnosis: 94 y/o F admitted after a mechanical GLF with:

-R ribs 8/9 fractures
-R hemo-pneumothorax (s/p chest tube)
-R inferior pubic ramus fracture (non-op).
Past Medical History: History of DVTs, on warfarin
HTN
Chronic BLE wounds.
Precautions
Activity: Ambulate as tolerated.
Weightbearing precautions LE: WBAT L LE, WBAT R LE.
Fall History - Fall Risk Assessment:
Fall risk: Patient is high fall risk.
Have you fallen in the past year? Pt reports she sometimes looses her balance posteriorly, but she generally catches herself. Son reports this is the first time she has injured herself from falling in ~10 years. Both pt and son were vague about her fall history/circumstances, but generally agree there have been other falls.
Prior functional status:
Mod I using 4WW. Son reports pt mobilizes independently, but he sometimes pushes her in her 4WW for longer distances (son reports they do not like wheelchairs because it's "too dangerous on the hills").

HOME ENVIRONMENT:

Lives with son in a single story home. Son reports ongoing disagreements with landlord surrounding updates to make the space more accessible (i.e. grab bars). Son can provide assist as needed and reports they have a large community of people who are also willing to help

BEHAVIOR:
Alert.

Fully oriented.
Following commands.
Tangential.

PAIN:

Reports general soreness to entire body; worse in hip with weight bearing

CARDIOPULMONARY:
Vital signs stable throughout intervention
Per ICU monitor.
Oxygen requirements:
Room air.

MUSCULOSKELETAL:
Range of Motion:
B UEs WFL, though B shoulder and wrist/digit movement is limited (pt reports this is baseline)

B ankles lacking ~10 deg from neutral (per pt, this is baseline due to her habit of walking on her toes)
Strength:
MAE againts gravity equally.

MOBILITY:
Bed Mobility
Supine to sit: surface elevated HOB, patient requires contact guard assistance, increased time to complete.
Transfers
Sit to stand: using a front wheel walker, CGA.
Stand to sit: using a front wheel walker, CGA.
Stand pivot: bedside chair, using a front wheel walker, minimal assistance, Son performed stand pivot transfer with pt x2, requiring heavy cues from therapist for hand placement, positioning during transfer, and safety of the scene (ensuring chair was secure and in a proper position)..
Ambulation
Distance: 3ft (distance limited by muscle fatigue to B LEs).
Device utilized: front wheel walker.
Level of assist: with contact guard assist, min A as pt fatigued.
Quality of ambulation: shuffling, slow, toe-walking throughout gait cycle; decreased foot clearance bilaterally, worse on the R (baseline per son).

BALANCE:
Sitting: Assistance: the patient is independent.
Standing:
Static standing: Assistance - the patient needs contact guard assist, with FWW.

EQUIPMENT:

Personal 4WW in room. Son has modified it to add a footrest as pt typically sits on the seat while her son pushes her. Advised pt and son that 4WWs were not designed for that and there are several safety risks when using the 4WW that way. Pt's son reports they have tried wheelchairs but he personally feels they are unsafe and refuses to use one.

Provided education on wheelchairs vs 4WWs and suggested the use of a wheelchair in the home for safety and to increase pt's independence. Pt's son actively declined all therapist's suggestions, but did report he could get a wheelchair through their church group if he later changes his mind.

Pt was quiet throughout this exhange and did not offer her opinions on the matter, stating she will defer to what her son thinks is best.
Equipment
In hospital/loaner equipment: assistive device front wheeled walker.

PATIENT EDUCATION:
Topics: Home exercise program,
role of PT, plan of care, goals of session, ongoing therapy, SNF vs home, wheelchair and 4WW safety.
Individuals present for education: patient, family Son, Louis.
Teaching method: verbal, written, pictures/video, demonstration.
Challenges to learning: decreased activity tolerance, pain.
Teaching outcome: cueing required, will require continued reinforcement.

GOALS:
Short term goals:
To be met by 8/10:
Pt will complete bed mobility with mod I
Pt will sit<>stand with supv and LRAD
Pt will transfer to/from chair with supv and LRAD
Pt will ambulate x50ft with SBA and LRAD
Pt will be independent in HEP
Pt's son will be trained to assist pt (as needed for discharge).
Patient/family goals: return to previous level of activity, to be able to walk, to get stronger.
Goals updated.

DAILY RECOMMENDATIONS:
Activity transfer status: stand pivot.
Transfers level of assistance: one person assist.
Device: walker.
Ambulation activity status: ambulate in room.
Ambulation level of assistance: one person assist.
Ambulation device: walker, gait belt.

IN HOUSE THERAPY PLANS:

Plan

Treatment plan:

Range of motion and positioning.
Strength training.
Mobility training.
Patient and family education/instruction.
Equipment assessment.

Patient will be seen:

2-3x/week.

The above goals and treatment plan have been discussed and agreed upon with:

Patient.
Family.

ASSESSMENT:

Seen by PT for progression of mobility and ongoing education following pelvic fractures. Pt continues to present with impairments in UE and ankle ROM, LE strength, balance, and activity tolerance. Required minimal assist for functional transfers and short distance ambulation using a walker. Pt with baseline ankle contractures as she reports a long history of toe-walking. Due to several comorbidities, most notably the altered base of support in standing, pt is at high risk for falls. Pt currently unable to stand for longer than a few minutes and struggles to ambulate farther than 2-3ft at a time, even with assist. Pt fatigues quickly with activity. Son present during session; began family training though pt's son is easily distracted and required several cues for safety during transfer. Spent considerable time educating pt and her son on pt's current mobility level, explain she needs assist with all mobility and is unable to ambulate household distances, even with assist.

Pt will likely be best served by a discharge setting that can provide ongoing therapy and 24 hour assist as pt has nursing care needs (wound care, incontinence) in addition to her mobility needs..
Recommended In House Consults: Social work.

RECOMMENDATIONS:

Current functional recommendations:

Recommended level of assist for household mobility: min A.

Discharge recommendations:

PT will continue to follow while at HMC; If patient discharges today, will need PT follow up at next level of care as determined by primary team.

Physical Therapy Note - HMC Acute-Progre

ASSESSMENT:
Assessment: Pt alert and oriented, hard of hearing, neuro exam unchanged, intact. Pt reports generalized pain, on scheduled tylenol.
Afebrile, SBP WNL, HRR, no telemetry. PIV x1.
Denies cough or SOB, lungs CTA, slightly dim in bases, sating > 90% on RA. PICC score 8. Needs IS encouragment. R chest dressing intact, see by GS today. Tolerating general diet, see I&Os. (+) BM.
Incontinent of urine, calls out appropriately afterwards, tolerating briefs.
BLE dressings intact, changed last night. Pt working with PT this morning, PT teaching son and talking about dispo, up with assistance to bedside commode and chair, 1 person max assist, remains a fall risk.
Wound care consulted, will try to see pt tomorrow to assess BLE wounds.
Son visited majority of day, speaking with RN, SW, MDs, PT regarding dispo. Concern for unknown home situation and son's ability to provide 24 hour care, will refer to SW and PT's recommendation.

.

EVALUATION:
Pt NOT progressing in these areas: dressing changes, dispo, PICC scores, IS.

Update in status from 7/27-7/29

Patient has been wards status for the past 3 days and has been awaiting bed placement.
She continued to be HD stable. Of note, at time of CT placed to water seal on 7/26 had small apical pneumothorax but pt on RA, HD stable w/o issue. CT dc'd on 7/27 w/ f/u CXR w/ small, stable apical pneuthorax w/ continued HD stability and tolerating RA. CXR f/u 7/28 w/ possible stable apical pneumothorax from before vs artifact/skin fold but patient continued to be HD stable.
Patient found to be MRSA positive during this interval and placed on precautions
PT/OT/SW cont to follow pt and give recs for dispo
Pt has been awaiting inlet/outlet imaging but delayed as pt not able to stand for long periods due to pain/frailty.
F/u W/ Ortho Pelvis on 7/28, advised that pt needs to be standing for imaging w/ information communicated to RN staff.
Pls refer to TICU progress notes during this interval, consultant's notes, imaging, lab data and EMR for further details during this interval.

-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

 # Right inferior pubic ramus fracture
-Orthopedic Pelvis consult, awaiting recs
-Non op treatment trial
-WBAT BLE
-f/u inlet/outlet pelvis views when pt able to weightbear--> ordered, pending to go to Xray--> pt unable to stand, alerted Ortho 7/27 and again today, 7/28, Ortho advised that pt needs to be weight bearing for study, RN staff advised of this and need to assist pt in radiology to do this.
-PT/OT

#Anemia, acute, due to blood loss from injuries, on chronic
-Tx if Hct <21

CHRONIC/STABLE
#s/p Hypotension, *resolved,* MAPs >60, felt due to hypovolemia as (+) straight leg test and improved w/ 500cc cyrstalloid bolus
-Orthostatics ordered. supine SBP in 90-100s, seated SBP high 80s low 90s(;on 7/26)
#Recurrent DVTs on warfarin
-initially held therapeutic anticoagulation in the setting of hemopneumothorax-
-Geri Med note on 7/25--> *Per outpatient PCP notes, patient was not taking warfarin and PCP had decided not to continue it at that time*
#Hypertension
currently normotensive
-Holding home losartan
#HLD
-atorvastatin restarted
#Chronic wounds of the bilateral lower extremities
-Wound care team following

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage

- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:

- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

#Dispo
f/u Ortho Pelvis once pelvic imaging done for final recs to determine DC needs
SW aware of PT/OT rec and plan w/ need to f/u imaging

ICU Progress Note

ASSESSMENT:
SW involved for continued support of patient and Son Louis. Per chart, 94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

.
.
INTERVENTION:
Met with patient and Son Louis at bedside. Son Louis reports strong preference for patient to discharge to home with outpatient PT / OT and not to SNF. Patient has been to SNF in the past and had a poor experience - laid in bed most of the day per Louis. Asked patient d/c preference and decision making deferred to Louis. CCN notified of preferred d/c plan to home with outpatient PT / OT.
.
PLAN OR OUTCOME:
SW to continue assisting patient accordingly.

Social Work Progress Note

ASSESSMENT:
Assessment: Pelvis x-ray NOT completed, RN called X-ray and unable to obtain due to multiple cases.

Pt alert and oriented, hard of hearing, neuro exam unchanged, intact. Pt reports generalized pain, on scheduled tylenol. Afebrile, SBP WNL, HRR, no telemetry. PIV x1. Denies cough or SOB, lungs CTA, slightly dim in bases, sating > 90% on RA. R chest dressing intact. Tolerating general diet, see I&Os. (+) BM. Incontinent of urine, calls out appropriately afterwards, tolerating briefs. BLE dressings intact. Up with assistance to bedside commode and chair, able to stand and march in place briefly with assist. Up to chair for 2 out of 3 meals.

.

EVALUATION:
Pt NOT progressing in these areas: dressing changes, dispo.

ASSESSMENT:
Assessment:
NEURO: Alert and oriented x4. Following commands x4, 4/5 strength. PERRL and brisk. No c/o pain this shift, receiving ATC scheduled tylenol. HOH, pocket talker in use and pt able to interact well.
CARD: SR with no ectopy. PPP. SBP 90-160, no intervention needed. PIV in place, flushing well.
PULM: Breathing even and unlabored. No cough noted. Lungs CTA-diminished at bases.
GI/GU: Tolerating general diet. Large BM this shift. Incontinent of urine, wearing a brief in bed. Transfered x1 to chair.
SKIN: Grossly intact.
PSYCH/SOC: Pt still reporting some anguish over home vs SNF. She would benefit from a SW chat..
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was dangling at bedside.

Nursing Progress Note - HMC

ASSESSMENT:
Frail 94 YO woman sustained GLF in her kitchen on 7/24 resulting in R rib Fx 8-9, R PTX and R rami Fx; transfered t HMC for further workup and treatment; admitted to the TICU service; transitioned to acute care orders on 7/6; R CT placed to H20 seal yesterday morning; injuries are non-op; medical Hx is signifiant for HTN, DVTs, chronic venous stasis ulcers and HLD; extremely HOH at baseline; wears glasses; non smoker; no nicotine; lives with son in church sponsored housing on Bainbridge island and was previously homeless living in a tent with her son; AM labs pending; see inpatient flowsheets for full assessment details; dispositon unclear at this point; care plan on going.

MOBILITY:
Mobility goal for today: dangle at bedside.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was dangling at bedside.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

EVALUATION:
Pt progressing towards discharge: stable on acute care orders; disposition tbd.

PROBLEMS / ASSESSMENT / PLAN:
94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia with presents after a ground-level fall yesterday

Pt continues to be HD stable

#Fracture right posterior 8-9 Rib with associated Hemopneumothorax
CT placement in the ED with post-procedure CXR that showed significant resolution; PIC scores now >8
CT to water seal w /stable, very small right apical pneumothorax on water seal; APS eval 7/26 and pt did not require regional anesthetic, so s/o; PIC scores >8
-D/W Dr. Robinson Gen/Surg Chief, OK to DC CT and f/u CXR in 4 hrs
-RFP/ BHP q 4
-multimodal pain regimen, APS evaluated pt, does not require block, signed off, SW advised w/chart biopsy that pt seen by APS at another facilty, will f/u
-DC Ketorlac, and oxycodone
-PT/OT following
-DVT ppx w/ SQH

#Elderly patient
Frailty score-->uses walker, cane

-Med G consultation(recs)
-Wound care consult
-Nutrition consult
-Iron studies
-Stop ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

 # Right inferior pubic ramus fracture
-Orthopedic Pelvis consult, awaiting recs
-Non op treatment trial
-WBAT BLE
-f/u inlet/outlet pelvis views when pt able to weightbear--> ordered, pending to go to Xray--> pt unable to stand, alerting Ortho to see if would be OK w/ seated films, awaiting call back
-PT/OT

#Anemia, acute, due to blood loss from injuries, on chronic
-Tx if Hct <21

CHRONIC/STABLE
#s/p Hypotension, *resolved,* MAPs >60, felt due to hypovolemia as (+) straight leg test and improved w/ 500cc cyrstalloid bolus
-Orthostatics ordered. supine SBP in 90-100s, seated SBP high 80s low 90s(;on 7/26)
#Recurrent DVTs on warfarin
-holding therapeutic anticoagulation in the setting of hemopneumothorax
-F/U AM CXR, if stable, consider restart once txf to wards
#Hypertension
-Holding home losartan
#HLD
-atorvastatin restarted
#Chronic wounds of the bilateral lower extremities
-Wound care team following

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix

- Change every other day or as needed with soiling

TICU Checklist
Analgesia/Sedation: scheduled tylenol, Ketorlac x 24hrs-->cont another 24hr scheduled, oxycodone PRN (all geritatic dosing)
FENGI: General diet
TLD: 2 PIVs, DC Right C
ABX: NI
GI ppx: NI
Glucose: NI
VTE prophylaxis: on Heparin 5,000u q 8
Spine: Cleared
Activity: TICU mobility
Labs: QOD
Code status: DNR, ok to Intubate (will try to contact a family member for clarification)
Dispo: Ward status w/ Gen Surg Team 1

ICU Progress Note

Addendum by Khandelwal MD, Nita on July 27, 2019 16:26

Attending Addendum:

I saw and evaluated this patient today with Judith Glann, ARNP and agree with her note.

Concurrent care was necessary because the patient required continuous physician observations and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

OCCUPATIONAL THERAPY NOTE:
Note Type: Evaluation.

TREATMENT PROVIDED:
Time Spent:
Session 1 : Start Time: 0846, End Time: 0930, Total Treatment Time: 44 minutes, Total Timed Codes: 20 minutes.
OT Evaluation.
Self care/home mngmt Include assist tech home (97535) for 20 minutes.

PERTINENT PATIENT INFORMATION:
Diagnosis/PMH
Diagnosis: 94 y/o F admitted after a mechanical GLF with:

-R ribs 8/9 fractures
-R hemo-pneumothorax (s/p chest tube)
-R inferior pubic ramus fracture (non-op).
Past Medical History: History of DVTs, on warfarin
HTN
Chronic BLE wounds.
Precautions:
Activity: ambulate.
Spine: Spines cleared:.
Weightbearing precautions: RLE - WBAT, LLE - WBAT.
Patient Safety Patient recieved with: in bed, Patient left with: in bedside chair, RN alerted.
Prior functional status:
BADL:
requires increased time, but independent.
IADL:
does her own cooking including canning food, Independent.
Functional mobility:
uses rollator in the community, holds onto furniture in the home.

HOME ENVIRONMENT:
Living situation: Lives in apartment w/son who is able to provide 24/7 assist, has a walk-in shower w/a shower chair..

PAIN:

no pain when resting in bed, though c/o pain in R ribs and hip w/movement

CARDIOPULMONARY:
Vital Signs
Stable per ICU monitor.
Oxygen requirements: room air.

MUSCULOSKELETAL:
ROM
All joints within functional limits except as noted:
B shoulder flexion to approx 110 deg, lacking full composite grip d/t arthritis.
Strength

moving all extremities against gravity without focal deficits, B grip strength WFL and equal .

SENSATION:
Denies sensory changes.

INTEGUMENTARY:
Drains: chest tube R, foley.
Skin Integrity distal B calves wrapped w/clean dressing, no drainage noted, pt reports chronic ulcers.

FUNCTIONAL MOBILITY:
Bed mobility
Supine to sit: Contact guard assist, HOB raised slightly.
Scooting edge of bed: Stand by assist.
Sitting balance
Edge of bed, static: Independent.
Functional transfers
Assistive device: front wheeled walker.
Sit to stand: Moderate assistance.
Bed to BSC: Moderate assistance, assist to keep weight forward as pt tends to list backwards, and assist to manage walker.
BSC to bedside chair : mod A to stand up from BSC, then therapist swapped out BSC for bedside chair while pt standing w/CGA for balance. benefits from cues for hand placement during transfer, plus physical assist for eccentric control of sit into chair.

SELF CARE:
Basic Activities of Daily Living
Grooming: Hand washing: sitting, Set-up assist.
Lower body dressing: mod A to doff briefs, max A to don clean briefs.
Toileting: Moderate assistance.

COGNITION:
Behavior: alert, cooperative, "I'm very independent, I need to do this by myself even if it kills me".
Command following: Patient consistently follows verbal commands.
Orientation: Patient is oriented to person, place, situation.
Communication: Able to communicate basic needs, hard of hearing, pocket talker greatly increases ease of communication.

VISION:
Vision Screen/Visual perceptual/inattention:
Glasses/contacts: glasses.

EQUIPMENT:

already owns shower chair

PATIENT EDUCATION:
Topics: ADLs:, Anticipated course of rehab, Functional transfers:, Goals of rehab/Plan of care, Recommended follow-up therapy, Role of Occupational Therapy.
Individuals present for education: patient.
Teaching method: verbal.
Teaching outcome: Patient verbalizes understanding.

DAILY RECOMMENDATIONS:
Mobility Recommendations
Encourage participation in BADLs.
Mobility: bedside chair.
Level of Assist Needed: 1-2 person depending on level of fatigue.
Device Needed: gait belt, front wheel walker.
Self Care Recommendations:
Toileting bedside commode.
Eating in bedside chair.

GOALS:

Short Term Goals:
Goals expected to be met by: 8/23/2019
Basic Activities of Daily Living:
Bathing: Sitting, Set-up assist.
Upper body dressing: Independent.
Lower body dressing: Modified independent.
Toileting: Modified independent.
Functional mobility and transfers:
Bed mobility: Independent.

Toilet transfer: Modified independent.
Functional mobility: Modified independent.
Patient/family goals: increase independence with ADLs.

IN HOUSE THERAPY PLANS:
Plan
Patient will be seen: 1-3 days a week.
Treatment plan: ADL training, functional mobility training, therapeutic activities, therapeutic exercise.

ASSESSMENT:
Patient seen for functional evaluation. She was able to get herself out of bed with CGA, required grossly mod assist for transfers with FWW, max assist for lower body dressing, mod assist for toileting, and set up assist to wash face while seated. Patient reports being extremely independent, and while her son provides support and assistance, she completes majority of basic ADLs and mobility independently. She is requiring increased assistance now d/t decreased balance, activity tolerance, and mobility at trunk/R hip d/t pain. Barriers: pain, chest tube. Strengths: assistance available at home, extremely motivated to regain independence, participatory with therapies. Acute OT will continue to follow to progress mobility and ADLs.

Currently recommend discharge location that can provide assistance with all mobility and ADLs plus ongoing skilled OT. .

RECOMMENDATIONS:
Current functional recommendations:
Recommend assistance for ADLs.
Recommend 1-2 person assist w/FWW for functional transfers.
Discharge recommendations:
OT will continue to follow while at HMC; If patient discharges today, will need OT follow up at next level of care as determined by primary team.

TJR
DD:07/27/19

ASSESSMENT:
Assessment:
NEURO: Alert and oriented x4. Following commands x4, 4/5 strength. PERRL and brisk. No c/o pain this shift, receiving ATC scheduled tylenol. HOH, given pocket talker and pt able to interact well.
CARD: SR with no ectopy. PPP. SBP 90-160, no intervention needed. PIV in place, drawing and flushing well.
PULM: Breathing even and unlabored. No cough noted. Lungs CTA-diminished at bases. CT removed this shift.
GI/GU: Tolerating general diet. No BM this shift. Incontinent of urine, wearing a brief in bed. Transfered x1 to chair.
SKIN: Grossly intact. Wound care done this shift.
PSYCH/SOC: Pt reports that if she were to go to a SNF or rehab that her son would not visit her and he refers to them as "death houses." She is looking for guidance from the nurse saying she doesn't want to make him mad and they "fight all the time." When pressed further about fighting, she denies any physical contact and states they just argue and back talk eachother. He spoke to me and stated that he does not want her at a rehab or SNF. She is having a difficult time making the decision for herself and fears that she may lose her son if she goes to a rehab facility. SW made aware. .
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was dangling at bedside.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 7/27/2019 8:00 - 7/27/2019 17:15).

PHYSICAL EXAM: *See daily TICU progress note for 7/27/19*

HOSPITAL COURSE:
Please refer to the TICU Admit note, daily progress notes, consultants's notes, procedure notes, imaging, imaging reports, laboratory data and the EMR for further details of the patient's hospitalization as the following is a general synopsis of care given while in the TICU from 7/24-7/27
Per Dr. Wettstein's note: "The patient is a 94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia who presents after a ground-level fall yesterday (no head trauma, no LOC and was able to ambulate right after), complaining of right-sided rib pain and hip pain. The patient states that she was attempting to open her refrigerator yesterday, when the door suddenly gave way and she fell backwards, landing on her right side. She denies hitting her head. She has been unable to walk since the fall. She also complains of shortness of breath. The patient's son is at bedside and assists with history. He reports that after the accident, he checked his mother for any signs of bony tenderness, bruising, or swelling and she had none so he thought that she was okay to remain at home. Today, however, due to her worsening pain and shortness of breath, they decided to present to the ED."
Patient was seen firts at UWMC ED, where labs were drawn and reviewed which were significant for a subtherapeutic INR of 1.3 but otherwise unremarkable. Pan Scan was ordered showing no multiple right-sided rib fractures, a right hemopneumothorax, and a right pubic ramus fracture. Large-bore 28 F chest tube placement was performed under sedation obtaining 30 cc. The post procedure CXR showed a small right pneumothorax but markedly improved. Chest tube was put on suction and patient was transferred to HMC for further care. She arrived to the ICU in stable condition. On arrival, she is breathing comfortably on RA, with good pain control with PO regimen

Patient continued to be hemodynamically stable and placed on rib fracture protocol w/ CT kept to suction w/ f/u imaging to reassess pulmonary status. Her therapeutic anticoagulation was held given the hemothorax in the setting of pt w/ supratherapeutic INR. She was started on multimodal pain medication w/ APS consulted given pt marginal PIC scores of 6-7
Orthopedic Pelvis surgery was consulted for right inferior pubic ramus fracture w/ subsequent imaging done w/ plan for non-operative measures w/ PT/OT assistance.. Geriatric Med was consulted given pt age and additional medical problems. (recurrent DVTs and need for recs given therapeutic AC along w/ review of hypertension, HLD, chronic wounds of BLE w/ no need for Pallative consult) As patient was normotensive, her home losartan was held w/ statin restarted. HMC wound care was consulted to assist w/ care of BLE. SW was consulted to assist w/ anticipated DC planning.w/ home safety eval done. A bedside swallow was done w/ pt able to be placed on a diet. On evening of HD #1, pt had soft SBP (80s) w/ MAPs >60 but noted to have (+) leg lift test and was given a 500cc bolus w/ crystalloids w/ improvement in BP
By 7/26, patient continued to be HD stable w/ DVT ppx held in anticipation of possible regional block by APS. However, after evaluating patient, it was felt her pain control had improved along w/ steady improvement in PIC scores that they signed off. Of note, patient had been started on Ketorlac x 48 hrs along w/ APAP and prn oxycodone. Her DVT ppx was restarted. With regards to use of therapeutic anticoagulation, Geri Med recommended that this medication be held and to f/u w/ PCP to determine if it would be needed. Additionally, they recommended for : Wound care consult BLE; nutrition consult; iron studies; geriatric dosing of meds, delirium precautions, fall precautions, consider bisphophonate in outpt setting (please refer to consult note for specifics)
With regards to Right inferior pubic ramus fracture, patient continued w/ WBAT BLE w/ PT/OT and plan for need of inlet/outlet pelvis views when pt able to weight bear.In terms of CT managment, it was placed to water seal w/f/u imaging showing very small apical pneumothorax. As her overall status continued to be stable/improved, she was made ward status.
By 7/27, patient continued to be hemodynamically stable w/ f/u CXR stable that patient was able to have CT discontinued w/ f/u CXR stable post removal. Ketorlac was discontinued w/ patient pain well controlled

PROBLEMS / ASSESSMENT / PLAN: See daily progress note for plan of the day on 7/27/19

Interim Summary

ASSESSMENT:
Assessment: AAOX4. Follows commands and moves all extremities. C/o minimal pain managed w/ scheduled ketorolac. R chest tube to sx at -20, minimal bloody output. Satting well on RA.. On rib fx protocol. Hypotensive responsive to passive leg raise, administered 500ml LR bolus per order. Remained asymptomatically hypotensive, eventually normalized. Tele SR. Incontinent w/ attends, multiple BM's after fluid bolus, adequate UO. Dressings CDI. Maintained on bedrest for severe instability, turn Q2. Held 0500 SQH dose for pain service consult this am, per MD. No family visiting during shift, pt updated to plan of care.
.

MOBILITY:
Mobility goal for today: passive ROM.

EVALUATION:
Pt NOT progressing in these areas: need ortho consult to determine plan of care.

Nursing Progress Note - HMC

HOSPITAL DAY: 2

ID & CHIEF CONCERN/PROBLEM: *(required for all billing levels)*
94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

INTERVAL HISTORY/MAJOR EVENTS: *(past 24 hours)*
-SW(eval for home safety-home OK), Geri Med consult/no need for Pallative per Geri
-swallow study--> diet
-Ortho non-op
-low SBP in 80s w/ good leg rift test, given 500cc bolus crystalloids w/ good response
-APS consult this AM to eval if needs block

PROBLEM LIST:
Supratherapeutic INR

ALLERGIES:
nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

SCHEDULED MEDICATIONS:
Acetaminophen 500mg tab Dose: 1,000 mg = 2 tab PO TID
Ascorbic acid 500mg tab Dose: 1,000 mg = 2 tab NG-Tube Q8 Hours
Ascorbic acid 500mg tab Dose: 1,000 mg = 2 tab NG-Tube Q6 Hours
Atorvastatin 10mg tab Dose: 10 mg = 1 tab PO QPM
Cholecalciferol 1,000units tab Dose: 1,000 units = 1 tab PO Daily
Heparin 5,000units/mL inj Dose: 5,000 units = 1 mL Subcutaneous Q8 Hours
Ketorolac 15mg/mL inj Dose: 7.5 mg = 0.5 mL IV Q6 Hours
Polyethylene glycol 3350-NF powder 17g Dose: 17 g = 1 packet PO Daily
Selenium 200mcg tab Dose: 400 mcg = 2 tab NG-Tube Daily
Senna 8.6mg tab Dose: 17.2 mg = 2 tab PO BID
Timolol 0.5% ophth soln 5mL Dose: 1 drop(s) EYE-Both Q12 Hours
Timolol 0.5% ophth soln 5mL Dose: 1 drop(s) EYE-Both BID
Tocopherol 1,500units/3.24mL liquid Dose: 1,500 units = 3.24 mL NG-Tube BID
Vitamin multi with minerals tab Dose: 1 tab PO Daily

PROBLEMS / ASSESSMENT / PLAN:

94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia with presents after a ground-level fall yesterday

#Fracture right posterior 8-9 Rib with associated Hemopneumothorax
CT placement in the ED with post-procedure CXR that showed significant resolution; PIC scores 7
-CT to suction -20 mm Hg-->reeval AM CXR, f/u w/ radiology, small apical pneuthorax, continue to water seal
-Hold anticoagulation for possible APS consult
-RFP/ BHP q 4
-multimodal pain regimen, APS evaluated pt, does not require block, signed off, SW advised w/chart biopsy that pt seen by APS at another facilty, will f/u
-extended Ketorlac for another 24 hrs, along w/ scheduled APAP, prn oxycodone
-PT/OT consultation
-PIC score improved post rounds 7-8, w/ noted improvement in pulmonary mechanics
-restarted DVT ppx w/ SQH

#Elderly patient
Frailty score-->uses walker, cane
-Med G consultation
-Therapeutic Anticoagulation recs-> recommend to defer to PCP

 # Right inferior pubic ramus fracture
-Orthopedic Pelvis consult, awaiting recs
-Non op treatment trial
-WBAT BLE
-f/u inlet/outlet pelvis views when pt able to weightbear--> ordered, pending to go to Xray
-PT/OT

#Anemia, acute, due to blood loss from injuries, on chronic
-Tx if Hct <21

CHRONIC/STABLE
#s/p Hypotension, *borderline*, MAPs >60, felt due to hypovolemia as (+) straight leg test and improved w/ 500cc cyrstalloid bolus
-Orthostatics ordered. supine SBP in 90-100s, seated SBP high 80s low 90s;
#Recurrent DVTs on warfarin
-holding therapeutic anticoagulation in the setting of hemopneumothorax
-F/U AM CXR, if stable, consider restart once txf to wards
#Hypertension
-Holding home losartan
#HLD
-atorvastatin restarted
#Chronic wounds of the bilateral lower extremities
-Wound care team following

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline

- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:

- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

TICU Checklist

Analgesia/Sedation: scheduled tylenol, Ketorlac x 24hrs-->cont another 24hr scheduled, oxycodone PRN (all geritatic dosing)
FENGI: General diet
TLD: 2 PIVs, Right CT -20cm suction --> change to water seal--> F/U CXR
ABX: NI
GI ppx: NI
Glucose: NI
VTE prophylaxis: on Heparin 5,000u q 8
Spine: Cleared
Activity: TICU mobility
Labs: QOD
Code status: DNR, ok to Intubate (will try to contact a family member for clarification)
Dispo: Ward status if PIC scores >7-8 and above

ICU Progress Notes

Addendum by Khandelwal MD, Nita on July 26, 2019 16:14

Attending Addendum:

I saw and evaluated this patient today with Judith Glann, ARNP and agree with her note.

Concurrent care was necessary because the patient required continuous physician observations and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

ASSESSMENT:

Care Plan:

BRONCHIAL HYGIENE DB&C - IS: frequency: Q4 w/a, date: 7/25/2019, GOAL 1500 ALERT 850.

RT Notes:

Pt remains on RA this shift w/ sats in the high 90s. BS clear. Pt has weak non-productive cough on command. IS done up to 900mL w/ poor technique, however, pt had good chest rise w/ deep breathing. Pt does great PEP. RT will continue to follow Q4 w/a per RFP.

Respiratory Therapy Note - Noc shift sum

CONSULT(S) REQUESTED:
Consult requested by Khandelwal MD, Nita.

REASON FOR CONSULT:
Reason for consult
rib fracture pain.

HISTORY OF PRESENT ILLNESS:

94 yo f w/ h/o recurrent DVTs on warfarin, HTN, HLD, who presented w/ GLF found to have right sided rib fractures, right hemopneumothorax, and R pubic ramus fracture. s/p chest tube placement. APS consulted for possible regional procedure given patients age and relatively higher risk of morbiditiy in this setting.

INTERVAL HISTORY:
Patient doing well from a respiratory standpoint.
Patient reports no pain, although states she would't tell us if she did have pain.

TREATMENT PROVIDED:
Short-acting Opioids:
Oxycodone IR 2.5-5 mg PO, q 3 hr, PRN.
Non-Opioid Analgesics:
Acetaminophen 1000 mg PO, q 8 hr.

TREATMENT-RELATED SIDE EFFECTS:
Patient-reported Side Effects/Complaints:
Nausea: absent.
Constipation: absent.
Drowsiness: absent.
Itching: absent.

ALLERGIES:

nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

MEDICATIONS:
INPATIENT MEDICATIONS

Scheduled Medications
Acetaminophen 500mg tab Dose: 1,000 mg = 2 tab PO TID
Ascorbic acid 500mg tab Dose: 1,000 mg = 2 tab NG-Tube Q8 Hours
Ascorbic acid 500mg tab Dose: 1,000 mg = 2 tab NG-Tube Q6 Hours
Atorvastatin 10mg tab Dose: 10 mg = 1 tab PO QPM
Cholecalciferol 1,000units tab Dose: 1,000 units = 1 tab PO Daily
Heparin 5,000units/mL inj Dose: 5,000 units = 1 mL Subcutaneous Q8 Hours
Polyethylene glycol 3350-NF powder 17g Dose: 17 g = 1 packet PO Daily
Selenium 200mcg tab Dose: 400 mcg = 2 tab NG-Tube Daily
Senna 8.6mg tab Dose: 17.2 mg = 2 tab PO BID
Timolol 0.5% ophth soln 5mL Dose: 1 drop(s) EYE-Both Q12 Hours
Timolol 0.5% ophth soln 5mL Dose: 1 drop(s) EYE-Both BID
Tocopherol 1,500units/3.24mL liquid Dose: 1,500 units = 3.24 mL NG-Tube BID
Vitamin multi with minerals tab Dose: 1 tab PO Daily

Infusions
No Infusion Medications Found.

PRN Medications
Calcium carb 1250mg(elem 500mg)/5mL susp Dose: 1,250 mg = 5 mL Feeding Tube On Call PRN

IMPRESSION AND PLAN:
94 yo f w/ h/o recurrent DVTs on warfarin, HTN, HLD, who presented w/ GLF found to have right posterio 8-9 rib fractures, right hemopneumothorax, and R pubic ramus fracture. s/p chest tube placement. APS consulted for possible regional procedure given patients age and relatively higher risk of morbiditiy in this setting. Patient currently not using much opiate, saturating well on RA, per RT note IS 900 (above alert), 600 with us this morning, weak non-productive cough. Functionally she is doing quite well, was sitting up, eating, and visiting with family this morning. Given how well she is doing currently, would not recommend regional procedure at this time. Please reconsult if clinical condition worsens and patient is failing optimized multimodal therapy. Reccomend APAP, NSAIDs, and low dose frequent oxycodone to encourage mobility.

APS is signing off and returning the patient's pain management to primary service.

ATTENDING STATEMENT:
See Resident’s note for details. I saw and evaluated patient and agree with the Resident’s findings and plan as written. DOS 07/26/2019

PHYSICAL THERAPY NOTE:
Note Type: Evaluation, Treatment.

TREATMENT PROVIDED:
Time Spent:
Session 1 : Start Time: 0930, End Time: 1000, Total treatment time: 30 minutes.
Total timed codes: 10 minutes. Physical Therapy Evaluation: This evaluation was of moderate complexity due 1-2 personal factors, evaluation of 3 or more elements, an evolving clinical presentation, and moderate clinical complexity..
Therapeutic Functional Activity/Bed Mobility: for 10 minutes.

PERTINENT PATIENT INFORMATION:
Diagnosis: 94 y/o F admitted after a mechanical GLF with:

-R ribs 8/9 fractures
-R hemo-pneumothorax (s/p chest tube)
-R inferior pubic ramus fracture (non-op).
Past Medical History: History of DVTs, on warfarin
HTN
Chronic BLE wounds.
Precautions
Activity: Ambulate as tolerated.
Weightbearing precautions LE: WBAT L LE, WBAT R LE.
Fall History - Fall Risk Assessment:
Fall risk: Patient is high fall risk.
Have you fallen in the past year? Pt reports she sometimes looses her balance posteriorly, but she generally catches herself. Son reports this is the first time she has injured herself from falling in ~10 years. Both pt and son were vague about her fall history/circumstances, but generally agree there have been other falls.
Prior functional status:
Mod I using 4WW. Son reports pt mobilizes independently, but he sometimes pushes her in her 4WW for longer distances (son reports they do not like wheelchairs because it's "too dangerous on the hills").

HOME ENVIRONMENT:

Lives with son in a single story home. Son reports ongoing disagreements with landlord surrounding updates to make the space more accessible (i.e. grab bars). Son can provide assist as needed

BEHAVIOR:
Alert.
Fully oriented.

Following commands.
Tangential.

PAIN:
Patient reports no pain.

CARDIOPULMONARY:
Vital signs stable throughout intervention
Per ICU monitor.
Oxygen requirements:
Room air.

MUSCULOSKELETAL:
Range of Motion:
B UEs WFL, though B shoulder and wrist/digit movement is limited (pt reports this is baseline)

B ankles lacking ~10 deg from neutral (per pt, this is baseline due to her habit of walking on her toes)
Strength:
MAE againts gravity equally.

INTEGUMENTARY:
Drains: chest tube.

MOBILITY:
Bed Mobility
Supine to sit: surface elevated HOB, patient requires stand by assistance, increased time to complete.
Transfers
Sit to stand: using a front wheel walker, CGA.
Stand to sit: using a front wheel walker, CGA.
Stand pivot: bedside chair, using a front wheel walker, CGA.
Ambulation
Distance: 5ft (distance limited by muscle fatigue to B LEs).
Device utilized: front wheel walker.
Level of assist: with contact guard assist.
Quality of ambulation: shuffling, slow, toe-walking throughout gait cycle; decreased foot clearance bilaterally (baseline per son).

BALANCE:
Sitting: Assistance: the patient is independent.
Standing:
Static standing: Assistance - the patient needs contact guard assist, with FWW.

EQUIPMENT:

personal 4WW at home
Equipment
In hospital/loaner equipment: assistive device front wheeled walker.

PATIENT EDUCATION:
Topics:
role of PT, plan of care, goals of session, ongoing therapy.
Individuals present for education: patient, family Son, Louis.
Teaching method: verbal, demonstration.
Challenges to learning: decreased activity tolerance.
Teaching outcome: demonstrates task, cueing required, will require continued reinforcement.

GOALS:
Short term goals:
To be met by 8/10:
Pt will complete bed mobility with mod I
Pt will sit<>stand with supv and LRAD
Pt will transfer to/from chair with supv and LRAD
Pt will ambulate x50ft with SBA and LRAD
Pt will be independent in HEP.
Patient/family goals: return to previous level of activity, to be able to walk, to get stronger.

DAILY RECOMMENDATIONS:
Activity transfer status: stand pivot.
Transfers level of assistance: one person assist.
Device: walker.
Ambulation activity status: ambulate in room.
Ambulation level of assistance: one person assist.
Ambulation device: walker, gait belt.

IN HOUSE THERAPY PLANS:

Plan
Treatment plan:
Range of motion and positioning.
Strength training.
Mobility training.
Patient and family education/instruction.
Equipment assessment.
Patient will be seen:
2-3x/week.

The above goals and treatment plan have been discussed and agreed upon with:
Patient.
Family.

ASSESSMENT:
Seen by PT for initial mobility assessment following pelvic fractures. Pt is alert, oriented, and highly motivated to participate with therapy. Presents with impairments in UE and ankle ROM, LE strength, balance, and activity tolerance. Required light assist for bed mobility and minimal assist for functional transfers and short distance ambulation using a walker. Pt with baseline ankle contractures as she reports a long history of toe-walking. Fatigued quickly with ambulation this date. Considered a high fall risk based on her history of falls and gait deviations. Pt's son at bedside reports pt is highly independent with household mobility and ADLs. Currently pt is below this baseline. Recommend ongoing therapy in a setting that can provide assist for mobility.
Recommended In House Consults: Social work.

RECOMMENDATIONS:
Current functional recommendations:
Recommended level of assist for household mobility: min A.
Discharge recommendations:
PT will continue to follow while at HMC; If patient discharges today, will need PT follow up at next level of care as determined by primary team.

Physical Therapy Note - HMC Acute-IA

NUTRITIONAL STATUS AND PLAN:
Note Type: Initial Nutrition Assessment.
Time: 45 minutes.

ASSESSMENT:
94F GLF right rib 8-9 fx, hemopneumothorax, right inf pubic ramus fx
Reason for Referral: nutrition assessment.

Ht: 165cm
Wt: 48.5kg
BMI: 17.8kg/m2

Height/Weight General Data: UBW: 130-140# per pt family.
BMI classification: Healthy BMI for patient >65 years old is 22-27.9, under ideal BMI range for age.
Labs: Reviewed.
Labs (Nutrition Sheet): Reviewed.
Medications: include: vitamin C, vitamin E, atorvastatin, 1000 units cholecalciferol, MV + min, senna.
Food allergies and intolerances: NKFA.

NUTRITION-FOCUSED PHYSICAL ASSESSMENT:
Muscle wasting: Temporalis: moderate, Clavicle: severe wasting, Deltoid: severe wasting, Scapula: severe wasting.
Subcutaneous Fat Loss: Tricep: severe wasting.

DIET/NUTRITION SUPPORT:
Diet order: general.
Assessment of oral intake in the past week: >75% (good).

EVAUATION OF NUTRITIONAL STATUS:
1. General assessment: pt seen, HOH, family assisting with interview. Pt appears visually thin, frail, c/w BMI. Per NFPA, notable muscle and fat mass wasting globally. Pt currently 77% of UBW, though unclear time period for this wt loss. Pt's family noted pt was ~120# one month ago, suggesting 13# (10.8%) loss over one month. Pt meets criteria for severe malnutrition.
2. GI/Nutrition: Great PO intake since admit, eating 100% of meals. Family reports pt had poor PO PTA as pt did not like meals at previous facility. However, nutrition goal at home included finishing 4 Ensure daily, will continue this goal while admitted to promote anabolism and support healing. No N/V noted at this time. Last BM 7/25.
3. Labs: Vit D pending, already receiving cholecalciferol.

NUTRITION DIAGNOSIS:
Severe malnutrition present on admission: r/t sarcopenia aeb global muscle and fat mass wasting,10% wt loss over 1 month admission date/time: 7/24/2019 18:24:00 .

INTERVENTIONS:
Chart reviewed.
Discussed status, POC/goals with RN, with family, with the patient.

Discussed current intakes & tolerance with RN, with family, with the patient.

GOALS OF INTERVENTIONS:
Adequate intake to maintain nutritional status/weight
Adequate intake to support healing/repletion

PLAN:
Will adjust supplements/snacks/meals to increase nutrient density
Will follow at meals to provide ongoing assessment of adequacy of intakes
Will monitor nutrition lab trends, weight trends

RECOMMENDATIONS:
H.7.26
1. Continue general diet. Encourage intake.
2. Will add Ensure TID to meal trays to boost protein/kcal intake.
3. Continue trauma vites per protocol.
4. Continue cholecalciferol and MV + min
5. Bowel regimen as ordered. Monitor stooling.
6. Monitor wt trends. Pt meets criteria for severe malnutrition.

Nutrition Assessment Note

PHYSICAL EXAMINATION:
At the time of my examination, the Patient's GCS was:
15.
The following factors (spints, traction, etc.) limited my examination:
Bilateral lower extremity ulcers.
Head, chest, abdomen, back, groin/GU re-examination completed.
Extremities re-examined, including peripheral pulses and range-of-motion for all Joints..

CASE REVIEW:
BCVI imaging is done, has formal reports, and I have reviewed these
None indicated.
Brain/face imaging is done, has final reports, and I have reviewed these:
Normal.
Spine imaging is done, has final reports, and I have reviewed these:
Normal.
Current spine clearance orders are appropriate for above findings.
Chest, abdomen, pelvis imaging is done, has final reports, and I have reviewed these:
Abnormal: plan in place.
Extremity imaging is done, has final reports, and I have reviewed these:
None indicated.
All known wounds/injuries/problems are appropriately covered by the primary or a consulting service at this time

Occupational Therapy Note - HMC Acute co

ASSESSMENT:
NEURO: see detailed assessment. C/O pain in BLE, reports adequate relief w/tylenol and toradol. Denies pain in ribs or pelvis.

CV: see detailed assessment. NSR w/o ectopy. SBP within parameters. + pulses. Afebrile.PIV x1 patent.

RESP: LS clear to diminished at bases. CDB, IS. PIC scores 7-8. Chest tube to water seal this morning at 0945, CXR completed four hours later. Plan for another CXR in the morning. O2sat WNL RA.

GI: Abd soft, BT present, one small formed brown BM. Taking 100% of general diet and drinking ensures.

GU: Voiding in BSC or in attends, yellow urine.

SKIN: fragile, grossly intact.

PSYC/SOC: Son Louis at bedside this morning and early afternoon, supportive, updated by RN and MD. No restraints indicated.

MOBILITY:
Mobility goal for today: transfer to chair.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was ambulating w/assist less then 10 feet, standing at bedside.
Duration of mobility event was less than 15 minutes.
Patient mobility tolerance: asymptomatic.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 7/26/2019 8:00 - 7/26/2019 15:56).

EVALUATION:
Pt progressing towards discharge: floor boarder.

Diagnosis Clarification

HOSPITAL DAY: 0

CHIEF CONCERN: *(Required for all billing levels)*
This is a 94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

PCP: William Neighbor

HISTORY OF PRESENT ILLNESS:
Per Dr. Wettstein's note: "The patient is a 94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia who presents after a ground-level fall yesterday (no head trauma, no LOC and was able to ambulate right after), complaining of right-sided rib pain and hip pain. The patient states that she was attempting to open her refrigerator yesterday, when the door suddenly gave way and she fell backwards, landing on her right side. She denies hitting her head. She has been unable to walk since the fall. She also complains of shortness of breath. The patient's son is at bedside and assists with history. He reports that after the accident, he checked his mother for any signs of bony tenderness, bruising, or swelling and she had none so he thought that she was okay to remain at home. Today, however, due to her worsening pain and shortness of breath, they decided to present to the ED."
Patient was seen firts at UWMC ED, where labs were drawn and reviewed which were significant for a subtherapeutic INR of 1.3 but otherwise unremarkable. Pan Scan was ordered showing no multiple right-sided rib fractures, a right hemopneumothorax, and a right pubic ramus fracture. Large-bore 28 F chest tube placement was performed under sedation obtaining 30 cc. The post procedure CXR showed a small right pneumothorax but markedly improved. Chest tube was put on suction and patient was transferred to HMC for further care. She arrived to the ICU in stable condition. On arrival, she is breathing comfortably on RA, with good pain control with PO regimen

PROBLEM LIST:
Supratherapeutic INR

PAST MEDICAL HISTORY:
Recurrent DVTs on warfarin
Hypertension
Hypertension anemia
Chronic wounds of the bilateral lower extremities

MEDICATIONS PRIOR TO ADMISSION:
1. atorvastatin (Lipitor 40 mg oral tablet) Dose: 40 mg PO Daily
2. losartan 25 mg oral tablet Dose: 12.5 mg PO Daily
3. pentoxifylline 400 mg oral tablet, extended release Dose: 400 mg PO TID
4. timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) Dose: 1 drop(s) EYE-Both BID
5. warfarin 5 mg oral tablet Dose: 5 mg PO QMTuWFSa
6. warfarin 2.5 mg oral tablet Dose: 2.5 mg PO QThSu
7. acetaminophen-codeine (Tylenol with Codeine #3 300 mg-30 mg oral tablet) Dose: 1 tab PO Daily PRN Pain.

ALLERGIES:
nitrofurantoin
penicillin
aspirin
sulfa drugs

Adhesive Bandage

HABITS:
Tobacco: denies
Alcohol: denies

SOCIAL HISTORY:
Lives with her son on Bainbridge Island with his son

FAMILY HISTORY:
[non contributory

REVIEW OF SYSTEMS:
In addition to that documented in the HPI above, the additional ROS was obtained:

Constitutional: Denies fevers or chills
Eyes: Denies vision changes
ENMT: Denies sore throat
Resp: Denies SOB
GI: Denies vomiting or diarrhea
GU: Denies painful urination
MSK: Denies recent trauma
Skin: Denies new rashes
Neuro: Denies new numbness or tingling or weakness
Endocrine: Denies unexpected weight loss
Heme: Denies bleeding disorders

ASSESSMENT / PLAN:
94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia with presents after a ground-level fall yesterday

#**Fracture right posterior 8-9 Rib with associated Hemopneumothorax**
-CT placement in the ED with post-procedure CXR that showed significant resolution
-CT to suction -20 mm Hg
-Hold anticoagulation
-RFP
-multimodal pain regimen
-PT/OT consultation
-PIC score 7

#Elderly patient
-Med G consultation in AM
-Anticoagulation recs

#. Right inferior pubic ramus fracture
-Orthopedics consult, awaiting recs

Chronic/stable conditions
#Recurrent DVTs on warfarin
-holding anticoagulation in the setting of hemopneumothorax
#Hypertension
-Holding home losartan
#HLD
-atorvastatin restarted
#Chronic wounds of the bilateral lower extremities
-will consult wound care in AM

Analgesia/Sedation: scheduled tylenol, ibuprofen + oxycodone PRN
FENGI: General diet
TLD: 2 PIVs, Right CT
ABX: NI
GI ppx: NI
Glucose: NI
VTE prophylaxis: enoxaparin 30 daily
Spine: Cleared
Activity: TICU mobility
Code status: DNR, ok to Intubate (will try to contact a family member for clarification)
Dispo: TICU

Attending Addendum:

I saw and evaluated this patient today with Dr. Czerwonko and agree with his note.

Concurrent care was necessary because the patient required continuous physician observations and interventions in an ICU setting to respond to emergent changes in their medical condition and to prevent further deterioration in their clinical state.

Respiratory Therapy Note - Rib Fracture

ID/CC:
Blunt trauma.
Modified trauma response.

HISTORY OF PRESENT ILLNESS:
This is a 94 y.o. F who suffered a mechanical GLF at home when she turned to open the refrigerator and had the door become loose. She fell onto her right side, did not hit hear head, did not lose consciocness. She was unable to walk afterwards and was taken to UWMC for further evaluation. While there she underwent pan-scan which revealed R sided rib fractures and a hemo-pneumothorax. A right sided chest tube was placed and she was subsequently transfered to HMC. She was never hypotensive and was alert and mentating throughout her pre-HMC course. Her spine was cleared prior to arrival.

Primary Survey
Airway: Intact, phonating
Breathing: Bilateral breath sounds, right chest tube in place with no air leak, 60 cc of bloody output
Circulation: Normotensive, intact distal pulses
Disability: GCS 15
CXR: Good position of R chest tube, no ptx

She complains of pain only in her R chest

HISTORY SOURCE:
History from: patient, pre-hospital provider.

PAST MEDICAL HISTORY:
1. History of DVTs, on warfarin
2. HTN
3. Chronic BLE wounds

MEDICATIONS:
1. atorvastatin (Lipitor 40 mg oral tablet) Dose: 40 mg PO Daily
2. losartan 25 mg oral tablet Dose: 12.5 mg PO Daily
3. pentoxifylline 400 mg oral tablet, extended release Dose: 400 mg PO TID
4. timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) Dose: 1 drop(s) EYE-Both BID
5. warfarin 5 mg oral tablet Dose: 5 mg PO QMTuWFSa
6. warfarin 2.5 mg oral tablet Dose: 2.5 mg PO QThSu
7. acetaminophen-codeine (Tylenol with Codeine #3 300 mg-30 mg oral tablet) Dose: 1 tab PO Daily PRN Pain.

ALLERGIES:

nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

FAMILY HISTORY:
No family history of bleeding or clotting disorders, or problems with anesthesia.

SOCIAL HISTORY:
Denies tobacco/ EtOH/ drug use
lives with her son on bainbridge island
Unable to fully assess frailty score due to hearing impairment but likely at least 5

REVIEW OF SYSTEMS:
A complete review of systems has been performed and is otherwise negative except for those items mentioned in the HPI.

PHYSICAL EXAMINATION:
(Most recent in prior 24 hours.)(As of: 07/24/2019)
Temperature: 37.1 Pulse: 82 Blood Pressure: 125 / 65 Respirations: 16 O2 Sat: 99
Height: 165 (cm) 5' 5" (ft / in) Weight: 48.5 (kg) 107 (lbs) BMI: 17.8 (kg/m2)

GENERAL: Elderley, frail, lying in bed
SKIN: There are severe venous stasis changes to the bilateral lower extremities with venous stasis ulcerations that do not appear activley infect. Large chronic wounds with fibrinous base
HEAD: NCAT, MMM
EYES: Pupils equal round and reacive to light
EARS: No hemotympanum
NOSE: No nasal septal hematoma, no deformities
MOUTH: No evidence of trauma
NECK: Trachea midline
CV: RRR, normal S1/S2
PV: 2+ DP and radial pulses bilaterally
CHEST: There is pain on palpation of the right chest. There is a right chest tube in place with 60 cc of bloody output
ABDOMEN: Soft, NT/ND, no rebound or guarding
BACK: No deformities, abrasions, contusions. No step-offs or pain on palpation of the C/T/L spine
PELVIC: There is pain on palpation of the R hip
MSK: Chronic LE wounds as described above. No deformities
NEURO: AOx3, moves all four extremities to command

RADIOLOGICAL STUDIES:
Radiology Results
XR Chest (07/24/2019 18:34)
~RADIOGRAPH OF THE CHEST, 1 VIEW
CLINICAL INDICATION:
Chest tube placement
COMPARISONS:
July 24, 2019
FINDINGS AND IMPRESSION:
Right thoracostomy tube present. There may be persistent small right pneumothorax. There is a small persistent right pleural effusion.
Heart size is unchanged.
Unchanged bibasilar consolidations.

~EXAMINATION:

XR CHEST 1VIEW
CLINICAL INDICATION:
confirm chest tube placement
FINDINGS AND IMPRESSION:
Compared to chest CT done earlier today at 1326 hours, there is persistent right subpulmonic/anterior pneumothorax. There is associated small pleural effusion.
Right chest tube is in an expected position.
Heart size is unchanged.
There are bilateral basilar consolidations, which could represent either atelectasis, aspiration or pneumonia.

CT Lumbar Spine (07/24/2019 14:35)
~EXAMINATION:
CT T SPINE WO CONT, CT L SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT thoracic spine without contrast: routine (N-65) MDCT scanning was obtained through the thoracic spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560201), CT Lumbar Spine without contrast: routine (N-65) MDCT scanning was obtained through the lumbar spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560202)
Superior Extent: T1
Inferior Extent: Sacrum
COMPARISON:
MRI thoracic spine 9/17/2018, radiographically lumbar spine 10/22/2014, and other priors
FINDINGS:
ALIGNMENT: Minimal anterolisthesis of L5 on S1. Left convex scoliosis of the lumbar spine with a Cobb angle of approximately 21 degrees.
VERTEBRAE/BONES: Again seen are chronic compression fractures of T12-L3. Cortical irregularity at the posterior aspect of the L1 vertebral body with correlate on MRI dated 9/17/18. Consider repeat MRI if pain persists in this region. No acute vertebral fractures. Diffuse osteopenia.
Partially visualized multiple rib fractures, some of which are chronic:
-Chronic fracture deformities of the right 10-12th posterior ribs.

-Acute mildly displaced fractures of the right posterior 8th and 9th ribs.
Partially visualized right femoral head/neck instrumental fixation.
Minimally displaced right sacral zone 1 fracture (604B/74 and 305B/166) with intra-articular extension into the SI joint.
HARDWARE: No spinal hardware present.
CORD: Visualized throracic cord and conus medularis are normal size.
SOFT TISSUES: Please refer to same day CT chest abdomen and pelvis for extraspinal findings. Paravertebral, interspinous, and posterior soft tissues are normal.
LEVELS: No central stenosis. Mild bony right neural foramen narrowing at L5-S1. ABNORMAL LEVELS: Partial bony fusion of T3-T4. Severe disc space narrowing at L4-L5.
IMPRESSION:
No acute thoracolumbar spinal fractures or malalignment. Again seen are chronic compression fractures of T12-L3, with posterior cortical irregularity at L1. If patient's back pain persists, consider repeat MRI for further evaluation.
Minimally displaced right sacral zone 1 fracture with intra-articular extension into the SI joint.
Acute displaced fractures of the right posterior eighth and ninth ribs.
Chronic fracture deformities of the right 10th-12th posterior ribs. Please refer to same day chest, abdomen, and pelvis CT for further description of rib fractures.
Moderate to severe multilevel degenerative changes of the thoracolumbar spine as detailed above.
The above findings were communicated to Nemanich by Moran at 7/24/2019 3:23 PM.

CT Chest Abdomen Pelvis (07/24/2019 14:02)
~EXAMINATION:
CT CHEST ABDOMEN AND PELVIS W CONTRAST
CLINICAL INDICATION:
GLF. Additional history: 94-year-old female patient with a ground level fall yesterday presented with the back, right side and right hip pain.
TECHNIQUE:
CTB A15 CT Chest Abdomen Pelvis with IV contrast.
Contiguous axial sections were obtained through the chest, abdomen and pelvis with IV contrast only. Multiplanar reformatted images were performed.
Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.
CONTRAST:
Omnipaque 350 mg-ml 88@2.2 ml 07/24/2019 02:03 PM INTRAVENOUS
COMPARISON:
None.
FINDINGS:
CHEST:
Thyroid: Unremarkable.
Thoracic lymph nodes: No lymphadenopathy by size criteria.
Mediastinum and esophagus: Moderate sliding hiatus hernia.
Heart and vasculature: Moderate to severe coronary artery disease.
Atherosclerotic changes of the aorta. Aortic wall calcifications.
Lungs: Unremarkable.
Pleura: Right sided hydropneumothorax with no mediastinal shift. Trace left pleural effusion.
Chest wall: Slightly displaced fracture right posterior eighth and ninth rib.
No fracture is noted involving right seventh rib at the costovertebral junction.
ABDOMEN:
Liver: Unremarkable.
Gallbladder: Distended with no opaque stones
Bile ducts: Prominent CBD measuring 9 mm (601/54) with associated mild intrahepatic biliary radical dilatation. CBD seen) distally towards the pancreas with no obvious lesions in the periampullary region.
Spleen: Unremarkable.
Pancreas: Unremarkable.
Adrenals: Unremarkable.
Kidneys and Ureters: Bilateral renal cortical hypodense lesions, the small lesions are too small to characterize while the larger lesions are likely cysts.
Abdominal Lymph Nodes and Retroperitoneum: No lymphadenopathy by size criteria.
Vasculature: Moderate aortobiiliac atherosclerotic disease with no aneurysmal dilatation of the aorta.
Bowel: Unremarkable.
Peritoneum and Abdominal Wall: Mild ascites. No abdominal collections. No pneumoperitoneum.
PELVIS:

Pelvic Viscera: Unremarkable.
Bladder: Unremarkable.
BONES:
-Two fracture lines involving the right inferior pubic ramus (3/213-216).
-Severe spondylo-degenerative changes of the spine with scoliotic deformity and mild wedging of L2 and T11 vertebral bodies, age indeterminate.
-Osteopenia. Right hip arthroplasty.
IMPRESSION:
1. Multiple right-sided rib fractures with right-sided hydropneumothorax.
2. Fracture right inferior pubic ramus. L2 and T11 vertebral body age-indeterminate wedge fracture.
3. Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if clinically indicated.

CT Cervical Spine (07/24/2019 13:30)
~EXAMINATION:
CT C SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
Cervical Spine wo contrast: routine (N-53)
MDCT scanning was obtained through the cervical spine without contrast.
Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
Inferior Extent: T4
COMPARISON:
C-spine CT 12/7/2012
FINDINGS:
ALIGNMENT: Normal alignment.
VERTEBRAE: Vertebral body height and density are normal. No fractures or destructive lesions.
HARDWARE: No hardware present.
DISCS: Normal disc height
SOFT TISSUES: Prevertebral, interspinous, and posterior soft tissues are normal. Multiple tiny hypodense thyroid nodules.
AXIAL DISCS AND FORAMINA:
Similar posterior subluxation of the right atlantoaxial articulation (602/91).
Moderate degenerative changes of the cervical spine including multilevel disc height loss, mild facet arthropathy, and fusion of the C4-5 posterior elements. Diffuse osteopenia.

C2-3: No central or foraminal stenosis.
C3-4: No central or foraminal stenosis.
C4-5: No central or foraminal stenosis.
C5-6: No central or foraminal stenosis.
C6-7: No central or foraminal stenosis.
C7-T1: No central or foraminal stenosis.
Right small-to-moderate pneumothorax.
IMPRESSION:
1. No acute fractures of the cervical spine. Stable degenerative changes.
Diffuse osteopenia.
2. Right small to moderate pneumothorax.
The above findings were communicated to Antonia Nemanich M.D. by Thomas Eggert
M.D. PGY-3 at 7/24/2019 2:04 PM.

CT Head (07/24/2019 13:30)
~EXAMINATION:
CT HEAD WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT Head Routine wo contrast (N-1)
Contiguous axial sections were obtained through the head without contrast.
Patient age specific scan parameters were used for radiation exposure.
COMPARISON:
CT head 3/29/2018.
FINDINGS:
Field-of-view does not contain the anterior mandible.
MASS EFFECT & VENTRICLES: No midline shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: Mild to moderate cerebral volume loss. Few unchanged scattered parenchymal calcifications. Unchanged mild to moderate periventricular white matter hypoattenuation. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Severe vascular calcifications involving of the common carotids and cavernous ICAs.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Orbits are normal.
IMPRESSION:
No acute intracranial hemorrhage, infarct, or masses.
Similar cerebral volume loss and periventricular white matter hypoattenuation consistent with chronic microvascular ischemia.

INJURIES LIST & ASSESSMENT:
This is a 94 y.o. F s/p mechanical GLF with injuries as listed below. She will be admitted to the TICU for rib fracture protocol and pain control. Orthopedics will consult for her pelvic fractures.

ED COURSE & MEDICAL DECISION MAKING:
Services Consulted in ED orthopaedics.

PLAN:
#. Right ribs 8/9 fractures
#. Right hemo-pneumothorax
- CT to -20 cmH2O, f/u AM CXR
- RFP
- Geri T bundle

#. Right inferior pubic ramus fracture
- Orthopedics consult

#. Prominent CBD
- No LFT abnormalities, CTM

#. History of DVTs
- Holding warfarin, continue ppx lovenox

#. Elderley, frail
- Geriatrics consult in the AM
- Prior NWH notes raise concern about patient's social situation and note that adult protective services have made multiple visits but always cleared patient's situation. Patient reportedly lives in a tent on Bainbridge island with her son. Patient in the past has been deemed compentant to make decision to return to this environment
- SW consult in the AM
- PT/OT evaluations

#. Code status

- Prior note from NWH in 2018 states conversation with patient where she elected to be made DNR, intubation ok

Electronically Reviewed/Signed On: 07/25/19 at 01:20

General Surgery Trauma History&Physical

ASSESSMENT:
Assessment: AAOX4. Follows commands and moves all extremities. C/o minimal pain managed w/ scheduled IV tylenol and ketorolac. R chest tube to sx at -20, minimal bloody output. Satting well on RA, f/u CXR completed. On rib fx protocol. SBP w/in goal, tele SR. NPO since midnight. Incontinent w/ attends, no UO for most of shift, bladder scan about 260ml, MD notified. Recieved LR 250 bolus, x1 UO PVR 130ml. Chronic venous stasis wounds assessed and redressed, wound consult placed. Maintained on bedrest for pelvic fx's. Lives w/ son Lewis was not present at bedside, pt has another estranged son Douglas who is not welcomed in room. .

MOBILITY:
Mobility goal for today: passive ROM.

PLAN:
Reviewed Results: PLAN OF CARE Interventions/Outcomes(Date Range: 7/25/2019 3:44 - 7/25/2019 5:14).

EVALUATION:
Pt NOT progressing in these areas: need ortho consult to determine plan of care.

ORTHOPEDIC SURGERY DAILY PROGRESS NOTE

HOSPITAL DAY: 1

ASSESSMENT:
94 y/o F s/p GLF sustaining a R LC pelvic fracture.

PLAN:
Activity / WB status: WBAT BLE
Antibiotics: none indicated
Anticoagulation plan: per primary
Anticipated discharge plan: per primary
Problems and Plan:

R LC pelvic fracture
- followed by pelvis team
- will trial nonop treatment
- f/u inlet/outlet pelvis views when pt begins to weightbear
- PT/OT

SUBJECTIVE:
Denies mml pain this morning. Denies acute complaints.

GERIATRIC MEDICINE INITIAL CONSULTATION NOTE

SPECIFIC RECS:
-Wound care consult
-Nutrition consult
-Iron studies
-Stop ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-If pt to SNF, please send all Med G notes with patient.

CONSULT: We are consulted by Dr. Khandelwal of the SICU service regarding anticoagulation and pain management in this elderly inpatient.

IDENTIFICATION AND CHIEF CONCERN: 94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

HISTORY OF PRESENT ILLNESS: This is a 94 year old female previously living at home with her son with a h/o DVTs, HTN, venous insufficiency, chronic leg ulcers, osteoporosis who presents with pelvic fracture, right RF, and hemopneumothorax after GLF. She was walking through her house as she usually does, holding on to furniture and walls for support, on her way to the kitchen to make breakfast. She held on to the refridgerator, which opened, causing her to fall. She denies any dizziness, lightheadedness. She has had falls in the past. She reports poor balance despite PT and uses a walker when she is outside of the house. She also has chronic leg wounds from venous stasis, which have been making it more difficult for her to walk.

She reports weight loss over the past 3+ years despite good appetite. She has a history of DVTs in the past, but per outpatient notes has been off warfarin recently and her PCP decided not to restart anticoagulation at a recent prior visit.

REVIEW OF SYSTEMS:
Comprehensive review of systems completed and negative, except as per HPI.

GERIATRIC ROS:
-ADLs: Independent
-IADLS: requires assistance with most IADLs
-Cognition: intact
-Mood: good
-Mobility: walker
-Vision: glasses
-Hearing: hearing aids
-Continence: continent but frequent urination
-Nutrition: malnourished
-Goals of Care/Advanced Care Directives: Reports wanting to be full code and that she has completed paperwork with her doctor to this effect.

PAST MEDICAL HISTORY:
HTN
HLD
Osteoporosis with prior spinal fracture
DVTs

MEDICATIONS:

Home Medications
1. atorvastatin (Lipitor 40 mg oral tablet) Dose: 40 mg PO Daily
2. losartan 25 mg oral tablet Dose: 12.5 mg PO Daily
3. pentoxifylline 400 mg oral tablet, exten Dose: 400 mg PO TID
4. timolol ophthalmic (timolol maleate 0.5% Dose: 1 drop(s) EYE-Both BID
5. warfarin 5 mg oral tablet Dose: 5 mg PO QMTuWFSa

RADIOLOGY: _

ASSESSMENT AND RECOMMENDATIONS:
94 year old female pmh osteoporosis, chronic leg wounds, HTN who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF

SPECIFIC RECS:
-Wound care consult
-Nutrition consult
-Iron studies
-Stop ketorolac and other NSAIDS
-APAP 1,000mg PO TID
-Delirium precautions (see below for full list)
-Fall precautions
-Defer anticoag restart decision to PCP
-Consider starting bisphosphonate in outpatient setting
-If pt to SNF, please send all Med G notes with patient.

 # SURGICAL ISSUE:
a R LC pelvic fracture.
Precautions: WBAT BLE

 # MEDICAL ISSUE(S):

#Anticoagulation
Per outpatient PCP notes, patient was not taking warfarin and PCP had decided not to continue it at that time.
-Recommend deferring decision of whether to restart anticoagulation to outpatient setting

#Chronic leg wounds
#Venous stasis
-Wound care consult

 # GERIATRIC ISSUES:
Delirium Precautions:
High risk for delirium given age, intermittent access to hearing aids, pain
- Initiate Delirium Powerplan
- Insomnia: Schedule melatonin 6mg PO qPM if needed
- Medications: minimize narcotics as able, schedule tylenol (max 3 grams in elderly).
Avoid diphenhydramine, benzodiazepines, zolpidem, muscle relaxants, scopolamine, metoclopramide, and prochlorperazine as able. Limit CNS active medications and use lowest effective dose, consult the Beer's List if unsure about appropriate use in the elderly.
- Environmental: window bed, well-lit room during day, minimize nighttime disturbance, keep calendars/clock visible. OOB TID w/ therapies and to chair when able; family at bedside and frequent reorientation
- Ensure that glasses or hearing aids are available when communicating w/patient.

Pain management:
-Acetaminophen 1000 mg TID
-Oxycodone 5-10 mg q3h PRN
-Avoid NSAIDS (ibuprofen, ketorolac)
-Schedule bowel meds while giving opiate analgesics

#Fall prevention
Patient is at high risk for an inpatient fall due to history of fall prior to admission
- Provide visual cues indicating high fall risk (yellow blanket/socks), if not already done
- Check orthostatic vital signs if applicable
- Secondary fracture prevention as below
- **FALLS CLINIC REFERRAL AFTER D/C**

Bone:
Known osteoporosis
Vitamin D: continue Cholecalciferol Vitamin D 1,000 IU daily
Other: PCP should consider repeat DEXA scan if not recently done, possible bisphosphonate therapy

Nutrition:
#Anemia:
Anemia likely has chronic and acute components. Unclear if declining Hct in hospital represents new blood loss vs. dilution.
-Nutrition consult
-Iron studies

Pressure ulcer prevention: Patient is at risk for pressure ulcers due to new immobility, low body weight suggestive of poor nutritional intake.
- Pressure ulcer precautions
- Nutrition consult
- Wound care consult

Thank you for this consult. Please do not hesitate to contact us with any questions or concerns. We will follow along. Pager: 206-540-4337.

ATTENDING STATEMENT:

I saw and evaluated the patient and agree with Dr. Newman's note.

ASSESSMENT:
Patient on chronic warfarin for history of recurrent DVTs now s/p GLF. INR upon admission subtherapeutic at 1.3. Questionable compliance per chart review. She has not had an INR within goal therapeutic range in our system in 2019.

PLAN:
1. Continue to hold warfarin at this time given injuries.
2. Would benefit from having a discussion with geriatrics and PCP regarding risk v benefit of continuing warfarin.

Anticoagulation Monitoring Note

Wound Care Consult

REFERRED BY: Nursing staff

WOUND CHIEF CONCERN: Bilateral lower extremities

HPI: Wound Care Team was contacted by nursing staff on 7/25 requesting bilateral lower extremity assessment. Per patient, she has had ulcers on her legs for 30+ years. They come and they go. Occasionally they itch. She denies significant pain right now. She lives with her son in Bainbridge. He applies a cream and dressing. Nursing staff have applied Xeroform since her admission. She admitted on 7/25 after sustaining pelvic fx and hemopneumothorax following a ground level fall. Patient has been afebrile and without white count. She also receives follow up at Northwest Hospitals Wound Care clinic and per chart review is noted to have mixed vascular disease with ulcerations to her legs. Her last visit was 7/15/2019. Today's visit is for skin check with dressing recommendations.

SOCIAL HISTORY:
Lives on Bainbridge island

ALLERGIES:
nitrofurantoin
penicillin
aspirin
sulfa drugs

HEIGHT & WEIGHT

Height for Calculation:	165 cm	(07/25/2019)
Weight for Calculation:	48.5 kg	(07/24/2019)
Body Mass Index (BMI):	17.8 kg/m2	(07/24/2019)
DAILY Weight - kg:	48.5 kg	(07/24/2019)

PHYSICAL EXAM:
General: Lying in bed in no acute distress
Resp: Unlabored breathing on room air
Neuro: Sensation intact to light touch to bilateral lower extremities
CV: Feet warm. Unable to palpate pedal pulses. Hemosiderin staining present.
Bilateral lower extremities:

Wound bed: Red tissue with yellow fibrinous exudate. There is also residual white cream in the above photo
Edges: Attached
Undermining/tunneling: None
Exudate: Small amount serous
Periwound skin: Dry and intact
Pain: Nontender to palpation
Odor: No odor
Etiology: Mixed vascular disease

IMPRESSION & RECOMMENDATIONS:

94 year old female with mixed vascular disease to her lower extremities. She receives follow up at Northwest Hospitals Wound Care clinic and can continue to do so after discharge (Norsworthy, Nilufer Bozdemir, MD with follow up planned for ~8/12/2019). Her wounds do not have overt signs of infection.

Bilateral lower extremities:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wounds with Xeroform. Cover Xeroform with gauze or ABD pads and secure with Kerlix and tape
- Change daily and as needed with soiling

Alternative multiday dressing recommendation to consider on discharge:
- Cleanse area with soap and water or normal saline
- Gently remove loose/dried exudate as able
- Apply no-sting barrier to periwound skin and allow 30+ seconds to dry to protect skin from drainage
- Cover wound with Mepilex white foam (med stores #49218). Cover with gauze or ABD pads and secure with Kerlix
- Change every other day or as needed with soiling

Discussed with RN and patient

Wound care signing off

ASSESSMENT:
Assessment:
NEURO: Alert and oriented x4. Following commands x4, 4/5 strength. PERRL and brisk. No c/o pain this shift, receiving ATC scheduled ketorolac and tylenol. PIC score 7 this shift. HOH, given pocket talker and pt able to interact well.
CARD: SR with no ectopy. PPP. SBP 90-160, no intervention needed. PIV in place, drawing and flushing well.
PULM: Breathing even and unlabored. No cough noted. Lungs CTA-diminished at bases. CT to -20 water seal.
GI/GU: Tolerating general diet. No BM this shift. Incontinent of urine, wearing a brief in bed. Transfered x1 to BSC with no result.
SKIN: Grossly intact. Wound care consulted on BLE venous stasis ulcers.
PLAN: PT/OT consult..
No restraints indicated.

MOBILITY:
Mobility goal for today: ambulate w/assist.
If eligible, did the pt have a mobility event today? Yes.
Highest level of mobility achieved was dangling at bedside.

PATIENT / FAMILY NON-ENGLISH SPEAKING: No.
SELF-INFLICTED: No.

SOCIAL HISTORY:
BACKGROUND / EDUCATION:
Born and raised on Bainbridge Island. Completed High School.
LIVING SITUATION / ADDRESS PRIOR TO ADMIT:
Lives with Son Louis in Cross Sound Church sponsored housing. Per chart, address is 321 High School Road NE, Ste D3 PMB 292, Bainbridge Island, WA 98110 (need to confirm address) .
EMPLOYMENT HISTORY:
Pt reports hx of working at the Bon Marche but has been unemployed most of her life. However, today's Geriatrician note states pt hx working as nanny.
VALUES / BELIEFS / CULTURAL FACTORS:
Affiliated with Cross Sound Church.
PHYSICAL AND COGNITIVE FUNCTIONING PRIOR TO ADMIT:
Patient reports using a FWW "with breaks" PTA and independent with ADLs. Denies incontinence. Son reports assisting pt with some ADLs / iADLs - set up for showers and wound care.
FAMILY HISTORY:
Born and raised on Bainbridge Island. Reports Spouse "Bob" was a "jiggalo" and died in the 1970's. Spent several years living in Brooklyn, NY caring for Bob's family. Refers to Son Doug as a "bully" and informs of no contact ordered by the court. Son Louis describes son Doug as a "neo-nazi" and reports there is a current restraining order against Doug for hx of physical and mental abuse against pt.

HEALTH CARE DECISION MAKING:
LEGAL NEXT OF KIN:
Son / Durable Power of Attorney for Health Care Louis Charles Hoffman Alloin .
CONTACT IN FOLLOWING ORDER FOR LEGAL NEXT OF KIN DECISION MAKING:
1 : Louis Charles Hoffman Alloin , Son / Health Care DPOA & General POA , 360-649-5702 .

PSYCHIATRIC HISTORY:
OTHER PSYCHIATRIC HISTORY INFORMATION:
Pt does not respond to writer when Psychiatric hx questioned. Son Louis does report concern that patient is depressed. Attributes depression to feeling micromanaged in current living situation. Denies pt verbalizing suicidal plans. Care Team notified of Louis's concerns.

SUBSTANCE USE HISTORY:
TOBACCO: Per chart, denies.
ALCOHOL:
Per chart, denies.
DRUGS:
Per chart denies.

PROVIDERS/COMMUNITY AGENCIES:
PCP: Dr. William Neighbor.

CPS/APS:
PRIOR CPS / APS HISTORY:
Per EPIC 6/12/19 office visit with PCP Dr. Neighbor, hx of adult failure to thrive and recent APS involvement

Per Dr. Norsworthy 5/23/19 note, Mrs. Hoffman's case has a challenging sociopsychological and economical aspect: She is living with her son in a tent. Her living conditions and access to food is poor. HHRN declined to care for her as she has no address with unsafe and unkept environment. Her son has been carrying out the wound care, he run out of supply and did not reach us for refills. There is an open APS file for her. Her son is not allowing her to live at a place that she will has better food and care, openly using psychological pressure on her with economical concerns: "people goes to nursing facility for dying", "he would not visit her there if she chooses to go", "she will loose all family photos as he cannot afford to keep them in storage".

.

INCOME/INSURANCE COVERAGE:
SOURCE OF INCOME: SSI, Pt reports receiving about $800 per month in Social Security.
MEDICAL COVERAGE HISTORY:
Medicaid: Yes: QMB .
Medicare: Yes, TYPE: A, B.

TRANSPORTATION:
NEEDS / ISSUES:
Denies having a vehicle. States " I walk to safeway".

SOCIAL WORK SUMMARY:
ASSESSMENT:
Per chart, this is a 94 year old female who presents with pelvic fx, right RF and hemo-pneumothorax secondary to GLF
.
INTERVENTION:
Met with patient at bedside, introduced self, and explained role. Pt reports that Son Louis is planning to arrive to hospital later today and states "we take care of each other". Describes Son Doug as a "bully" and reports Doug is not allowed to contact her for two years. Reports was recently homeless for several years and was living on the side of the "highway 305" near a bus stop in a tent. Reports was unfairly evicted from houising prior to homelessness. Recently moved into church sponsored housing. Patient informs was born and raised on Bainbridge Island and has seen significant change since childhood, "it's Mercer Island". Pt reports Spouse Bob died in the 1970's and was a "jiggalo" who divorced her. At times patient does not answer writers questions and continues to discuss childhood and family hx.

Met with patient's Son Louis. Louis reports extended period residing with and caring for patient. Describes

himself as an "eunuch" and purpose is to serve pt. Louis is tangential re academic and work success, is difficult to follow at times, and is briefly redirectable. Louis reports owning and operating a radio station but then denies current employment. Reports homelessness for a little over a year and recent relocation into a church sponsored studio apartment with pt. Louis describes difficulty residing in church sponsored housing due to micro management causing patient depression. Reports about a year remaining on a protection restraining order against Brother Doug who is described as a neo-nazi. Son Louis does report ability to care for patient 24/7.

PLAN OR OUTCOME:

SW to continue assisting patient accordingly.

Social Work Assessment

REASON FOR CONSULTATION:
This is an inpatient pelvis consultation.

REASON FOR CONSULTATION:
Right lateral compression pelvic fracture.

NON-ORTHOPEDIC INJURIES:
Rib fractures, as well as a right pneumothorax with placement of a chest tube.

HISTORY OF PRESENT ILLNESS:
Ms. Hoffman is a 94-year-old female with a past significant history of hypertension, chronic venous stasis with a history of recurrent DVTs. She is currently on warfarin. The patient sustained a ground level on 07/24/2019 after opening her refrigerator door per her son whom she lives with. Patient had pain and had inability to ambulate. She denied hitting her head or any amnesia to events. She was originally taken to UWMC ED where a CT scan was ordered and demonstrated the aforementioned pelvic injuries, as well as the rib fractures. The patient was transferred to Harborview for definitive management.

PAST MEDICAL HISTORY:
1. Recurrent DVT, is on warfarin.
2. Hypertension.
3. Chronic venous stasis ulcers.

ALLERGIES:
ASPIRIN, PENICILLIN, SULFA DRUGS.

MEDICATIONS:
Atorvastatin, Lipitor, warfarin, as well as Tylenol with codeine.

SOCIAL HISTORY:
The patient lives with her son on Bainbridge Island. They both deny any use of tobacco, alcohol or drug use.

REVIEW OF SYSTEMS:
Complete 14-point review of systems reviewed and is all negative, except for what is aforementioned above.

PHYSICAL EXAMINATION:

GENERAL: She is a well-appearing 94-year-old female in no acute distress.
PULMONARY: No extra work of breathing. No stridor. She is on room air.
CARDIOVASCULAR: All 4 extremities are warm and well perfused with brisk capillary refill.
MUSCULOSKELETAL: Focused exam of the bilateral lower extremities reveals intact palpable distal pulses and sensation intact to light touch in deep and superficial peroneal nerves, as well as tibial, sural and saphenous. The patient is able to fire EHL, as well as FHL, tibialis anterior and gastrocsoleus complex. No pain to log roll on either hip.

IMAGING:
CT of the pelvis demonstrates a very small right lateral compression type pelvic injury with ipsilateral inferior rami fractures.

ASSESSMENT:
Ms. Hoffman is a 94-year-old female with a significant past medical history of DVTs who is currently on warfarin, who had a mechanical ground level fall resulting in a lateral compression type 1 pelvic fracture.

PLAN:
Given the stability of this fracture pattern, the patient's low demand, as well as her age, we will trial nonoperative management. Recommendations would be to ambulate with physical therapy with the use of a walker if needed. Patient will obtain post-mobilization radiographs which will include AP inlet and outlet views. Patient may follow up in our clinic in 3 weeks after discharge to assess her pain, as well as repeat imaging, the same views as previously described. It would be important, given the patient's history of DVTs, as well as low demand and likely inability to ambulate fully for some time, that she continue on anticoagulation Lovenox 30 mg two times a day for 6 weeks of treatment.

ED Pre-Sedation Physicians Evaluation

PROCEDURE PERFORMED:
Chest tube insertion site: the thoracostomy tube was placed on the right side of the chest, in the 4th intercostal space, at the mid axillary line.

INDICATIONS:
Hemothorax. Pneumothorax.

PREOPERATIVE INFORMATION:
Consent: the risks and benefits were explained to, and consent was obtained from, the holder of durable power of attorney (DPOA) for health care.
Pre-procedure verification: the procedure, site and patient identification were verified prior to beginning the procedure.

OPERATORS:
Resident Nemanich MD, Antonia Justine.

OPERATIVE DETAILS:
The patient was monitored during the procedure with blood pressure monitoring, a cardiac monitor, pulse oximetry.
Patient position: the patient was placed in the supine position.
Chest tube insertion site: the thoracostomy tube was placed on the right side of the chest, in the 4th intercostal space, at the mid axillary line.
The skin, muscle, periosteum, and parietal pleura was anesthetized with 1% lidocaine with epinephrine: 20 cc.
The procedure was performed using 28 French tube.
After making an incision in the skin, blunt dissection was used to create a track for the chest tube.
Upon insertion of the tube a rush of air was noted, fluid was obtained, the fluid was serosanguinous, approximately 30 mL of fluid returned.
The tube was sutured into place.
A vaseline gauze was applied to the site at the conclusion of the procedure.
A chest X-ray was obtained and shows good positioning of the tube.

SAMPLES AND SPECIMENS:
None.

COMPLICATIONS:
Bleeding: Scant.

ATTENDING STATEMENT:
I was present for and supervised the entire procedure.

Procedure - Chest Tube Placement

VISIT INFORMATION:

Chief Complaint:
Chest pain and hip pain

History of Present Illness:
The patient is a 94-year-old woman with history of recurrent DVTs on warfarin, hypertension, hyperlipidemia who presents after a ground-level fall yesterday, complaining of right-sided rib pain and hip pain. The patient states that she was attempting to open her refrigerator yesterday, when the door suddenly gave way and she fell backwards, landing on her right side. She denies hitting her head. She has been unable to walk since the fall. She also complains of shortness of breath. The patient's son is at bedside and assists with history. He reports that after the accident, he checked his mother for any signs of bony tenderness, bruising, or swelling and she had none so he thought that she was okay to remain at home. Today, however, due to her worsening pain and shortness of breath, they decided to present to the ED.

PMH:
Recurrent DVTs on warfarin
Hypertension
Hypertension anemia
Chronic wounds of the bilateral lower extremities

Medications:
1. atorvastatin (Lipitor 40 mg oral tablet) Dose: 40 mg PO Daily
2. losartan 25 mg oral tablet Dose: 12.5 mg PO Daily
3. pentoxifylline 400 mg oral tablet, extended release Dose: 400 mg PO TID
4. timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) Dose: 1 drop(s) EYE-Both BID
5. warfarin 5 mg oral tablet Dose: 5 mg PO QMTuWFSa
6. warfarin 2.5 mg oral tablet Dose: 2.5 mg PO QThSu
7. acetaminophen-codeine (Tylenol with Codeine #3 300 mg-30 mg oral tablet) Dose: 1 tab PO Daily PRN Pain

Allergies:
nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

Social history:
Tobacco: denies
Alcohol: denies
Drugs: denies

Lives with her son on Bainbridge Island

ROS:
10/14 review of systems completed. Systems reviewed are negative except as stated above in HPI. Systems reviewed: Constitutional, HENT, Eyes, Resp, CV, GI, GU, MSK, skin, heme/lymph

Physical exam:

Vitals *(Most recent and 24 hour range.)*

Date	Result	Last	MIN	-	MAX

GENERAL: Very frail appearing, nearly cachectic, elderly woman, alert and im mild pain, in C collar
SKIN: Warm and dry. No rashes, bruises, lacerations, or abrasions.
HEAD: Atraumatic. Normocephalic. Facial bones without obvious deformity or tenderness.
EYES: Pupil size 3mm and symmetric. PERRL. No scleral icterus or hyphema. Extraocular muscles intact without nystagmus. No proptosis or exophthalmos. No pain or double vision with eye movements.
EARS: Atraumatic pinnae. No hemotympanum b/l.
NOSE: No nasal septa hematoma or epistaxis.
MOUTH: Teeth aligning well. No loose teeth. Dry mucus membranes. No lacerations. Pt handling secretions normally.
NECK: Trachea mid-line. No mid-line tenderness of c-spine. No swelling or crepitus of neck. ROM not tested due to c-spine precautions.
CV: Regular rate and rhythm. No murmurs, rubs, or gallops. Pulses 2+ and symmetric bilateral radial and DP. Warm extremities without discoloration or edema.
CHEST: Normal respiratory effort. Chest wall tender on R. Faint crepitus over R lateral chest. no ecchymosis, Lungs are clear and equal to auscultation bilaterally without crackles or wheezes.
ABDOMEN: Not distended. Non-tender to palpation. No rebound tenderness or guarding. No palpable masses. No bruising or abrasions.
BACK: No abrasions, lacerations, bruising, or pressure sores. +Midline tenderness at T2-T3, no crepitus or step-offs.
PELVIC: Stable and non-tender to lateral compression. Tender to palpation on R.
MSK: No gross deformities. No lacerations, brusing or abrasions. Moving all extremities.
LYMPHATIC: No lymphadenopathy.
NEURO: GCS 15. Alert and oriented to person, place, and time. CN II-XII grossly intact. Sensation grossly intact. Strength 5/5 in flexors and extensors of all extremities. No sensory level.

RADIOLOGICAL STUDIES:
Radiology Results
XR Chest (07/24/2019 16:31)
~EXAMINATION:
XR CHEST 1VIEW
CLINICAL INDICATION:
confirm chest tube placement
FINDINGS AND IMPRESSION:
Compared to chest CT done earlier today at 1326 hours, there is persistent right subpulmonic/anterior pneumothorax. There is associated small pleural effusion.
Right chest tube is in an expected position.
Heart size is unchanged.
There are bilateral basilar consolidations, which could represent either atelectasis, aspiration or pneumonia.

CT Lumbar Spine (07/24/2019 14:35)
~EXAMINATION:
CT T SPINE WO CONT, CT L SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT thoracic spine without contrast: routine (N-65) MDCT scanning was obtained through the thoracic spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560201), CT Lumbar Spine without contrast: routine (N-65) MDCT scanning was obtained through the lumbar spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560202)
Superior Extent: T1
Inferior Extent: Sacrum
COMPARISON:
MRI thoracic spine 9/17/2018, radiographically lumbar spine 10/22/2014, and other priors
FINDINGS:
ALIGNMENT: Minimal anterolisthesis of L5 on S1. Left convex scoliosis of the lumbar spine with a Cobb angle of approximately 21 degrees.
VERTEBRAE/BONES: Again seen are chronic compression fractures of T12-L3. Cortical irregularity at the posterior aspect of the L1 vertebral body with correlate on MRI dated 9/17/18. Consider repeat MRI if pain persists in this region. No acute vertebral fractures. Diffuse osteopenia.
Partially visualized multiple rib fractures, some of which are chronic:
-Chronic fracture deformities of the right 10-12th posterior ribs.
-Acute mildly displaced fractures of the right posterior 8th and 9th ribs.
Partially visualized right femoral head/neck instrumental fixation.
Minimally displaced right sacral zone 1 fracture (604B/74 and 305B/166) with intra-articular extension into the SI joint.
HARDWARE: No spinal hardware present.
CORD: Visualized throracic cord and conus medularis are normal size.
SOFT TISSUES: Please refer to same day CT chest abdomen and pelvis for extraspinal findings. Paravertebral, interspinous, and posterior soft tissues are normal.
LEVELS: No central stenosis. Mild bony right neural foramen narrowing at L5-S1. ABNORMAL LEVELS: Partial bony fusion of T3-T4. Severe disc space narrowing at L4-L5.
IMPRESSION:

No acute thoracolumbar spinal fractures or malalignment. Again seen are chronic compression fractures of T12-L3, with posterior cortical irregularity at L1. If patient's back pain persists, consider repeat MRI for further evaluation.
Minimally displaced right sacral zone 1 fracture with intra-articular extension into the SI joint.
Acute displaced fractures of the right posterior eighth and ninth ribs.
Chronic fracture deformities of the right 10th-12th posterior ribs. Please refer to same day chest, abdomen, and pelvis CT for further description of rib fractures.
Moderate to severe multilevel degenerative changes of the thoracolumbar spine as detailed above.
The above findings were communicated to Nemanich by Moran at 7/24/2019 3:23 PM.

CT Chest Abdomen Pelvis (07/24/2019 14:02)
~EXAMINATION:
CT CHEST ABDOMEN AND PELVIS W CONTRAST
CLINICAL INDICATION:
GLF. Additional history: 94-year-old female patient with a ground level fall yesterday presented with the back, right side and right hip pain.
TECHNIQUE:
CTB A15 CT Chest Abdomen Pelvis with IV contrast.
Contiguous axial sections were obtained through the chest, abdomen and pelvis with IV contrast only. Multiplanar reformatted images were performed.
Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.

CONTRAST:
Omnipaque 350 mg-ml 88@2.2 ml 07/24/2019 02:03 PM INTRAVENOUS
COMPARISON:
None.
FINDINGS:
CHEST:
Thyroid: Unremarkable.
Thoracic lymph nodes: No lymphadenopathy by size criteria.
Mediastinum and esophagus: Moderate sliding hiatus hernia.
Heart and vasculature: Moderate to severe coronary artery disease.
Atherosclerotic changes of the aorta. Aortic wall calcifications.
Lungs: Unremarkable.
Pleura: Right sided hydropneumothorax with no mediastinal shift. Trace left pleural effusion.
Chest wall: Slightly displaced fracture right posterior eighth and ninth rib. No fracture is noted involving right seventh rib at the costovertebral junction.
ABDOMEN:
Liver: Unremarkable.
Gallbladder: Distended with no opaque stones
Bile ducts: Prominent CBD measuring 9 mm (601/54) with associated mild intrahepatic biliary radical dilatation. CBD seen) distally towards the pancreas with no obvious lesions in the periampullary region.
Spleen: Unremarkable.
Pancreas: Unremarkable.
Adrenals: Unremarkable.
Kidneys and Ureters: Bilateral renal cortical hypodense lesions, the small lesions are too small to characterize while the larger lesions are likely cysts.
Abdominal Lymph Nodes and Retroperitoneum: No lymphadenopathy by size criteria.
Vasculature: Moderate aortobiiliac atherosclerotic disease with no aneurysmal dilatation of the aorta.
Bowel: Unremarkable.
Peritoneum and Abdominal Wall: Mild ascites. No abdominal collections. No pneumoperitoneum.
PELVIS:
Pelvic Viscera: Unremarkable.
Bladder: Unremarkable.
BONES:
-Two fracture lines involving the right inferior pubic ramus (3/213-216).
-Severe spondylo-degenerative changes of the spine with scoliotic deformity and mild wedging of L2 and T11 vertebral bodies, age indeterminate.
-Osteopenia. Right hip arthroplasty.

IMPRESSION:
1. Multiple right-sided rib fractures with right-sided hydropneumothorax.
2. Fracture right inferior pubic ramus. L2 and T11 vertebral body age-indeterminate wedge fracture.
3. Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if

clinically indicated.

CT Cervical Spine (07/24/2019 13:30)
~EXAMINATION:
CT C SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
Cervical Spine wo contrast: routine (N-53)
MDCT scanning was obtained through the cervical spine without contrast.
Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
Inferior Extent: T4
COMPARISON:
C-spine CT 12/7/2012
FINDINGS:
ALIGNMENT: Normal alignment.
VERTEBRAE: Vertebral body height and density are normal. No fractures or destructive lesions.
HARDWARE: No hardware present.
DISCS: Normal disc height
SOFT TISSUES: Prevertebral, interspinous, and posterior soft tissues are normal. Multiple tiny hypodense thyroid nodules.
AXIAL DISCS AND FORAMINA:
Similar posterior subluxation of the right atlantoaxial articulation (602/91).
Moderate degenerative changes of the cervical spine including multilevel disc height loss, mild facet arthropathy, and fusion of the C4-5 posterior elements. Diffuse osteopenia.
C2-3: No central or foraminal stenosis.
C3-4: No central or foraminal stenosis.
C4-5: No central or foraminal stenosis.
C5-6: No central or foraminal stenosis.
C6-7: No central or foraminal stenosis.
C7-T1: No central or foraminal stenosis.
Right small-to-moderate pneumothorax.
IMPRESSION:
1. No acute fractures of the cervical spine. Stable degenerative changes. Diffuse osteopenia.
2. Right small to moderate pneumothorax.
The above findings were communicated to Antonia Nemanich M.D. by Thomas Eggert M.D. PGY-3 at 7/24/2019 2:04 PM.

CT Head (07/24/2019 13:30)
~EXAMINATION:
CT HEAD WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT Head Routine wo contrast (N-1)
Contiguous axial sections were obtained through the head without contrast.
Patient age specific scan parameters were used for radiation exposure.
COMPARISON:
CT head 3/29/2018.
FINDINGS:
Field-of-view does not contain the anterior mandible.
MASS EFFECT & VENTRICLES: No midline shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: Mild to moderate cerebral volume loss. Few unchanged scattered parenchymal calcifications. Unchanged mild to moderate periventricular white matter hypoattenuation. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Severe vascular calcifications involving of the common carotids and cavernous ICAs.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Orbits are normal.
IMPRESSION:
No acute intracranial hemorrhage, infarct, or masses.
Similar cerebral volume loss and periventricular white matter hypoattenuation consistent with chronic microvascular ischemia.

ED COURSE & MEDICAL DECISION MAKING:

The patient is a 94-year-old woman who presents after a mechanical ground-level fall yesterday, with right-sided rib pain and pelvic pain. On presentation, VS were normal and remained stable throughout the ED course. Physical exam significant for tenderness over the right lateral ribs, tenderness of the right pelvis and tenderness at T2 and T3.

Initial concern is for intracranial or intra-abdominal bleed, given patient's anticoagulation. I also have a high suspicion for right rib fractures, as well as spinal and pelvic fractures.

Labs were drawn and reviewed which were significant for a subtherapeutic INR of 1.3 but otherwise unremarkable.

Given the patient's age and her anticoagulation status, a CT trauma pan scan was ordered. This was significant for multiple right-sided rib fractures, a right hemopneumothorax, and a right pubic ramus fracture.
A right-sided chest tube was placed, which the patient tolerated well without procedural sedation.
Given the patient's injuries, the most appropriate disposition for her is transferred to the Harborview surgical ICU.
The transfer center was called and the patient will be transferred to them pending an accepting doctor.

The patient was signed out to Dr. Zachary Wettstein at 16:45 pending transfer to HMC.

Received signout on the patient with transfer to HMC pending. She remained hemodynamically stable while in the emergency department. Her cervical spine was clinically cleared. She was transferred to the Harborview surgical ICU.

Zachary Wettstein, MD
PGY-2 - Emergency Medicine

DISPOSITION/PLAN:
Final disposition:
Transfer.

IMPRESSION/DIAGNOSIS:
Right hemopneumothorax
Multiple right-sided rib fractures
Right pubic ramus fracture
Sacral fracture
Fall
Anitcoagulated

ATTENDING STATEMENT:
Critical care
The critical illness(s) present in this patient include: fall in elderly patient .
I spent a total of 20 minutes personally providing critical care and formulating a plan for the day, independent of any time spent teaching or performing any separately billable procedures. Critical care tasks included. Talking with family members making care decisions for the patient.

Talking to the patient's family members or surrogates regarding patient history.
Reviewing the patient's condition or prognosis with the patient's family or surrogate(s).
Discussing treatment of the patient with this patient's family or surrogate(s).
Review of medical records.
direct personal management, the absence of which would likely result in sudden, clinically significant or life threatening deterioration, to prevent further life-threatening deterioration .
Attending Statement
A laboratory evaluation was ordered and I have personally reviewed all of these findings.
A radiology evaluation was ordered and I have personally reviewed all of these findings.
I was the supervising attending involved in this patient's Emergency Department care. I have personally obtained a history and evaluated this patient and discussed the history, physical exam, diagnostic studies, and treatment plan with the resident. I agree with their documentation and where necessary for either clarification or accuracy, I have added directly to the above note or provided additional comments below.

The patient was signed out to Dr Marie Vrablik with chest tube placment pending

Follow-up Instructions:

IMPORTANT EMERGENCY DEPARTMENT COMMUNICATION AFTER YOUR VISIT:
If you have questions about your ED visit, please call:
University of Washington Medical Center ED: 206-598-2000

You may receive a phone call from us in the next few days to ensure that you are improving. Please be sure that we have an accurate phone number and address for you.

To assist us with continuing to improve the quality of the Emergency Care we provide, we would like your input. In the coming weeks, you may receive a survey in the mail about our processes. Please complete this and return it to us. Our goal is to provide you with excellent medical care. If we have not reached this goal, please let us know how we can improve our services.

University of Washington Medical Center would like to thank you for allowing us to assist you with your healthcare needs.

It is important to see your doctor or primary care provider. Emergency Care may be incomplete without proper follow-up. For help scheduling your UW Medicine or Harborview Clinic doctor appointment, call the Patient Contact Center at 206.520.5000 or toll free at 877.520.5000.

If you become worse in any way, it is important that you call your doctor, or return to the Emergency Department. Please remember to take these instructions to your next doctor's appointment.

Additional Information/Special Instructions

Suicide Prevention
If you or someone you know is thinking about harming yourself or attempting suicide, there are resources available to help 24/7. Call the toll-free National Suicide Prevention Lifeline to speak with a trained counselor or find a suicide crisis center near you.
Telephone: (800) 273-8255
TTY: (800) 799 - 4889

Antibiotics & You:
Antibiotics treat or prevent infections. If your provider prescribed this medicine for you, take it exactly as instructed. If you do not take it as prescribed, your infection can get worse or start to resist treatment. Please call your provider if you have problems taking your medicines, or if you have side effects.

PHYSICIANS PRESENT:
The following resident(s) participated in the care and documentation of this patient:
Alley MD, Michael Dee.

VISIT INFORMATION:
Transfer from UW MC

CHIEF CONCERN:
Ground-level fall with right-sided hip and rib pain, worked up and transferred from UWMC

HISTORY OF PRESENT ILLNESS:
The patient several ground-level fall several days ago, and then was taken to UWMC today, where she was found to have a right hemopneumothorax, right rib fractures, a right inferior pubic rami ramus fracture, and a right sacral zone 1 fracture with extension into the SI joint. Chest tube was placed and she was sent to HMC for admit to the TICU. Here she was transferred in stable condition and reports minimal pain.

PAST MEDICAL AND SURGICAL HISTORY:
Hyperlipidemia
History DVTs
Hypertension
Anemia

_
MEDICATIONS:

_1. atorvastatin (Lipitor 40 mg oral tablet) Dose: 40 mg PO Daily
2. losartan 25 mg oral tablet Dose: 12.5 mg PO Daily
3. pentoxifylline 400 mg oral tablet, extended release Dose: 400 mg PO TID
4. timolol ophthalmic (timolol maleate 0.5% ophthalmic solution) Dose: 1 drop(s) EYE-Both BID
5. warfarin 5 mg oral tablet Dose: 5 mg PO QMTuWFSa
6. warfarin 2.5 mg oral tablet Dose: 2.5 mg PO QThSu
7. acetaminophen-codeine (Tylenol with Codeine #3 300 mg-30 mg oral tablet) Dose: 1 tab PO Daily PRN Pain

ALLERGIES:
_nitrofurantoin
penicillin
aspirin
sulfa drugs
Adhesive Bandage

SOCIAL HISTORY:
Denies tobacco, alcohol or drug use

FAMILY HISTORY:
No further family history provided

REVIEW OF SYSTEMS:
A 10-system ROS was performed (including General, HEENT, Neurologic, Pulmonary, Cardiovascular, Gastrointestinal, Genitourinary, Dermatologic, Musculoskeletal, Hematologic) and was negative except as listed above in HPI.

PHYSICAL EXAM:

GENERAL: Elderly frail female lying on hospital bed, no acute distress
SKIN: Bilateral lower extremity wounds that are chronic in nature
HEAD: Atraumatic, normocephalic. Facial bones without obvious deformity or tenderness.
EYES: Pupils equal, round, and reactive to light. No scleral icterus. Extraocular muscles intact without nystagmus. No proptosis, exophthalmos, or raccoon eyes.
EARS: Atraumatic pinnae. No otorrhea or hemotympanum.
NOSE: No nasal septa hematoma, epistaxis, or rhinorrhea.
MOUTH: Teeth aligning well. No loose teeth. Moist mucus membranes.
NECK: Trachea mid-line. No mid-line tenderness, step-offs, or crepitus. ROM not tested
CARDIOVASCULAR: 2+ bilateral radial and DP pulses. Warm extremities without edema.
PULMONARY: Normal respiratory effort. Chest wall non-tender. No crepitus.
ABDOMEN: Non-distended, non-tender, and no palpable masses.
BACK: No abrasions, lacerations, bruising, or pressure sores. Mid thoracic midline tenderness palpatio, tenderness over the right side to palpation
PELVIC: Stable and non-tender to lateral compression.
GENITOURINARY: Normal external genitalia. No bruising, edema or blood at urethra.
RECTAL: Deferred
MUSCULOSKELETAL: No gross deformities. Moving all extremities.
NEUROLOGIC: Glasgow Coma Scale 15/15. Alert and oriented to person, place, and time. CN II-XII grossly intact. Sensation grossly intact. Strength 5/5 in all extremities. Deep tendon reflexes 2+ bilaterally.

RADIOLOGY:
XR Chest (07/24/2019 18:34)
~RADIOGRAPH OF THE CHEST, 1 VIEW
CLINICAL INDICATION:

Chest tube placement
COMPARISONS:
July 24, 2019
FINDINGS AND IMPRESSION:
Right thoracostomy tube present. There may be persistent small right pneumothorax. There is a small persistent right pleural effusion.
Heart size is unchanged.
Unchanged bibasilar consolidations.

XR Chest (07/24/2019 16:31)
~EXAMINATION:
XR CHEST 1VIEW
CLINICAL INDICATION:
confirm chest tube placement
FINDINGS AND IMPRESSION:
Compared to chest CT done earlier today at 1326 hours, there is persistent right subpulmonic/anterior pneumothorax. There is associated small pleural effusion.
Right chest tube is in an expected position.
Heart size is unchanged.
There are bilateral basilar consolidations, which could represent either atelectasis, aspiration or pneumonia.

CT Lumbar Spine (07/24/2019 14:35)
~EXAMINATION:
CT T SPINE WO CONT, CT L SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT thoracic spine without contrast: routine (N-65) MDCT scanning was obtained through the thoracic spine without contrast. Coronal and sagittal reformatted images were performed. Patient age specific scan parameters and

iterative reconstruction techniques were used for radiation exposure.
(accession 12560201), CT Lumbar Spine without contrast: routine (N-65)
MDCT scanning was obtained through the lumbar spine without contrast.
Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure. (accession 12560202)
Superior Extent: T1
Inferior Extent: Sacrum
COMPARISON:
MRI thoracic spine 9/17/2018, radiographically lumbar spine 10/22/2014, and other priors
FINDINGS:
ALIGNMENT: Minimal anterolisthesis of L5 on S1. Left convex scoliosis of the lumbar spine with a Cobb angle of approximately 21 degrees.
VERTEBRAE/BONES: Again seen are chronic compression fractures of T12-L3. Cortical irregularity at the posterior aspect of the L1 vertebral body with correlate on MRI dated 9/17/18. Consider repeat MRI if pain persists in this region. No acute vertebral fractures. Diffuse osteopenia.
Partially visualized multiple rib fractures, some of which are chronic:
-Chronic fracture deformities of the right 10-12th posterior ribs.
-Acute mildly displaced fractures of the right posterior 8th and 9th ribs.
Partially visualized right femoral head/neck instrumental fixation.
Minimally displaced right sacral zone 1 fracture (604B/74 and 305B/166) with intra-articular extension into the SI joint.
HARDWARE: No spinal hardware present.
CORD: Visualized throracic cord and conus medularis are normal size.
SOFT TISSUES: Please refer to same day CT chest abdomen and pelvis for extraspinal findings. Paravertebral, interspinous, and posterior soft tissues are normal.
LEVELS: No central stenosis. Mild bony right neural foramen narrowing at L5-S1. ABNORMAL LEVELS: Partial bony fusion of T3-T4. Severe disc space narrowing at L4-L5.
IMPRESSION:
No acute thoracolumbar spinal fractures or malalignment. Again seen are chronic compression fractures of T12-L3, with posterior cortical irregularity at L1. If patient's back pain persists, consider repeat MRI for further evaluation.
Minimally displaced right sacral zone 1 fracture with intra-articular extension into the SI joint.
Acute displaced fractures of the right posterior eighth and ninth ribs.
Chronic fracture deformities of the right 10th-12th posterior ribs. Please refer to same day chest, abdomen, and pelvis CT for further description of rib fractures.
Moderate to severe multilevel degenerative changes of the thoracolumbar spine as detailed above.
The above findings were communicated to Nemanich by Moran at 7/24/2019 3:23 PM.

CT Chest Abdomen Pelvis (07/24/2019 14:02)
~EXAMINATION:
CT CHEST ABDOMEN AND PELVIS W CONTRAST
CLINICAL INDICATION:
GLF. Additional history: 94-year-old female patient with a ground level fall yesterday presented with the back, right side and right hip pain.
TECHNIQUE:
CTB A15 CT Chest Abdomen Pelvis with IV contrast.
Contiguous axial sections were obtained through the chest, abdomen and pelvis with IV contrast only. Multiplanar reformatted images were performed.
Automated exposure control and statistical iterative reconstruction techniques substantially lowered patient radiation dose.
CONTRAST:
Omnipaque 350 mg-ml 88@2.2 ml 07/24/2019 02:03 PM INTRAVENOUS
COMPARISON:
None.
FINDINGS:
CHEST:
Thyroid: Unremarkable.
Thoracic lymph nodes: No lymphadenopathy by size criteria.
Mediastinum and esophagus: Moderate sliding hiatus hernia.
Heart and vasculature: Moderate to severe coronary artery disease.
Atherosclerotic changes of the aorta. Aortic wall calcifications.
Lungs: Unremarkable.
Pleura: Right sided hydropneumothorax with no mediastinal shift. Trace left pleural effusion.
Chest wall: Slightly displaced fracture right posterior eighth and ninth rib.
No fracture is noted involving right seventh rib at the costovertebral junction.

ABDOMEN:
Liver: Unremarkable.
Gallbladder: Distended with no opaque stones
Bile ducts: Prominent CBD measuring 9 mm (601/54) with associated mild intrahepatic biliary radical dilatation. CBD seen) distally towards the pancreas with no obvious lesions in the periampullary region.
Spleen: Unremarkable.
Pancreas: Unremarkable.
Adrenals: Unremarkable.
Kidneys and Ureters: Bilateral renal cortical hypodense lesions, the small lesions are too small to characterize while the larger lesions are likely cysts.
Abdominal Lymph Nodes and Retroperitoneum: No lymphadenopathy by size criteria.
Vasculature: Moderate aortobiiliac atherosclerotic disease with no aneurysmal dilatation of the aorta.
Bowel: Unremarkable.
Peritoneum and Abdominal Wall: Mild ascites. No abdominal collections. No pneumoperitoneum.
PELVIS:
Pelvic Viscera: Unremarkable.
Bladder: Unremarkable.
BONES:
-Two fracture lines involving the right inferior pubic ramus (3/213-216).
-Severe spondylo-degenerative changes of the spine with scoliotic deformity and mild wedging of L2 and T11 vertebral bodies, age indeterminate.
-Osteopenia. Right hip arthroplasty.
IMPRESSION:
1. Multiple right-sided rib fractures with right-sided hydropneumothorax.
2. Fracture right inferior pubic ramus. L2 and T11 vertebral body age-indeterminate wedge fracture.
3. Prominent CBD with mild intra-hepatic biliary radicle dilatation. Recommend correlation with liver function tests and further evaluation with MRCP if clinically indicated.

CT Cervical Spine (07/24/2019 13:30)
~EXAMINATION:
CT C SPINE WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
Cervical Spine wo contrast: routine (N-53)

MDCT scanning was obtained through the cervical spine without contrast.
Coronal and sagittal reformatted images were performed.
Patient age specific scan parameters and iterative reconstruction techniques were used for radiation exposure.
Inferior Extent: T4
COMPARISON:
C-spine CT 12/7/2012
FINDINGS:
ALIGNMENT: Normal alignment.
VERTEBRAE: Vertebral body height and density are normal. No fractures or destructive lesions.
HARDWARE: No hardware present.
DISCS: Normal disc height
SOFT TISSUES: Prevertebral, interspinous, and posterior soft tissues are normal. Multiple tiny hypodense thyroid nodules.
AXIAL DISCS AND FORAMINA:
Similar posterior subluxation of the right atlantoaxial articulation (602/91).
Moderate degenerative changes of the cervical spine including multilevel disc height loss, mild facet arthropathy, and fusion of the C4-5 posterior elements. Diffuse osteopenia.
C2-3: No central or foraminal stenosis.
C3-4: No central or foraminal stenosis.
C4-5: No central or foraminal stenosis.
C5-6: No central or foraminal stenosis.
C6-7: No central or foraminal stenosis.
C7-T1: No central or foraminal stenosis.
Right small-to-moderate pneumothorax.
IMPRESSION:
1. No acute fractures of the cervical spine. Stable degenerative changes. Diffuse osteopenia.
2. Right small to moderate pneumothorax.
The above findings were communicated to Antonia Nemanich M.D. by Thomas Eggert M.D. PGY-3 at 7/24/2019 2:04 PM.

CT Head (07/24/2019 13:30)
~EXAMINATION:
CT HEAD WO CONT
CLINICAL INDICATION:
GLF, x
TECHNIQUE:
CT Head Routine wo contrast (N-1)

Contiguous axial sections were obtained through the head without contrast.
Patient age specific scan parameters were used for radiation exposure.
COMPARISON:
CT head 3/29/2018.
FINDINGS:
Field-of-view does not contain the anterior mandible.
MASS EFFECT & VENTRICLES: No midline shift. The lateral ventricles are symmetric. The ventricles, sulci and cisterns are normal.
BRAIN: Mild to moderate cerebral volume loss. Few unchanged scattered parenchymal calcifications. Unchanged mild to moderate periventricular white matter hypoattenuation. No acute infarct, hemorrhage or mass lesion is seen.
VASCULAR: Severe vascular calcifications involving of the common carotids and cavernous ICAs.
EXTRA-AXIAL: Extra-axial spaces are normal.
EXTRA-CRANIAL: Skull and facial bones are normal. Sinuses and mastoids are clear. Orbits are normal.
IMPRESSION:
No acute intracranial hemorrhage, infarct, or masses.
Similar cerebral volume loss and periventricular white matter hypoattenuation consistent with chronic microvascular ischemia.

ED COURSE & MEDICAL DECISION MAKING:
The patient is a 94-year-old female who is here after a ground-level fall and was worked up for rib fractures, hemopneumothorax, pubic rami fracture, as well as possible acute sacral someone fracture. Gen. surgery was present at the time of transfer, and they will be the admitting service. The orthopedic Department was consulted about the pelvis and a 3-D reconstruction of the pelvis was ordered. For pain fentanyl 25 mcg was provided after a secondary survey revealed no new findings. The patient was alert and oriented ×4 from the time of arrival to admission on the floor.

ED CONSULTS:
Neurosurgery
Orthopedics

DISPOSITION/PLAN:
Surgery TICU

IMPRESSION/DIAGNOSIS:
Right hemopneumothorax
Right 8 and 9 rib fractures
Right inferior pubic ramus fracture
Right sacral someone fracture with SI joint extension

IMPORTANT EMERGENCY DEPARTMENT COMMUNICATION AFTER YOUR VISIT:

If you have questions about your ED visit, please call:
Harborview Medical Center ED: 206-744-3074

You may receive a phone call from us in the next few days to ensure that you are improving. Please be sure that we have an accurate phone number and address for you.

To assist us with continuing to improve the quality of the Emergency Care we provide, we would like your input. In the coming weeks, you may receive a survey in the mail about our processes. Please complete this and return it to us. Our goal is to provide you with excellent medical care. If we have not reached this goal, please let us know how we can improve our services.

Harborview Medical Center would like to thank you for allowing us to assist you with your healthcare needs.

It is important to see your doctor or primary care provider. Emergency Care may be incomplete without proper follow-up. For help scheduling your UW Medicine or Harborview Clinic doctor appointment, call the Patient Contact Center at 206.520.5000 or toll free at 877.520.5000.

If you become worse in any way, it is important that you call your doctor, or return to the Emergency Department. Please remember to take these instructions to your next doctor's appointment.

Additional Information/Special Instructions

Suicide Prevention
If you or someone you know is thinking about harming yourself or attempting suicide, there are resources available to help 24/7. Call the toll-free National Suicide Prevention Lifeline to speak with a trained counselor or find a suicide crisis center near you.
Telephone: (800) 273-8255
TTY: (800) 799 - 4889

Antibiotics & You:
Antibiotics treat or prevent infections. If your provider prescribed this medicine for you, take it exactly as instructed. If you do not take it as prescribed, your infection can get worse or start to resist treatment. Please call your provider if you have problems taking your medicines, or if you have side effects.

COLUMBIA-SUICIDE SEVERITY RATING SCALE

*Screen with Triage Points for **Emergency Department***

Ask questions that are bolded and underlined.	**Past month**	
Ask Questions 1 and 2	**YES**	**NO**
1) ***Have you wished you were dead or wished you could go to sleep and not wake up?***		
2) ***Have you actually had any thoughts of killing yourself?***		
If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.		
3) ***Have you been thinking about how you might do this?*** E.g. "*I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it....and I would never go through with it.*"		
4) ***Have you had these thoughts and had some intention of acting on them?*** As opposed to "*I have the thoughts but I definitely will not do anything about them.*"		
5) ***Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?***		
6) ***Have you ever done anything, started to do anything, or prepared to do anything to end your life?*** Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc. **If YES, ask:** ***Was this within the past three months?***	**Lifetime**	
	Past 3 Months	

If yes—follow listed recommendation:
Item 1 Behavioral Health Referral at Discharge
Item 2 Behavioral Health Referral at Discharge
Item 3 Behavioral Health Consult (Psychiatric Nurse/Social Worker) and consider Patient Safety Precautions
Item 4 Immediate Notification of Physician and/or Behavioral Health and Patient Safety Precautions
Item 5 Immediate Notification of Physician and/or Behavioral Health and Patient Safety Precautions
Item 6 Over 3 months ago: Behavioral Health Consult (Psychiatric Nurse/Social Worker) and consider Patient Safety Precautions
Item 6 3 months ago or less: Immediate Notification of Physician and/or Behavioral Health and Patient Safety Precautions

CERTIFICATION FOR PATIENT TRANSFER

THIS HOSPITAL IS REQUIRED BY FEDERAL LAW TO PROVIDE ANY PERSON PRESENTING FOR MEDICAL TREATMENT WITH A MEDICAL SCREENING EXAMINATION TO DETERMINE WHETHER AN EMERGENCY MEDICAL CONDITION EXISTS AND TO PROVIDE NECESSARY STABILIZING CARE WITHIN ITS CAPABILITIES FOR EMERGENCY MEDICAL CONDITIONS WITHOUT REGARD TO A PATIENT'S MEANS OR ABILITY TO PAY.

P H Y S I C I A N

① REASON FOR TRANSFER

- ☒ For services not available here *(e.g. OB, hyperbaric, court-ordered, lack of capacity, etc)*
- ☐ Patient or family request
- ☐ Other *(specify)*: _____

② RECEIVING FACILITY ACCEPTANCE

Facility has been contacted, has capability to care for patient, and has agreed to accept and provide care to patient.

Name of Facility: HARBORVIEW MEDICAL CENTER
Location within facility: ED
M.D. Accepting care: RAJ TRIVEDI
Receiving facility called by:

- ☐ HMC staff: _____
- ☒ UWMC staff: Marie Vrablik
- ☐ County Designated Mental Health Professional

③ RISKS OF TRANSFER

In addition to risks present in all transfers, such as traffic delay, accidents, deterioration or worsening of condition en route, pain or discomfort during transport, specific risks for this patient include:

_____
_____
_____
_____

Risks of refusal of transfer include worsening of condition if patient remains here; failure to obtain necessary services; *(other)* _____
_____

④ BENEFITS OF TRANSFER

- ☒ Receipt of services not available here
- ☐ Other medical benefits *(specify)*: _____
_____
_____

⑤ MODE/SUPPORT/TREATMENT DURING TRANSFER

- ☐ Basic Life Support (agency:_____)
- ☒ Advanced Life Support (circle one: Medic One; AMR, other: _____)
- ☐ Other *(specify)*:_____)

SUPPORT/TREATMENT DURING TRANSFER

- ☐ Restraints (new order/continue CTU order)
- ☐ IV _____
- ☐ Cardiac monitor
- ☐ O_2
- ☐ Pulse Oximeter
- ☒ Other *(specify)*: Chest tube to suction

⑥ PATIENT CONDITION

The patient has been examined and any emergency medical condition identified has been treated within the capabilities of the hospital.

(check one box)

- ☒ A. No material deterioration of this patient's condition is likely to result from, or occur during transfer.

OR

- ☐ B. The patient may be at risk for deterioration from or during transport.
  Based upon my examination of the patient and the information available to me at the time of transfer, I certify that the benefits from transfer and reasonably anticipated care at the receiving facility outweigh any increased risks of transfer for this patient.

PATIENT PROPERTY TRACKING

H0796

WHITE - MEDICAL RECORD

HMC0796 REV JUL 17

NOTE:

ATTENDING OF RECORD:
Dr. Beingessner.

REASON FOR CONSULTATION:
Right lateral compression pelvic fracture.

NON-ORTHOPEDIC INJURIES:
1. Right pneumothorax. Subsequent placement of right chest tube.
2. Right rib fractures.

HISTORY OF PRESENT ILLNESS:
Jeanne Hoffman is a 94-year-old female with significant past medical history of recurrent DVTs on warfarin, hypertension and chronic venous stasis with bilateral lower extremity wounds, who sustained a mechanical ground level fall on 07/24/2019 after opening her refrigerator door when it subsequently loosened and she fell onto her right side. She was unable to ambulate and felt immediate pain. She denies losing consciousness. She denies pain to her extremities or numbness or tingling. The patient was initially taken to UWMCED where a CT pan scan was ordered demonstrating the aforementioned injuries. INR was obtained which demonstrated a subtherapeutic INR of 1.3. She was then subsequently transferred to Harborview Medical Center for further evaluation and treatment. On my evaluation in the Emergency Department, the patient corroborates the above-mentioned story. She has hearing aids in place; however, the batteries have died and she is subsequently unable to hear me upon attempt to gain further historical history. As a result, an attempt was made to communicate via writing and the exam was performed in this manner.

PAST MEDICAL HISTORY:
1. Recurrent DVT, is on warfarin.
2. Hypertension.
3. Chronic venous stasis wounds bilateral lower extremities.

ALLERGIES:
1. ADHESIVE BANDAGE.
2. Aspirin.
3. NITROFURANTOIN.
4. PENICILLIN.
5. SULFA DRUGS.

MEDICATIONS:
1. Atorvastatin.
2. Losartan.
3. Pentoxifylline.
4. Warfarin.
5. Tylenol with codeine.

SOCIAL HISTORY:
Currently lives with her son on Bainbridge Island. Denies tobacco, alcohol or drug use.

Previous documentation reviewed in chart history says that they may live in a tent and maybe previous history of concern for Adult Protective Services involvement.

REVIEW OF SYSTEMS:
A complete 14-point review of systems was performed and negative except as mentioned in the HPI. I was able to participate with historical information gathering.

PHYSICAL EXAMINATION:
VITAL SIGNS: Temperature 36 degrees Celsius, heart rate 59, respiratory rate 16, blood pressure 111/42, oxygen saturation 100% on room air.
GENERAL: A 94-year-old female resting in no apparent distress.
PULMONARY: No extra work of breathing. Normal inspiratory to expiratory ratio.
CARDIOVASCULAR: Extremities warm and well perfused.
PSYCHIATRIC: Appropriate mood and affect.
NEUROLOGIC: Answering questions and responds to written communication secondary to inability to use her hearing aids.
MUSCULOSKELETAL: Bilateral upper extremities shows no gross deformities noted. Nontender to palpation. Painless range of motion of fingers, wrist, forearm, elbow and shoulder. Nontender to palpation of the clavicles. Sensation is intact to light touch in distribution of the axillary musculocutaneous, radial, median, and ulnar nerves. Able to demonstrate thumb extension, ____, finger abduction, cross fingers, extend index finger. Strength is intact to resistance in wrist flexion, extension, forearm pronation and supination, elbow flexion/extension, and shoulder abduction. Fingers are warm and well perfused with 2+ radial pulses. Bilateral lower extremities. She has bilateral venous stasis wounds with weeping and ulceration along her bilateral shins. Otherwise, no gross deformities noted. Nontender to palpation. Painless range of motion of the toes, ankle, knee, and hip. No pain with log roll of hip. Sensation intact to light touch in distribution of the superficial, peroneal, deep peroneal, tibial, sural and saphenous nerves. Strength is intact to resistance of extensor hallucis longus, flexor hallucis longus, gastrocsoleus complex, tibialis anterior, quadriceps, hamstrings and hip flexors. Toes are warm and well perfused with 2+ dorsalis pedis pulse.
Pelvis: Stable to anterior, lateral rotational stress

IMAGING:
CT scan of the pelvis demonstrates a right lateral compression-type pelvic injury with minimal displacement.

LABORATORY DATA:
Creatinine 0.65, hemoglobin 8.5, hematocrit 27. INR 1.3. Urinalysis negative for occult blood.

ASSESSMENT:
Jeanne Hoffman is a 94-year-old female with significant past medical history of chronic DVTs, currently on warfarin with an INR of 1.3 during this Emergency Department stay who sustained a mechanical ground level fall on 07/24/2019 resulting in a right lateral compression pelvic fracture. She is neurovascularly intact on exam with no significant pain to palpation or range of motion of her hips.

PLAN:
Given the relative stability of her exam and minimal pain as well as chronic comorbidities and advanced age, we will trial this pelvic injury non-operatively with recommendations to pursue physical therapy and occupational therapy to be weightbearing as tolerated and to obtain post-mobilization films after weightbearing, which include inlet and outlet view pelvic imaging.

The patient will be admitted to the trauma ICU for rib fracture protocol.

The above assessment and plan was discussed with the chief resident on call.

SPECIAL CONSENT FOR PROCEDURAL TREATMENT

(DIAGNOSTIC & SURGICAL PROCEDURES & OTHER INVASIVE PROCEDURES)

The law in Washington gives you the right and the responsibility to make decisions about your health care. Health care professionals can give you information and advice. You or your legal representative must be part of the decision-making. This consent form:
- Proves that you had a part in making decisions about your health care.
- Shows that you gave permission for the treatment recommended by your health care professionals.

The words "I", "my", etc., in this form mean the patient, no matter whether the patient or the patient's representative is signing the form. The term "health care professional" may mean the attending physician, but in addition may mean a different doctor (including a resident), nurse practitioner, registered nurse, or physician's assistant, who orders, performs all or part of, or is involved in explaining the procedure.

I give permission to my health care professional(s) who are listed on the back of this form as the performing provider(s), to do the procedure(s) listed on the back of this form, with anesthesia and/or sedation if that is needed. Anesthesia or sedation medicine will be given by the health care professional, anesthesiologist, or other trained health care staff who work under appropriate supervision.

I understand that the attending physician may need to perform other urgent procedures due to an emergency that may occur while I am sedated or otherwise not able to give consent. The attending physician or designee will talk with my legally authorized representative if possible.

I understand that the attending physician may choose assistants, including other health care professionals and residents *(physicians who have finished medical school, but are getting more training)*, to be part of the team performing my procedure. The assistants may suture; harvest grafts; dissect, remove or alter tissue; implant devices; or do other tasks that the attending physician has deemed appropriate. If known, the attending physician has discussed with me whether there will be assistants and whom s/he expects the assistants to be. I understand that during the procedure, the attending physician may need to choose different assistants or have them do different tasks. I understand that for some kinds of medical equipment used during procedures, a representative from the equipment manufacturer may be there, doing things like providing consultation or running checks on the equipment.

I understand the attending physician may participate in care involving overlapping procedures or oversee other urgent medical responsibilities and may not be present in the room at all times. During this time, the skilled team of assistants may perform portions of my procedure which the attending physician has determined they are proficient to perform. If an overlap is anticipated or planned, I will be notified prior to surgery. The attending physician will be present for the key and critical portions of the procedure, and either he/she or a designated attending physician will be available to the procedure team at all times.

The hospital or health care professional will dispose of any removed tissues or parts.

I understand what procedure(s) will be done. I have been told about the risks and benefits. I have been told about other treatment choices and about their risks and benefits, including not having the procedure. I have been told about what results to expect, which includes information about the chances for the expected results. I know that results cannot be guaranteed. I have been told about potential problems that may occur during recuperation.

I understand that there are risks for all kinds of surgery and for "invasive procedures" *(procedures where a blood vessel, body cavity, or other internal tissue is entered with a needle, tube, or similar device)*. These risks, which can be serious, include bleeding, infection, and damage to nearby tissues, vessels, nerves, or organs. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I have received this added detailed information and/or patient information materials about the procedure(s):

_____

Print added information or title of information materials

I understand whether I will receive either anesthesia or sedation medicine, or both. I have been told about my choices for anesthesia and sedation and about their risks and benefits. I have been told about side effects of the medicine(s) and problems they may cause with recovery.

I understand that anesthesia and sedation medicines used for procedures involve risks. These risks can be serious.

SPECIAL CONSENT FOR PROCEDURAL TREATMENT

U0173

UH0173 REV APR 17 BACK

AN IMPORTANT MESSAGE FROM MEDICARE ABOUT YOUR RIGHTS

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-0692

AS A HOSPITAL INPATIENT, YOU HAVE THE RIGHT TO:

- Receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, which will pay for them, and where you can get them.
- Be involved in any decisions about your hospital stay, and know who will pay for it.
- Report any concerns you have about the quality of care you receive to the Quality Improvement Organization listed here: KEPRO: 1-888-305-6759

YOUR MEDICARE DISCHARGE RIGHTS

Planning For Your Discharge: During your hospital stay hospital staff will be working with you to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.

If you think you are being discharged too soon:

- You can talk to the hospital staff, your doctor and your managed care plan *(if you belong to one)* about your concerns.
- You also have the right to an appeal, that is, a review of your case by a Quality Improvement Organization (QIO). The QIO is an outside reviewer hired by Medicare to look at your case to decide whether you are ready to leave the hospital.
  - ***If you want to appeal, you must contact the QIO no later than your planned discharge date and before you leave the hospital.***
  - If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
- If you do not appeal, but decide to stay in the hospital past your planned discharge date, you may have to pay for any services you receive after that date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206 744 9355
Please sign and date here to show you received this notice and understand your rights.

Signature of Patient or Representative	Patient Name (printed)	Date/Time

PAGE 1/2 * RCVD AT 7/29/2019 10:46:37 AM [Pacific Daylight Time] * SVR:EPIC-RF-P2/7 * DNIS:3251 * CSID: * DURATION (mm-ss):01-29

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
  - Here is the contact information for the QIO:
    KEPRO:
    Toll-free Phone: 1-888-305-6759
    Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.

- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☑ HMC: Medicare Provider Number ☑ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO APPEAL, YOU HAVE OTHER APPEAL RIGHTS:

- You can still ask the QIO or your plan *(if you belong to one)* for a review of your case:
  - If you have Original Medicare: Call the QIO listed above.
  - If you belong to a Medicare Advantage Plan or other Medicare managed care plan: Call your plan.
- If you stay in the hospital, the hospital may charge you for any services you receive after your planned discharge date.

For more information, call 1-800-MEDICARE (1-800-633-4227), or TTY: 1-877-486-2048.

CARE AGREEMENT

7/31/2019 12:37:42 PM

This form contains facts you should know about your health care at UW Medicine and from Children's University Medical Group, University of Washington Dentists and Oral Surgeons, and Seattle Cancer Care Alliance. If there is any part of this form that is unclear you can ask questions about it. At the bottom of the form there is a place for you to sign your name so that we know you have read this form (or had it read to you) and agree to receive health care from us.

UW Medicine includes:

- Harborview Medical Center and Clinics
- Northwest Hospital & Medical Center and Clinics
- University of Washington Medical Center and Clinics
- Airlift Northwest
- UW Medicine Neighborhood Clinics
- UW Physicians Sports Medicine Clinic
- Hall Health Primary Care Center,
- Summit Cardiology, and
- UW Physicians

Your health care team consists of medical doctors, doctors in training (residents and fellows), nurses, other health care professionals, and students of the health sciences. They will work together to diagnose and treat you. You will have an attending physician. This is the doctor who has primary responsibility for your care.

Photographs, videotapes, or other images of you may be used to keep a record of your care and treatment (including surgery). These images may become part of your medical record. Part of your care may take place through telemedicine technology, which may mean 1) live video between your care team members *(in which you also may be involved)*, or 2)"remote" review by your care team of the images described above.

SIGNATURE

By signing below, it shows that you have read this document and agree to receive health care from UW Medicine. If there is any part of this form that is unclear, be sure to ask questions about it.

Financ Agreement & Consent for D closure

7/24/2019 12:57:42 PM

By signing below, I agree:

1. That Harborview Medical Center and Clinics (HMC), Northwest Hospital & Medical Center and Clinics (NWH), University of Washington Medical Center and Clinics (UWMC), Valley Medical Center and Clinics (VMC), UW Medicine Neighborhood Clinics (UWNC), UW Medicine Sports Medicine Clinic (UW Sports Med), Hall Health Primary Care Center (HHPCC), and University of Washington Physicians (UWP) (collectively known as "UW Medicine"), University of Washington School of Dentistry (SOD), Children's University Medical Group (CUMG) and Seattle Cancer Care Alliance (SCCA) may share any financial information I provide to facilitate payment.
2. To pay UW Medicine, SOD, CUMG and/or SCCA for balances remaining after insurance benefits are paid, unless prohibited by law or contract.
3. To notify UW Medicine, SOD, CUMG and/or SCCA of changes to my insurance coverage and/or address.
4. That UW Medicine, SOD, CUMG and/or SCCA may impose reasonable interest, late charges, costs and/or reasonable attorney's fees should my account become delinquent.
5. To notify UW Medicine, SOD, CUMG, and/or SCCA if I am not able to pay my balance due within 30 days of receipt.
6. To apply to other financial programs that I may qualify for as requested by UW Medicine, SOD, CUMG and/or SCCA, should I be unable to pay my account.
7. That any lawsuit for collection of my account may be brought in King County, Washington.
8. To receiving information related to treatment, payment or health care operations, including receiving autodialed and prerecorded message calls and/or text messages, at any number I have provided or, if not current, to any number I am reasonably found to be associated with.
9. That UW Medicine may, at its discretion, disclose to appropriate parties my medical records or information from my records for treatment, payment and health care operation purposes.

By signing this page, I acknowledge that I have read and agreed to the terms on both sides of this form.

FINANCIAL AGREEMENT & CONSENT FOR DISCLOSURE

U1865

UH1865 REV MAR 16

WHITE – MEDICAL RECORD
CANARY – PATIENT

Financial Agreement & Consent for Disclosure

I understand that:

- Each UW Medicine entity, SOD, CUMG, and/or SCCA bill separately for their services.
- Patients who receive outpatient services at UWMC or HMC sites generally receive two bills: one bill from the physician or other provider (for the costs of the professional services) and one bill from the hospital (for the facility costs, i.e. building, equipment, supplies, staff time). Each of these bills may incur a co-payment or co-insurance responsibility, depending on my insurance coverage. The exact amount of the co-insurance or co-payment will depend upon the actual services provided and the coverage provisions of any insurance I have. Sometimes patients will pay more for certain outpatient services and procedures at hospital-based outpatient locations. The amount will depend on my insurance. I may review my insurance benefits or contact my insurer to learn what my policy will pay and what out-of-pocket expenses I may need to pay. At my request, clinic staff will provide me with an estimate of the billed charges for outpatient services I am likely to receive.
- UW Medicine requests and, if I provide it, will use my Social Security Number to facilitate access to any potential federal or state health care benefits, to verify my identity, or to facilitate discharge planning. Providing my Social Security Number is voluntary except when applying for state and federal health care benefits.
- My Consumer Credit Report information may be accessed for the following reasons: to make determination of available financial assistance, assistance in managing the payment process, or if I report that my identity has been stolen.

Statement to Permit Payment of Medicare or Insurance Benefits to Provider

I request payment of authorized Medicare or insurance benefits for any services furnished to me by UW Medicine, SOD, CUMG, and/or SCCA. I authorize any holder of medical and other information about me to release to Medicare [and its agents] or other insurance providers any information needed to determine these benefits for related services.

Patient Information for Inclusion in the UW Medicine Patient Directory

Please Read this Statement Carefully

I understand that I have a choice as to whether or not to be included in the UW Medicine patient directory. My name and location will be included in the patient directory unless I would prefer not to receive phone calls or visitors. My decision is indicated by marking a box and signing this form.

☐ **YES, please include me in the Patient Directory.** The hospital has informed me that my name and location will be included in its hospital directory. This information will be made available to people who ask for me by name such as my relatives, friends and fellow employees

- Harborview Medical Center
- Northwest Hospital and Medical Center
- University of Washington Medical Center / Seattle Cancer Care Alliance
- Valley Medical Center

If I have provided my religious affiliation to UW Medicine in the past or if I provide my religious affiliation to UW Medicine now, I authorize its disclosure to clergy of my religious affiliation. Disclosure of my religious affiliation may result in a visit from a clergy member of my affiliation while I am being treated at UW Medicine.

If you have provided your religious affiliation to UW Medicine in the past and do not want a visit from a clergy member of your affiliation, please inform the registration staff.

☐ **NO, please do not include me in the Patient Directory.** I do not want my name or location included in the UW Medicine Patient Directory. **If this is my choice, I understand UW Medicine staff will <u>not</u> be able to confirm I am a patient or share my location with any family or friends. I also understand that by choosing not to be in the directory, UW Medicine will be unable to deliver items *(for example, flowers and gifts)* addressed to me.**

For Staff Use Only

☐ **ADMIN OPT-OUT:** Please provide reason for Administrative Opt-Out

☐ Crime Victim ☐ Employee ☐ Incarcerated Patient

☐ Involuntary Commitment ☐ Unable to Interview Patient ☐ Media Interest

Name of person requesting opt out *(if other than patient)*: _____

By signing below, it shows that you have read this document. If there is any part of this form that is unclear, be sure to ask questions about it.

HARBORVIEW MEDICAL CENTER

PATIENT PROPERTY NOTICE, WAIVER AND ASSUMPTION OF RISK

Harborview Medical Center (HMC) staff respects and promotes the rights of all patients. Patients should expect that efforts are taken to promote a safe and secure environment. HMC will make reasonable efforts to safeguard the personal property of patients, however property is generally the responsibility of patients and their families and HMC cannot guarantee the security of personal property. To minimize potential harm to personal property including loss, misplaced, stolen or damaged items, the following practices will be observed:

HMC has two choices for storing personal property of patients during hospitalization:	**1**	**One choice is placing items in the HMC "Valuables and Property Storage System". This choice involves HMC placing valuables (examples: watch, jewelry, dentures, glasses) or property into a secure area. This "Valuables and Property Storage System" utilizes a witnessed (2 person) property check-in process. It is generally for nonessential items and access to this may be limited by hours of operation.**
	2	**Another choice for storing property is in the patient's room. The patient is generally responsible for these items and these items are generally accessible to the patient. HMC will provide limited locked storage spaces for patient storage of personal property in the hospital room during hospitalization.**

- Patients are strongly encouraged to leave and/or send all nonessential belongings and valuables home.
- Biohazards or severely damaged clothing are generally discarded immediately unless required for forensic evidence. (Biohazards means: clothing or other items are contaminated in the judgment of medical staff and presents a health risk.)
- HMC will dispose of unclaimed patient belongings as allowed by law after proper notice and time period for retrieval of items. When patient belongings are not claimed after 30 days, notice will be given and if such property remains unclaimed for an additional 60 days then it shall be disposed of as allowed by law.
- Further information about HMC's property policies and procedures will be provided as needed or requested to the patient or patient's authorized representative.

Patient's Personal Property Liability Agreement

I, the undersigned, have read or have been informed about the above policy. I/patient understand that I/patient am responsible for all property brought to Harborview Medical Center. I/patient understand that the hospital recommends all nonessential items be left at home or be sent home with family or friends.

I/patient understand that the hospital provides a "Valuable and Property Storage System" for important personal property and that access to this area may be limited by hours of operation.

I/patient agree to hold the hospital and its employees harmless from liability for my/patient's property if it is lost, misplaced, stolen or damaged when such property is not placed in the "Valuable and Property Storage System" or otherwise under the direct control of the hospital. I/patient further acknowledge the potential harm to property maintained by the hospital due to circumstances beyond the hospital's control (e.g. fire, earthquake) and hereby release the hospital from any liability in such circumstances

By signing below, I agree:

1. That Harborview Medical Center and Clinics (HMC), Northwest Hospital & Medical Center and Clinics (NWH), University of Washington Medical Center and Clinics (UWMC), Valley Medical Center and Clinics (VMC), UW Medicine Neighborhood Clinics (UWNC), UW Medicine Sports Medicine Clinic (UW Sports Med), Hall Health Primary Care Center (HHPCC), and University of Washington Physicians (UWP) (collectively known as "UW Medicine"), University of Washington School of Dentistry (SOD), Children's University Medical Group (CUMG) and Seattle Cancer Care Alliance (SCCA) may share any financial information I provide to facilitate payment.
2. To pay UW Medicine, SOD, CUMG and/or SCCA for balances remaining after insurance benefits are paid, unless prohibited by law or contract.
3. To notify UW Medicine, SOD, CUMG and/or SCCA of changes to my insurance coverage and/or address.
4. That UW Medicine, SOD, CUMG and/or SCCA may impose reasonable interest, late charges, costs and/or reasonable attorney's fees should my account become delinquent.
5. To notify UW Medicine, SOD, CUMG, and/or SCCA if I am not able to pay my balance due within 30 days of receipt.
6. To apply to other financial programs that I may qualify for as requested by UW Medicine, SOD, CUMG and/or SCCA, should I be unable to pay my account.
7. That any lawsuit for collection of my account may be brought in King County, Washington.
8. To receiving information related to treatment, payment or health care operations, including receiving autodialed and prerecorded message calls and/or text messages, at any number I have provided or, if not current, to any number I am reasonably found to be associated with.
9. That UW Medicine may, at its discretion, disclose to appropriate parties my medical records or information from my records for treatment, payment and health care operation purposes.

By signing this page, I acknowledge that I have read and agreed to the terms on both sides of this form.

FINANCIAL AGREEMENT & CONSENT FOR DISCLOSURE

U1865

UH1865 REV MAR 16

WHITE – MEDICAL RECORD
CANARY – PATIENT

Financial Agreement & Consent for Disclosure

I understand that:

- Each UW Medicine entity, SOD, CUMG, and/or SCCA bill separately for their services.
- Patients who receive outpatient services at UWMC or HMC sites generally receive two bills: one bill from the physician or other provider (for the costs of the professional services) and one bill from the hospital (for the facility costs, i.e. building, equipment, supplies, staff time). Each of these bills may incur a co-payment or co-insurance responsibility, depending on my insurance coverage. The exact amount of the co-insurance or co-payment will depend upon the actual services provided and the coverage provisions of any insurance I have. Sometimes patients will pay more for certain outpatient services and procedures at hospital-based outpatient locations. The amount will depend on my insurance. I may review my insurance benefits or contact my insurer to learn what my policy will pay and what out-of-pocket expenses I may need to pay. At my request, clinic staff will provide me with an estimate of the billed charges for outpatient services I am likely to receive.
- UW Medicine requests and, if I provide it, will use my Social Security Number to facilitate access to any potential federal or state health care benefits, to verify my identity, or to facilitate discharge planning. Providing my Social Security Number is voluntary except when applying for state and federal health care benefits.
- My Consumer Credit Report information may be accessed for the following reasons: to make determination of available financial assistance, assistance in managing the payment process, or if I report that my identity has been stolen.

Statement to Permit Payment of Medicare or Insurance Benefits to Provider

I request payment of authorized Medicare or insurance benefits for any services furnished to me by UW Medicine, SOD, CUMG, and/or SCCA. I authorize any holder of medical and other information about me to release to Medicare [and its agents] or other insurance providers any information needed to determine these benefits for related services.

AN IMPORTANT MESSAGE FROM MEDICARE ABOUT YOUR RIGHTS

8/5/2019 10:59:25 AM

DEPARTMENT OF HEALTH & HUMAN SERVICES
Centers for Medicare & Medicaid Services
OMB Approval No. 0938-0692

AS A HOSPITAL INPATIENT, YOU HAVE THE RIGHT TO:

- Receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, which will pay for them, and where you can get them.
- Be involved in any decisions about your hospital stay, and know who will pay for it.
- Report any concerns you have about the quality of care you receive to the Quality Improvement Organization listed here: KEPRO: 1-888-305-6759

YOUR MEDICARE DISCHARGE RIGHTS

Planning For Your Discharge: During your hospital stay hospital staff will be working with you to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.

If you think you are being discharged too soon:

- You can talk to the hospital staff, your doctor and your managed care plan *(if you belong to one)* about your concerns.
- You also have the right to an appeal, that is, a review of your case by a Quality Improvement Organization (QIO). The QIO is an outside reviewer hired by Medicare to look at your case to decide whether you are ready to leave the hospital.
    - **If you want to appeal, you must contact the QIO no later than your planned discharge date and before you leave the hospital.**
    - If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
- If you do not appeal, but decide to stay in the hospital past your planned discharge date, you may have to pay for any services you receive after that date.

Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call 206 744 9535
Please sign and date here to show you received this notice and understand your rights.

Signature of Patient or Representative | Patient Name (printed): Louri Allora Soa/Cure | Date/Time: 7/29/19 1043AM

If signed by person other than patient, provide printed name, relationship to patient, description of authority

WHITE – MEDICAL RECORD
CANARY – HMC: FINANCIAL SVCS
UWMC: ADMITTING
PINK – PATIENT

8/7/2019 10:59:23 AM

STEPS TO APPEAL YOUR DISCHARGE

- **STEP 1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal *(except for charges like copays and deductibles)*.
    - Here is the contact information for the QIO:
      KEPRO:
      Toll-free Phone: 1-888-305-6759
      Toll-free Fax: 1-833-868-4064

You can file a request for an appeal any day of the week.
Once you speak to someone or leave a message, your appeal has begun.

- Ask the hospital if you need help contacting the QIO.
- The name of this hospital is:

☑ HMC: Medicare Provider Number ☑ 50-0064 *(acute care)* ☐ 50-S064 *(psych)* ☐ 50-T064 *(rehab)*
☐ UWMC: Medicare Provider Number ☐ 50-0008 *(acute care)* ☐ 50-S008 *(psych)* ☐ 50-T008 *(rehab)*

- **STEP 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **STEP 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **STEP 4**: The QIO will review your medical records and other important information about your case.
- **STEP 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
    - If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
    - If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

IF YOU MISS THE DEADLINE TO APPEAL, YOU HAVE OTHER APPEAL RIGHTS:

- You can still ask the QIO or your plan *(if you belong to one)* for a review of your case:
    - If you have Original Medicare: Call the QIO listed above.
    - If you belong to a Medicare Advantage Plan or other Medicare managed care plan: Call your plan.
- If you stay in the hospital, the hospital may charge you for any services you receive after your planned discharge date.

For more information, call 1-800-MEDICARE (1-800-633-4227), or TTY: 1-877-486-2048.
CMS does not discriminate in its programs and activities. To request this publication in an alternate format, please call: 1-800-MEDICARE or email AltFormatRequest@cms.hhs.gov.

HOFFMAN, JEANNE LEONIE

DOB: 01/06/1925
MRN: U8170135

Study Date: 01/10/2019 11:49
Accession #: 12052156 **Pt Type:** O
Account #: 1833623385
Pt. Location: NWH WOUND CARE

XR Tibia Fibula 2 Views Left

Referring Provider:
NORSWORTHY, NILUFER BOZDEMIR, MD
FRANCISCAN MEDICAL GROUP
34503 NINTH AVE S, SUITE 100
FEDERAL WAY, WA 98003

EXAMINATION:
XR Tibia Fibula 2 Views Left

CLINICAL INDICATION:
worsening wound at left medial ankle

COMPARISON:
Radiographs of the left tibia and fibula dated August 17, 2017.

FINDINGS AND IMPRESSION:
The bones are diffusely demineralized.

No acute fracture or dislocation. No periostitis, focal osteopenia, or osseous erosion to suggest osteomyelitis.

There is soft tissue irregularity/ulceration along the medial distal calf. No definite soft tissue gas. No radiopaque foreign body. Vascular calcifications are present.

Dictated and verified by: CHRISTINE MARIE REHWALD, MD Up'd 5/18/2015 ms. Up'd 3/2015 ms. resident 2014 jl

Seattle, WA 98133-9733

Inpatient Coding Summary

Patient Name	Sex	Birth Date	Age	MR Number	Account Number
HOFFMAN, JEANNE LEONIE	**FEMALE**	**01/06/1925**	**93**	**U8170135**	**1830020513**

Admit Date	Discharge Date	LOS	Financial Class	Disposition
09/10/18 06:56 PM	**09/19/18 01:30 PM**	**9**	**Medicare**	**06 - 06 HOME HEALTH CARE**

Attending Physician	Coder	Patient Type
Abbott Klafter,Jesse MD	**Pamela Campbell**	**Inpatient**

MDC Code / Text
010 ENDOCRINE, NUTRITIONAL & METABOLIC DISEASES & DISORDERS

DRG Code / Text
641 MISC DISORDERS OF NUTRITION,METABOLISM,FLUIDS/ELECTROLYTES W/O MCC

CMS Weight	Average LOS	Geometric Mean LOS	Estimated Reimbursement
0.7461	**3.3**	**2.6**	**0.00**

Primary Diagnosis

Y E861 Hypovolemia

Secondary Diagnosis

Y # L97929 Non-pressure chronic ulcer of unspecified part of left lower leg with unspecified severity
Y R55 Syncope and collapse
Y R197 Diarrhea, unspecified
Y I872 Venous insufficiency (chronic) (peripheral)
Y I771 Stricture of artery
E Z7901 Long term (current) use of anticoagulants
Y R269 Unspecified abnormalities of gait and mobility
Y G629 Polyneuropathy, unspecified
E Z86718 Personal history of other venous thrombosis and embolism
Y R911 Solitary pulmonary nodule
Y D649 Anemia, unspecified
Y E785 Hyperlipidemia, unspecified
N M542 Cervicalgia
N M62838 Other muscle spasm
N S161XXA Strain of muscle, fascia and tendon at neck level, initial encounter
N X58XXXA Exposure to other specified factors, initial encounter
Y E860 Dehydration
Y R296 Repeated falls
E Z9181 History of falling

Procedures	Provider	Date
2W1RX6Z Compression of Left Lower Leg using Pressure Dressing	Harris,Mary Catherine AR	09/17/18

Chemistry from 9/10/2018 7:38 PM

Sodium 135 mEq/L *(135-145 mEq/L)*
Potassium 4.1 mEq/L *(3.6-5.2 mEq/L)*
Chloride 102 mEq/L *(98-108 mEq/L)*
Carbon Dioxide, Total 26 mEq/L *(22-32 mEq/L)*
Anion Gap 7 *(4-12)*
Glucose 131 mg/dL H *(62-125 mg/dL)*
Urea Nitrogen 26 mg/dL H *(8-21 mg/dL)*
Creatinine 0.91 mg/dL *(0.38-1.02 mg/dL)*
Protein (Total) 7.0 g/dL *(6.0-8.2 g/dL)*
Albumin 3.6 g/dL *(3.5-5.2 g/dL)*
Bilirubin (Total) 0.3 mg/dL *(0.2-1.3 mg/dL)*
AST (GOT) 14 U/L *(9-38 U/L)*
ALT (GPT) 9 U/L *(7-33 U/L)*
Alkaline Phosphatase (Total) 66 U/L *(49-199 U/L)*
eGFR, Calc, European American 58 mL/min/1.73_m2 L *(>59- mL/min/1.73_m2)*
eGFR, Calc, African American >60 mL/min/1.73_m2 *(>59- mL/min/1.73_m2)*

eGFR, Information (Reference Range: not available)
Calculated GFR in mL/min/1.73 m2 by MDRD equation.
Inaccurate with changing renal function. See

http://depts.washington.edu/labweb/test/bclim/cGFR.html
Procalcitonin <0.05 ng/mL *(0-0.49 ng/mL)*
Procalcitonin Component (Reference Range: not available)
Sepsis diagnosis in adults:
PCT <0.5 ng/mL Low risk for progression to severe systemic bacterial infection. Repeat level in 6-24 hours if infection is strongly suspected.
PCT >=0.5 and <2.0 ng/mL Moderate risk for progression to severe sepsis.
PCT >=2 and <10 ng/mL High risk for progression to severe sepsis.
PCT >=10 ng/mL High likelihood of severe sepsis or septic shock.

PCT concentrations <0.5 ng/mL do not exclude an infection, on account of localized infections (without systemic signs) which can be associated with such low concentrations, or a systemic infection in its initial stages (<6 hours).
Furthermore, increased PCT can occur without infection.
PCT concentrations between 0.5 and 2.0 ng/mL should be interpreted taking into account the patient's history.
It is recommended to retest PCT within 6-24 hours if any concentrations of <2 ng/mL are obtained.
Calcium 8.9 mg/dL *(8.9-10.2 mg/dL)*

Chemistry from 9/11/2018 5:55 AM

Sodium 141 mEq/L *(135-145 mEq/L)*

Phencyclidine Qual, URN Negative *(NRN)*
Alcohol (Ethyl), URN (Reference Range: not available)
Negative
Quantitative testing for ethanol is by enzymatic method.
Ethanol cutoff limit: 10 mg/dL
Acetaminophen Qualitative, URN Positive A *(NRN)*
Drug Screen Test Info, URN (Reference Range: not available)
These results are presumptive and have not been confirmed as positive by an alternate method.

Results are for medical management only, and should not be used for legal purposes nor for workplace or pre-employment testing.

Qualitative immunochemical testing for amphetamines, barbiturates, benzodiazepines, cocaine metabolites, methadone, opiates, phencyclidine (PCP), cannabinoids, and tricyclic antidepressants.
Positive results indicate immunoreactivity greater than or equal to these calibrators: d-methamphetamine 500 ng/mL, secobarbital 200 ng/mL, lormetazepam 200 ng/mL, benzoylecgonine 150 ng/mL, methadone 150 ng/mL, morphine 300 ng/mL, phencyclidine 25 ng/mL, nortetrahydrocannabinoic acid 50 ng/mL, nortriptyline 1000 ng/mL and acetaminophen 5 mcg/mL.

Quantitative testing for ethanol is by an enzymatic method. Results less than 10 mg/dL are reported as negative.

This test was developed and its performance characteristics determined by the University of Washington Department of Laboratory Medicine in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. FDA.

Plan of Care

Treatment Plan from 9/17/2018 12:39 PM:

- Primary Care Provider : Neighbor Jr., William E, MD
- Follow Up Phone : 206-616-9358
- When : Within 7 days, call to schedule appointment.
- Additional Follow Up Appointment : Wound care clinic
- Follow Up Phone : 206 668-1244
- When : 9/20/2018 @ 11:15 AM [Thursday]
- Lab When : INR on Thursday.

Treatment Plan from 9/19/2018 11:54 AM:

- Primary Care Provider : Neighbor Jr., William E, MD
- Follow Up Phone : 206-616-9358
- When : Within 7 days, call to schedule appointment.
- Additional Follow Up Appointment : Wound care clinic
- Follow Up Phone : 206 668-1244
- When : 9/24/2018 @ 8:30 AM [Monday]
- Lab When : INR on Friday 9/21/2018
- Additional Referral : Kindred Home Health

Treatment Plan from 9/19/2018 11:58 AM:

Procedures

No relevant procedures performed.

Immunizations

No immunizations administered.

Hospital Course

Hospital Discharge Instructions

Detailed Instructions from 9/17/2018 12:39 PM:

Activity Instructions
- Activity : Fall precautions.

Diet Instructions
- Diet Instructions : Resume previous diet
- Fluid Intake : Drink 6-8 glasses per day

Medication Administration Instructions
- Med Administration Instructions : Whole with thin liquids

Additional Instructions
- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

- Fever of 100.5 F or higher or chills
- Increased/ Excessive Bleeding
- Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
- Frequency, burning, foul smelling or blood with urination or unable to urinate
- Persistent diarrhea or constipation
- Pain, redness and swelling in lower legs
- Pain unrelieved with medication and rest
- Unable to tolerate oral fluids or food
- Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
- Swelling unrelieved by elevation, rest or ice
- Severe leg/calf pain
- Chest pain
- Shortness of breath
- Fatigue
- Weight gain of more than 3 pounds in 3 days

Allergies, Adverse Reactions, Alerts

This section is representative of the current allergy information, at the time of the CCD generation. In the case of regeneration of the CCD, the allergy information may not reflect the state of known allergies at the time of the CCD's subject visit.

- nitrofurantoin causes CONFUSION, NAUSEA, ABD PAIN. Status:Active.
- aspirin causes Rash. Status:Active.
- adhesive tape causes Rash. Status:Active.
- Penicillins causes Rash. Status:Active.
- Sulfa (Sulfonamide Antibiotics) causes Rash. Status:Active.

- No Latex Allergy.
- No IV Contrast Allergy.

Medication

It is the responsibility of the patient or patient representative to confirm the list of medications with either the patient's personal care provider or the patient's follow-up care provider to ensure the patient has an appropriate list of medications to take at home.

Preliminary list - medication reconciliation not completed.

Discharge medications

New medications

- acetaminophen 325 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 2 tablet oral every six hours PRN MILD PAIN
  Additional Instructions: ONLY take if NOT taking norco
- LIDOCAINE 4% PATCH (ASPERCREME LIDOCAINE PATCH) 1 PATCH = 1 PATCH Transdermal DAILY First Dose Now, Clinician Dir:SWITCH TO 4% PER HOSPITAL POLICY PATCH: 12 HOURS ON, 12 HOURS OFF. Buy over the counter.
  Directions: 1 each transdermal daily
  Additional Instructions: SWITCH TO 4% PER HOSPITAL POLICY PATCH: 12 HOURS ON, 12 HOURS OFF
- methocarbamol 500 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral every six hours PRN Neck pain
- atorvastatin (Lipitor) 10 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily

Continued medications

- cholecalciferol (vitamin D3) 1,000 unit Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily every morning
- timolol maleate 0.5 % Drops, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 drop ophthalmic, both eyes daily every morning

Changed medications

- HYDROcodone-acetaminophen 5 mg-325 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1-2 tablet oral every six hours PRN pain
- warfarin (Coumadin) 4 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily every evening
  Additional Instructions: check INR on friday

Stopped medications

- cyanocobalamin (vitamin B-12) 1,000 mcg Tablet
  Directions: 1 tablet oral daily every morning
- pentoxifylline 400 mg Tablet Extended Release
  Directions: 1 tablet oral every eight hours
- lactulose 10 gram/15 mL Solution
  Directions: 30 mL oral twice a day PRN constipation
  Additional Instructions: if no BM in 3 days
- bisacodyl (Dulcolax (bisacodyl)) 10 mg Suppository
  Directions: 1 suppository per rectum daily PRN constipation
  Additional Instructions: if no BM in 4 days

Clinical Notes Report

Generated from 09/10/2018 00:00 to 10/10/2018 23:59

Collected Date/Time: 09/19/18 13:23 **Collected By:** Kari Carney, RN

Note: ADT Time: 1315
Transported From: 444
Transported To: Home
Transportation Method: W/C
Accompanied By: Volunteer and her son
Location of Personal Belongings: w/ pt's son
Belongings List Completed: yes by Samson
Items in Hospital Safe or Pharmacy Returned to Patient: None
Comments: A/Ox3, son at bedside. Reviewed discharge instructions regarding medications, pain managment, drsg changes and indications to contact md.

Collected Date/Time: 09/19/18 13:08 **Collected By:** Kari Carney, RN

Note: Outcome Name: Identified Safe Discharge Plan
Outcome Status: Not Met
Pt and her son decline any care facilities and verbalize understanding of risks.

Collected Date/Time: 09/19/18 11:57 **Collected By:** Kari Carney, RN

Note: Plan of Care Reviewed: :
A/Ox3, can be forgetful. Son at bedside. She reports 5/10 neck pain is managed with Oxcodone 2.5mg. Up to chair all morning. LLE drsg cdi, leg is elevated.

Collected Date/Time: 09/19/18 06:06 **Collected By:** Marivic S Flora-Doidge, RN

Note: Pt c/o severe neck pain with activity, she could scream in pain but she controls not to. She is able to get OOB without any help, walks to the BR using FWW w/ supervision, she has steady gait. Denies pain on LLE with ambulation, LLE dressing intact. Voiding without difficulty, has small BM last noc. Son at bedside.

Collected Date/Time: 09/18/18 19:03 **Collected By:** Kari Carney, RN

Note: Plan of Care Reviewed: :
A/Ox3. Son at bedside, very involved. She sat up in the chair most of the day. Ambulates to the bathroom w/ 1 person assist and FWW. Voiding. 2 formed BM's. Fair appetite. She reports neck pain ranges from 5-7/10 and is well managed with routine tylenol and prn Oxy 2.5mg. LLE drsg cdi, leg elevated on foot rest while sitting up.

Collected Date/Time: 09/18/18 05:50 **Collected By:** Agnes A Okolie, RN

Note: Pt A/Ox3, very HOH, pocket talker to communicate, Pt is very weak, need assistence with activity. Pt noted, to be very painful, on the neck, when needing to get up. Pt will support head with, both hands behind her head. Pt neck, appears to be stiff, Pt medicated with half of oxycodone, on routine tylenol. Pt voiding, had small BM, during this shift.

Collected Date/Time: 09/17/18 18:27 **Collected By:** Susan E Baker, RN

Clinical Notes Report

Generated from 09/10/2018 00:00 to 10/10/2018 23:59

Collected Date/Time: 09/17/18 18:27 **Collected By:** Susan E Baker, RN

Note: Plan of Care Reviewed: :
C/o neck pain. MRI revealed most likely muscle strain and narrowing. Pain relieved by po oxy. Dsg L LE changed by wound care nurse this afternoon. Son at bedside all shift. Warfarin held this shift. please place dentures in for eating meals. Meals on house menu plan. elevate LLE on pillow. Plan still to d/c home w/ son.

Collected Date/Time: 09/17/18 03:34 **Collected By:** Fitsum Nedi, RN

Note: Plan of Care Reviewed: :
A/O x 4. Make needs known. HOH.VSS. C/o pain on Neck, medicated with PRN Tylenol + Oxycodone with good effect. 1 SBA to the BSC. Dressing on RLE, C/D/I. Will CTM pt.

Collected Date/Time: 09/16/18 22:26 **Collected By:** Ebrima Fatajo, RN

Note: Reported right neck pain, "i did not sleep well due to pain." Pain felt mostly on the right neck, also on the right shoulder and scapula.These three site tender to touch.Denies any numbness of BUE, has good ROM. Has new order for Oxycodone and lidocain patch for pain management.Pain was quite bothersome in the morning, improved slightly this afternoon and evening, was able to walk in the hallway.

Collected Date/Time: 09/16/18 03:37 **Collected By:** Michelle Tomita, RN

Note: Outcome Name: Effective Pain Control
Outcome Status: Progressing
No c/o pain. LLE elevated on pillows, dressing intact.

Collected Date/Time: 09/14/18 18:46 **Collected By:** Ebrima Fatajo, RN

Note: LLE venous ulcer dressing changed,from knee down with rubor, multiples ulcers.Painful with dressing change but patient tolerated it well without pain meds.No fever,SOB chest pain, dizziness reported

---

Collected Date/Time: 09/14/18 04:31 **Collected By:** Nisha Kumari Padha, RN

Note: Patient is alert and oriented, can use call light appropriately. Denies pain. LLE with dresssing, daily dressing change. IV is saline locked. One person SBA with FWW to restroom, voiding.

Collected Date/Time: 09/14/18 01:48 **Collected By:** Nisha Kumari Padha, RN

Note: Outcome Name: No Fall
Outcome Status: Progressing
Patient uses call light effectively.

Collected Date/Time: 09/14/18 01:48 **Collected By:** Nisha Kumari Padha, RN

Note: Outcome Name: Effective Pain Control

Clinical Notes Report

Generated from 09/10/2018 00:00 to 10/10/2018 23:59

Collected Date/Time: 09/14/18 01:48 **Collected By:** Nisha Kumari Padha, RN

Outcome Status: Progressing
Patient denies pain.

Collected Date/Time: 09/13/18 17:06 **Collected By:** Cindy Jo Allen, RN

Note: Plan of Care Reviewed: :
pt has been alert and oriented x4 today; has not tried to get up without help; participated in therapy and got OOB for meals; during discussions about discharge plan, she states adamantly that she "has to talk to Lou and see what he wants me to do; if he wants me to go to a home, then I will;" she also says "I don't want to do anything to hurt him;" she talks at length about memories of being treated poorly in the last place where they lived and says "i don't know if that might happen again;" she describes how she wants to be independent and is afraid that her independence will be restricted if she goes to a home

---

Collected Date/Time: 09/13/18 03:48 **Collected By:** Susan Mathews, RN

Note: Sleeping well. Appears comfortable. Turn q2hrs and applying skin protective cream.

Collected Date/Time: 09/12/18 22:29 **Collected By:** Queenie Ching, RN

Note: Plan of Care Reviewed: :
Patient was up in the chair for most of the day. She walked in the hall once with the CNA. Wound RN came to change dressing on patient left leg. Patient was told to elevate the leg.

Collected Date/Time: 09/12/18 03:55 **Collected By:** Susan Mathews, RN

Note: Patient sleeping well. Appears comfortable.

Collected Date/Time: 09/12/18 00:37 **Collected By:** David Trush, RN

Note: sleeping. Vss. Mild pain at rest Ref. pain meds at this time. LLE D/I. Foot is warm and pink. Pt is HOH. A/O3. Up to BR with one person min. asst and FWW.

Collected Date/Time: 09/11/18 18:08 **Collected By:** Mary J Jeffries, RN

Note: Plan of Care Reviewed: :
Pt up with SBA and FWW today. Dressing changed after MD removed to view LLE venous wounds. Negative for Cdiff so isolation removed.

Collected Date/Time: 09/11/18 06:17 **Collected By:** Joan C Rama, RN

Note: Pt. A/O x3. Very HOH, on tele monitoring for syncope, presently SR. On contact isolation for possible C-diff. Needs to collect stool specimen. LLE- with dressing and has wound consult ordered. Hx. of DVT and is currently taking coumadin.

Care Management Progress Note

Progress Note

SW met with pt at bedside. She was just being discharged from Park Ridge Care Center when she was admitted to the hospital. Per Rosemary in admissions there, the pt and her son did not want them to hold a room for her because they do not want to pay the co-pays involved to stay there and no longer want to stay at the SNF. They are planning to reside at a place called the Long Tent, which Rosemary states has warm temperatures and a solid roof. She reports that APS has been invovled in the situation but that the recommendation of the facility was to go to the tent situation as it is stable. The pt insists on staying with her son, per Rosemary. SW spoke with MD and will submit a referral for DSHS to evaluate the pt for an adult family home. This was submitted today. Awaiting response. Follow-up tomorrow.

Next Steps

F/U on referral faxed to DSHS for evaluation of pt for an AFH placement.

Expected Date of Step Completion 09/12/2018

Care Management Progress Note

Progress Note

SW called King County APS investigator C.J. Balstad, (360)473-2166, per request of MD to determine if we can gather any information that would be helpful for discharge disposition. Per the main administration number, although there is an investigator that was assigned to the case, the case is now officially closed. SW left voice mail message for C.J. to see if there is any helpful information that she can provide in terms of discharge. Awaiting return call.

Next Steps

Awaiting return call from APS investigator to determine if any further information can be gathered to help assist MD and SW with discharge disposition.

Expected Date of Step Completion 09/12/2018

Care Management Progress Note

Progress Note	MSW continues to follow. MSW reveiwed pts chart, read and apprciated past SW notes. MSW spoke with Dr Ellingston re: plan of care. MSW appriciated SW collegue sending DSHS COPES assessment referral for AFH on 9/11 as now per discussion with MD, pt/ son are moderatly agreeable to AFH & initiating this process. MSW left void of PHI vm for Intake & Referral at DSHS 206-341-7750 re: to see if SW had been assigned to pt case yet. MSW confirmed with SW Molly @ Park Ridge that Intake was never sent in while pt was at PRCC as pt/son were not agreeable to this at this time. As per discussion with MD - pt son, Louis, is also planning on coming in to NWH on 9/17 in the AM for wound care teaching. Plan of care at this time is likely awaiting COPES assessment for AFH vs return to Long tent with Kindred HH resumption and son educated on wound care. MSW will continue to follow and collaborate with interdisciplinary team.	**Next Steps**	DCP pending. MSW will continue to follow and collaborate with interdisciplinary team.

Care Management Progress Note

Progress Note	Chart reviewed. Initial plans for discharge today. However, pt now with neck pain and, per MD, d/c on hold until medical work-up for neck pain complete. Met with pt (with use of pocket-talker) to discuss d/c plan. Discussed possible option of more supported environment (i.e. AL vs AFH). However, pt reiterates that she wants to discharge to the Long		Tent with son (Louis) and does not want to be evaluated for additional services/more supported environment. Reviewed plans for Kindred HH RN to follow and pt agreeable. DSHS/HCS Referral initiated (9/11). T/C to HCS (Jane Jackson,SW @ 206-341-7838) who has been assigned to pt to provide update. Msg left with request for call back.

Care Management Progress Note

Plan:
1) Per pt decision, pt will discharge to the Long Tent shelter with son, and Kindred HH RN to follow ~ per MD, when neck pain work-up complete.
2) Pt's son (Louis) scheduled to come to NWH (9/17) for wound care teaching.

Darcy Knore, MSW

Next Steps - SW to continue to follow and coordinate dispo. to the Long Tent shelter when medically stable.

Expected Date of Step Completion 09/19/2018

Assessment (OT)

arterial insufficiency, hx bilateral LE DVTs on warfarin, peripheral neuropathy, poor balance, gait instability. PLOF: Pt had been living at SNF for 2 months. Pt admitted from SNF. About to d/c back to her and her son's "hobbit" home. She reports it is a solid, heated, waterproof tent. Pt has a BSC she keeps in her tent. Her son empties it every morning. She walks to the church shower ~ 1 mile away for bathing 1x/week. Son goes with her. Pt has not been back to this tent in 2 months. She does not know if there are chairs to sit in. Reports using the BSC to go outside and sit in the sun previously. Son changed her dressings every 2 days. Son has a BBQ he cooks on outside tent. Canned food. CLOF: Pt very HOH. She was SBA level with FWW in room, toilet transfer and LE dressing. Slow moving and reports fatigue from walking in hallway recently with PT. A&O x 4. Recomendation: Pt does not appear to have the activity tolerance to walk 1 mile to bathe herself. Unclear if she will have a chair to sit in nor ability to have access to fresh food. This living situation appears unsafe and an unsustainable long term living environment, especially coming in to the winter months. Per notes SW as been in contact with d/c coordinators at SNF and APS, recommend APS assessment of living situation prior to d/c there or assessment for AFH. IP OT to follow

Baseline Mobility Score	18	**Mobility Barriers**	Other: see comment section, Pain

Vital Signs (PT)

Comments	asymptomatic

Assessment (PT)

Dysmobility Rating	Mild	**Therapy Diagnosis**	Deconditioning d/t Illness, Gait Deviation, Fall Risk
PT Eval Complete	Jeanne is a 93 year-old F admitted s/p episode of syncope (lost consciousness). PMH: chronic LLE ulcerations, venous and arterial insufficiency, hx bilateral LE DVTs on warfarin, peripheral neuropathy, poor balance, gait instability. Pt had been living at SNF since June 2018 NWH hospitalization (previously residing in tent/"hobbit house" with her son, Louis), has commode and "built-up bed". PLOF: at SNF, had been self-sufficient, amb with FWW. On eval, pt was alert and oriented. Pts son briefly visited and then left to get pts items from SNF. Pt demonstrated slow mobility at CGA level of assist using FWW. Bed mob not tested (see OT note), but estimated at SBA/supervision. Pt lacks activity tolerance to complete all ADLs (walks 1 mile to church shower), needs		CGA for safe mobility, and is a fall risk due to co-morbidities and age. Her living situation appears unsustainable for long-term, especially in winter months. Appreciate SW working with pt/family to find a safe and appropriate living situation (?AFH). Recommend additional PT while in NWH to improve all mobility and safety.

Version	Entered Date	Status	Reason Revised
Revision: 3.00	09/12/2018 13:49	Complete	correct level of assistance for accuracy

Assessment (PT)

Finding Name: PT Eval Complete

Previous Value	Jeanne is a 93 year-old F admitted s/p episode of syncope (lost consciousness). PMH: chronic LLE ulcerations, venous and arterial insufficiency, hx bilateral LE DVTs on warfarin, peripheral neuropathy, poor balance, gait instability. Pt had been living at SNF since June 2018 NWH hospitalization (previously residing in tent/"hobbit house" with her son, Louis), has commode and "built-up bed". PLOF: at SNF, had been self-sufficient, amb with FWW. On eval, pt was alert and oriented. Pts son briefly visited and then left to get pts items from SNF. Pt demonstrated slow mobility at SBA/supervision level of assist using FWW. Bed mob not tested (see OT note), but estimated at SBA/supervision. Pt lacks activity tolerance to complete all ADLs (walks 1 mile to church shower), needs SBA for mobility, and is a fall risk due to co-morbidities and age. Her living situation appears unsustainable for long-term, especially in winter months. Appreciate SW working with pt/family to find a safe and appropriate living situation (?AFH). Recommend additional PT while in NWH to improve all mobility and safety.	User Name	Megan A van Seeters, PT	Entered Date	09/11/2018 14:55
Revised Value	Jeanne is a 93 year-old F admitted s/p episode of syncope (lost consciousness). Treatment Note (OT)

Assessment Sts Complete
Collected By Emily A Sheridan, OT
Collected DTime 09/17/2018 10:15

Treatment Note (OT)

OT Tx Therapy Time (min) 15

OT Therapy Note

S: Pt received in bed, guarding neck. MD arrived as well. Pt in so much pain not wanting MD to exam her. Not able to turn head due to pain.

O: Theract (15')
Discussed pt status c MD. Pt ok for k-pad. OT procured k-pad and set up for pt. Two person assist to move pt's head/shoulders a few inches to place k-pad. Pt screaming and crying in pain c even slight movement. Improves at rest but very avoidant of movement. Further activity deferred. MD reports plan to order MRI. Left in bed c all needs met.

OT Assessment Pt does not appear safe for d/c home today. Pain is so severe she cannot move, get OOB, or participate in any self-care or mobility. Will cont to follow for IP OT during acute stay and progress indep as able when pain better controlled.

OT Plan CONT OT POC

Current ADL Score 12

Clinical Note:

Treatment Note (PT)

Assessment Sts Complete
Collected By Megan A van Seeters, PT
Collected DTime 09/13/2018 09:20

Treatment Note (PT)

PT Tx Therapy Time (min) 45

PT Therapy Note

S: Pt presented in bed, ready to move, "I can't stay in bed all day!" Uses 4WW mostly, sometimes uses her "potty chair" (narrow commode) to "walk" outside and sit in it. PT expressed concerns with that, pt does not seem concerned.

O: Discussed PT POC. Weeping observed on posterior LLE bandage. Supine<>sit, supervision / mod I with extra time. Sit<>stand SBA slowly, time to find balance. Amb 400' with FWW, CGA-->SBA due to quickness, occasional poor LLE clearance, poor posture and FWW too far out front; unable to

Treatment Note (PT)

Assessment Sts Complete
Collected By Megan A van Seeters, PT
Collected DTime 09/13/2018 09:20

Treatment Note (PT)

remain closer to FWW despite cues. Amb 400' with 4WW, SBA after initial training (brakes) and cueing for same deficits as above. Pt alternates between looking down and forward when walking. After initial cues, pt was consistently using brakes prior to transfers and mobility. Amb 50' with hand-hold assist and CGA, hesitant steps, mild-mod unsteady.
PT held lengthy discussion about safety, wounds, access to fresh food/water, shelter, current set-up and other options. Despite concerns brought up by PT, pt seems confident she will be ok there but wants her son to have input too. PT attempted to call pts son, Louis, but was sent to voicemail.
(Theract 45 min)

PT Assessment Pt ambulates quickly and remains a fall risk but did not demonstrate LOB this session. Pt needs extra time and SBA/CGA for sit>stand. After significant discussion about safety, wounds, housing, etc, pt wants her son's opinion about returning "home" vs finding other solid housing options. Pt does not understand the significance her limitations or how her previous living situation could negatively affect that.

PT Plan SW/CM team to follow up with son, Louis, about placement, with info from PT/OT. Louis 360-649-5702.

Clinical Note:

Treatment Note (PT)

Assessment Sts Complete
Collected By Laura J Saito, PT
Collected DTime 09/15/2018 16:24

Treatment Note (PT)

PT Tx Therapy Time (min) 25

PT Therapy Note Patient received in bed and eager to get up. Is ready to go home. Says son has everything figured out for her to go home. Says she will have to work on building up her walking again.

Patient is reluctant to sit down on walker seat saying she won't be able to get going again. Does have difficulty standing from walker seat but figures out how to walk walker with feet over to place for handhold to assist herself in coming to stand. Is able to come sit and come back to standing in this way without assistance.

Treatment Note (PT)

Assessment Sts Complete
Collected By Laura J Saito, PT
Collected DTime 09/15/2018 16:24

Treatment Note (PT)

TherAct:(25 min)
-supine to sit at edge of be from flat bed with supervision
-sit to stand to 4-wheeled walker with SBA
-ambulation with 4-wheeled walker and SBA x 400'
-transfer to/from 4-wheeled walker seat with verbal cues for brakes application.
-back to bed and positioning with SBA

PT Plan Continue strength and endurance work to improve safety and mobility. DC pending social work issues.

PT Assessment No loss of balance noted but patient initially very challenged with coming to stand from walker seat. Able to problem solve well with figuring out way to get handhold to assist herself.

PT Tx Therapy Time (min) 25

PT Therapy Note

S: Pt presented in bed, LEs propped on pillows. "I feel tired", and c/o neck pain. MD/RN aware (pain started this morning). "Let's try" - when offered PT.

O: Discussed PT POC. HOB raised, pt slowly pivoted to EOB, holding neck with both hands for initial movement. "I can do it, just slowly". Brief minA for LLE. Slow scooting forward, supervision. Sit>stand SBA, good technique, just slowly and painful (neck). Slow initial gait with FWW, increased forward posture. Pt grunting from neck pain during session. Amb 120' with FWW and CGA/SBA, very slowly, pts posture and pain

Treatment Note (PT)

necessitating increased LOA/guarding. SBA for restroom/toileting. While sitting, holding head/neck in hands. Transferred to chair, seat alarm on, LEs propped on pillows, call light in reach. (Theract 25 min)

PT Assessment Pt required increased guarding/assist during mobility due to neck pain. Per notes, plan is for d/c back to "tent"/"hobbit house" set-up tomorrow. Pt should be at supervision level of assist to be safe. However, continue to recommend more supportive living situation for long-term well-being.

PT Plan Discharge pending social / living issues ("tent"/"hobbit house" vs ? AFH). Per pt, wants to go "home" (aka with her son).

PT Tx Therapy Time (min) 32

PT Therapy Note

S: Pt resting in chair. Son, Louis, in room. Pt said she hasn't walked today (besides to restroom). Neck is still painful.

O: Sit>stand, SBA, slow transfer, effortful; correctly locked 4WW. Amb quickly with 4WW, 450', SBA/supervision, cued to get closer to the walker and to slow down slightly to reduce fall risk. Sit<>stand in chair with armrests, appropriately locking/unlocking brakes. Transferred into bed slowly, c/o neck pain. Pt winced to any neck movement and palpation. PT performed gentle PROM of neck, gentle muscle/fascia release. Cued to relax frequently, pt just very sensitive. Encouraged to perform gentle ROM and self-massage. Son, Louis, has done the same. He re-informed this PT of their set-up.
(Theract 15 min, Manual tech 17 min)

PT Assessment Pt appears to be functioning close to her baseline. Son, Louis, reports having everything set up at home for

Treatment Note (PT)

her return. Encouraged Louis to provide assistance and have her use the 4WW at this time. Since pt does not want to go anywhere else but "home", anticipate pt can d/c with son when medically stable.

Dietitian Treatment Note

Initial assessment
Nutrition screen for length of stay > 7 days

Wt (9/16): 51.7kg
Admit wt (9/11): 52.6kg
Diet: general
GI: +BT, abd non-distended, BM x 1 9/15
Labs (9/13): BUN-25
Medications: acidophilus, warfarin
Skin: chronic LE ulcerations w/ severe dermatitis

93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

Assessment

Visited with pt and son today. Pt very sleepy/groggy, unable to keep eyes open during interview. Spoke primarily with pt's son. He is very concerned about her nutritional status, stating she has lost wt and is not eating much. Wt records do not corroborate son's statement. Per wt records, pt has gained some wt and maintained since prevous admission and SNF stay. Per ADL's, pt consuming 100% of some meals. Difficult to assess overall PO intake as records do not seem to be complete and pt is not awake to report. Will add Ensure supplement and snack in the afternoon. Pt will be transitioned to house meals to ensure she gets x 3 meals daily when son is not here to order for her. Will continue to monitor PO intake and nourishment tolerance.

Plan

Transition to house meals.
Add Ensure & 2pm snack.
Monitor PO intake, wts, labs.

Assessment Name: Treatment Note (PT) **Collected DateTime:** 09/13/2018 09:20

Version	Entered Date	Status	Reason Revised
Revision: 1.00	09/13/2018 10:52	Complete	additional info

Treatment Note (PT)

Finding Name: PT Therapy Note

Previous Value — User Name: Megan A van Seeters, PT — Entered Date: 09/13/2018 10:28

S: Pt presented in bed, ready to move, "I can't stay in bed all day!"

O: Discussed PT POC. Weeping observed on posterior LLE bandage. Supine<>sit, supervision / mod I with extra time. Sit<>stand SBA slowly, time to find balance. Amb 400' with FWW, CGA-->SBA due to quickness, occasional poor LLE clearance, poor posture and FWW too far out front; unable to remain closer to FWW despite cues. Amb 400' with 4WW, SBA after initial training (brakes) and cueing for same deficits as above. Pt alternates between looking down and forward when walking. After initial cues, pt was consistently using brakes prior to transfers and mobility.
PT held lengthy discussion about safety, wounds, access to fresh food/water, shelter, current set-up and other options. Despite concerns brought up by PT, pt seems confident she will be ok there but wants her son to have input too. PT attempted to call pts son, Louis, but was sent to voicemail.
(Theract 45 min)

Revised Value — User Name: Megan A van Seeters, PT — Entered Date: 09/13/2018 10:52

S: Pt presented in bed, ready to move, "I can't stay in bed all day!" Uses 4WW mostly, sometimes uses her "potty chair" (narrow commode) to "walk" outside and sit in it. PT expressed concerns with that, pt does not seem concerned.

O: Discussed PT POC. Weeping observed on posterior LLE bandage. Supine<>sit, supervision / mod I with extra time. Sit<>stand SBA slowly, time to find balance. Amb 400' with FWW, CGA-->SBA due to quickness, occasional poor LLE clearance, poor posture and FWW too far out front; unable to remain closer to FWW despite cues. Amb 400' with 4WW, SBA after initial training (brakes) and cueing for same deficits as above. Pt alternates between looking down and forward when walking. After initial cues, pt was consistently using brakes prior to transfers and mobility. Amb 50' with hand-hold assist and CGA, hesitant steps, mild-mod unsteady.
PT held lengthy discussion about safety, wounds, access to fresh food/water, shelter, current set-up and other options. Despite concerns brought up by PT, pt seems confident she will be ok there but wants her son to have input too. PT attempted to call pts son, Louis, but was sent to voicemail.

Admission History

Arrival Date/Time	09/11/2018 01:11	**Admitted From**	ED
Accompanied By	Hospital/Office Staff	**Mode of Arrival**	Stretcher/Bed
Source of Information	Patient	**Organ Donor**	No

Social History

Living Situation	SNF	**Living with Whom**	Caregiver(s)
Work/Travel/Exposure	Retired	**Travel in Last 30 Days**	No
Hazardous Material Exposure?	No	**Would you like to see clergy/spiritual counselor?**	Yes

Personal Habits

Caffeine Use	Yes	**Cups/Day**	1
Difficulty with Sleep?	No	**Number of Hours per Night**	9
Do you drink alcohol?	No	**No Recreational Drugs**	Yes

PMH

DVT	Yes	**Other**	35 years ago
Appendectomy	Yes	**Appendectomy Date**	1950
UTI	Yes	**Hysterectomy**	Yes
Hysterectomy Date	1960s		

PMH2

Muscle Weakness	Yes	**Osteoporosis**	Yes
Rheumatoid Arthritis	Yes	**Stasis Ulcers**	Yes
Other	LLE	**Cataract**	Yes
Cataract Surgery	Yes	**Cataract Surgery Date**	1988

Current Function

Functional Impairment	Yes	**Needs Assist With**	Ambulation
Assistive device used (prior to admit)?	Yes	**Assistive Devices Used (describe)**	FWW
Comm Barrier Hearing (list)	HOH - Left, HOH - Right, Uses Hearing Aid(s)	**Comm Barrier Sight (list)**	Wears Glasses/ Contacts
Fall in Last Month	No	**Fall in Last 2-6 Months**	No

Nutrition

Home Diet	Regular/Unrestricted	**Unintended Weight Loss >= 10 pounds**	No
Eating < 50% for More than 5 days Prior to Admit	No	**Eye Opening**	Spontaneous
Motor Response	Obeys Commands	**Verbal Response**	Appropriate
Glasgow Coma Scale	15	**Is the GCS <13?**	Yes

Admission History

Assessment Sts	Complete	**Collected DTime**	09/11/2018 02:10
Collected By	Alieu B Jallow, RN		

Nutrition

Tongue Asymmetry/Weakness	Yes	**Facial Asymmetry/Weakness**	Yes
Palatal Asymmetry/Weakness	Yes	**Swallow Screen Results**	Passed

Educational Assessment

Ed Learning Barriers	Hearing, Vision	**Readiness to Learn**	Receptive
Learning Style	Reading, Listening		

Vaccine Assessment

Influenza Season?	No		

VTE Assessment

PCDs Applied	No, see contraindications below	**PCDs Contraindicated**	Any local conditions with compromised wound healing

Discharge Planning

Anticipated DC Needs	Yes

Chemistry from 9/10/2018 7:38 PM

Sodium 135 mEq/L *(135-145 mEq/L)*
Potassium 4.1 mEq/L *(3.6-5.2 mEq/L)*
Chloride 102 mEq/L *(98-108 mEq/L)*
Carbon Dioxide, Total 26 mEq/L *(22-32 mEq/L)*
Anion Gap 7 *(4-12)*
Glucose 131 mg/dL H *(62-125 mg/dL)*
Urea Nitrogen 26 mg/dL H *(8-21 mg/dL)*
Creatinine 0.91 mg/dL *(0.38-1.02 mg/dL)*
Protein (Total) 7.0 g/dL *(6.0-8.2 g/dL)*
Albumin 3.6 g/dL *(3.5-5.2 g/dL)*
Bilirubin (Total) 0.3 mg/dL *(0.2-1.3 mg/dL)*
AST (GOT) 14 U/L *(9-38 U/L)*
ALT (GPT) 9 U/L *(7-33 U/L)*
Alkaline Phosphatase (Total) 66 U/L *(49-199 U/L)*
eGFR, Calc, European American 58 mL/min/1.73_m2 L *(>59- mL/min/1.73_m2)*
eGFR, Calc, African American >60 mL/min/1.73_m2 *(>59- mL/min/1.73_m2)*

eGFR, Information (Reference Range: not available)
Calculated GFR in mL/min/1.73 m2 by MDRD equation.
Inaccurate with changing renal function. See

http://depts.washington.edu/labweb/test/bclim/cGFR.html
Procalcitonin <0.05 ng/mL *(0-0.49 ng/mL)*
Procalcitonin Component (Reference Range: not available)
Sepsis diagnosis in adults:
PCT <0.5 ng/mL Low risk for progression to severe systemic bacterial infection. Repeat level in 6-24 hours if infection is strongly suspected.
PCT >=0.5 and <2.0 ng/mL Moderate risk for progression to severe sepsis.
PCT >=2 and <10 ng/mL High risk for progression to severe sepsis.
PCT >=10 ng/mL High likelihood of severe sepsis or septic shock.

PCT concentrations <0.5 ng/mL do not exclude an infection, on account of localized infections (without systemic signs) which can be associated with such low concentrations, or a systemic infection in its initial stages (<6 hours).
Furthermore, increased PCT can occur without infection.
PCT concentrations between 0.5 and 2.0 ng/mL should be interpreted taking into account the patient's history.
It is recommended to retest PCT within 6-24 hours if any concentrations of <2 ng/mL are obtained.
Calcium 8.9 mg/dL *(8.9-10.2 mg/dL)*

Chemistry from 9/11/2018 5:55 AM

Troponin_I (Reference Range: not available)
<0.03
A value of 0.04 ng/mL is the 99th percentile for a healthy population. Consensus guide lines for interpreting troponin results slightly above the 99th percentile are available at JACC 2012, 60:2427-63. For additional information see http://tests.labmed.washington.edu/TROPIG

Drug Levels from 9/10/2018 7:38 PM

Alcohol (Ethyl) Negative mg/dL *(NRN mg/dL)*

Drug Levels from 9/10/2018 9:16 PM

Amphet/Metamphetamine Qual,URN Negative *(NRN)*
Barbiturate Qual, URN Negative *(NRN)*
Benzodiazepines Qual, URN Negative *(NRN)*
Cannabinoids Qual, URN Negative *(NRN)*
Cocaine Qual, URN Negative *(NRN)*
Opiates Qual, URN Positive A *(NRN)*
Methadone Qual, URN Negative *(NRN)*
Tricyclic Antidepressants, URN Negative *(NRN)*
Phencyclidine Qual, URN Negative *(NRN)*
Alcohol (Ethyl), URN (Reference Range: not available)
Negative
Quantitative testing for ethanol is by enzymatic method.
Ethanol cutoff limit: 10 mg/dL
Acetaminophen Qualitative, URN Positive A *(NRN)*
Drug Screen Test Info, URN (Reference Range: not available)
These results are presumptive and have not been confirmed as positive by an alternate method.

Results are for medical management only, and should not be used for legal purposes nor for workplace or pre-employment testing.

Qualitative immunochemical testing for amphetamines, barbiturates, benzodiazepines, cocaine metabolites, methadone, opiates, phencyclidine (PCP), cannabinoids, and tricyclic antidepressants.
Positive results indicate immunoreactivity greater than or equal to these calibrators: d-methamphetamine 500 ng/mL, secobarbital 200 ng/mL, lormetazepam 200 ng/mL, benzoylecgonine 150 ng/mL, methadone 150 ng/mL, morphine 300 ng/mL, phencyclidine 25 ng/mL, nortetrahydrocannabinoic acid 50 ng/mL, nortriptyline 1000 ng/mL and acetaminophen 5 mcg/mL.

Quantitative testing for ethanol is by an enzymatic method. Results less than 10 mg/dL are reported as negative.

This test was developed and its performance characteristics determined by the University of Washington Department of Laboratory Medicine in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. FDA.

Infectious Immunology from 9/11/2018 11:35 AM

C. difficile PCR Spec Desc Stool (Reference Range: not available)

C. difficile, Toxigenic by PCR Negative *(NRN)*

Procedures

No relevant procedures performed.

Immunizations

No immunizations administered.

Hospital Course

Hospital Discharge Instructions

Detailed Instructions from 9/17/2018 12:39 PM:

Activity Instructions
- Activity : Fall precautions.

Diet Instructions
- Diet Instructions : Resume previous diet
- Fluid Intake : Drink 6-8 glasses per day

Medication Administration Instructions
- Med Administration Instructions : Whole with thin liquids

Additional Instructions
- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

- Fever of 100.5 F or higher or chills
- Increased/ Excessive Bleeding
- Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
- Frequency, burning, foul smelling or blood with urination or unable to urinate
- Persistent diarrhea or constipation
- Pain, redness and swelling in lower legs
- Pain unrelieved with medication and rest
- Unable to tolerate oral fluids or food
- Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
- Swelling unrelieved by elevation, rest or ice
- Severe leg/calf pain
- Chest pain
- Shortness of breath
- Fatigue
- Weight gain of more than 3 pounds in 3 days

Allergies, Adverse Reactions, Alerts

This section is representative of the current allergy information, at the time of the CCD generation. In the case of regeneration of the CCD, the allergy information may not reflect the state of known allergies at the time of the CCD's subject visit.

- nitrofurantoin causes CONFUSION, NAUSEA, ABD PAIN. Status:Active.
- aspirin causes Rash. Status:Active.
- adhesive tape causes Rash. Status:Active.
- Penicillins causes Rash. Status:Active.
- Sulfa (Sulfonamide Antibiotics) causes Rash. Status:Active.

- No Latex Allergy.
- No IV Contrast Allergy.

Medication

It is the responsibility of the patient or patient representative to confirm the list of medications with either the patient's personal care provider or the patient's follow-up care provider to ensure the patient has an appropriate list of medications to take at home.

Preliminary list - medication reconciliation not completed.

Discharge medications

New medications

- acetaminophen 325 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 2 tablet oral every six hours PRN MILD PAIN
  Additional Instructions: ONLY take if NOT taking norco
- LIDOCAINE 4% PATCH (ASPERCREME LIDOCAINE PATCH) 1 PATCH = 1 PATCH Transdermal DAILY First Dose Now, Clinician Dir:SWITCH TO 4% PER HOSPITAL POLICY PATCH: 12 HOURS ON, 12 HOURS OFF. Buy over the counter.
  Directions: 1 each transdermal daily
  Additional Instructions: SWITCH TO 4% PER HOSPITAL POLICY PATCH: 12 HOURS ON, 12 HOURS OFF
- methocarbamol 500 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral every six hours PRN Neck pain
- atorvastatin (Lipitor) 10 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily

Continued medications

- cholecalciferol (vitamin D3) 1,000 unit Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily every morning
- timolol maleate 0.5 % Drops, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 drop ophthalmic, both eyes daily every morning

Changed medications

- HYDROcodone-acetaminophen 5 mg-325 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1-2 tablet oral every six hours PRN pain
- warfarin (Coumadin) 4 mg Tablet, Ordered By: Jesse Abbott Klafter, MD
  Directions: 1 tablet oral daily every evening
  Additional Instructions: check INR on friday

Stopped medications

- cyanocobalamin (vitamin B-12) 1,000 mcg Tablet
  Directions: 1 tablet oral daily every morning
- pentoxifylline 400 mg Tablet Extended Release
  Directions: 1 tablet oral every eight hours
- lactulose 10 gram/15 mL Solution
  Directions: 30 mL oral twice a day PRN constipation
  Additional Instructions: if no BM in 3 days
- bisacodyl (Dulcolax (bisacodyl)) 10 mg Suppository
  Directions: 1 suppository per rectum daily PRN constipation
  Additional Instructions: if no BM in 4 days

Wound (Progress Note) - Inpatient SOAP Note

Collected On: 09/19/2018 15:20

Subjective

ID/CC: 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility. Seen today for dressing change/compression wrap to Left leg.
Subjective Jeanne cheerful today, ready to go home with her son, leg wounds don't hurt, some itch only. She is able to walk with assistance. Neck pain mostly resolved. No fever, good appetite.
Son present during skin exam and wrapping, assures me that he knows well how to do wrapping and wound care, sometimes when returns home after being seen at wound center, he re-does the wrapping. .
Tolerating Diet Yes.

Exam

Comment Awake, alert, participates in conversation about her wound care, knows she has new appointment at wound center scheduled for Monday.
General Appearance Not in Acute Distress, Frail Appearing.

Vital Signs (PDoc)
09/19/2018 08:58

- Temperature (C): 36.7 (35.5-38.3Cel)
- Pulse: 72

- Weight (kg): 50.1kg

09/18/2018 00:15

- O2 LPM: 2

I have reviewed vital signs as listed in EMR Yes.
Behavior/Emotional Appropriate; Cooperative.
Skin Left lower leg: skin continues very fragile with fissures, though non tender, chronic dermatitis. two chronic ulcers lower medial left leg/ankle, measurements unchanged from exam of 9/19: 2x3x0.2cm, distal apprx 1x0.5x0.3cm. with coarse granulation and some fibrin in wound base and raised edges. left lateral mid calf, small granulating lesion approx 1x0.5cm.

Procedure: Application of multilayer compression wrap left lower extremity
Dx/Indication: Improving symptoms of venous insufficiency with ulceration/inflammation left lower leg. Compression wrapping is to control edema, expedite wound healing. Mild to moderate arterial insufficiency of the left leg, light compression is indicated.

Wound (Progress Note) - Inpatient SOAP Note

continued from previous page

Collected On: 09/19/2018 15:20

Left leg bathed, emollient (vaseline) applied intact skin, alginate to ulcers, Profore light multi-layer wraps applied base of toes to below knee, 50% stretch, 50% overlap with extra padding at ankle to increase circumference.

1-eDisch Sum Abbott Klafter, MD, Jesse 9/19/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 12:03:10 PM -04:00

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 09/10/2018
Acct#: 1830020513
Date of Discharge: 20180919
Dictating Physician: Abbott Klafter, MD, Jesse

DATE OF SERVICE: 09/19/2018

DISCHARGE DIAGNOSES:
1. Syncope, resolved, secondary to suspected hypovolemia.
2. Diarrhea, resolved.
3. Chronic lower extremity ulcerations of the left leg secondary to venous insufficiency.
4. History of arterial insufficiency.
5. History of bilateral lower extremity deep vein thromboses, on chronic warfarin.
6. History of right lower extremity fracture.
7. Poor balance and gait instability.
8. Peripheral neuropathy.
9. Degenerative changes in her cervical spine including mild neuroforaminal stenosis and mild canal narrowing.
10. Neck pain, felt to be muscular in etiology.

CONSULTATIONS:
Wound Care Service.

DIAGNOSTIC STUDIES:
1. Duplex of the lower extremity, arterial, demonstrates mild arterial insufficiency at the level of the bilateral ankles. Arterial pathology includes diffuse arterial calcifications, stenoses of the bilateral femoral and tibial arteries. Bilateral digital indices are significantly reduced suggesting additional foot and/or toe arteriopathy.
2. MRI of the cervical spine showed multilevel facet arthropathy, which is chronic-appearing. Edematous changes of the posterior paraspinous musculature, which may represent muscle strain. Mild C3 to C4 central canal narrowing without myelopathy. Multilevel neural foraminal narrowing worst at C3 to 4.
3. MRI of the T-spine showed no acute abnormality of the lumbar spine, old compression fractures of T12 through L3. Moderate to large-sized hiatal hernia.

REASON FOR ADMISSION:
Please see admission H and P for details. Briefly, this is a 93-year-old woman who has been living in a skilled nursing facility since her admission here in

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 09/10/2018
Date of Discharge: 20180919
Dictating Physician: Abbott Klafter, MD, Jesse

MR#: U8170135
Acct#: 1830020513

June for worsening venous stasis ulcerations. She had been doing well there and was planning to discharge back to her home, or really rather her son's tent on Bainbridge Island. However, on this evening prior to this, she had diarrhea and cramping. Thereafter, she had syncope. She was brought to Northwest and admitted for further management and evaluation.

HOSPITAL COURSE BY PROBLEM:
1. Syncope. The patient had an episode of syncope at her skilled nursing facility for which her diagnostic workup here has been negative. She had an EKG which did not show any ischemic changes. Troponins were negative. She was monitored on telemetry for 48 hours and did not have significant arrhythmias. Overall, I suspect that her syncopal episode was secondary to dehydration in the setting of diarrhea. Diarrhea had resolved by the time of admission and she was C. diff negative. This did not recur.
2. Chronic venous insufficiency ulcerations. She had previously been hospitalized for this in June, has been having ongoing care at the nursing facility. However, on admission here her left lower extremity showed extensive foot and leg scale with large patches of denuded weeping skin. She has a healed skin graft on the medial aspect of the ankle, on the medial lower leg two ulcers have rolled edges and granular fibrosis. Please see Wound Care consultation note for further information and pictures. Arterial Dopplers revealed mild to moderate arterial disease and she was felt to be safe for light compression. She continued to be followed by Wound Care. She was discharged with a light compression wrap and will follow up in Wound Care this coming Monday. She also has home health nursing for twice weekly wrap changes.
3. History of DVTs. The patient was continued on warfarin. Her INR has fluctuated somewhat. She was discharged on a dose of 4 mg daily with a plan to recheck her INR in two days this coming Friday with further dose adjustments as necessary. This will be checked by Home Health.
4. Disposition. The patient was previously residing with her son in a temporary tent structure on Bainbridge Island. This was not felt to be a safe or acceptable living situation to say the least. Extensive conversations were had with the patient and her son involving both Dr. Ellingson and myself as well as Social Work, PT, OT as well as nursing staff attempting to

convince them of her need for placement. It was continuously recommended that the patient be placed in an adult living facility or an assisted living facility. However, both the patient and her son were not willing to consider this. The patient was quite insistent she wished to return home with her son. She was felt to have capacity to make this decision. Regardless, she was quite insistent that she would want her

son to make any decisions for her she could not make and her son was also insistent that she should return home with him to this tent structure. The risks of this were discussed with them at length. We did discuss the case with Adult Protective Services. Adult Protective Services has evaluated the patient's situation once in King County and three times in Kitsap County and not taken any action. However, we did discuss with them the current situation. In the end, despite these many conversations and strong recommendations to the contrary, the patient did elect to return with her son to their tent on Bainbridge Island.
5. Neck pain. The patient developed neck pain prior to discharge. She had MRI imaging as above, which showed chronic degenerative changes. It was felt that her acute pain was likely related to a trapezius strain. This did improve over the course of several days with conservative management. She was discharged with pain medications for this as below.

DISCHARGE MEDICATION LIST:
The following medications were started during this hospitalization:

1. Atorvastatin 10 mg q.h.s. This was a prior medication, but it was not listed on the patient's admission med reconciliation.
2. Methocarbamol 500 mg p.o. q.6 h. p.r.n. neck pain, #30.
3. Warfarin 4 mg every evening for the time being. Home Health to check INR in two days on 09/21/2018 with dose adjustments as necessary by patient's PCP.
4. Lidocaine 4% patch to neck, on during the day, off during the evening. Discontinue this as pain improves.
5. Hydrocodone/acetaminophen 5/325, 1 to 2 tabs p.o. q.6 h. p.r.n. pain. Take either this or acetaminophen alone, not both.
6. Acetaminophen 650 mg orally every 6 hours p.r.n. pain. Take either this or Norco, not both.
7. Cholecalciferol 1000 units daily.
8. Timolol 0.5% eyedrops both eyes daily.

The patient was seen and examined by myself on the day of discharge.

CODE STATUS:
DNR, FULL MEDICAL INTERVENTIONS including intubation if indicated as per discussion with the patient and her son.

DISPOSITION:
Home to her tent structure on Bainbridge Island with her son as discussed above with home health, RN, PT, OT, wound care.

Patient Name: HOFFMAN, JEANNE LEONIE
Date of Admission: 09/10/2018
Date of Discharge: 20180919
Dictating Physician: Abbott Klafter, MD, Jesse

MR#: U8170135
Acct#: 1830020513

FOLLOW UP:
She will follow up with her PCP next week. The son tells me he has already scheduled this appointment. She will have wound care drawing an INR in two days' time. She will also follow up with our Wound Care Clinic this coming Monday.

TIME SPENT ON DISCHARGE AND COORDINATION OF CARE ON THE DAY OF DISCHARGE:
Two hours.

Date of Admission: 09/10/2018
Acct#: 1830020513
Date of Discharge: 20180919
Dictating Physician: Abbott Klafter, MD, Jesse

DATE OF SERVICE: 09/19/2018

DISCHARGE DIAGNOSES:
1. Syncope, resolved, secondary to suspected hypovolemia.
2. Diarrhea, resolved.
3. Chronic lower extremity ulcerations of the left leg secondary to venous insufficiency.
4. History of arterial insufficiency.
5. History of bilateral lower extremity deep vein thromboses, on chronic warfarin.
6. History of right lower extremity fracture.
7. Poor balance and gait instability.
8. Peripheral neuropathy.
9. Degenerative changes in her cervical spine including mild neuroforaminal stenosis and mild canal narrowing.
10. Neck pain, felt to be muscular in etiology.

CONSULTATIONS:
Wound Care Service.

DIAGNOSTIC STUDIES:
1. Duplex of the lower extremity, arterial, demonstrates mild arterial insufficiency at the level of the bilateral ankles. Arterial pathology includes diffuse arterial calcifications, stenoses of the bilateral femoral and tibial arteries. Bilateral digital indices are significantly reduced suggesting additional foot and/or toe arteriopathy.
2. MRI of the cervical spine showed multilevel facet arthropathy, which is chronic-appearing. Edematous changes of the posterior paraspinous musculature, which may represent muscle strain. Mild C3 to C4 central canal narrowing without myelopathy. Multilevel neural foraminal narrowing worst at C3 to 4.
3. MRI of the T-spine showed no acute abnormality of the lumbar spine, old compression fractures of T12 through L3. Moderate to large-sized hiatal hernia.

REASON FOR ADMISSION:
Please see admission H and P for details. Briefly, this is a 93-year-old woman who has been living in a skilled nursing facility since her admission here in June for worsening venous stasis ulcerations. She had been doing well there and was planning to discharge back to her home, or really rather her son's tent

on Bainbridge Island. However, on this evening prior to this, she had diarrhea and cramping. Thereafter, she had syncope. She was brought to Northwest and admitted for further management and evaluation.

HOSPITAL COURSE BY PROBLEM:
1. Syncope. The patient had an episode of syncope at her skilled nursing facility for which her diagnostic workup here has been negative. She had an EKG which did not show any ischemic changes. Troponins were negative. She was monitored on telemetry for 48 hours and did not have significant arrhythmias. Overall, I suspect that her syncopal episode was secondary to dehydration in the setting of diarrhea. Diarrhea had resolved by the time of admission and she was C. diff negative. This did not recur.
2. Chronic venous insufficiency ulcerations. She had previously been hospitalized for this in June, has been having ongoing care at the nursing facility. However, on admission here her left lower extremity showed extensive foot and leg scale with large patches of denuded weeping skin. She has a healed skin graft on the medial aspect of the ankle, on the medial lower leg two ulcers have rolled edges and granular fibrosis. Please see Wound Care consultation note for further information and pictures. Arterial Dopplers revealed mild to moderate arterial disease and she was felt to be safe for light compression. She continued to be followed by Wound Care. She was discharged with a light compression wrap and will follow up in Wound Care this coming Monday. She also has home health nursing for twice weekly wrap changes.
3. History of DVTs. The patient was continued on warfarin. Her INR has fluctuated somewhat. She was discharged on a dose of 4 mg daily with a plan to recheck her INR in two days this coming Friday with further dose adjustments as necessary. This will be checked by Home Health.
4. Disposition. The patient was previously residing with her son in a temporary tent structure on Bainbridge Island. This was not felt to be a safe or acceptable living situation to say the least. Extensive conversations were had with the patient and her son involving both Dr. Ellingson and myself as well as Social Work, PT, OT as well as nursing staff attempting to

convince them of her need for placement. It was continuously recommended that the patient be placed in an adult living facility or an assisted living facility. However, both the patient and her son were not willing to consider this. The patient was quite insistent she wished to return home with her son. She was felt to have capacity to make this decision. Regardless, she was quite insistent that she would want her son to make any decisions for her she could not make and her son was also insistent that she should return home with him to this tent structure. The

Patient Name: HOFFMAN, JEANNE LEONIE

Date of Discharge: 20180919
Dictating Physician: Abbott Klafter, MD, Jesse

risks of this were discussed with them at length. We did discuss the case with Adult Protective Services. Adult Protective Services has evaluated the patient's situation once in King County and three times in Kitsap County and not taken any action. However, we did discuss with them the current situation. In the end, despite these many conversations and strong recommendations to the contrary, the patient did elect to return with her son to their tent on Bainbridge Island.
5. Neck pain. The patient developed neck pain prior to discharge. She had MRI imaging as above, which showed chronic degenerative changes. It was felt that her acute pain was likely related to a trapezius strain. This did improve over the course of several days with conservative management. She was discharged with pain medications for this as below.

DISCHARGE MEDICATION LIST:
The following medications were started during this hospitalization:

1. Atorvastatin 10 mg q.h.s. This was a prior medication, but it was not listed on the patient's admission med reconciliation.
2. Methocarbamol 500 mg p.o. q.6 h. p.r.n. neck pain, #30.
3. Warfarin 4 mg every evening for the time being. Home Health to check INR in two days on 09/21/2018 with dose adjustments as necessary by patient's PCP.
4. Lidocaine 4% patch to neck, on during the day, off during the evening. Discontinue this as pain improves.
5. Hydrocodone/acetaminophen 5/325, 1 to 2 tabs p.o. q.6 h. p.r.n. pain. Take either this or acetaminophen alone, not both.
6. Acetaminophen 650 mg orally every 6 hours p.r.n. pain. Take either this or Norco, not both.
7. Cholecalciferol 1000 units daily.
8. Timolol 0.5% eyedrops both eyes daily.

The patient was seen and examined by myself on the day of discharge.

CODE STATUS:
DNR, FULL MEDICAL INTERVENTIONS including intubation if indicated as per discussion with the patient and her son.

DISPOSITION:
Home to her tent structure on Bainbridge Island with her son as discussed above with home health, RN, PT, OT, wound care.

FOLLOW UP:

Assessment and Plan

Comment 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

1) Syncope,
suspect hypovolemic given clinical history. Cardiac w/u remains otherwise negative.
Plan
- PT/ OT
- fall precautions
- set up for home health PT/OT.

2) Venous Stasis, Chronic Ulcer of Lower Extremity,
Plan

- wound care consultation.

3) Diarrhea,
c. diff negative,
Plan - ctm.

4) Deep Venous Thrombosis,
Plan - continue warfarin.

5) Hyperlipidemia,
Plan - statin.

6) Anemia,
Chronic, stable.
Plan - further w/u as outpatient.

7) Neck Pain,
suspect this is due to muscle strain/inflamation rather than c-spine DDD. improved today. ,
Plan
- k pad
- robaxin for muscle spasm
- oxycodone q4 hours PRN
- scheduled APAP
- discharge on hold while awaiting results of MRI.

8) discharge planning,
Patient was living with her son in a temporary structure on bainbridge island prior to the most recent hospitalization in 7/2018 after she and her son were evicted from their apartment. Admitted to NWH 7/2018 with worsening venous stasis wounds then discharged to Park Ridge. Patient improved while at Park Ridge and ultimately there were multiple care conversations. Although she was not felt to have any skilled needs at time of discharge from Park Ridge, the team highly recommended discharge to adult family home. Ultimately, it was the

patient's preference to be discharged back home with her son. She is very clear about the risks of returning home to Bainbridge island. She understands that her wounds have a higher risk of becoming infected. She also understands that she has a higher risk of falling. It has been out continued recommendation that she have a more supportive environment at time of discharge, and we had started the referral process during this admission. I have discussed her overall plan of care with APS, social worker from Park Ridge (Mollie), her primary care physician and Janice Edwards. She has been set up for home health nursing / PT / OT and social work at time of discharge should it remain her preference to return home.

Plan - dispo again discussed at length with patient and her son today, no changes... plan for likely dispo to tent tomrrow if she continues to improve .

Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Disposition Plan Discharge To Home, Timeframe Tomorrow, Comment pending clinical improvement.
Medical Decision Making Care Plan Discussed With Patient, Nurse, Social Worker.

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 09/10/2018
Acct#: 1830020513
Date of Discharge:
Dictating Physician: Ellingson, MD, Sonja

DATE OF SERVICE: 09/17/2018

DATES COVERED IN INTERIM SUMMARY:
09/10, through 09/17/2018.

BRIEF IDENTIFYING INFORMATION:
The patient is a 93-year-old woman with a history of prior DVT and venous stasis ulcerations of the left lower extremity, who was recently admitted to Northwest Hospital, then discharged to a skilled nursing facility, who presented with her nursing facility with syncope.

DISCHARGE DIAGNOSES:
1. Syncope, resolved, secondary to suspected hypovolemia.
2. Diarrhea, resolved. Clostridium difficile toxin negative.
3. Chronic lower extremity ulcerations of the left leg secondary to venous insufficiency.
4. History of arterial insufficiency.
5. Bilateral lower extremity deep venous thromboses, on chronic warfarin.
6. History of right lower extremity fracture.
7. Poor balance and gait instability.
8. Peripheral neuropathy.

CONSULTATIONS THIS ADMISSION:
Wound Care, ARNP, Mary Harris.

DIAGNOSTIC STUDIES:
1. Duplex of the lower extremity arterial demonstrates mild arterial insufficiency at the level of the bilaterally ankles. Arterial pathology includes diffuse arterial calcification and stenosis of the bilateral femoral and tibial arteries. Bilateral digital indices are significantly reduced suggesting additional foot and/or toe arteriopathy.
2. C. Difficile toxin by PCR negative on September 11, 2018.
3. Troponin negative x2 on September 12, 2018.
4. MRI of the cervical and thoracic spine are pending.

HISTORY OF PRESENT ILLNESS:
Please see dictated H and P written by Dr. Cella for further details. In brief, this is a 93-year-old woman who has been living in a skilled nursing facility since her admission here in June for worsening venous stasis

---

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135

Date of Discharge:
Dictating Physician: Ellingson, MD, Sonja

ulcerations. Overall, things have been going well there. She was actually planning to discharge tomorrow to her home on Bainbridge Island. She ate a piece of bad tasting salmon for dinner on the night prior to admission and in the morning she woke up and did not feel like herself. She felt cold. She then had 3-4 loose bowel movements associated with some belly cramping. Her symptoms resolved. However, around dinner time, she was attempting to ambulate when she suddenly lost consciousness. She does not recall any prodromal symptoms such as tunneling of vision, chest pain or pressure, shortness of breath, or other symptoms. She was helped up from the ground and did not have any other pain in her body or difficulty bearing weight. In the ER, she was given 1 L of fluid administration and admitted to the hospital for further management

HOSPITAL COURSE BY PROBLEM:
1. Syncope. The patient had an episode of syncope at her skilled nursing facility for which her diagnostic workup has largely been negative. She had an EKG which did not show any ischemic changes. Her troponins were negative x2. She was monitored on telemetry for 48 hours and did not have any significant arrhythmias. Overall, it is suspected that her syncopal episode is secondary to dehydration in the setting of diarrhea. The diarrhea had resolved by the time of admission and she was C. difficile toxin negative. Therefore, it was suspected to be secondary to foodborne illness and no further workup was undertaken. She has been seen by physical and occupational therapy during this admission for assistance with discharge planning.
2. Chronic venous insufficiency ulcers. The patient was hospitalized for worsening of these back in June and has since been in a skilled nursing facility receiving care. During this admission, her left lower extremity showed extensive foot and leg scale with large patches of denuded, weeping skin. She has a healed skin graft on the medial aspect of the ankle, on the medial lower leg two ulcers have rolled edges and granular fibrosis. Please see Wound Care consultation note for further information and pictures. Arterial Doppler studies revealed mild to moderate arterial disease, but she was felt to be safe for light compression. While inpatient, she was given a break from compression, kept her legs elevated, and she had daily hygiene to improve the quality of her skin. Wound care was completed with Vaseline emollient with daily showering and bathing. When ready for discharge, Wound Care will apply a light multilayer compression wrap to the left leg. She should be seen within seven days of discharge at the Wound Center and arrange for home health nursing for twice weekly wrap changes.
3. History of DVTs, on warfarin. The patient was continued on her home warfarin dose and her INRs remain in therapeutic range. There were no

episodes of bleeding.
4. Frequent falls, dysmobility and fall risk. The patient was seen by PT and OT during her hospitalization and early in the hospital course she was felt to be a fall risk due to comorbidities and age. Her living situation was felt to be unsustainable for long-term, especially in the winter months. Ultimately, it was recommended that she consider adult family home for further assistance with mobility and safe transfers.
5. Social situation. The patient was previously residing with her son, Louis, in a temporary structure on Bainbridge Island. The temporary structure does not have running water. It is on a raised platform and has two separate tents with bedding and warm clothes. There are portable heaters in the unit, however, the patient has to walk approximately one mile to the church for any bathing. She does have a bedside commode that she uses for toileting and the plan from the skilled nursing facility was to arrange for home health PT, OT, Social Work and nursing to help the patient in her current environment. She was offered several times during her skilled nursing facility stay, in addition to her current hospitalization, to pursue adult family home or other supportive environment for discharge. However, the patient has not been willing to go to a group home. She is able to understand the risks of discharging to an unsafe living environment, including risk of fall, risk of worsening infection of the lower extremity. The patient feels that being separated from her son would be an unacceptable solution, until they can find a more permanent shelter she would like to be with her son whenever possible. At this time, she has capacity to make the decision, although it would be against our recommendation. At time of discharge, if she does discharge to this situation, she will follow up with home health. In addition, we will ask APS to return for assessment of her current living situation.
6. Code status. During this admission I discussed the patient's code status with her. At this time, she prefers to not have CPR if her heart were to stop, and she would continue to accept full medical treatment including intubation should it be necessary.
7. Neck pain. The patient developed neck pain on Sunday, September 9/18. At that time, she was given pain medications. It was felt that she had a trapezius strain and her pain improved over the course of the day. However, her pain became severe again on Monday and she was unable to participate much in a meaningful neurologic exam, although she denied any neurologic symptoms. She did undergo MRI of the cervical and thoracic spine to rule out any nerve impingement or fracture, and at this time, she did not have any interest in discharging because her pain was so severe. She was given scheduled Tylenol, lidocaine patch, heat pack, p.r.n. Robaxin, and low-dose oxycodone for pain.

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a 93 y/o F admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf currently
Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar .

Objective:
INR: 3.3
Hgb/Hct: 9.7/31
Plt:290
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 37.1
Diet/PO intake: 70/-/50% of meals charted per nurse chart
Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi-taking APAP PRN

Assessment:
INR is supratherapeutic. Will hold coumadin today.

Plan:
Will hold coumadin today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
PT/INR in am.

An Important Message From Medicare About Your Rights

As A Hospital Inpatient, You Have The Right To:

- Receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- Be involved in any decisions about your hospital stay, and know who will pay for it.
- Report any concerns you have about the quality of care you receive to the Quality Improvement Organization (QIO) listed here:

Name of QIO
Livanta, LLC

Telephone Number of QIO
1-877-588-1123

Your Medicare Discharge Rights

Planning For Your Discharge: During your hospital stay, the hospital staff will be working with you to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.

If you think you are being discharged too soon:

- You can talk to the hospital staff, your doctor and your managed care plan (if you belong to one) about your concerns.
- You also have the right to an appeal, that is, a review of your case by a Quality Improvement Organization (QIO). The QIO is an outside reviewer hired by Medicare to look at your case to decide whether you are ready to leave the hospital.
  - ❑ **If you want to appeal, you must contact the QIO no later than your planned discharge date and before you leave the hospital.**
  - ❑ If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you do not appeal, but decide to stay in the hospital past your planned discharge date, you may have to pay for any services you receive after that date.
- Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call: Care Management Department at 206-668-1304.

Please sign and date here to show you received this notice and understand your rights. 1340

NORTHWEST HOSPITAL & MEDICAL CENTER
Seattle, Washington

MEDICARE IMPORTANT MESSAGE

M-1195 (07 2017) File Under: Admitting Financial

Page 1 of 2

Steps To Appeal Your Discharge

- **Step1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
  - ❑ Here is the contact information for the QIO:

    Name of QIO (in bold)
    Livanta, LLC

    Telephone Number of QIO
    1-877-588-1123
  - ❑ You can file a request for an appeal any day of the week. **Once you speak to someone or leave a message, your appeal has begun.**
  - ❑ Ask the hospital if you need help contacting the QIO.
  - ❑ The name of this hospital is : Northwest Hospital & Medical Center.

Hospital Name	Provider ID Number
Acute NPI: **Geropsych NPI:**	1700861580 1497766067

- **Step 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **Step 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **Step 4**: The QIO will review your medical records and other important information about your case.
- **Step 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - ❑ If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - ❑ If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

If You Miss The Deadline To Appeal, You Have Other Appeal Rights:

- You can still ask the QIO or your plan (if you belong to one) for a review of your case:
  - ❑ If you have Original Medicare: Call the QIO listed above.
  - ❑ If you belong to a Medicare Advantage Plan or other Medicare managed care plan: Call your plan.
- If you stay in the hospital, the hospital may charge you for any services you receive after your planned discharge date.

For more information, call 1-800-MEDICARE (1-800-633-4227), or TTY: 1-877-486-2048. CMS does not discriminate in its programs and activities. To request this publication in an alternate format, please call: 1-800-MEDICARE or email: AltFormatRequest@cms.hhs.gov.

Additional Information:

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0938-0692. The time required to complete this information collection is estimated to average 15 minutes per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. If you have comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: CMS, 7500 Security Boulevard, Attn: PRA Reports Clearance Officer, Mail Stop C4-26-05, Baltimore, Maryland 21244-1850.

Assessment and Plan

Comment 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

1) Syncope,
suspect hypovolemic given clinical history. Cardiac w/u remains otherwise negative.
Plan
- PT/ OT
- fall precautions
- set up for home health PT/OT.

2) Venous Stasis, Chronic Ulcer of Lower Extremity,
Plan

- wound care consultation.

3) Diarrhea,
c. diff negative,
Plan - ctm.

4) Deep Venous Thrombosis,
Plan - continue warfarin.

5) Hyperlipidemia,
Plan - statin.

6) Anemia,
Chronic, stable.
Plan - further w/u as outpatient.

7) Neck Pain,
suspect this is due to muscle strain/inflamation rather than c-spine DDD. improved today. ,
Plan
- k pad
- robaxin for muscle spasm
- oxycodone q4 hours PRN
- scheduled APAP
- discharge on hold while awaiting results of MRI.

8) discharge planning,
Patient was living with her son in a temporary structure on bainbridge island prior to the most recent hospitalization in 7/2018 after she and her son were evicted from their apartment. Admitted to NWH 7/2018 with worsening venous stasis wounds then discharged to Park Ridge. Patient improved while at Park Ridge and ultimately there were multiple care conversations. Although she was not felt to have any skilled needs at time of discharge from Park Ridge, the team highly recommended discharge to adult family home. Ultimately, it was the

General Medical Adult (Progress Note) - Inpatient SOAP Note

continued from previous page

Collected On: 09/18/2018 17:54

patient's preference to be discharged back home with her son. She is very clear about the risks of returning home to Bainbridge island. She understands that her wounds have a higher risk of becoming infected. She also understands that she has a higher risk of falling. It has been out continued recommendation that she have a more supportive environment at time of discharge, and we had started the referral process during this admission. I have discussed her overall plan of care with APS, social worker from Park Ridge (Mollie), her primary care physician and Janice Edwards. She has been set up for home health nursing / PT / OT and social work at time of discharge should it remain her preference to return home.

Plan - dispo again discussed at length with patient and her son today, no changes... plan for likely dispo to tent tomrrow if she continues to improve .

Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.

Disposition Plan Discharge To Home, Timeframe Tomorrow, Comment pending clinical improvement.

Medical Decision Making Care Plan Discussed With Patient, Nurse, Social Worker.

Northwest Hospital Inpatient Services
1550 N 115th St, MS D-149B
Seattle, WA 98133

EXAMINATION:
MRI of the thoracic spine without contrast

CLINICAL INFORMATION:
Back pain.

COMPARISON STUDY:
Chest x-ray from 9/10/2018

TECHNIQUE:
MRI of the thoracic spine was performed using sagittal T1, T2, STIR, axial T2.

FINDINGS:
Mild S-shaped scoliosis is seen, predominantly to the right. The alignment is otherwise within normal limits. Chronic compression deformities of T12, L1, L2, and L3 are seen, centrally measuring 40%, 25%, 25%, and 40% respectively. No fracture is otherwise seen. There is no significant canal or neural foraminal narrowing. Minimal degenerative disc bulging is seen at T11-T12, T12-L1, and L1-L2. The cord signal is within normal limits. The bone marrow signal is within normal limits.

Moderate to large size hiatal hernia is noted incidentally.

IMPRESSION:
1. No acute abnormality of the lumbar spine.
2. Old compression fractures of T12-L3 inclusive.
3. Moderate to large size hiatal hernia.

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a 93 y/o F admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf currently
Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar .

Objective:
INR: 3.8
Hgb/Hct: no new
Plt:no new
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 37.3
Diet/PO intake: 100/100-% of meals charted per nurse chart
Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi-taking APAP PRN

Assessment:
INR is supratherapeutic. No sign and symptom of bleed per rn report. Will hold coumadin today.

Plan:
Will hold coumadin today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
PT/INR in am.

EXAMINATION:
MRI of the cervical spine without contrast

CLINICAL INFORMATION:
Cervicalgia.

COMPARISON STUDY:
None

TECHNIQUE:
MRI of the cervical spine was performed using sagittal T1, T2, STIR, axial GRE, volumetric T2.

FINDINGS:
Grade 1 anterolisthesis is seen at C4-C5, C5-C6, and C7-T1, measuring 2, 3, and 2 mm respectively. These appeared due to multilevel facet arthropathy. The alignment is otherwise unremarkable. The bone marrow signal is within normal limits. The cord signal is within normal limits. There is no Chiari malformation.

C2-C3: No significant canal or neuroforaminal narrowing. Moderate bilateral facet hypertrophy is seen.

C3-C4: Mild central canal narrowing is seen due to a combination of disc/osteophyte complex, ligamentum flavum hypertrophy, and ligamentum flavum hypertrophy. Moderate bilateral neural foraminal narrowing is seen due to severe bilateral facet hypertrophy.

C4-C5: Disc/osteophyte complex is seen without significant central canal narrowing. Severe left and moderate right facet hypertrophy is seen with mild bilateral neural foraminal narrowing.

C5-C6: Moderate bilateral facet hypertrophy is seen without significant neural foraminal narrowing. No significant central canal narrowing.

C6-C7: Minimal disc/osteophyte complex is seen without significant central canal narrowing. Mild bilateral facet hypertrophy is seen. No significant central canal narrowing.

Wound (Progress Note) - Inpatient SOAP Note

Collected On: 09/17/2018 20:28

Subjective

ID/CC: 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility. Seen today for multi layer compression wrap of left lower leg.
Subjective Jeanne was planning on discharging today but her neck is very painful, so will be staying at least overnight. Still plans on leaving with her son and does not want to live anywhere else. She has been a patient at wound center is is confident she can get to a follow up appointment on Thursday (if discharged by then) for wrap change. she has had wraps before. Knows to keep it dry. Not much appetite. very minor pain in her left leg.
Tolerating Diet Yes.

Exam

Comment sitting up in chair with pillows behind her head, appears somewhat awkward, conversant, mild distress.
General Appearance Frail Appearing.

Vital Signs (PDoc)
09/17/2018 17:01

- Temperature (C): 37.1 (35.5-38.3Cel)
- Pulse: 64
- Respirations: 18
- BP: 111/62
- O2 Saturation (%): 97

09/16/2018 06:59

- Weight (kg): 51.7kg

I have reviewed vital signs as listed in EMR Yes.
Extremities Right lower leg and foot without skin break, skin clean and supple.
Behavior/Emotional Appropriate; Cooperative.
Skin Left lower leg: skin continues very fragile with scale and fissures, though non tender, chronic dermatitis. two chronic ulcers lower medial left leg/ankle, measurements unchanged: 2x3x0.2cm, distal apprx 1x0.5x0.3cm. with coarse granulation and some fibrin in wound base and raised edges. left lateral mid calf, small granulating lesion approx 1x0.5cm.

Procedure: Application of multilayer compression wrap left lower extremity
Dx/Indication: Improving symptoms of venous insufficiency with ulceration/inflammation left lower leg.
Compression wrapping is to control edema, expedite wound healing. Mild to moderate arterial insufficiency of the left leg, light compression is indicated.
Left leg bathed, emollient (vaseline) applied intact skin, alginate to ulcers, Profore light multi-layer wraps applied base of toes to below knee, 50% stretch, 50% overlap with extra padding at ankle to increase circumference.
No photo.

Assessment and Plan

Comment 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

1) Syncope,
Clinical Status Resolved,
suspect hypovolemic given clinical history. Cardiac w/u remains otherwise negative.
Plan
- PT/ OT
- fall precautions
- set up for home health PT/OT.

2) Chronic Ulcer of Lower Extremity, Venous Stasis,
Plan

- wound care consultation.

3) Diarrhea,
c. diff negative,
Plan - ctm.

4) Deep Venous Thrombosis,
Plan - continue warfarin.

5) Hyperlipidemia,
Plan - statin.

6) Anemia,
Chronic, stable.
Plan - further w/u as outpatient.

7) Neck Pain,
Worsening pain this morning, unable to fully assess neuro exam due to pain.
Plan
- MRI cervical and thoracic spine
- k pad
- robaxin for muscle spasm
- oxycodone q4 hours PRN
- scheduled APAP

General Medical Adult (Progress Note) - Inpatient SOAP Note

continued from previous page

- discharge on hold while awaiting results of MRI.

8) discharge planning,

Patient was living with her son in a temporary structure on bainbridge island prior to the most recent hospitalization in 7/2018 after she and her son were evicted from their apartment. Admitted to NWH 7/2018 with worsening venous stasis wounds then discharged to Park Ridge. Patient improved while at Park Ridge and ultimately there were multiple care conversations. Although she was not felt to have any skilled needs at time of discharge from Park Ridge, the team highly recommended discharge to adult family home. Ultimately, it was the patient's preference to be discharged back home with her son. She is very clear about the risks of returning home to Bainbridge island. She understands that her wounds have a higher risk of becoming infected. She also understands that she has a higher risk of falling. It has been out continued recommendation that she have a more supportive environment at time of discharge, and we had started the referral process during this admission. I have discussed her overall plan of care with APS, social worker from Park Ridge (Mollie), her primary care physician and Janice Edwards. She has been set up for home health nursing / PT / OT and social work at time of discharge should it remain her preference to return home.

Plan

- Given ongoing neck pain today, patient was not felt to be safe to discharge home until further workup
- Appreciate SW assistance, continue to explore adult family home options for now just in case the patient changes her mind.

Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Disposition Plan Discharge To Home, Comment pending clinical improvement, process starte.
Medical Decision Making Care Plan Discussed With Patient, Family, Nurse, Social Worker.

Subjective

ID/CC: 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility. Seen today for multi layer compression wrap of left lower leg.
Subjective Jeanne was planning on discharging today but her neck is very painful, so will be staying at least overnight. Still plans on leaving with her son and does not want to live anywhere else. She has been a patient at wound center is is confident she can get to a follow up appointment on Thursday (if discharged by then) for wrap change. she has had wraps before. Knows to keep it dry. Not much appetite. very minor pain in her left leg.
Tolerating Diet Yes.

Exam

Comment sitting up in chair with pillows behind her head, appears somewhat awkward, conversant, mild distress.
General Appearance Frail Appearing.

Vital Signs (PDoc)
09/17/2018 17:01

- Temperature (C): 37.1 (35.5-38.3Cel)
- Pulse: 64
- Respirations: 18
- BP: 111/62
- O2 Saturation (%): 97

09/16/2018 06:59

- Weight (kg): 51.7kg

I have reviewed vital signs as listed in EMR Yes.
Extremities Right lower leg and foot without skin break, skin clean and supple.
Behavior/Emotional Appropriate; Cooperative.
Skin Left lower leg: skin continues very fragile with scale and fissures, though non tender, chronic dermatitis. two chronic ulcers lower medial left leg/ankle, measurements unchanged: 2x3x0.2cm, distal apprx 1x0.5x0.3cm. with coarse granulation and some fibrin in wound base and raised edges. left lateral mid calf, small granulating lesion approx 1x0.5cm.

Procedure: Application of multilayer compression wrap left lower extremity
Dx/Indication: Improving symptoms of venous insufficiency with ulceration/inflammation left lower leg.
Compression wrapping is to control edema, expedite wound healing. Mild to moderate arterial insufficiency of the left leg, light compression is indicated.
Left leg bathed, emollient (vaseline) applied intact skin, alginate to ulcers, Profore light multi-layer wraps applied base of toes to below knee, 50% stretch, 50% overlap with extra padding at ankle to increase circumference.
No photo.

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 09/10/2018 **Acct#:** 1830020513
Date of Discharge:
Dictating Physician: Ellingson, MD, Sonja

DATE OF SERVICE: 09/17/2018

DATES COVERED IN INTERIM SUMMARY:
09/10, through 09/17/2018.

BRIEF IDENTIFYING INFORMATION:
The patient is a 93-year-old woman with a history of prior DVT and venous stasis ulcerations of the left lower extremity, who was recently admitted to Northwest Hospital, then discharged to a skilled nursing facility, who presented with her nursing facility with syncope.

DISCHARGE DIAGNOSES:
1. Syncope, resolved, secondary to suspected hypovolemia.
2. Diarrhea, resolved. Clostridium difficile toxin negative.
3. Chronic lower extremity ulcerations of the left leg secondary to venous insufficiency.
4. History of arterial insufficiency.
5. Bilateral lower extremity deep venous thromboses, on chronic warfarin.
6. History of right lower extremity fracture.
7. Poor balance and gait instability.
8. Peripheral neuropathy.

CONSULTATIONS THIS ADMISSION:
Wound Care, ARNP, Mary Harris.

DIAGNOSTIC STUDIES:
1. Duplex of the lower extremity arterial demonstrates mild arterial insufficiency at the level of the bilaterally ankles. Arterial pathology includes diffuse arterial calcification and stenosis of the bilateral femoral and tibial arteries. Bilateral digital indices are significantly reduced suggesting additional foot and/or toe arteriopathy.
2. C. Difficile toxin by PCR negative on September 11, 2018.
3. Troponin negative x2 on September 12, 2018.
4. MRI of the cervical and thoracic spine are pending.

HISTORY OF PRESENT ILLNESS:
Please see dictated H and P written by Dr. Cella for further details. In brief, this is a 93-year-old woman who has been living in a skilled nursing facility since her admission here in June for worsening venous stasis ulcerations. Overall, things have been going well there. She was actually planning to discharge tomorrow to her home on Bainbridge Island. She ate a

piece of bad tasting salmon for dinner on the night prior to admission and in the morning she woke up and did not feel like herself. She felt cold. She then had 3-4 loose bowel movements associated with some belly cramping. Her symptoms resolved. However, around dinner time, she was attempting to ambulate when she suddenly lost consciousness. She does not recall any prodromal symptoms such as tunneling of vision, chest pain or pressure, shortness of breath, or other symptoms. She was helped up from the ground and did not have any other pain in her body or difficulty bearing weight. In the ER, she was given 1 L of fluid administration and admitted to the hospital for further management

HOSPITAL COURSE BY PROBLEM:
1. Syncope. The patient had an episode of syncope at her skilled nursing facility for which her diagnostic workup has largely been negative. She had an EKG which did not show any ischemic changes. Her troponins were negative x2. She was monitored on telemetry for 48 hours and did not have any significant arrhythmias. Overall, it is suspected that her syncopal episode is secondary to dehydration in the setting of diarrhea. The diarrhea had resolved by the time of admission and she was C. difficile toxin negative. Therefore, it was suspected to be secondary to foodborne illness and no further workup was undertaken. She has been seen by physical and occupational therapy during this admission for assistance with discharge planning.
2. Chronic venous insufficiency ulcers. The patient was hospitalized for worsening of these back in June and has since been in a skilled nursing facility receiving care. During this admission, her left lower extremity showed extensive foot and leg scale with large patches of denuded, weeping skin. She has a healed skin graft on the medial aspect of the ankle, on the medial lower leg two ulcers have rolled edges and granular fibrosis. Please see Wound Care consultation note for further information and pictures. Arterial Doppler studies revealed mild to moderate arterial disease, but she was felt to be safe for light compression. While inpatient, she was given a break from compression, kept her legs elevated, and she had daily hygiene to improve the quality of her skin. Wound care was completed with Vaseline emollient with daily showering and bathing. When ready for discharge, Wound Care will apply a light multilayer compression wrap to the left leg. She should be seen within seven days of discharge at the Wound Center and arrange for home health nursing for twice weekly wrap changes.
3. History of DVTs, on warfarin. The patient was continued on her home warfarin dose and her INRs remain in therapeutic range. There were no episodes of bleeding.
4. Frequent falls, dysmobility and fall risk. The patient was seen by

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135

Dictating Physician: Ellingson, MD, Sonja

PT and OT during her hospitalization and early in the hospital course she was felt to be a fall risk due to comorbidities and age. Her living situation was felt to be unsustainable for long-term, especially in the winter months. Ultimately, it was recommended that she consider adult family home for further assistance with mobility and safe transfers.
5. Social situation. The patient was previously residing with her son, Louis, in a temporary structure on Bainbridge Island. The temporary structure does not have running water. It is on a raised platform and has two separate tents with bedding and warm clothes. There are portable heaters in the unit, however, the patient has to walk approximately one mile to the church for any bathing. She does have a bedside commode that she uses for toileting and the plan from the skilled nursing facility was to arrange for home health PT, OT, Social Work and nursing to help the patient in her current environment. She was offered several times during her skilled nursing facility stay, in addition to her current hospitalization, to pursue adult family home or other supportive environment for discharge. However, the patient has not been willing to go to a group home. She is able to understand the risks of discharging to an unsafe living environment, including risk of fall, risk of worsening infection of the lower extremity. The patient feels that being separated from her son would be an unacceptable solution, until they can find a more permanent shelter she would like to be with her son whenever possible. At this time, she has capacity to make the decision, although it would be against our recommendation. At time of discharge, if she does discharge to this situation, she will follow up with home health. In addition, we will ask APS to return for assessment of her current living situation.
6. Code status. During this admission I discussed the patient's code status with her. At this time, she prefers to not have CPR if her heart were to stop, and she would continue to accept full medical treatment including intubation should it be necessary.
7. Neck pain. The patient developed neck pain on Sunday, September 9/18. At that time, she was given pain medications. It was felt that she had a trapezius strain and her pain improved over the course of the day. However, her pain became severe again on Monday and she was unable to participate much in a meaningful neurologic exam, although she denied any neurologic symptoms. She did undergo MRI of the cervical and thoracic spine to rule out any nerve impingement or fracture, and at this time, she did not have any interest in discharging because her pain was so severe. She was given scheduled Tylenol, lidocaine patch, heat pack, p.r.n. Robaxin, and low-dose oxycodone for pain.

The patient's care will be transitioned to Dr. Jesse Abbott Klafter on

Advance Care Planning Note - Inpatient SOAP Note

Collected On: 09/16/2018 17:43

Note

I had a conversation with Jeanne today in anticipation of upcoming discharge tomorrow about her goals of care.

We discussed her code status. She is currently listed as full code. During a prior admission she discussed maybe wanting a brief trial of CPR but no prolonged life support.

I discussed with Jeanne that it's important for us to fill out a POLST form that she can have with her when she goes home, to help emergency medical providers understand her wishes. At this time she reported to me that if her heart stops, she would not want to have CPR. She continues to want full medical treatment at this time. I have filled out the POLST form with her preferences listed. She will review the form and we will sign together tomorrow prior to discharge. I have updated her code status in the chart.

She would want her decision maker to be Louis, her son.

Note

Pharmacy warfarin management note: Subjective: Patient is a 93 y/o F admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt. Goal INR: 2-3 PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability Pt previously homeless, lives in snf currently Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar . Objective: INR: 2.5 (from 2.2) Hgb/Hct: no new Plt:no new Albumin: 3.6 Baseline LFTs: 14/9 Tmax: 36.9 Diet/PO intake: -/100%/50% of meals charted per nurse chart Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi-taking APAP PRN Assessment: INR is therapeutic today in center of goal range. Seeing continued improvement in meal intake. Given stable result, 5 mg daily dose seems to be working well at this time. Will monitor whether INR continues to rise on this dose tomorrow and whether adjustment is needed. Plan: Will continue coumadin 5mg today. Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly. PT/INR in 9/17 am.

Advance Care Planning Note - Inpatient SOAP Note

Collected On: 09/16/2018 17:43

Note

I had a conversation with Jeanne today in anticipation of upcoming discharge tomorrow about her goals of care.

We discussed her code status. She is currently listed as full code. During a prior admission she discussed maybe wanting a brief trial of CPR but no prolonged life support.

I discussed with Jeanne that it's important for us to fill out a POLST form that she can have with her when she goes home, to help emergency medical providers understand her wishes. At this time she reported to me that if her heart stops, she would not want to have CPR. She continues to want full medical treatment at this time. I have filled out the POLST form with her preferences listed. She will review the form and we will sign together tomorrow prior to discharge. I have updated her code status in the chart.

She would want her decision maker to be Louis, her son.

Assessment and Plan

Comment 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

1) Syncope,
Clinical Status Resolved,
suspect hypovolemic given clinical history. Cardiac w/u remains otherwise negative.
Plan

- PT/ OT
- fall risk.

2) Chronic Ulcer of Lower Extremity, Venous Stasis,
Plan

- wound care consultation.

3) Diarrhea,
Clinical Status Resolved,
c. diff negative,
Plan - ctm.

4) Deep Venous Thrombosis,
Plan - continue warfarin.

5) Hyperlipidemia,
Plan - statin.

6) Anemia,
Chronic, stable.
Plan - further w/u as outpatient.

Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Disposition Plan Discharge To Home, Comment monday.

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 09/15/2018 12:28

Note

Pharmacy warfarin management note: Subjective: Patient is a 93 y/o F admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt. Goal INR: 2-3 PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability Pt previously homeless, lives in snf currently Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar . Objective: INR: 2.2 (from 2.3) Hgb/Hct: no new Plt:no new Albumin: 3.6 Baseline LFTs: 14/9 Tmax: 36.9 Diet/PO intake: -/100%/- of meals charted per nurse chart Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi Assessment: INR is trending down since dose holding on 9/12 but remains therapeutic today. Previous elevation in INR may have been d/t multiple factors including adv age, low wt, and diarrheal episodes on admit. Meal intake seems to be improving since resuming warfarin was resumed, and remains stable. Continue coumadin at 5mg anticipated while pt disposition determination ongoing at this time. Plan: Will give coumadin 5mg today. Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly. PT/INR in 9/16 am.

Note

Pharmacy Warfarin Management Note:

Subjective:

Patient is a admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf but was sched for discharge soon
Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar .

Objective:

INR: 2.3
Hgb/Hct: no new
Plt:no new
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 36.9
Diet/PO intake: 100/not charted/100% of meals
Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi

Assessment:

INR trended down but remains therapeutic. Coumadin resumed yesterday. INR down trend likely d/t coumadin held on 9/12 for supratherutic inr. Continue coumadin at 5mg .
Will await pt disposition determination at this time.

Plan:

Will give coumadin 5mg today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
PT/INR in am.

Assessment and Plan

Comment 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope at skilled nursing facility.

1) Syncope,
Clinical Status Resolved,
suspect hypovolemic given clinical history. Cardiac w/u remains otherwise negative.
Plan

- PT/ OT
- fall risk.

2) Chronic Ulcer of Lower Extremity, Venous Stasis,
Plan

- wound care consultation.

3) Diarrhea,
c. diff negative,
Plan - ctm.
4) Deep Venous Thrombosis,
Plan - continue warfarin.
5) Hyperlipidemia,
Plan - statin.
6) Anemia,
Plan - daily CBC.
Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Medical Decision Making Care Plan Discussed With Patient, Nurse, Social Worker.

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 09/13/2018 11:39

Note

Warfarin note:

Subjective:
Patient is a admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf but was sched for discharge soon
Patient's home warfarin regimen was recently increased to 6mg daily on 9/10 (from 5.5mg daily) per snf mar .

Objective:
INR: 3.0
Hgb/Hct: 9.3/31
Plt:281
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 36.9
Diet/PO intake: remains on general diet charted as 90% dinner other meals charted as independent but eating in room and reports eating okay
Current potential drug-drug or drug-disease interactions with warfarin: no significant ddi

Assessment:
INR stable at at upper end of therapeutic range. Will resume coumadin at 5mg .
Will await pt disposition determination at this time.

Plan:
Will give coumadin 5mg today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 09/12/2018 11:26

Note

Pharmacy Warfarin Management Note:

Subjective:

Patient is a admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf but was sched for discharge soon
Patient's home warfarin regimen was recently increased to 6mg daily (9/10).
Last dose taken: 5mg yesterday.

Objective:

INR: 3.1 (2.1)
Hgb/Hct: 9.3/30
Plt:276
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 36.9
Diet/PO intake: 100%/"independent"/"independent" last 3 charted meals
Current potential drug-drug or drug-disease interactions with warfarin: no ddi

Assessment:

INR has trended up quicky up to supratherapeutic range. INR uptrend likely due to recent diarrhea. Will hold coumadin today.
H/H stable.
Will await pt disposition determination at this time.

Plan:

Will hold coumadin today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.

NWH INPATIENT WOUND CONSULT
DATE OF SERVICE: 09/12/2018

ID/CC: 93 yo woman with a history of prior venous stasis ulcerations and nonhealing lower extremity wounds admitted for diarrhea and syncope. Dr. Cella requested consult to evaluate lower leg venous ulcers.

S: History obtained from chart review and patient interview
Soc: has been living with her son in subsidized housing but was apparently evicted and has been living in an "igloo," which consists of two separate tents.
Pertinent Medical history: Chronic lower extremity ulcerations for many years, venous insufficiency, arterial insufficiency, bilateral lower extremity DVT about 30 years ago, on Coumadin, peripheral neuropathy, right lower extremity fractures.
Allergies: ADHESIVE TAPE. PENICILLIN and SULFA drugs cause a rash.

O: VS reviewed: Afebrile, stable VS. Wght 52.6Kg. BMI 20.5
Gen: Alert, conversant woman, hard of hearing. Underweight. NAD
C/V, Ext: Unable to palpate dorsalis pedis pulses bilaterally, no edema of lower legs, the Left foot is puffy
Skin:Very thin lower legs. Left lower leg and foot extensive scale, and large patches of denuded weeping skin. Medial ankle has a healed skin graft. Medial lower leg 2 ulcers w rolled edges and granular/fibrinous wound beds: proximal approx. 2x3x0.2cm, distal apprx 1x0.5x0.3cm.
See photos page 2.
Labs/Diagnostics (reviewed in soarian): **WBC 6.66, Hct 30, eGFR >60**

A/P: Elder with chronic venous insufficiency s/p saphenous ablation about 2 months ago, continued ulceration and severe dermatitis of the left leg. Arterial studies reveal mild to moderate arterial disease, safe for light compression.
Plan: While inpatient, no compression, and keep legs well elevated so she can have daily hygiene to improve quality of skin. Alginate to ulcers, generous application of Vaseline emollient with daily shower/bathing. When ready for discharge or on Friday if discharging over the weekend, Wound Care will apply light multi-layer compression wrap to the left leg. She should follow up at wound center to be seen within 7 days of discharge and will need HHRN/wound center visits for twice weekly wrap changes. Of course it will not be ideal for her to discharge to an unstable housing condition, but apparently she refuses the idea of a group home.

Wound care will follow weekly while inpatient, please page sooner if needed.
Mary C Harris, ARNP 206-969-3868

Left leg.

Left medial lower leg

Right lower leg. No wounds

Lower Extremity Arterial Exam

Aortoiliac and Lower Extremity Duplex and Physiologic Testing

Patient Name:	**JEANNE L HOFFMAN**	Date of Exam:	**09/11/2018 02:32 PM**
PVI #:	**10114841-50225073-40261930**	DOB, Age, Gender:	**1/6/1925 93 Female**
MRN / Acct#:	**U8170135-1830020513**	Patient Type:	**Inpatient**
Referring Clinician:	**SONJA M. ELLINGSON, MD**	Exam Location:	**Northwest Hospital Medical Center**
Cc:		Technologist:	**Scott E. Amy, RVT**

Clinical Indication:

Patient referred for a long history of chronic ulcers and pain in the left leg.

Interpretation:

Ankle brachial indices: incompressible; Digit/Brachial indices: Right- .23 Left- .23

Abdominal Aorta:
Not visualized (overlying bowel gas)

Right Lower Extremity:
Common iliac artery: non-visualized
Diffuse calcification throughout the femoral and popliteal arteries
Tibioperoneal trunk artery: 20-49% stenosis
Distal posterior tibial artery: occlusion
Digit/Brachial index suggests small vessel disease
No other significant abnormalities identified

Left Lower Extremity:
Ankle/Brachial indices are unreliable secondary to medical calcification.
Based on waveform analysis there is mild to moderate arterial insufficiency at rest
Common iliac artery: non-visualized
Diffuse calcification throughout the femoral and popliteal arteries
Superficial femoral artery proximal: 20-49% stenosis
Superficial femoral artery distal: 20-49% stenosis
Digit/Brachial index suggests small vessel disease
No other significant abnormalities identified

Summary/Conclusion:

Although there are no findings on this exam that likely correlate with the referring indication (leg ulcers and rest pain), the following are noted:

1. **The bilateral ankle/brachial indices are inaccurate due to tibial artery calcification. Waveform morphology suggests, at most, mild arterial insufficiency to the level of the bilateral ankles.**
2. **Arterial pathology includes diffuse arterial calcification and stenoses in the bilateral femoral and tibial arteries as detailed above.**
3. **That all said, the bilateral digital indices are significantly reduced suggesting additional foot and/or toe arteriopathy.**

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 09/11/2018 13:08

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a admitted for syncope, pt was also noted to have diarrhea which resolved pta. Pharmacy was consulted to dose warfarin for the indication of h/o dvt.
Goal INR: 2-3
PMH includes:chronic venous stasis of left leg/venous insufficiency L >R, arterial insufficiency, RLE fracture, PN, poor balance and gait instability
Pt previously homeless, lives in snf but was sched for discharge soon
Patient's home warfarin regimen was recently increased to 6mg daily (9/10).
Last dose taken: 5mg yesterday.

Objective:
INR: 2.1
Hgb/Hct: 9.1/30
Plt:259
Albumin: 3.6
Baseline LFTs: 14/9
Tmax: 36.8
Diet/PO intake: on general diet po intake adequate per rn.
Current potential drug-drug or drug-disease interactions with warfarin: none

Assessment:
INR is therapeutic.
Will await pt disposition determination at this time.

Plan:
Will continue home dose of coumadin 6mg today.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.

- Procalcitonin: <0.05
- Procalcitonin Component: Sepsis diaSepsis diagnosis in adults: PCT <0.5 ng/mL Low risk for progression to severe systemic bacterial infection. Repeat level in 6-24 hours if infection is strongly suspected. PCT >=0.5 and <2.0 ng/mL Moderate risk for progression to severe sepsis. PCT >=2 and <10 ng/mL High risk for progression to severe sepsis. PCT >=10 ng/mL High likelihood of severe sepsis or septic shock. PCT concentrations <0.5 ng/mL do not exclude an infection, on account of localized infections (without systemic signs) which can be associated with such low concentrations, or a systemic infection in its initial stages (<6 hours). Furthermore, increased PCT can occur without infection. PCT concentrations between 0.5 and 2.0 ng/mL should be interpreted taking into account the patient's history. It is recommended to retest PCT within 6-24 hours if any concentrations of <2 ng/mL are obtained.

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 09/10/2018 **Acct#:** 1830020513
Date of Discharge:
Dictating Physician: Cella, MD, Julie

DATE OF SERVICE: 09/10/2018

IDENTIFICATION/CHIEF CONCERN:
The patient is a 93-year-old woman being admitted after episode of syncope.

HISTORY OF PRESENT ILLNESS:
The patient has been residing at a skilled nursing facility since her admission here in June for worsening venous stasis ulcerations. She reports that overall things have been going well there. She thinks the wounds on her left leg are healing well. She was actually planning to be discharged tomorrow. Last night, she ate what she describes as a bad tasting piece of salmon. This morning, she woke up and she did not really feel quite like herself. She felt cold. She then went on to have 3 or 4 loose bowel movements this morning associated with some mild belly cramping. At this point, she no longer feels cold and her diarrhea has resolved. She still feels unable to walk steady, however. Around dinnertime, she was attempting to ambulate when she suddenly lost consciousness. She does not recall any prodromal symptoms such as tunneling of her vision, chest pain or pressure, shortness of breath or other symptoms. She was helped up from the ground and she did not have any pain in her body or difficulty bearing weight. In the emergency department, she was given 1 L of IV fluid and recommended for admission to the hospital.

REVIEW OF SYSTEMS:
Remainder of her review of systems is negative except as stated in HPI above.

PAST MEDICAL HISTORY:
1. Chronic lower extremity ulcerations, left leg.
2. Venous insufficiency, left greater than right.
3. Arterial insufficiency.
4. Bilateral lower extremity DVTs, on chronic warfarin.
5. History of right lower extremity fracture.
6. Peripheral neuropathy.
7. Poor balance and gait instability.

MEDICATIONS PRIOR TO ADMISSION:
1. Tylenol 650 mg p.o. q.4 h. p.r.n. fever.
2. Acidophilus 1 tablets twice per day.
3. Atorvastatin 10 mg daily.
4. Enoxaparin. Discontinue when INR therapeutic. I do not believe the

patient was taking this medication immediately prior to admission.
5. Losartan 25 mg tablet, unknown dosing schedule.
6. Timolol eye drops both eyes twice per day.
7. Warfarin 5 mg every Monday, Tuesday, Wednesday, Friday and Saturday; and 2.5 mg on Thursdays and Sundays.

ALLERGIES:
1. ADHESIVE TAPE.
2. ASPIRIN.
3. NITROFURANTOIN.
4. PENICILLIN.
5. SULFA.

SOCIAL HISTORY:
The patient had recently been homeless, residing in a tent with her son, Louis. She was admitted here for wounds on her left leg. She was discharged to skilled nursing facility, where she has resided until today. She was actually planning to be discharged tomorrow. Her son, Louis, is her closest family member. The patient denies current alcohol, tobacco or drug use. She is widowed. She is quite self-sufficient.

FAMILY HISTORY:
Mother died of old age at 94.

PHYSICAL EXAMINATION:
VITAL SIGNS: Temperature is 36.8, pulse 66, respiratory rate 18, blood pressure 173/75, oxygen saturation 97% on room air.
GENERAL: She is sleeping peacefully upon my initial arrival, she arouses easily to stimulation. She appears her stated age.
HEENT: Head is normocephalic and atraumatic. Mucous membranes are somewhat dry. No nasal drainage.
NECK: No significant neck stiffness.
LUNGS: Clear to auscultation bilaterally without wheezes, crackles, or

rhonchi.
CARDIOVASCULAR: Regular rate and rhythm. No murmurs, rubs, or gallops appreciated.
ABDOMEN: Soft, nontender. No masses. Bowel tones present.
EXTREMITIES: Trace right lower extremity edema. Left lower extremity edema present. Left leg is wrapped.
NEUROLOGIC: Alert and oriented x3. Moving all four extremities.

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 09/10/2018 **Acct#:** 1830020513
Date of Discharge:
Dictating Physician: Cella, MD, Julie

LABORATORIES AND STUDIES:
1. CBC: White blood cell count is 6.24, hematocrit 32, platelets 289.
2. INR is 1.9.
3. Basic metabolic panel is notable for a glucose of 131, a BUN of 26, creatinine 0.91.
4. Liver function testing is normal.
5. Procalcitonin undetected.
6. Troponin negative.
7. BNP 84.
8. Urine tox screen is positive for opiates and Tylenol.
9. Urinalysis shows greater than 5 epithelial cells, otherwise normal.
10. Chest x-ray shows right lower lobe airspace opacification consistent with atelectasis versus pneumonia and a suspected right upper lobe solitary pulmonary nodule. Further evaluation with contrast-enhanced CT of the chest recommended.
11. Head CT: No acute intracranial abnormality.
12. A 12-lead EKG: Normal sinus rhythm with a right bundle branch block.

ASSESSMENT AND PLAN:
The patient is a 93-year-old woman presenting with syncope.

1. Syncope. Based on the history, this is most consistent with an orthostatic event from volume depletion from her diarrhea. Primary cardiac or neurologic event are possible, though preliminary EKG does not support this and initial neurologic examination is unrevealing. I will hydrate her with an additional 1 L of Lactated Ringer's. She will be monitored on telemetry. Will check orthostatics. Will check serial troponins. Will have physical and occupational therapy evaluate the patient. Pending these assessments, additional workup could be considered to include a CT angiogram to rule out pulmonary embolism, though I think this is low likelihood given the clinical scenario.
2. Diarrhea. The patient had 3-4 loose bowel movements this morning. It seems to be related to something that she ate last night. We will check her for Clostridium difficile, however, given that she has risk factors for this.
3. Venous stasis ulcers. Patient reports that these are healing well. I will have Wound Care check on her while she is here in the hospital.
4. History of deep venous thrombosis. I have consulted Pharmacy for dosing of warfarin.
5. Lung nodule. Does not appear to be acutely related to the patient's hospitalization. This can be worked up either while she is here in the hospital or as an outpatient.

6. Anemia. Stable. Does not require further inpatient workup.
7. Recent homelessness. The patient will need to be seen by Social Work for consideration of resources.
8. Code status: FULL. This was discussed with the patient at time of admission and is consistent with her recent prior hospitalization.
9. DVT prophylaxis: The patient is on warfarin.
10. Disposition: Medical floor for observation admission.

- Procalcitonin: <0.05
- Procalcitonin Component: Sepsis diaSepsis diagnosis in adults: PCT <0.5 ng/mL Low risk for progression to severe systemic bacterial infection. Repeat level in 6-24 hours if infection is strongly suspected. PCT >=0.5 and <2.0 ng/mL Moderate risk for progression to severe sepsis. PCT >=2 and <10 ng/mL High risk for progression to severe sepsis. PCT >=10 ng/mL High likelihood of severe sepsis or septic shock. PCT concentrations <0.5 ng/mL do not exclude an infection, on account of localized infections (without systemic signs) which can be associated with such low concentrations, or a systemic infection in its initial stages (<6 hours). Furthermore, increased PCT can occur without infection. PCT concentrations between 0.5 and 2.0 ng/mL should be interpreted taking into account the patient's history. It is recommended to retest PCT within 6-24 hours if any concentrations of <2 ng/mL are obtained.

DIAGNOSIS (Tue Sep 11, 2018 00:11 JDEW)

FINAL: PRIMARY: syncope.

DOCTOR NOTES (Tue Sep 11, 2018 02:54 JDEW)

TEXT: This is a 93−year−old female who presents to the emergency department with a chief complaint of syncope. The patient arrives alert, oriented without focal neurologic deficits. EKG was ordered, reviewed there is no evidence of arrhythmia. The patient's left her lites are normal, there is no evidence of infection. I reviewed the labs independently, her pro−calcitonin is negative, making the abnormality seen on her chest x−ray more likely to be atelectasis. On reevaluation, the patient's vital signs are stable, her examination is unchanged. However, given the patient's age I believe it would be prudent for 23 our cardiac monitoring and observation in the hospital. This was discussed with Dr. Cella from inpatient team, she has accepted the patient for admission to telemetry under observation status. The patient is admitted in stable condition.

DATA REVIEWED: Lab data reviewed, Xray data reviewed, Reviewed EKG, Discussed with consultants.

DISPOSITION

PATIENT: Disposition Type: Observation, Disposition: Admit to Med/Tele, Condition: 2−GUARDED. (Tue Sep 11, 2018 00:11 JDEW)

Patient left the department. (Tue Sep 11, 2018 01:08 CFIG)

PRESCRIPTION

No recorded prescriptions

HPI SYNCOPE (20:56 JDEW)

CHIEF COMPLAINT: Patient presents for the evaluation of syncope. *HISTORIAN:* History obtained from patient, History obtained from EMS. *TIME COURSE:* Onset of symptoms reported as sudden, Onset was 1 hours prior to arrival, Symptoms are improved, Complaint is resolved. *QUALITY:* Loss of consciousness, Momentary, Restoration of usual mental status, immediate. *ASSOCIATED WITH:* Denies abdominal pain, Denies anorexia, Denies back pain, Denies bradycardia, Denies chest pain, Denies diaphoresis, Denies diarrhea, Denies focal weakness, Denies headache fall, Denies melena, Denies nausea, Denies recent surgery, Denies shortness of breath, Denies speech changes, Denies tachycardia, Denies vision changes, Denies vomiting, Denies weakness, All systems reviewed, negative except as described above. *EXACERBATED BY:* Patient's condition exacerbated by nothing. *NOTES:* Patient denies any complaints; syncopal episode at nursing home today. Denies any other complaints.

PHYSICAL EXAM (20:58 JDEW)

CONSTITUTIONAL: Vital signs reviewed, Patient is afebrile, Patient has normal pulse, Patient has normal blood pressure, Patient has normal respiratory rate, Well appearing, Patient appears comfortable, There is no acute distress.
HEAD: Atraumatic, Normocephalic.
EYES: Eyes are normal to inspection, Pupils equal, round and reactive to light, No discharge from eyes, Extraocular muscles intact, Sclera are normal, Conjunctiva are normal.
ENT: Dry mucous membranes.
NECK: Normal ROM, No jugular venous distention, No meningeal signs.
RESPIRATORY CHEST: Chest is nontender, Breath sounds normal, No respiratory distress.
CARDIOVASCULAR: Normal Rate/Rhythm, No murmurs, Normal S1 S2, No rub, No gallop.
ABDOMEN: Abdomen is nontender, No masses, No distension, No peritoneal signs, No hernias, No organomegaly.
BACK: There is no CVA Tenderness, There is no tenderness to palpation, Normal inspection.
UPPER EXTREMITY: Inspection normal, No cyanosis, No clubbing, No edema, Normal range of motion, Normal pulses.
LOWER EXTREMITY: No cyanosis, No clubbing, No edema, Normal range of motion, No calf tenderness, left medial malleolus superficial ulcer; chronic erythema. Nontender. Normal ROM.
NEURO: No focal motor deficits, No focal sensory deficits, No cerebellar deficits, Speech normal, Gait normal, Memory normal.
SKIN: Skin is warm, Skin is dry, Skin is normal color, Skin exam normal except as noted.
PSYCHIATRIC: Oriented X 3.

EKG INTERPRETATION (21:00 JDEW)

12 LEAD EKG INTERPRETATION: 12 lead EKG interpreted by ED Physician, At: 2100, Compared with previous EKG, from 7/2018, Rate 66, beats per minute, RATE is, normal, Rhythm is, Normal Sinus, AXIS is, normal, INTERVAL, conduction is normal, BLOCKS, RBBB (Complete), No acute ST changes, Non−Specific EKG, Questionable decreased anterior t−wave amplitude without inverions, no other changes from prior EKG.

ORDERS

Accu−check: Ordered by: Elamparo, RN, Jaclyn
Ordered for: Omura, MD, Travis
Status: Done by: Elamparo, RN, Jaclyn − Mon Sep 10, 2018 19:26. (19:24 JELA)
Alcohol (Ethyl): Ordered by: Elamparo, RN, Jaclyn
Ordered for: Omura, MD, Travis
Status: Done by: System − Mon Sep 10, 2018 20:06. (19:24 JELA)
CBC, Diff/Smear Evaluation: Ordered by: Elamparo, RN, Jaclyn
Ordered for: Omura, MD, Travis
Status: Done by: System − Mon Sep 10, 2018 19:47. (19:24 JELA)
Comprehensive Metabolic Panel: Ordered by: Elamparo, RN, Jaclyn
Ordered for: Omura, MD, Travis
Status: Done by: System − Mon Sep 10, 2018 20:06. (19:24 JELA)
EKG: Ordered by: Elamparo, RN, Jaclyn
Ordered for: Omura, MD, Travis
Status: Active
Reason: AMS. (19:24 JELA)

RESULTS
RADIOLOGY: CT HEAD WITHOUT IV CONTRAST Mon Sep 10, 2018 21:29,

Exam Performed at: Northwest Hospital
EXAMINATION:
CT of the head without contrast

CLINICAL INFORMATION:
Syncope.

COMPARISON STUDY:
3/29/2018

TECHNIQUE:
Images were obtained helically through the head without intravenous contrast. Multiplanar reconstruction was performed. Radiation dose reduction techniques were utilized including automated exposure control, adjustment of the mA and/or kV according to patient size, and/or use of iterative reconstruction technique.

FINDINGS:
The ventricles and sulci are within normal limits. There is no evidence of acute intracranial hemorrhage mass or midline shift. Incidental note is made of focal areas of calcification in the periventricular white matter tracts posterior to the left ventral horn and right basal ganglia. Smaby associated with cavernous hemangioma and these findings are entirely stable from comparison examination. No acute or prior major segment stroke is seen. No extra−axial mass or fluid collection is present.

The orbits are clear. The visualized paranasal and mastoid sinuses are clear. No acute bony abnormality is seen.

IMPRESSION:
1. No evidence of acute intracranial event. Stable exam.

Dictated and Verified by: Michael A Degroot MD, Via Radiology 9/10/2018 21:47

. (21:47)
CHEST 2 VIEWS Mon Sep 10, 2018 21:07,

Exam Performed at: Northwest Hospital

EXAMINATION:
Two−view chest

CLINICAL INFORMATION:
Altered mental status

COMPARISON STUDY:
None

FINDINGS:
The cardiac and mediastinal silhouettes are within normal limits. Focal airspace opacification is identified in the posterior segment of the right upper lobe and may be consistent with cysts subsegmental atelectasis versus pneumonia. A small spiculated area of opacification is seen in the right upper lobe and may be associated with solitary pulmonary nodule. Lung volumes are mildly decreased. No pleural effusion or pneumothorax identified. No acute bony abnormalities are identified.

IMPRESSION:
1. Right lower lobe airspace opacification consistent with atelectasis versus pneumonia.
2. Suspected right upper lobe solitary pulmonary nodule. Recommend comparison to prior examinations if available, otherwise further evaluation with contrast−enhanced CT of the chest recommended.

Dictated and Verified by: Michael A Degroot MD, Via Radiology 9/10/2018 22:10

. (22:10)

MEDICATION ADMINISTRATION SUMMARY

Drug Name	Dose Ordered	Route	Status	Time
sodium chloride 0.9 % intravenous	1000 mL	IV Bolus	Given	21:15 9/10/2018

Detailed record available in Medication Service section.

MEDICATION SERVICE

sodium chloride 0.9 % intravenous: Order: sodium chloride 0.9 % intravenous (0.9 % sodium chloride) − **Dose:** 1000 mL : IV Bolus
Ordered by: Jonathan Dewees, MD
Entered by: Jonathan Dewees, MD Mon Sep 10, 2018 21:00 ,
Acknowledged by: Booze, RN Thomas Mon Sep 10, 2018 21:03
Documented as given by: Thomas Booze, RN Mon Sep 10, 2018 21:15
Patient, Medication, Dose, Route, Schedule verified prior to administration., Amount given: 1 L, IV SITE #1 IV fluids established for hydration, IV SITE #1 into right forearm, IV SITE #1 1st bag hung, amount 1 Liter hung, IV SITE #1 bolus of 1000 ml established, IV SITE #1 Rate of bolus, wide open, via gravity tubing, via pump tubing, Connections checked prior to administration, Line traced prior to administration, Catheter placement confirmed via flush prior to administration, Correct patient, time, route, dose and medication confirmed prior to administration, Patient advised of actions and side−effects prior to administration, Allergies confirmed and medications reviewed prior to administration, Patient in position of comfort, Side rails up, Cart in lowest position, Call light in reach.

: Follow Up : Response assessment performed, No signs or symptoms of allergic reaction noted, _IV SITE #1:_, IV fluid infusion discontinued, on Mon Sep 10, 2018 23:00, Total fluid hydration time IV site 1 1 hour, 45 minutes, . (23:00 EOHA)

AMBULANCE (19:13 MBEC)

NOTES: Age 93, female, parkridge rehab, 1600 possible syncopal episode, then DLOC, per EMS tired but alert and oriented with no complaints, staff state patient is not acting right, right lung sounds − rales, BG 159, BP: 168, / 80, HR: 84.

AMBULANCE: Ambulance: Mon Sep 10, 2018 19:13, Comment: A65.

ADMISSION REQUEST

ENTRY: Disposition Type: Observation
Disposition: Admit to Med/Tele
Condition: 2−GUARDED
Admitting Doctor: Cella, Julie
PCP Doctor: NEIGHBOR JR, WILLIAM
Special Needs: No
View Bed: Fall Risk
Isolation: None
PRIMARY: syncope. (Tue Sep 11, 2018 00:11 JDEW)

UPDATE: Additional Comments: FUF CREATED JJ. (Tue Sep 11, 2018 00:13 JJU)
Admitting Doctor: CELLA, JULIE
Attending Doctor: CELLA, JULIE
Admit Room: ED
Admit Area: ED. (Tue Sep 11, 2018 00:25 SPAR)
Admit Area: 4. (Tue Sep 11, 2018 00:27 VBAN)
Admit Room: 444
Admit Area: 4S
Bed Status: Bed Ready. (Tue Sep 11, 2018 00:28 VBAN)

NURSING ASSESSMENT: HEAD−TO−TOE (19:40 JELA)

CONSTITUTIONAL: Patient arrives ambulatory with steady gait to treatment area, History obtained from patient, Patient appears comfortable, Patient is cooperative, Patient is alert and oriented x 3, Patient appears in no acute distress, Patient's skin is warm and dry, Patient's mucous membranes are moist and pink, via EMS, lifted to cart.

NEURO: GCS eye opening is 4, verbal response is 5, motor response is 6, total GCS is15, Pupils PERRL, Motor strength to all extremities are strong and equal, Patient denies paresthesias, No facial droop noted, Patient denies headache, Patient denies nausea, Patient denies vomiting, Patient's speech is clear and understandable, Pt reports "I'm just really tired and have no energy".

RESPIRATORY/CHEST: Breath sounds clear bilaterally, Equal chest expansion, No complaint of pain, No acute respiratory distress, No intercostal retractions, No supraclavicular retractions, No nasal flaring, No jugular vein distension, No orthopnea, Non productive cough, Pt reports coughing out blood at home.

CARDIOVASCULAR: Patient denies chest pain, Normal sinus rhythm on monitor, No extremity edema noted, Positive peripheral pulses bilaterally, Left radial pulse normal, Right radial pulse normal.
LEFT LOWER EXTREMITY: Dressing to left shin for venous stasis ulcer, c/d/i.

NURSING PROCEDURE: BEDSIDE TESTING (19:27 JTHU)
GLUCOSE: Patient's identity verified by, patient stating name, patient stating birth date, hospital ID bracelet, Indications for test: mental status changes, Procedure was performed at 1921, Blood, is capillary, Accucheck results(Normal Range 70−105 mg/dl): 131, Patient tolerated procedure well.

NURSING PROCEDURE: IV (20:30 TBOO)
SITE 1: Patient's identity verified by, patient stating name, patient stating birth date, Indications for procedure: fluid replacement, Procedure performed at 1955, IV established for hydration, 20 gauge catheter inserted, into right forearm, in 1 attempt, Saline lock established, flushed with normal saline, amount 10, ml, After procedure, no swelling noted at site, After procedure, no drainage noted at site, After procedure, no redness, IV line connections checked and properly labeled, IV secured by, 2x3 ensure dressing applied.

IMAGING (19:29 SPAR)
ECG − PRELIM: Image captured from scanner.

CT Head WO Cont

Referring Provider:
Dewees, Jonathan William, MD
1550 N 115th St
Emergency Department A-150
Seattle, WA 98133

EXAMINATION:
CT of the head without contrast

CLINICAL INFORMATION:
Syncope.

COMPARISON STUDY:
3/29/2018

TECHNIQUE:
Images were obtained helically through the head without intravenous contrast. Multiplanar reconstruction was performed. Radiation dose reduction techniques were utilized including automated exposure control, adjustment of the mA and/or kV according to patient size, and/or use of iterative reconstruction technique.

FINDINGS:
The ventricles and sulci are within normal limits. There is no evidence of acute intracranial hemorrhage mass or midline shift. Incidental note is made of focal areas of calcification in the periventricular white matter tracts posterior to the left ventral horn and right basal ganglia. Smaby associated with cavernous hemangioma and these findings are entirely stable from comparison examination. No acute or prior major segment stroke is seen. No extra-axial mass or fluid collection is present.

The orbits are clear. The visualized paranasal and mastoid sinuses are clear. No acute bony abnormality is seen.

IMPRESSION:
1. No evidence of acute intracranial event. Stable exam.

Dictated and verified by: Michael A Degroot, MD Via Radiology 09/10/2018 21:47

XR Chest 2 Views

Referring Provider:
Dewees, Jonathan William, MD
1550 N 115th St
Emergency Department A-150
Seattle, WA 98133

EXAMINATION:
Two-view chest

CLINICAL INFORMATION:
Altered mental status

COMPARISON STUDY:
None

FINDINGS:
The cardiac and mediastinal silhouettes are within normal limits. Focal airspace opacification is identified in the posterior segment of the right upper lobe and may be consistent with cysts subsegmental atelectasis versus pneumonia. A small spiculated area of opacification is seen in the right upper lobe and may be associated with solitary pulmonary nodule. Lung volumes are mildly decreased. No pleural effusion or pneumothorax identified. No acute bony abnormalities are identified.

IMPRESSION:
1. Right lower lobe airspace opacification consistent with atelectasis versus pneumonia.
2. Suspected right upper lobe solitary pulmonary nodule. Recommend comparison to prior examinations if available, otherwise further evaluation with contrast-enhanced CT of the chest recommended.

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Patient and Additional Contact Information (if any)

Patient Name (last, first, middle)	Date of Birth	Phone Number
Name of Guardian, Surrogate or other Contact Person	**Relationship**	**Phone Number**

D NON-EMERGENCY MEDICAL TREATMENT PREFERENCES

ANTIBIOTICS:

- [x] Use antibiotics for prolongation of life.
- [ ] Do not use antibiotics except when needed for symptom management.

MEDICALLY ASSISTED NUTRITION:
Always offer food and liquids by mouth if feasible.

- [ ] No medically assisted nutrition by tube.
- [ ] Trial period of medically assisted nutrition by tube. (Goal: _____)
- [x] Long-term medically assisted nutrition by tube.

ADDITIONAL ORDERS: (e.g. dialysis, blood products, implanted cardiac devices, etc. Attach additional orders if necessary.)

X Physician/ARNP/PA-C Signature	Date 06/06/18
X Patient or Legal Surrogate Signature Jeanne L Hoffman	Date 6/4/2018

DIRECTIONS FOR HEALTH CARE PROFESSIONALS

NOTE: A person with capacity may always consent to or refuse medical care or interventions, regardless of information represented on any document, including this one.

Completing POLST

- Completing a POLST form is always voluntary.
- Treatment choices documented on this form should be the result of shared decision-making by an individual or their surrogate and medical provider based on the person's preferences and medical condition.
- POLST must be signed by a physician/ARNP/PA-C and patient, or their surrogate, to be valid. Verbal orders are acceptable with follow-up signature by physician/ARNP/PA-C in accordance with facility/community policy.

Using POLST

Any incomplete section of POLST implies full treatment for that section.

This POLST is valid in all care settings including hospitals until replaced by new physician's orders.

The POLST is a set of medical orders. The most recent POLST replaces all previous orders.

The POLST does not replace an advance directive. An advance directive is encouraged for all competent adults regardless of their health status. An advance directive allows a person to document in detail his/her future health care instructions and/or name a surrogate decision maker to speak on his/her behalf. When available, all documents should be reviewed to ensure consistency, and the forms updated appropriately to resolve any conflicts.

SECTIONS A AND B:

- No defibrillator should be used on a person who has chosen "Do Not Attempt Resuscitation."
- When comfort cannot be achieved in the current setting, the person should be transferred to a setting able to provide comfort (e.g., treatment of a hip fracture).
- An IV medication to enhance comfort may be appropriate for a person who has chosen "Comfort-Focused Treatment."
- Treatment of dehydration is a measure which may prolong life. A person who desires IV fluids should indicate "Selective" or "Full Treatment."

SECTION D:

- Oral fluids and nutrition must always be offered if medically feasible.

Reviewing POLST

This POLST should be reviewed periodically whenever:
(1) The person is transferred from one care setting or care level to another, or
(2) There is a substantial change in the person's health status, or
(3) The person's treatment preferences change.

To void this form, draw line through "Physician Orders" and write "VOID" in large letters. Any changes require a new POLST.

Review of this POLST Form

Review Date	Reviewer	Location of Review	Review Outcome

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Physician Orders for Life-Sustaining Treatment (POLST)

Last Name - First Name - Middle Name or Initial: Hoffman, Jeanne
Date of Birth: 1 6 25
Last 4 #SSN (optional): 4 7 3 6

FIRST follow these orders, **THEN** contact physician, nurse practitioner or PA-C. The POLST is a set of medical orders intended to guide medical treatment based on a person's current medical condition and goals. Any section not completed implies full treatment for that section. Completing a POLST form is always voluntary. Everyone shall be treated with dignity and respect.

Medical Conditions/Patient Goals:

Agency Info/Sticker

A Check One

CARDIOPULMONARY RESUSCITATION (CPR): Person has no pulse and is not breathing.
When not in cardiopulmonary arrest, go to part B.

- [x] **Attempt Resuscitation/CPR**
- [ ] **Do Not Attempt Resuscitation/DNAR (Allow Natural Death)**
  Choosing DNAR will include appropriate comfort measures.

B Check One

MEDICAL INTERVENTIONS: Person has pulse and/or is breathing.

- [x] **FULL TREATMENT - primary goal of prolonging life by all medically effective means.**
  Includes care described below. Use intubation, advanced airway interventions, mechanical ventilation and cardioversion as indicated. **Transfer** *to hospital if indicated. Includes intensive care.*
- [ ] **SELECTIVE TREATMENT - goal of treating medical conditions while avoiding burdensome measures.**
  Includes care described below. Use medical treatment, IV fluids and cardiac monitor as indicated. Do not intubate. May use less invasive airway support (e.g. CPAP, BiPAP). **Transfer** *to hospital if indicated. Avoid intensive care if possible.*
- [ ] **COMFORT-FOCUSED TREATMENT - primary goal of maximizing comfort.**
  Relieve pain and suffering with medication by any route as needed. Use oxygen, oral suction and manual treatment of airway obstruction as needed for comfort. **Patient prefers no hospital transfer:** *EMS consider contacting medical control to determine if transport is indicated to provide adequate comfort.*

Additional Orders: (e.g. dialysis, etc.) _____

C **SIGNATURES:** The signatures below verify that these orders are consistent with the patient's medical condition, known preferences and best known information. If signed by a surrogate, the patient must be decisionally incapacitated and the person signing is the legal surrogate.

Discussed with:	PRINT — Physician/ARNP/PA-C Name	Phone Number

Patient seen today for: SNF f/u visit

History:
93 year old female with history of severe peripheral vascular disease of both venous and arterial, recurrent DVTs, chronic anticoagulation (coumadin), DM II, OA of both hips, homelessness, admitted at Park Ridge Care Center on 6/4/18 from NWH where she was hospitalized from 5/31/18 to 6/4/18 for worsening stasis ulcers on her left lower extremity and cellulitis.

She as previously followed by the NW wound clinic for her venous stasis multiple ulcers of LLE. During her follow up appointment at the clinic there was concern for worsening cellulitis, hence admitted for further workup. She was started on Cefazolin empirically. Wound culture later grew MSSA and Pseudomonas. She will continue to be closely followed by the wound clinic team at NW.

On hospital admission her INR was 4.9. coumadin was subsequently held for few days and then gradually restarted. She also received some IV fluid for dehydration.

Hx Interval:
SNF follow up visit with Jeanne today as she continues to be at Park Ridge Care Center for rehabilitation and wound care management. She has been doing well physically, participating in therapy sessions and ambulates using a walker with minimal assistance. For ling distances she is still wheelchair dependent. Her leg wounds gradually improving with wound dressing by the SNF RN and followed by NW wound NP weekly. She states her "leg pain is more of aching/itching but seems to be less as the wound heals". Appetite/intake improving with improving weight as well (117 lbs today), continues to be on nutritional supplement Prostat to facilitate wound healing in addition to her protein cal malnutrition. Her INR today was 2.7 on 6 mg Coumadin, no s/s of active bleeding per nursing staff.

She reports no new concerns today.

ROS:
Leg pain with activity, Norco has been effective
Denies fever, chills, sob, n/v, chest pain, headache, diarrhea or constipation.
Rest of the ROS reviewed and were negative except for as above

PMH:

Patient Active Problem List

Diagnosis

- Sensorineural hearing loss, unspecified
- DVT, recurrent, lower extremity, chronic (HCC)
- Other and unspecified hyperlipidemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign

A/P:

(I73.9) Peripheral vascular disease, unspecified (HCC) (primary encounter diagnosis)
(I83.029) Venous ulcer of left leg (HCC) (I73.9)
Plan:
- followed by vascular clinic, s/p venous ablation procedure 7/26/18
- f/u with NW wound NP at SNF weekly and at the clinic as needed
- continue wound care as ordered
- continue supportive care with ADLs
- continue Pentoxifylline 400 mg po q 8 hrs
- Norco 5-325 mg, 2 tabs po prn q 6 hrs for pain

(Z86.718) History of recurrent deep vein thrombosis (DVT)
(Z79.01) Long term current use of anticoagulant therapy
Plan:
- continue chronic anticoagulation with Coumadin, current dose 6 mg po daily
- INR has been at therapeutic, 2.7 today
- INR goal is 2 - 3
- continue to check INR twice a week

(G31.84) Mild cognitive impairment
Plan:
- stable without behaviors or resistive to care
- continue supportive care
- monitor for mood/behavioral changes

(I10) Essential hypertension
Plan: - stable, BP remains at goal with SBP generally below 130
- continue to monitor without meds

(E78.5) Other and unspecified hyperlipidemia
Plan: - no longer on statin

(M16.0) Primary osteoarthritis of both hips
(M47.816) Osteoarthritis of lumbar spine, unspecified spinal osteoarthritis complication status
(M62.81) Weakness of trunk musculature
(R29.898) Leg weakness, bilateral
Plan: - PT and OT as scheduled
- supportive care with ADLs
- Norco 5-325 mg, 2 tabs po prn q 6 hrs for pain

(E11.9) Type 2 diabetes mellitus without complication, without long-term current use of insulin (HCC)
Plan: - diet controlled

(H40.9) Unspecified glaucoma(365.9)
Plan: - stable, continue home regimen
- Timolol 0.5% 1 drop both eyes daily

(E43) Severe protein-calorie malnutrition (HCC)
Plan: - followed by SNF dietician
- continue Prostat 30 cc po daily
- will continue to monitor weight

(E53.9) Unspecified vitamin B deficiency
Plan: - Vitamin B_{12} 1000 mcg po daily

(E55.9) Vitamin D deficiency
Plan: - recent Vit D 25-OH was 24.3 on 6/8/18
- completed 6 weeks course of high dose Vit D
- continue Vitamin D_3 1000 units po daily

Patient seen today for: SNF f/u visit

History:
93 year old female with history of severe peripheral vascular disease of both venous and arterial, recurrent DVTs, chronic anticoagulation (coumadin), DM II, OA of both hips, homelessness, admitted at Park Ridge Care Center on 6/4/18 from NWH where she was hospitalized from 5/31/18 to 6/4/18 for worsening stasis ulcers on her left lower extremity and cellulitis.

She as previously followed by the NW wound clinic for her venous stasis multiple ulcers of LLE. During her follow up appointment at the clinic there was concern for worsening cellulitis, hence admitted for further workup. She was started on Cefazolin empirically. Wound culture later grew MSSA and Pseudomonas. She will continue to be closely followed by the wound clinic team at NW.

On hospital admission her INR was 4.9. coumadin was subsequently held for few days and then gradually restarted. She also received some IV fluid for dehydration.

Hx Interval:
I'm following up with Jeanne today for a routine SNF visit as she continues to be at Park ridge for rehabilitation and wound care. Now she is more active and ambulating more with a walker inside the facility. Her leg wound is still there with routine dressing change by the wound nurse. She stated it hurts sometimes but she thinks the pain has decreased since SNF admission. She is taking Norco pain management as needed. She is scheduled to have surgery tomorrow at NWH, venous ablation procedure.

Her INR has been stable for the past month, maintained on 5 mg Coumadin daily for DVT management, no sign and symptoms of bleeding. Appetite remains fair, weight has been gradually increasing since SNF admission, current weight is 114.5 pounds. She remains continent of bowel and bladder.

She has no new concerns today.

ROS:
Leg pain with activity
Denies fever, chills, sob, n/v, chest pain, headache, diarrhea or constipation.
Rest of the ROS reviewed and were negative except for as above

Patient seen today for: Leg pain, SNF f/u visit

History:
93 year old female with history of severe peripheral vascular disease of both venous and arterial, recurrent DVTs, chronic anticoagulation (coumadin), DM II, OA of both hips, homelessness, admitted at Park Ridge Care Center on 6/4/18 from NWH where she was hospitalized from 5/31/18 to 6/4/18 for worsening stasis ulcers on her left lower extremity and cellulitis.

She as previously followed by the NW wound clinic for her venous stasis multiple ulcers of LLE. During her follow up appointment at the clinic there was concern for worsening cellulitis, hence admitted for further workup. She was started on Cefazolin empirically. Wound culture later grew MSSA and Pseudomonas. She will continue to be closely followed by the wound clinic team at NW.

On hospital admission her INR was 4.9. coumadin was subsequently held for few days and then gradually restarted. She also received some IV fluid for dehydration.

Hx Interval:
Jeanne is complaining of leg pain, more like cramps to the calf, more on the right leg than the left. She has no wounds on the right leg. She has stasis ulcer wounds on the left leg which is wrapped with dressing. She states that the cramp-like pain comes and goes, worse in the morning after long rest in bed. She has history of chronic/recurrent DVTs and is currently on chronic anticoagulation coumadin with therapeutic INR for the past month. Pain could also be related to her poor vascular circulation. Her electrolytes are stable and no active clot noted on RLE by duplex.

She is otherwise walking on both legs with one person assist using a walker. Per nursing notes her wounds are gradually healing with current treatment plan. She has no sign of active infection. Appetite fairly stable, remains continent of bowel and bladder. She remains calm and cooperative with care and treatments.

ROS:
Denies fever, chills, sob, n/v, chest pain, headache, diarrhea or constipation.
Rest of the ROS reviewed and were negative except for as above

x: (206) 365-0568

ADMIT HISTORY AND PHYSICAL

Date of Admission to SNF: 6/4/18

Date of Encounter: 6/7/2018

Reason for admission to PRCC: s/p hospitalization for worsening stasis ulcers, now admitted to SNF for rehab and wound care.

ary care provider: Neighbor Jr., William E, MD

Interval History:
ID/CC: 93 year old female with with severe peripheral vascular disease both venous and arterial who came in with worsening stasis ulcers on her left lower extremity and cellulitis admitted to NWH from 5/31/18 to 6/4/18.

Her son, Louis, is present for this visit,

Venous stasis ulcers: LLE, multiple, has known PVD as well, using Xeroform with leg wraps but not pressure wraps. She appreciates the care she is receiving here.

Homelessness: pt and son were forced out of their apartment and have been living in a tent for several weeks. n asked what here plans are when her wounds heal up, she states "I am going back to my tent".

Low grade fever: noted last night, 99F, normalized today, stat labs drawn one day prior and noted K+ elevated to 5.6, and H/H went from 11.7/35.5 to 9.8/30 in a single day. Her prior H/H appear to be in the range of 9/30. She denies any localizing sx.

Comprehensive functional assessment:
ADLS: independent prior Hygiene, Dressing, Feeding, Transferring, Toileting, Ambulation
IADLS: requires assistance w/Telephone, Shopping, Food, Housekeeping, Laundry, Transport, Meds, Finances
Memory: no concerns
ow: no concerns
Balance: no recent falls
Assistive devices: walks w/ 4WW
Incontinence: positive for urge UI
Mood: "good"

ROS:
Complete ROS is negative, except for hard of hearing

H/Problem List:
atient Active Problem List

Diagnosis	Date Noted
• Osteoporosis, unspecified	03/04/2008

T spine X ray 3/4/2008 showed ostepenia and compression wedging of vertebra. Summer 2008 Vit D 25 total 20.5. Advised Vitamin D 800 IU daily. Began fosamax spring 2008. Continued for five years, then stopped

ong term current use of anticoagulant therapy 01/08/2008
Reason for anticoagulation: Recurrent dvts
Duration of anticoagulation: life
INR goal: 2.-3 (lower end of this range desired because of age)

• Unspecified vitamin B deficiency 05/01/2007
Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency

pe 2 diabetes mellitus without complication 03/27/2007
(HCC)
Year onset: Dx March 2007
Metformin discontinued 2011 as A1c in target range without it.
Diet and weight controlled.

• Sensorineural hearing loss, unspecified 11/20/2006
Has bilateral hearing aids.
6/3/2008 hearing worse. Ears clean. Advise follow with audiology.

T, recurrent, lower extremity, chronic (HCC) 11/20/2006
Recurrent DVT and phlebitis since 1982
Per Vascular Surgery note 5/9/2006: continue warfarin
3/9/2010 Lower extremity arterial vascular ultrasound studies normal

• Other and unspecified hyperlipidemia 11/20/2006
On lipitor. Tried discontinuing but LDL cholesterol markedly increase. Now low dose effective.

• Generalized osteoarthrosis, unspecified site 11/20/2006
LS spine. Bilateral talonavicular arthritis since 1994.

• Essential hypertension, benign 11/20/2006

- Unspecified glaucoma(365.9) 11/20/2006

  4/1/2014 refilled timolol but do not seen recent eye clinic visit. Patient to be seen in eye clinic.
  William E Neighbor JR, MD

- Routine general medical examination at a health care facility 11/20/2006

  Td/Tdap (q 10 yr): See immmunizations
  Pneumococcal (65 yoa and high risk x1): See imms
  Blood pressure: Dx hypertension
  Cholesterol: dx hyperlipidemia
  Mammogram (q 1 yr begin at age 40-50 yrs): neg spring 2011
  Pap smear (q2-3 yrs to age 65)--82 years old
  Colorectal cancer screening: Sig to 30 cm in May 2001. Previoiusly had refused studies. Heme neg 2008. 4/29/2010 heme x 3 neg.
  Tobacco: no
  Alcohol: no
  Drugs: no
  Sexual practice/contraception: Not active
  Advanced directives: Yes/ 9/21/2016 POLST forms signed. Scanned to record.
  Advised osteoporosis prevention in 2005. Vit D 25 20 on 4/3/2008 . Advise Vit D 800 IU daily.

- nous ulcer of left leg (HCC) 06/07/2018
- omeless 06/07/2018
- Normocytic anemia 06/07/2018
- Cellulitis of left leg 05/31/2018
- Non-pressure chronic ulcer of left ankle with fat layer exposed (HCC) 05/17/2018
- Non-pressure chronic ulcer of left calf with fat layer exposed (HCC) 05/17/2018
- Peripheral vascular disease, unspecified (HCC) 05/17/2018
- Primary osteoarthritis of both hips 02/01/2017
- Thrombocytopenia (HCC) 11/02/2016
- Imbalance 11/02/2016
- History of recurrent deep vein thrombosis (DVT) 06/02/2016
- er physical therapy 01/22/2015
- Hip joint stiffness 01/06/2015
- Leg weakness, bilateral 01/06/2015
- Weakness of trunk musculature 01/06/2015
- Pseudophakia, both eyes 11/08/2014
- Urine incontinence 08/27/2014

  Uses pads

- Osteoarthritis of lumbar spine 08/30/2013

RGIES: Review of patient's allergies indicates:

Allergies

Allergen	Reactions
• Adhesives	
• Aspirin	Other

• Nitrofurantoin		Other
	Confusion, loss of appetitie, nausea, abdominal pain	
• Nitrofurantoin		Other
	confusion	
Penicillins		Rash
Sulfa Antibiotics		Rash

Medication orders reviewed in MAR: X
Current nursing home medications reviewed on the medical record.
Please review the facility Medication Administration Record (MAR) for the most up to date and accurate medication list.
To obtain current medication list please call the facility and ask for medication administration record to be faxed.

Family History:
Parents died of old age

Social History:
Habits: NONE
Prior living situation: homeless now
Widowed. She has two sons. She had been living with her son in subsidized housing and apparently the landlord was affected by her son's behavior, as well as her other son's bullying, and eventually evicted them a couple of months ago (per SW note the son reports they left "willingly".
Social Support: son, Louis, 360-649-5702
POLST completed, in summary - FULL
DPOA: son, Louis

Physical Exam:
118/55 | Pulse 70 | Temp 98.1 °F (36.7 °C) | Resp 20 | Wt 110 lb 2 oz (50 kg) | BMI 20.81 kg/m²
Readings from Last 3 Encounters:

06/07/18	110 lb 2 oz (50 kg)
05/31/18	112 lb (50.8 kg)
05/17/18	109 lb 6.4 oz (49.6 kg)

GEN: appears older stated age, accompanied by son . Appears nourished, adequately hydrated, and groomed. Alert and responding appropriately and in no acute distress, HOH
PSYCH: alert and oriented x3, interactive, speech w/o dysarthria, full affect, focused content, logical process, no hallucinations or psychomotor agitation
HEENT: NCAT, NL external ears, hearing aid in L ear, Poor dentition, moist mucous membranes, oropharynx clear. EOMI and anicteric, corrective lens, R facial droop
CV: RRR, NL S1 and S2, G 1/6 sys murmurs, no r/g, no JVD.
Resp: normal, unlabored, and regular respiratory effort, CTA B/L.
ABD: normal BT all quadrants, non-tender, non-distended, no masses
MSK: kyphotic, changes in hands consistent w/ OA.
EXT: no c/c, LLE in Xeroform wrap, 1+ edema,
NEURO: MAE, no tremors, no focal deficits, normal tone, motor symmetry. AD8=2
SKIN: dry wnl temp and color, no apparent rash

Labs/Imaging: Reviewed in chart:

Upcoming Appointments:
Future Appointments

	Time	Provider	Department	Center
6/[illegible]/2018	3:30 PM	Rollo, Johnathon Curtis, MD	NWSSH	NWH SSHC

Assessment/Plan:

(I83.029) Venous ulcer of left leg (HCC) (primary encounter diagnosis)
Plan: wound care

(I73.9) Peripheral vascular disease, unspecified (HCC)
n: supportive care, cont w/ pentoxifylline

(Z86.718) History of recurrent deep vein thrombosis (DVT)
Plan: appears to be recurrent

(Z79.01) Long term current use of anticoagulant therapy
Plan: INR 2.1 now, LMWH stopped, cont w/ coumadin

(G31.84) Mild cognitive impairment
Plan: AD8 score was a 2, will have SLP assess

9.0) Homeless
an: see below.

(E87.5) Hyperkalemia
Plan: odd, that it would change over the span of a day, she reports she has had this issue previously
-Kayexlate 15g x1
-stop ARB

(I10) Essential hypertension
Plan: SBP in the 110s, ok to liberalize, stop ARB

(D64.9) Normocytic anemia
Plan: stable

8.5) Dyslipidaemia
Plan: stop statin

POLST: FULL

Disposition: she has the capacity to elect to move out w/ her son at any time, though would benefit from a roof over her head. SNF SW working on establishing housing.

The patient's risk is moderate.
Problem category: is new, Moderate problem.
T medical decision making is High.

Thuan D Ong, MD

Please contact the University of Washington Post-Acute Care Service at 206-744-5415 or page the provider or the on-call provider through Harborview Medical Center at 206-744-3000.

INR/COUMADIN (W[illegible]ARIN) FLOW SHEET

Directions: Use flow sheet for individual residents and complete each time a INR level is drawn. When completed, file in individual resident clinical record. If lab results are not reported within same day of draw, contact physician to determine if Coumadin (Warfarin) should be given or held. No Aspirin, NSAID, or Plavix to be used unless specifically ordered by the physician.

Resident-Specific INR Goal:

Diagnosis/Clinical Indication for Coumadin:

INR RANGES: 1.8 - 2.2 = Elderly with Atrial Fibrillation; 2.0 - 3.0 = DVT, PE, A-Fib, MI, Mural Thrombus, S/P Joint Replacement; 2.5 - 3.5 = Mechanical Heart Valve

Common drugs which increase INR: Antibiotics; Sulfa; Quinolones (Cipro, Levaquin, and others); Prozac, Paxil, Zoloft; Flagyl; Tylenol and ASA; proton pump inhibitors (Prilosec, Prevacid, Nexium); Cox-2 Inhibitors (Celebrex); NSAIDs; Thyroid Meds; Zocor, Lipitor, Depakote; Allopurinol; Inderal; Vitamin E and some herbs.

Common drugs which decrease INR: Barbiturates; Haldol; Penicillins; Aldactone; Carafate; Vitamin C; Vitamin K; Tazadone; Cortisone.

Common drugs which may increase or decrease INR: Prednisone; Dilantin; Alcohol; Cholestyramine; Zantac

Date/Time	INR Results	Current Coumadin Dose	MD Notified	Dose Change	Next Date INR	Nurse's Signature

MRI INPATIENT SCREENING FORM

FAX COMPLETED FORM TO EXT 1925 – FOR QUESTIONS CALL EXT 4700

Attending RN: SUSAN BAKER NWH RN cell# 3733

NOTE: Sedation or anesthesia should be considered for patients who are uncooperative, anxious, claustrophobic, unable to hold still, or unable to lay flat. Exam time is 30–45 min per body part.

Pre MRI assessment of patient: *This checklist will help to prepare the patient for an MRI exam.*
The form should be completed at the bedside with the patient or family.

Patient weight 51.7 kg. lbs. *(circle)*

YES NO

- ☑ IV access
- ☑ On dialysis. *If yes, dialysis is recommended to follow MRI with contrast.*
- ☑ Severe kidney disease (Stage 5 or GFR <15)
- ☑ Allergic to gadolinium (MRI) contrast
- ☑ On an IV pump. *RN to discontinue or transfer to MRI compatible infusion pump (pump stored in ICU equip room).*
- ☑ Difficulty lying flat or holding still for the duration of exam (30–45min per body part).
- ☑ Claustrophobic, in pain, anxious, etc. Clinician to consider pre-medication, moderate sedation, or general anesthesia.
- ☑ NPO 4–6 hours prior to *abdomen* exams
- ☑ Translator needed and will accompany patient
- ☑ Pregnant, _____ weeks
- ☑ History of cancer, type _____

Faxed @ FAXED SEB

Pre MRI safety screening: *Answer yes or no and circle all that apply*

YES NO

- ☑ Pacemaker (PATIENT MAY NOT HAVE MRI)
- ☑ Programmable shunt (*requires post MRI consult with neurosurgery*)
- ☑ Neurostimulator, i.e., spinal, or DBS
- ☑ Indwelling catheter device or drug infusion (insulin or pain) pump
- ☑ Aneurysm clips
- ☑ Inner eye/ear implant
- ☑ Implanted metal/device, i.e., stent, clips, screws, pins, wires, prosthesis of any kind – Hip screw per son
- ☑ History of shrapnel or metal fragment(s) in eyes or in body, location _____ Midline path
- ☑ Insufficient medical history from patient, family or medical record
- ☑ Patient is metal-free (has no implants, devices or shrapnel in or on his/her body) Removed @ home
- ☑ Removed all jewelry, removable dental work, piercings, medication patches, hearing aids, and personal items. glasses on

Implant/device type: _____ Manufacturer: _____

Date(s) of implantation: _____ Facility/physician: _____

NOTE: Medical implants/devices require documentation. If insufficient patient history is available from patient, family, or medical record to complete this form, MRI staff will coordinate alternative screening procedure.

Signature of person completing the form: Susan S Baker **Date:** 9/17/18

NORTHWEST HOSPITAL & MEDICAL CENTER — Partners with the Community for Wellness

Our mission is to raise the long–term health status of our community by providing personalized, quality care with compassion, dignity, and respect.

	WHAT TO LOOK FOR?	WHAT TO DO?
HEART FAILURE	**Call your primary care provider for any of the symptoms below:** • Shortness of breath that gets worse or wakes you from sleep • Weight gain above 2lb per day or 3lb per week • Swollen/puffy feet, ankles or legs • Dizziness or light–headedness with standing • Feeling exhausted during routine activity	• Don't smoke! • Take medications on time, to control blood pressure, choles–terol and glucose • Check weight daily • Pace yourself. Slow down or stop when you need to rest • Participate in activities that you can do comfortably and build exercise into your daily routine • Avoid stress • Eat heart healthy diet: reduce salt, fat, cholesterol, and increase fiber • Limit alcohol intake • Follow up regularly with your primary care provider as directed
STROKE "Brain Attack!"	**Call 911 if you have:** • Sudden numbness or weakness of face, arm or leg • Sudden confusion, trouble speaking or understanding • Sudden change in vision in one or both eyes • Sudden difficulty with walking • Sudden dizziness, loss of balance or coordination • Sudden severe headache with un–known cause	**Know the 2 types of stroke** • Ischemic stroke – blocked artery • Hemorrhagic – ruptured artery **How to prevent stroke** • Don't smoke! • Control blood pressure • Take medications as directed • Manage diabetes • Eat a heart healthy diet: reduce salt, fat, cholesterol, and • increase fiber • Incorporate physical activity into your daily routine • Limit alcohol intake • Maintain healthy weight
QUIT SMOKING 	**Did you know?** • Tobacco is the number 1 killer in America today • Second hand smoke is just as harmful to your health • 1/2 million Americans die from smok–ing related disease each year	• Get ready to quit and pick a date to stop smoking • Get support and encouragement from family, friends and co–workers • Do things differently to avoid triggers that make you want to smoke • Consider medication and use it correctly • Be prepared for relapse, it may take several attempts • Join a support group or telephone a quit–line

VISIT SUMMARY INFORMATION

Discharging Provider	Sonja Ellingson, MD
Primary Diagnosis	Lower extremity wounds.
Other Major Diagnoses	Syncope, Diarrhea, DVTs on Warfarin

ACTIVITY

Activity	Fall precautions.

DIET

Diet Instructions	Resume previous diet
Fluid Intake	Drink 6-8 glasses per day

FOLLOW UP APPOINTMENTS

	Provider Name	Phone#	When to Follow Up
Primary Care Follow up Appt	Neighbor Jr., William E, MD	206-616-9358	Within 7 days, call to schedule appointment.
Follow up Appt	Wound care clinic	206 668-1244	9/24/2018 @ 8:30 AM [Monday]
Follow up Labs	INR on Friday 9/21/2018		
Additional Referral	Kindred Home Health		
Referral Instructions	INR to be checked on Friday 9/21/2018		

ADDITIONAL INSTRUCTIONS

Additional Instructions

1. Be careful with mobility- if you are going for walks with Lou and use fall precaution tips, assistive device/Walker at all times.
2. Follow up with Wound Care Clinic on Monday.
3. INR on Thrusday.
4. Follow up with Dr. Neighbor Jr.

Notify

Notify your Provider if you have any of the following signs or symptoms:
Fever of 100.5 F or higher or chills
Increased/ Excessive Bleeding
Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
Frequency, burning, foul smelling or blood with urination or unable to urinate
Persistent diarrhea or constipation
Pain, redness and swelling in lower legs
Pain unrelieved with medication and rest
Unable to tolerate oral fluids or food
Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
Swelling unrelieved by elevation, rest or ice
Severe leg/calf pain
Chest pain
Shortness of breath
Fatigue
Weight gain of more than 3 pounds in 3 days

NORTHWEST HOSPITAL & MEDICAL CENTER

Medicare Outpatient Observation Notice

Patient name: Hoffman, Jeanne Leonie **Patient number: U8170135**

You're a hospital outpatient receiving observation services. You are not an inpatient because:

Your physician feels that the treatment for your medical condition (Syncope) is corrected within 48 hours from your admission date and time as of 9/11/2018 @00:11.

Being an outpatient may affect what you pay in a hospital:

- When you're a hospital outpatient, your observation stay is covered under Medicare Part B.
- For Part B services, you generally pay:
  - A copayment for each outpatient hospital service you get. Part B copayments may vary by type of service.
  - 20% of the Medicare-approved amount for most doctor services, after the Part B deductible.

Observation services may affect coverage and payment of your care after you leave the hospital:

- If you need skilled nursing facility (SNF) care after you leave the hospital, Medicare Part A will only cover SNF care if you've had a 3-day minimum, medically necessary, inpatient hospital stay for a related illness or injury. An inpatient hospital stay begins the day the hospital admits you as an inpatient based on a doctor's order and doesn't include the day you're discharged.
- If you have Medicaid, a Medicare Advantage plan or other health plan, Medicaid or the plan may have different rules for SNF coverage after you leave the hospital. Check with Medicaid or your plan.

NOTE: Medicare Part A generally doesn't cover outpatient hospital services, like an observation stay. However, Part A will generally cover medically necessary inpatient services if the hospital admits you as an inpatient based on a doctor's order. In most cases, you'll pay a one-time deductible for all of your inpatient hospital services for the first 60 days you're in a hospital.

If you have any questions about your observation services, ask the hospital staff member giving you this notice or the doctor providing your hospital care. You can also ask to speak with someone from the hospital's utilization or discharge planning department.

You can also call 1-800-MEDICARE (1-800-633-4227). TTY users should call 1-877-486-2048.

Form CMS 10611-MOON

FS0005 - Medicare Outpatient Observation

HOFFMAN, JEANNE LEONIE
DOB: 01/06/1925 093 Y - F
E CSN: 1830020513 MRN:U8170135
ADM: 09/10/2018
CLASS: ED
SVC: ED

Your costs for medications:

Generally, prescription and over-the-counter drugs, including "self-administered drugs," you get in a hospital outpatient setting (like an emergency department) aren't covered by Part B. "Self-administered drugs" are drugs you'd normally take on your own. For safety reasons, many hospitals don't allow you to take medications brought from home. If you have a Medicare prescription drug plan (Part D), your plan may help you pay for these drugs. You'll likely need to pay out-of- pocket for these drugs and submit a claim to your drug plan for a refund. Contact your drug plan for more information.

If you're enrolled in a Medicare Advantage plan (like an HMO or PPO) or other Medicare health plan (Part C), your costs and coverage may be different. Check with your plan to find out about coverage for outpatient observation services.

If you're a Qualified Medicare Beneficiary through your state Medicaid program, you can't be billed for Part A or Part B deductibles, coinsurance, and copayments.

Additional Information (Optional):

Admit Diagnosis

I878 Other specified disorders of veins

Diagnosis Reason for Visit

Primary Diagnosis

I83892 Varicose veins of left lower extremity with other complications

Secondary Diagnosis

I872 Venous insufficiency (chronic) (peripheral)
I878 Other specified disorders of veins
E11622 Type 2 diabetes mellitus with other skin ulcer
L97322 Non-pressure chronic ulcer of left ankle with fat layer exposed
L97222 Non-pressure chronic ulcer of left calf with fat layer exposed
I10 Essential (primary) hypertension
Z86718 Personal history of other venous thrombosis and embolism
G3184 Mild cognitive impairment, so stated
D649 Anemia, unspecified
E785 Hyperlipidemia, unspecified
M160 Bilateral primary osteoarthritis of hip
M47816 Spondylosis without myelopathy or radiculopathy, lumbar region
M6281 Muscle weakness (generalized)
R32 Unspecified urinary incontinence
H409 Unspecified glaucoma
E43 Unspecified severe protein-calorie malnutrition
E539 Vitamin B deficiency, unspecified
E559 Vitamin D deficiency, unspecified
H9190 Unspecified hearing loss, unspecified ear
Z7901 Long term (current) use of anticoagulants

Anesthesia Report

Anesthesia Summary

HOFFMAN, JEANNE

Procedure(s): LEFT LEG RADIOFREQUENCY ABLATION, STAB PHLEBECTOMY, SCLEROTHERAPY

LEFT LEG RADIOFREQUENCY ABLATION, STAB PHLEBECTOMY, SCLEROTHERAPY

Medical Record Number: U8170135
Account Number: 1828465398
SSN: 531-26-4736

ASA: III
Sex: F
Height: 62 in / 157.5 cm
Weight: 114 lb / 51.7 kg

Date of Birth: 01/06/1925
Age (when performed): 93

Anesthesia Type(s): MAC

Anesthesia Staff Present: LITTLE, P. (Anesthesiologist)

Scheduled Staff: ROLLO, J. (Surgeon); LITTLE, P. (Anesthesiologist)

Final Anesthesia Data

Final Measurements	Value

Final Fluids	Value
IN - Other	
Propofol IV (1000 mg) in Premix Fluid (100 mL)	16.1 mL

Anesthesia Start: 07/26/2018 11:11:36

Anesthesia End: 07/26/2018 12:23:34

DATE OF SERVICE: 07/26/2018

SURGEON:
Johnathon Rollo, MD

ASSISTANT:
Anna Ohlsson, MD, resident

PREOPERATIVE DIAGNOSES:
1. LEFT LOWER EXTREMITY VENOUS STASIS ULCERATION.
2. LEG SWELLING.
3. CHRONIC VENOUS INSUFFICIENCY WITH SAPHENOFEMORAL REFLUX.

POSTOPERATIVE DIAGNOSES:
1. LEFT LOWER EXTREMITY VENOUS STASIS ULCERATION.
2. LEG SWELLING.
3. CHRONIC VENOUS INSUFFICIENCY WITH SAPHENOFEMORAL REFLUX.

OPERATION:
1. Ultrasound-guided left greater saphenous vein access.
2. Radiofrequency ablation of left greater saphenous vein.
3. Microphlebectomy of varicose veins with six separate stab incisions.
4. Debridement of the lateral ankle ulcer 1.2 x 1 cm to fat layer exposed.
5. Debridement of the medial calf ulcer 2.5 x 3 cm to fat layer exposed.
6. Debridement of the medial ankle ulcer 3 x 2.5 cm to fat layer exposed.
7. All debridements were performed sharp excisional debridement.

ANESTHESIA:
MAC local.

INDICATIONS:
The patient is a 93-year-old female who resides in a nursing home, who has chronic nonhealing left lower extremity wounds and venous stasis ulcerations for greater than six months, for which she has been undergoing wound care therapy and compression. She underwent a venous duplex reflux study which revealed greater saphenous vein reflux and large perforating collaterals of the greater saphenous vein, which are contributing to her ulcer formation. We discussed the risks, benefits and alternatives of saphenous vein ablation and microphlebectomy as well as debridement of her ulcers, which are very painful.

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 07/26/2018 **Acct#:** 1828465398
Date of Discharge:
Dictating Physician: Rollo, MD, Johnathon

She agreed to proceed with the operation.

FINDINGS:
I performed ultrasound-guided left greater saphenous vein access, radiofrequency ablation of the left greater saphenous vein, microphlebectomy with six separate stab incisions, debridement of left leg ulcers using sharp excisional debridement, lateral ankle, medial calf and medial ankle wounds.

DESCRIPTION OF PROCEDURE IN DETAIL:
The patient was brought to the OR. A time-out was performed confirming patient, operation, antibiotics, prophylaxis, placed on the OR table. The left leg was prepped and draped in the usual sterile fashion. Ultrasound was used to identify the greater saphenous vein in the thigh. The greater saphenous vein left the fascia early at approximately the mid thigh and gave off large tortuous collaterals throughout the lower thigh. I accessed the greater saphenous vein under ultrasound guidance after instilling lidocaine in the skin. I saved an image to the chart after I watched the needle enter the vein. I passed the micropuncture wire followed by a 7-French RFA sheath. I then inserted the RFA catheter into the greater saphenous vein under ultrasound guidance and I watched as it approached 2 cm before the saphenofemoral junction. I then marked the catheter and instilled tumescence around the catheter throughout its length, such as is greater than 2 cm from the skin edge and surrounded by tumescent solution and the catheter tip was 22 degrees centigrade. I then performed radiofrequency ablation after rechecking the catheter position. It was indeed 2 cm from the saphenofemoral junction. I performed radiofrequency ablation of the left greater saphenous vein, a total of 4 cycles for a minute and 20 seconds, moving the catheter back to premarked locations according to manufacture guidelines. I then performed a microphlebectomy of the left greater saphenous vein using marking veins identified under ultrasound, which were feeding her ulcers. I ligated the veins using 3-0 silk. I made a 2 to 3 mm incision using 11 blade. I pulled the veins out with a nerve hook, and then ligated them with 3 0 silk or pulled them until they broke and then held pressure for hemostasis. Steri-Strips were

applied to the wound. This was performed in six separate stab incisions on the left lower leg, particularly medial calf and lateral calf. I then performed debridement of her left leg ulcers. I debrided her lateral ankle ulcer measuring l.2 x 1 cm to fat layer exposed using sharp excisional debridement. I debrided her medial calf measuring 2.5 x 3 cm and medial ankle measuring 3 x 2.5 cm. All of these wounds were debrided to fat layer exposed with sharp excisional debridement, debriding fat, slough, debris and dead skin until bleeding healthy tissue was encountered using a curette. Manual pressure was

held for hemostasis. Xeroform dressings were applied. The leg was wrapped with Ace wrap, ABD pads up to the thigh and elevated. The patient tolerated the procedure well.

COMPLICATIONS:
None.

SPECIMEN:
None.

ESTIMATED BLOOD LOSS:
30 mL.

I was present for the entirety of the operation.

PATIENT PROPERTY NOTICE, WAIVER AND ASSUMPTION OF RISK

Northwest Hospital (NWH) will make reasonable efforts to safeguard the personal property of patients. However, property is generally the responsibility of patients and their families, and NWH cannot guarantee the security of personal property.
To minimize potential harm to personal property including lost, misplaced, stolen or damaged items, the following two (2) options are available:

1	Place nonessential items in one of the NWH Safes located in Admitting and the Geropsychiatric Unit. This choice involves NWH placing small valuables (examples: watch, jewelry, currency) in a secure locked safe. This option utilizes a witnessed (2 person) property check–in/out process with access during regular business hours.
2	Keep personal belongings with you in your room. The patient/family is generally responsible for these items. NWH will provide limited unsecured storage spaces for patient storage of personal property in the hospital room during hospitalization.

- Patients are strongly encouraged to leave and/or send all nonessential belongings and valuables home.
- Prohibited items are firearms and other dangerous weapons, illegal drugs, marijuana, drug paraphernalia, and alcohol.
- Biohazards or severely damaged clothing are generally discarded immediately unless required for forensic evidence. (Biohazards means: clothing or other items are contaminated in the judgment of medical staff and presents a health risk.)
- NWH will dispose of unclaimed patient belongings as allowed by law after proper notice and time period for retrieval of items. When patient belongings are not claimed after 30 days, items are disposed of as allowed by law.
- Further information about NWH's property policies and procedures will be provided as needed or requested to the patient or patient's authorized representative.

For ITA Patients Only

I authorize the following relative/person_____to inspect my personal belongings and take non–essential items home. Relationship to patient:_____

Patient's Personal Property Liability Agreement

I, the undersigned, have read or have been informed about the above policy. I/patient understand that I/patient am responsible for all property brought to Northwest Hospital. I/patient understand that the hospital recommends all nonessential items be left at home or be sent home with family or friends.

I/patient understand that the hospital provides a safe for important personal property and that access to this area is limited to regular business hours.

I/patient agree to hold the hospital and its employees harmless from liability for my/patient's property if it is lost, misplaced, stolen or damaged when such property is not placed in the hospital safe or otherwise under the direct control of the hospital. I/patient further acknowledge the potential harm to property maintained by the hospital due to circumstances beyond the hospital's control (e.g., fire, earthquake) and hereby release the hospital from any liability in such circumstances.

TRAVEL QUESTIONNAIRE

M–1899 (09/17) File Under: Assessments

SPECIAL CONSENT FOR PROCEDURAL TREATMENT

(DIAGNOSTIC & SURGICAL PROCEDURES & OTHER INVASIVE PROCEDURES)

The law in Washington gives you the right and the responsibility to make decisions about your health care. Health care professionals can give you information and advice. You or your legal representative must be part of the decision–making. This consent form:

- Proves that you had a part in making decisions about your health care.
- Shows that you gave permission for the treatment recommended by your health care professionals.

The words "I", "my", etc., in this form mean the patient, no matter whether the patient or the patient's representative is signing the form. The term "health care professional" may mean the attending physician, but in addition may mean a different doctor (including a resident), nurse practitioner, registered nurse, or physician's assistant, who orders, performs all or part of, or is involved in explaining the procedure.

I give permission to my health care professional(s) who are listed on the back of this form as the performing provider(s), to do the procedure(s) listed on the back of this form, with anesthesia and/or sedation if that is needed. Anesthesia or sedation medicine will be given by the health care professional, anesthesiologist, or other trained health care staff who work under appropriate supervision.

I understand that the attending physician may need to perform other urgent procedures due to an emergency that may occur while I am sedated or otherwise not able to give consent. The attending physician or designee will talk with my legally authorized representative if possible.

I understand that the attending physician may choose assistants, including other health care professionals and residents *(physicians who have finished medical school, but are getting more training)*, to be part of the team performing my procedure. The assistants may suture; harvest grafts; dissect, remove or alter tissue; implant devices; or do other tasks that the attending physician has deemed appropriate. If known, the attending physician has discussed with me whether there will be assistants and whom he/she expects the assistants to be. I understand that during the procedure, the attending physician may need to choose different assistants or have them do different tasks. I understand that for some kinds of medical equipment used during procedures, a representative from the equipment manufacturer may be there, doing things like providing consultation or running checks on the equipment.

I understand the attending physician may participate in care involving overlapping procedures or oversee other urgent medical responsibilities and may not be present in the room at all times. During this time, the skilled team of assistants may perform portions of my procedure which the attending physician has determined they are proficient to perform. If an overlap is anticipated or planned, I will be notified prior to surgery. The attending physician will be present for the key and critical portions of the procedure, and either he/she or a designated attending physician will be available to the procedure team at all times.

The hospital or health care professional will dispose of any removed tissues or parts.

I understand what procedure(s) will be done. I have been told about the risks and benefits. I have been told about other treatment choices and about their risks and benefits, including not having the procedure. I have been told about what results to expect, which includes information about the chances for the expected results. I know that results cannot be guaranteed. I have been told about potential problems that may occur during recuperation.

I understand that there are risks for all kinds of surgery and for "invasive procedures" *(procedures where a blood vessel, body cavity, or other internal tissue is entered with a needle, tube, or similar device)*. These risks, which can be serious, include bleeding, infection, and damage to nearby tissues, vessels, nerves, or organs. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I have received this added detailed information and/or patient information materials about the procedure(s):

_____

_____

Print added information or title of information materials

I understand whether I will receive either anesthesia or sedation medicine, or both. I have been told about my choices for anesthesia and sedation and about their risks and benefits. I have been told about side effects of the medicine(s) and problems they may cause with recovery.

I understand that anesthesia and sedation medicines used for procedures involve risks. These risks can be serious.

Continued on page 2

They may include damage to vital organs such as the brain, heart, lungs, liver, and kidneys. They may even result in paralysis, cardiac arrest, brain damage, and/or death.

I understand that the anesthesia equipment may damage my teeth or cause other dental damage.

I understand that nerve damage may occur from how anesthesia equipment is placed or how my body must be positioned during a procedure.

I understand that I am free to refuse consent to any proposed procedure.

BLOOD: I have been told whether I am having a procedure where blood or blood components *(products)* may need to be used *(also known as transfused)*. **If I am having this kind of procedure**, I have been told about side effects, risks and other choices about transfusion, including **not** getting a transfusion.

I give permission to receive blood and/or blood components if the health care team decides it is needed. I understand that use of blood and blood components involves risks. The risks may include reactions, including allergic reactions, fever, hives, lung injury, and in rare cases, infectious diseases such as hepatitis and HIV/AIDS. I know that the blood bank screens donors and matches blood for transfusions to help lower risks.

OR *(Please initial)*
_____ **I refuse** ***(or partially refuse)*** **permission for blood and blood components.** *(You will be asked to sign another form, Form UH2063).*

HEALTH CARE PROFESSIONAL'S STATEMENT

I explained the treatment/procedure(s) stated on this form, including the possible risks, complications, alternative treatments *(including non-treatment)* and anticipated results to the patient and/or his/her representative before the patient and/or his/her representative consented.

If only the patient has signed this form, in my clinical opinion, the patient is capable of making his/her own health care decisions. If in my clinical opinion, the *(adult)* patient has questionable ability to make his/her own health care decisions, I discussed the above with the patient and with the patient's legally authorized representative.

SPECIAL CONSENT FOR PROCEDURAL TREATMENT

UH0173 (04/17) File Under: Consent

*update @ 1445- Wound care center not open Saturday Dr. Rollo would like Jeanne to be seen late morning afternoon @ wound care center for dressing change- Call for appointment.

Activity
You may be up and about as tolerated or as directed by your physician. Avoid prolonged standing and sitting with feet down; elevate feet when sitting.

Incisions and Dressings:
Leave dressings in place unless instructed otherwise by your doctor. Ace wraps may be rewrapped as needed. Check the color of your foot before you start to wrap the ace bandage, be sure your foot stays that color after you are done. Check to see that you have no numbness or tingling in your foot. Check with your surgeon to find out when you may begin showering and/or tub bathing. Expect some bruising, from a minimal to significant amount.

but leave on 2 days-
may shower Saturday!
*Resume compression stockings once ace wraps removed on Saturday.

Pain
Take pain medication as prescribed. Do not let the pain become severe before taking medication. As the pain becomes milder, you may be able to switch to other medications such as Ibuprofen, Tylenol, etc.

Symptoms to report to your surgeon
– Watch for signs of infection or inflammation of the vein.
– Temperature greater than 100.5 degrees for more than 24 hours.
  - Check your temperature twice daily for the first week or until you see your physician.
– Increased pain not relieved by pain medication.
– Sudden onset of acute pain in the leg not relieved with pain medication.
– Sudden feeling of shortness of breath.

Name	Monograph given		Summary of what it is and precautions*
Per Pharmacy Labeling	☐ yes	☐ no	
	☐ yes	☐ no	
	☐ yes	☐ no	

* If monograph not available.

Special Instructions –
Patient must have dressings changed in 2 days by wound care center. call 206-668-1244 call for appt.

I have read and understand the above instructions.

Physician Phone Number 206-668-1070

Follow –up visit 1 week in wound care clinic

VEIN LIGATION/STRIPPING DISCHARGE INSTRUCTIONS

© M–766 (3/99) File Under: Discharge Information

Procedure Date/Time: 7-26-18
Procedure: L leg ablation, Phlebectomy

How are you doing after your procedure? _____

Are you having any problems or concerns? ❑ Yes ❑ No

Circle issues discussed:

Fever	Redness	Swelling	Tenderness	Drainage	Constipation
Vomiting	Nausea	Urinating	Bleeding	Pain	Dressings

Other: _____

Is pain being adequately managed with post–op medication regimen? ❑ Yes ❑ No

❑ Patient referred to MD for any stated complications/concerns
❑ Patient instructed on S/S of infection
Other Advice Given: _____

Did pt make follow up provider appointment? ❑ Yes ❑ No
Able to obtain prescriptions? ❑ Yes ❑ No
Understands discharge instructions? ❑ Yes ❑ No

Service

Overall, how was your care? _____

Recognize any providers, nurses or hospital staff? _____

POST DISCHARGE CALL DOCUMENTATION

© M–1892 (12/13) File Under: Discharge Information

❑ Local without Sedation

You may return to all your normal activities except those specifically mentioned by your doctor. If you are not experiencing any nausea or vomiting, you may progress to your normal diet.

☒ Local with Monitored Anesthesia Care (Local with Sedation)

Go home and rest today. Have someone help you get up the first couple of times to make sure you are steady on your feet. Do not drive, operate machinery, sign any legal documents or make any important decisions for 12 hours after surgery. Resume your normal activities tomorrow, as you are able. If you are not experiencing nausea or vomiting you may gradually resume your normal diet.

❑ Regional Anesthesia

Go home and rest today. Have someone help you get up the first couple of times to make sure you are steady on your feet. Do not drive, operate machinery, sign any legal documents or make any important decisions for 12 hours after surgery. Resume your normal activities tomorrow, as you are able. If you are not experiencing nausea or vomiting then gradually resume your normal diet.

❑ Spinal Block / Epidural Block Patients If you are unable to empty your bladder in 8 hours, or if you are experiencing discomfort from a full bladder, or if you have a severe headache or backache unrelieved by Tylenol or pain medication, call your doctor or go to an emergency room.

❑ Nerve Block Patients Support and protect your affected arm / leg until the numbness is gone. You may wear a sling to protect your arm. Avoid contact with hot objects, as you may not feel the heat in the affected arm / leg.

☒ General Anesthesia

Go home and rest. General Anesthesia may stay in your body for up to 24 hours. It is normal to feel sleepy and weak today. Avoid vigorous activity or exercise. Do not drive, operate machinery, sign any important documents or make any important decisions for 24 hours after surgery. For your own safety and comfort have a responsible adult stay with you today and through the night. Do not drink any alcoholic beverages. Do not smoke for 24 hours without supervision. If nausea or inability to drink lasts 8 hours after discharge call your doctor. Take only prescribed medications. It is important that you drink plenty of fluids today (i.e., juice, water, soda, tea, Gatorade). Gradually progress to your normal diet. Begin with clear liquids, dry toast, crackers, soup then progress to regular foods.

ADULT ANESTHESIA DISCHARGE INSTRUCTIONS

© M-762 (03/99) File Under: Discharge Information Tab

NO[redacted]RSIVE: ALL PRESC[redacted]TIONS MUST BE PR[redacted]ED WITH LETTERS[redacted]T ARE NOT CONN[redacted]ED.
PROHIBITED ABBREVIATIONS at NWHMC:
OD, QD, QOD, SQ, CC, U, IU, MS, MSO4, MGSO4, µ, TIW, X.0 (TRAILING ZERO), .X (LACK OF LEADING ZERO)
***** THESE ORDERS ARE TO BE USED IN THE PERI–OPERATIVE SETTING ONLY *****

ALLERGIES: PCN, Sulfa, nitrofurantoin

POST–OP ORDERS:
☑ Lactated ringers at 50 mL/hr, if no post–operative IV fluid orders by surgeon ☐ Other:_____

OXYGEN
☑ 2 L/min nasal prongs prn SpO_2 less than or equal to 92%
☐ _____ L/min mask prn SpO_2 less than or equal to 92%
☑ May discharge to floor or Phase II with 1–2 L nasal prongs if room air saturation less than or equal to 92%

MEDICATIONS

1. Intravenous Analgesia: if multiple agents ordered, use in the order listed unless otherwise specified

Order Of Use	Medication:
X	☐ Fentanyl 25–50 mcg IV every 5 min prn to maximum of 50 mcg
_____	☐ Morphine 2–5 mg IV every 10 min prn to maximum of _____ mg
X	☐ Hydromorphone 0.2–0.5 mg IV every 10 min prn to maximum of 1 mg
_____	☐ DSU ONLY: Fentanyl 25–50 mcg IV every 5 min prn to maximum of 100 mcg
_____	☐ DSU ONLY: Hydromorphone 0.2–0.5 mg IV every 10 min prn to maximum of 1 mg

2. Oral Analgesia: if multiple agents ordered, use in the order listed unless otherwise specified

Order Of Use	Medication:
_____	☐ Oxycodone/acetaminophen 5/325 mg (Percocet®) 1–2 tabs PO every 3 hr prn pain
_____	☐ Hydrocodone/acetaminophen 5/325 mg (Vicodin®) 1–2 tabs PO every 3 hr prn pain
_____	☐ Codeine/acetaminophen 30/300 mg (Tylenol #3®) 1–2 tabs PO every 3 hr prn pain

3. Other Medications:
☐ Ketorolac (Toradol®) ☐ 15 mg IV x 1 dose ☐ 30 mg IV x 1 dose
☐ Labetalol 5–10 mg IV every 10 minutes prn SBP above _____ mmHg or DBP above _____ mmHg
☐ Albuterol Neb x 1 prn wheezing. Call physician if not effective
☑ May administer surgeon ordered analgesia prn
☐ Other:_____

4. Shivering
☐ Meperidine 12.5 mg IV prn, MR x 1
☑ Warming device: use to warm patient with temperature less than or equal to 35.6 ℃ (96.0 ℉)

5. Nausea/vomiting: if multiple agents ordered, use in the order listed unless otherwise specified

Order of Use	Medication:
_____	☐ Ondansetron (Zofran®) 4 mg IV, may repeat x 1
_____	☐ Metoclopramide (Reglan®) 5–10 mg IV slowly prn, may repeat x 1

6. Emergencies
☑ Atropine 0.5 mg IV (to a maximum of 1 mg) for heart rate below 40 with hypotension if slow pulse unusual for patient
☑ Respiratory Depression: Dilute 1 mL naloxone (0.4 mg/mL) with 9 mL normal saline (making 40 mcg/mL). Give 1 mL for RR less than 10 every 5 minutes while phoning the anesthesiologist

LAB ☐ HCT ☐ FSBG _____
☐ OTHER: _____
☐ OTHER: _____

DISCHARGE:
- Patient may transition from Perioperative Anesthesia Orders to Discharge Medication Orders when discharge criteria met.
- May discharge patient from PACU to floor or Phase II when discharge criteria are satisfied.
- May discharge patient from Phase II to home when discharge criteria are satisfied.

ANESTHESIA PRE-OP ORDERS

© M-1442 (03/18) File Under: Physician Orders

Page 1 of 1

❑ A. TYPE 1 DIABETES – ON INSULIN

1. On day of surgery, prior to admission--no insulin. If taking insulin glargine, have patient take evening dose prior to surgery.
2. On arrival: check FSBG. Start IV with LR @TKO. (If patient has renal insufficiency, use NS.)
3. Piggyback: D5LR @ 1.5 mL/kg/hr up to max of 100 mL/hr. (If patient has renal insufficiency, use D5NS.)
4. If FSBG is less than 70, administer 25 mL Dextrose 50% IV and follow IV insulin protocol (see Item E, below)

❑ IF SURGERY TO END BEFORE NOON AND PATIENT TO RESUME P.O. FEEDING AFTER SURGERY	❑ IF SURGERY WILL NOT END BEFORE NOON OR PT. IS EXPECTED TO REMAIN NPO AFTER SURGERY
5. Administer subcutaneous insulin as follows: a. If pt uses UltraLente, give full usual dose: _____ units b. If pt uses NPH or Lente, give 1/2 of usual dose: _____units	5. Piggy back IV insulin drip (100 units regular insulin in 100 mL Normal Saline; see Item E, below)

❑ B. TYPE 1 DIABETES – ON INSULIN PUMP

1. Have patient continue basal pump rate
2. On Arrival: check FSBG; repeat every 4 hours.
3. Refer to preop orders for *Type 1 Diabetes – On Insulin* (see Item A above)
   – When subcutaneous insulin dose is required, patient may administer dose through insulin pump.
   – Continue insulin pump at basal rate during surgery. If pump interferes with surgery, discontinue pump after subcutaneous bolus is given.
   – If IV insulin drip is required, discontinue pump.

SCANNED

diet controlled

❑ C. TYPE 2 DIABETES – ON INSULIN

1. On day of surgery, prior to admission–no insulin
2. On Arrival: check FSBG; repeat every 4 hours.
3. If FSBG less than 70: administer 25 mL Dextrose 50% and follow IV insulin protocol (see Item E)
4. Start IV: LR @ TKO rate. (If patient has renal insufficiency, substitute NS)

❑ OPERATIVE TIME LESS THAN 2 HOURS AND "NON–MAJOR" (e.g., noncavitary, not total hip, no potential for large blood loss)	❑ OPERATIVE TIME GREATER THAN 2 HOURS OR "MAJOR" SURGERY (e.g., intracavitary, total hip, potential for large blood loss)
5. If arrival FSBG is greater than 120: Administer 1/2 of usual dose of NPH insulin subcutaneously: (_____ units)	5. Piggyback D5LR @ 1.5 mL/kg/hr up to a maximum of 100 mL/hr (D5NS if patient has renal insufficiency) 6. Piggyback IV insulin drip (100 units regular insulin in 100 mL NS)

❑ D. TYPE 2 DIABETES – ON ORAL HYPOGLYCEMIC AGENTS

1. On the night before surgery, hold extended release oral glycemic agents; on the morning of surgery, hold all oral glycemic agents
2. On arrival: check FSBG.
3. If FSBG is less than 70, administer 25 mL Dextrose 50% IV and follow IV insulin protocol (see Item E below)
4. Start IV of LR @ TKO rate. (If patient has renal insufficiency, substitute NS)

❑ OPERATIVE TIME LESS THAN 2 HOURS AND "NON–MAJOR" (e.g., noncavitary, not total hip, no potential for large blood loss)	❑ OPERATIVE TIME GREATER THAN 2 HOURS OR "MAJOR" SURGERY (e.g., intracavitary, total hip, potential for large blood loss)
5. Resume oral hypoglycemics with meal postop except metformin or metformin XR, which should be resumed when renal function is determined to be normal (serum creatine 1.5 or less). If receiving contrast, hold metformin 48 hours after procedure.	5. Piggyback D5LR @ 1.5 mL/kg/hr up to a maximum of 100 mL/hr (D5NS if patient has renal insufficiency) 6. Piggyback IV insulin drip (100 units regular insulin in 100 mL NS)

E. REGULAR INSULIN IV INFUSION PROTOCOL (for standard infusion, dilution is 1u/1mL)

Start at 0.5 units/hr if usual dose under 10 units/day; 1 unit/hr if 20–50 units/day; 1.5 units/hr if more than 50 units/day. Adjust rate according to FSBG as follows:

FSBG less than 70	Turn off drip for 30 minutes and give 25 mL D50 IV. Recheck glucose every 30 minutes and restart drip @ 1u/hr when glucose greater than 100.
70 – 120	Decrease rate by 0.3u/hr (0.3mL/hr*)
121 – 180	No Change
181 – 240	Increase rate by 0.3 units/hr (0.3mL/hr*)
241 – 300	Increase rate by 0.6 units/hr (0.6mLl/hr*)
Greater than 300	Increase rate by 1 unit/hr (1.0mLl/hr*) & check urinary ketones if Type 1

OBTAIN FSBG EVERY HOUR FOR 6–8 HOURS, THEN EVERY 2 HOURS

NOTIFY PHYSICIAN FOR BLOOD GLUCOSE CHANGE OVER 100 MG/DL OR FOR BLOOD GLUCOSE OVER 300.

: (206) 365-0568

ADMIT HISTORY AND PHYSICAL

EX0001 - External Documents

Date of Admission to SNF: 6/4/18

Date of Encounter: 6/7/2018

Reason for admission to PRCC: s/p hospitalization for worsening stasis ulcers, now admitted to SNF for rehab and wound care.

ary care provider: Neighbor Jr., William E, MD

Interval History:
ID/CC: 93 year old female with with severe peripheral vascular disease both venous and arterial who came in with worsening stasis ulcers on her left lower extremity and cellulitis admitted to NWH from 5/31/18 to 6/4/18.

Her son, Louis, is present for this visit,

Venous stasis ulcers: LLE, multiple, has known PVD as well, using Xeroform with leg wraps but not pressure wraps. She appreciates the care she is receiving here.

Homelessness: pt and son were forced out of their apartment and have been living in a tent for several weeks. n asked what here plans are when her wounds heal up, she states "I am going back to my tent".

Low grade fever: noted last night, 99F, normalized today, stat labs drawn one day prior and noted K+ elevated to 5.6, and H/H went from 11.7/35.5 to 9.8/30 in a single day. Her prior H/H appear to be in the range of 9/30. She denies any localizing sx.

Comprehensive functional assessment:
ADLS: independent prior Hygiene, Dressing, Feeding, Transferring, Toileting, Ambulation
IADLS: requires assistance w/Telephone, Shopping, Food, Housekeeping, Laundry, Transport, Meds, Finances
Memory: no concerns
ow: no concerns
Balance: no recent falls
Assistive devices: walks w/ 4WW
Incontinence: positive for urge UI
Mood: "good"

ROS:
Complete ROS is negative, except for hard of hearing

H/Problem List:
atient Active Problem List

Diagnosis	Date Noted
• Osteoporosis, unspecified	03/04/2008

T spine X ray 3/4/2008 showed ostepenia and compression wedging of vertebra. Summer 2008 Vit D 25 total 20.5. Advised Vitamin D 800 IU daily. Began fosamax spring 2008. Continued for five years, then stopped

ong term current use of anticoagulant therapy 01/08/2008
Reason for anticoagulation: Recurrent dvts
Duration of anticoagulation: life
INR goal: 2.-3 (lower end of this range desired because of age)

• Unspecified vitamin B deficiency 05/01/2007
Vitamin B12 217 in February 2007; however methylmalonic acid and homocysteine levels normal ruling out diagnosis of B12 deficiency

pe 2 diabetes mellitus without complication 03/27/2007
(HCC)
Year onset: Dx March 2007
Metformin discontinued 2011 as A1c in target range without it.
Diet and weight controlled.

• Sensorineural hearing loss, unspecified 11/20/2006
Has bilateral hearing aids.
6/3/2008 hearing worse. Ears clean. Advise follow with audiology.

VT, recurrent, lower extremity, chronic (HCC) 11/20/2006
Recurrent DVT and phlebitis since 1982
Per Vascular Surgery note 5/9/2006: continue warfarin
3/9/2010 Lower extremity arterial vascular ultrasound studies normal

• Other and unspecified hyperlipidemia 11/20/2006
On lipitor. Tried discontinuing but LDL cholesterol markedly increase. Now low dose effective.

• Generalized osteoarthrosis, unspecified site 11/20/2006
LS spine. Bilateral talonavicular arthritis since 1994.

• Essential hypertension, benign 11/20/2006

- Unspecified glaucoma(365.9) 11/20/2006

4/1/2014 refilled timolol but do not seen recent eye clinic visit. Patient to be seen in eye clinic.
William E Neighbor JR, MD

- Routine general medical examination at a health care facility 11/20/2006

Td/Tdap (q 10 yr): See immmunizations
Pneumococcal (65 yoa and high risk x1): See imms
Blood pressure: Dx hypertension
Cholesterol: dx hyperlipidemia
Mammogram (q 1 yr begin at age 40-50 yrs): neg spring 2011
Pap smear (q2-3 yrs to age 65)--82 years old
Colorectal cancer screening: Sig to 30 cm in May 2001. Previoiusly had refused studies. Heme neg 2008. 4/29/2010 heme x 3 neg.
Tobacco: no
Alcohol: no
Drugs: no
Sexual practice/contraception: Not active
Advanced directives: Yes/ 9/21/2016 POLST forms signed. Scanned to record.
Advised osteoporosis prevention in 2005. Vit D 25 20 on 4/3/2008 . Advise Vit D 800 IU daily.

Medication orders reviewed in MAR: X
Current nursing home medications reviewed on the medical record.
Please review the facility Medication Administration Record (MAR) for the most up to date and accurate medication list.
To obtain current medication list please call the facility and ask for medication administration record to be faxed.

Family History:
Parents died of old age

Social History:
Habits: NONE
Prior living situation: homeless now
Widowed. She has two sons. She had been living with her son in subsidized housing and apparently the landlord was affected by her son's behavior, as well as her other son's bullying, and eventually evicted them a couple of months ago (per SW note the son reports they left "willingly".
Social Support: son, Louis, 360-649-5702
POLST completed, in summary - FULL
DPOA: son, Louis

Physical Exam:
118/55 | Pulse 70 | Temp 98.1 °F (36.7 °C) | Resp 20 | Wt 110 lb 2 oz (50 kg) | BMI 20.81 kg/m²
Readings from Last 3 Encounters:
06/07/18 110 lb 2 oz (50 kg)
05/31/18 112 lb (50.8 kg)
05/17/18 109 lb 6.4 oz (49.6 kg)

GEN: appears older stated age, accompanied by son . Appears nourished, adequately hydrated, and groomed. Alert and responding appropriately and in no acute distress, HOH
PSYCH: alert and oriented x3, interactive, speech w/o dysarthria, full affect, focused content, logical process, no hallucinations or psychomotor agitation
HEENT: NCAT, NL external ears, hearing aid in L ear, Poor dentition, moist mucous membranes, oropharynx clear. EOMI and anicteric, corrective lens, R facial droop
CV: RRR, NL S1 and S2, G 1/6 sys murmurs, no r/g, no JVD.
RESP: normal, unlabored, and regular respiratory effort, CTA B/L.
ABD: normal BT all quadrants, non-tender, non-distended, no masses
MSK: kyphotic, changes in hands consistent w/ OA.
EXT: no c/c, LLE in Xeroform wrap, 1+ edema,
NEURO: MAE, no tremors, no focal deficits, normal tone, motor symmetry. AD8=2
SKIN: dry wnl temp and color, no apparent rash

Labs/Imaging: Reviewed in chart:

Upcoming Appointments:
Future Appointments

	Time	Provider	Department	Center
6/[illegible]/2018	3:30 PM	Rollo, Johnathon Curtis, MD	NWSSH	NWH SSHC

Assessment/Plan:

(I83.029) Venous ulcer of left leg (HCC) (primary encounter diagnosis)
Plan: wound care

(I73.9) Peripheral vascular disease, unspecified (HCC)
n: supportive care, cont w/ pentoxifylline

(Z86.718) History of recurrent deep vein thrombosis (DVT)
Plan: appears to be recurrent

(Z79.01) Long term current use of anticoagulant therapy
Plan: INR 2.1 now, LMWH stopped, cont w/ coumadin

(G31.84) Mild cognitive impairment
Plan: AD8 score was a 2, will have SLP assess

9.0) Homeless
an: see below.

(E87.5) Hyperkalemia
Plan: odd, that it would change over the span of a day, she reports she has had this issue previously
-Kayexlate 15g x1
-stop ARB

(I10) Essential hypertension
Plan: SBP in the 110s, ok to liberalize, stop ARB

(D64.9) Normocytic anemia
Plan: stable

8.5) Dyslipidaemia
Plan: stop statin

POLST: FULL

Disposition: she has the capacity to elect to move out w/ her son at any time, though would benefit from a roof over her head. SNF SW working on establishing housing.

The patient's risk is moderate.
Problem category: is new, Moderate problem.
T- - medical decision making is High.

HIPAA PERMITS DISCLOSURE OF POLST TO OTHER HEALTH CARE PROVIDERS AS NECESSARY

Physician Orders for Life-Sustaining Treatment (POLST)

Last Name - First Name - Middle Name or Initial: Hoffman, Jeanne
Date of Birth: 1 6 25
Last 4 #SSN (optional): 4 7 3 6

FIRST follow these orders, **THEN** contact physician, nurse practitioner or PA-C. The POLST is a set of medical orders intended to guide medical treatment based on a person's current medical condition and goals. Any section not completed implies full treatment for that section. Completing a POLST form is always voluntary. Everyone shall be treated with dignity and respect.

Medical Conditions/Patient Goals:

Agency Info/Sticker

A Check One

CARDIOPULMONARY RESUSCITATION (CPR): Person has no pulse and is not breathing.
When not in cardiopulmonary arrest, go to part B.

- [x] **Attempt Resuscitation/CPR**
- [ ] **Do Not Attempt Resuscitation/DNAR (Allow Natural Death)**
  Choosing DNAR will include appropriate comfort measures.

B Check One

MEDICAL INTERVENTIONS: Person has pulse and/or is breathing.

- [x] **FULL TREATMENT - primary goal of prolonging life by all medically effective means.**
  Includes care described below. Use intubation, advanced airway interventions, mechanical ventilation and cardioversion as indicated. **Transfer** *to hospital if indicated. Includes intensive care.*
- [ ] **SELECTIVE TREATMENT - goal of treating medical conditions while avoiding burdensome measures.**
  Includes care described below. Use medical treatment, IV fluids and cardiac monitor as indicated. Do not intubate. May use less invasive airway support (e.g. CPAP, BiPAP). **Transfer** *to hospital if indicated. Avoid intensive care if possible.*
- [ ] **COMFORT-FOCUSED TREATMENT - primary goal of maximizing comfort.**
  Relieve pain and suffering with medication by any route as needed. Use oxygen, oral suction and manual treatment of airway obstruction as needed for comfort. **Patient prefers no hospital transfer:** *EMS consider contacting medical control to determine if transport is indicated to provide adequate comfort.*

Additional Orders: (e.g. dialysis, etc.) _____

C

SIGNATURES: The signatures below verify that these orders are consistent with the patient's medical condition, known preferences and best known information. If signed by a surrogate, the patient must be decisionally incapacitated and the person signing is the legal surrogate.

Discussed with:
- [x] Patient
- [ ] Parent of Minor
- [ ] Guardian with Health Care Authority
- [ ] Spouse/Other as authorized by RCW 7.70.065
- [ ] Health Care Agent (DPOAHC)

PRINT — Physician/ARNP/PA-C Name: Ibrahima Toure MD
Phone Number: 206-744-5415

X Physician/ARNP/PA-C Signature *(mandatory)*
Date *(mandatory)*: 06/06/18

PRINT — Patient or Legal Surrogate Name: Jeanne Hoffman
Phone Number:

X Patient or Legal Surrogate Signature *(mandatory)* Jeanne J Hoffman
Date *(mandatory)*: 6/4/18

Person has:
- [x] Health Care Directive (living will)
- [x] Durable Power of Attorney for Health Care

Encourage all advance care planning documents to accompany POLST

SEND ORIGINAL FORM WITH PERSON WHENEVER TRANSFERRED OR DISCHARGED

Revised 8/2017

Photocopies and faxes of signed POLST forms are legal and valid. May make copies for records.

ANTIBIOTICS:

- [x] Use antibiotics for prolongation of life.
- [ ] Do not use antibiotics except when needed for symptom management.

MEDICALLY ASSISTED NUTRITION:
Always offer food and liquids by mouth if feasible.

- [ ] No medically assisted nutrition by tube.
- [ ] Trial period of medically assisted nutrition by tube. (Goal: _____)
- [x] Long-term medically assisted nutrition by tube.

ADDITIONAL ORDERS: (e.g. dialysis, blood products, implanted cardiac devices, etc. Attach additional orders if necessary.)

✘ Physician/ARNP/PA-C Signature	Date 06/06/18
✘ Patient or Legal Surrogate Signature Jeanne L Hoffman	Date 6/6/2018

DIRECTIONS FOR HEALTH CARE PROFESSIONALS

NOTE: A person with capacity may always consent to or refuse medical care or inverventions, regardless of information represented on any document, including this one.

Completing POLST

- Completing a POLST form is always voluntary.
- Treatment choices documented on this form should be the result of shared decision-making by an individual or their surrogate and medical provider based on the person's preferences and medical condition.
- POLST must be signed by a physician/ARNP/PA-C and patient, or their surrogate, to be valid. Verbal orders are acceptable with follow-up signature by physician/ARNP/PA-C in accordance with facility/community policy.

Using POLST

Any incomplete section of POLST implies full treatment for that section.

This POLST is valid in all care settings including hospitals until replaced by new physician's orders.

The POLST is a set of medical orders. The most recent POLST replaces all previous orders.

The POLST does not replace an advance directive. An advance directive is encouraged for all competent adults regardless of their health status. An advance directive allows a person to document in detail his/her future health care instructions and/or name a surrogate decision maker to speak on his/her behalf. When available, all documents should be reviewed to ensure consistency, and the forms updated appropriately to resolve any conflicts.

SECTIONS A AND B:

- No defibrillator should be used on a person who has chosen "Do Not Attempt Resuscitation."
- When comfort cannot be achieved in the current setting, the person should be transferred to a setting able to provide comfort (e.g., treatment of a hip fracture).
- An IV medication to enhance comfort may be appropriate for a person who has chosen "Comfort-Focused Treatment."
- Treatment of dehydration is a measure which may prolong life. A person who desires IV fluids should indicate "Selective" or "Full Treatment."

SECTION D:

- Oral fluids and nutrition must always be offered if medically feasible.

Reviewing POLST

This POLST should be reviewed periodically whenever:
(1) The person is transferred from one care setting or care level to another, or
(2) There is a substantial change in the person's health status, or
(3) The person's treatment preferences change.

To void this form, draw line through "Physician Orders" and write "VOID" in large letters. Any changes require a new POLST.

Review of this POLST Form

Review Date	Reviewer	Location of Review	Review Outcome
			☐ No Change ☐ Form Voided ☐ New form completed
			☐ No Change ☐ Form Voided ☐ New form completed

SEND ORIGINAL FORM WITH PERSON WHENEVER TRANSFERRED OR DISCHARGED

nd faxes of signed POLST forms are legal and valid. May make copies for records.
For more information on POLST visit www.wsma.org/polst.

Diagnosis/Problem:

☐ **Urgent** ☐ **For Review** ☐ **Please Comment** ☐ **Please Reply** ☐ **Please Recycle**

• **Comments:**

– As requested. Only skin issues are wounds on Ottis. Does bruise easily on Coumadin & Restoxi/yellows.

Thx
Shuey RN RN

INR/COUMADIN (W...FARIN) FLOW SHEET

Directions: Use flow sheet for outpatient residents on if complex each time a new level is drawn. When completed, file in individual resident clinical record. If lab results are not reported within same day of draw, contact physician for determination if Coumadin (or other) should be given or held. No Aspirin, NSAIDS, or Plavix to be used unless specifically ordered by the physician.

Resident-Specific INR Goal:

Diagnosis/Clinical Indication for Coumadin:

INR RANGES: 1.5– 2.5 = Elderly with Fall/Risk/Bleeding; 2.0 – 3.0 = DVT, PE, A Fib, MI, Atrial Thrombus, SP Knee Replacement; 2.5– 3.5 = Mechanical Heart Valve

Criterion drugs which increase INR: Antibiotics, Sulfa, Cytotoxic Drugs, Steroids, Thyroid, Tylenol, Salicylates (Aspirin), NSAIDs, Bismuth, Metals, Xylocaine, Quinidine, Quinine, Allopurinol, Cimetidine, Vitamin E and Supplements

Criterion drugs which decrease INR: Barbiturates, Diuretics, Oral Contraceptives, Carbamazepine, Vitamin K, Theophylline, Corticosteroids

Common drugs which may increase or decrease INR: Phenytoin, Digitalis, Propranolol, Cholestyramine, Zantac

Date/Time	INR Results	Current Coumadin Dose	MD Notified	Dose Change	Next Date INR	Nurse's Signature
7/9/18	1.9	5mg	Yes	Coumadin 6mg PO + 1 then resume 5mg daily	7/12/18	
7/12/18	2.4	5mg	Yes	& A. continue 5mg daily	7/16/18	
7/16/18	1.9	5mg	Yes	Coumadin 6mg today then resume 5mg daily	7/19/18	
7/19/18	2.4	5mg	Yes	Continue same 5mg	7/23/18 Monday	
7/23/18	2.5	5mg	Yes	Continue same 5mg	7/26/18 Thursday

INR/COUMADIN (W...RIN) FLOW SHEET

Directions: Use flow sheet for individual residents and complete each time a INR level is drawn. When completed, file in individual resident clinical record. If lab results are not reported within same day of draw, contact physician to determine if Coumadin (Warfarin) should be given or held. No Aspirin, NSAID, or Plavix to be used unless specifically ordered by the physician.

Resident-Specific INR Goal:	Diagnosis/Clinical Indication for Coumadin: DVT

INR RANGES: 1.8 - 2.2 = DVT with Atrial Fibrillation; 2.0 - 3.0 = DVT, PE, CVA/TIA, Mural Thrombus, St Jude Bileaflet valve; 2.5 - 3.5 = Mechanical Heart Valve

Common drugs which increase INR: Sulfa, Antibiotics (Cipro, Levaquin and others), Amiodarone, Fluconazole, Flagyl, Cimetidine and ASA, proton pump inhibitors (Prilosec, Nexium), Cox-2 inhibitors (Celebrex), NSAIDs, Thyroid Medications, Tegretol, Depakote, Allopurinol (Zyloprim), Phenytoin and Dilantin.

Common drugs which decrease INR: Barbiturates, Haldol, Reglan, Antacids, Carafate, Vitamin C, Multivitamins, Theodur, Cortisone.

Common drugs which may increase or decrease INR: Prednisone, Digoxin, Alcohol, Cholestyramine, Zantac.

SURGICAL HISTORY

CASEMAIN ID: 64919

NAME: HOFFMAN, JEANNE LEONIE
GENDER: F **BIRTH DATE:** 01/06/1925 **AGE:** 93 Years
MEDICAL RECORD NUMBER: U8170135 **ACCOUNT NUMBER:** 1828465398
ANTICIPATED START: 07/26/2018 10:20

PROCEDURE: UNKNOWN

[ ] **COMPLICATION**

COMPLICATIONS COMMENT:
PT SAYS SHE HAS NEVER HAD ANY DIFFICULTY WITH ANESTHESIA ON PRIOR SURGERIES, NOT ABLE TO TALK ON THE PHONE TO LIST HER PRIOR SURGERIES.

FAMILY PROBLEMS WITH ANESTHESIA: Unknown

HOME MEDICATIONS

MEDICATION Coumadin
ROUTE ORALLY / BY MOUTH **LAST TAKEN** 7/23
FREQUENCY DAILY
STATUS Active **LAST REVIEWED** 07/26/2018 10:07
SPECIAL INSTRUCTIONS PER MD INSTRUCTION. I COULD NOT TELL FROM THE MAR THE PATIEN'S DOSE OR IF THIS IS ON HOLD. UNABLE TO REACH THE SNF TO CLARIFY. INSTRUCTIONS FAXED.

MEDICATION Norco
DOSE 2 **UNITS** TABLET
ROUTE ORALLY / BY MOUTH **LAST TAKEN** 7/26 0200; 0730
FREQUENCY EVERY SIX HOURS **PRN** Y
STATUS Active **LAST REVIEWED** 07/26/2018 10:07
SPECIAL INSTRUCTIONS TAKE DOS AS NEEDED. 5-325MG.

MEDICATION pentoxifylline
DOSE 400 **UNITS** MG
ROUTE ORALLY / BY MOUTH **LAST TAKEN** 7/26 0600
FREQUENCY EVERY EIGHT HOURS
STATUS Active **LAST REVIEWED** 07/26/2018 10:11
SPECIAL INSTRUCTIONS PER MD INSTRUCTION.

MEDICATION timolol maleate
DOSE 1 **UNITS** DROP
ROUTE BOTH EYES **LAST TAKEN** 7/25
FREQUENCY TWICE A DAY
STATUS Active **LAST REVIEWED** 07/26/2018 10:11
SPECIAL INSTRUCTIONS TAKE DOS.

PSYCHO/SOCIAL ASSESSMENT

CURRENT TOBACCO USE: Unknown

PAST TOBACCO USE: Unknown

ALCOHOL USE: Unknown

RECREATIONAL DRUG USE: Unknown

CULTURAL / SPIRITUAL
ARE THERE CULTURAL / SPIRITUAL PRACTICES THAT WE SHOULD KNOW ABOUT?: No

ARE YOU HERE TODAY DUE TO AN INJURY OR ILLNESS RELATED TO PARTNER VIOLENCE?: No
HAVE YOU BEEN HIT, KICKED, PUNCHED, OR OTHERWISE HURT BY SOMEONE IN THE PAST YEAR?: No

CASEMAIN ID: 64919

NAME: HOFFMAN, JEANNE LEONIE
GENDER: F **BIRTH DATE:** 01/06/1925 **AGE:** 93 Years

Anesthesia MAC.

Vital Signs (PDoc)
07/26/2018 09:21

- Weight (kg): 51.3kg

I have reviewed and agree with vital signs as listed in the EMR Yes Time 7/26/2018 12:30.
Continuous Blood Pressure Yes.
Continuous Pulse Ox Yes.
Respiratory Function: Tolerating Face Mask.
Mental Status Sedated.
Pain (Assessment and Plan) Controlled, continue current therapy.
Post-Op Nausea No.
Post-Op Vomiting No.
Post Operative Hydration Adequate.
Events and/or Complications Full neurologic recovery, No apparent post-anesthetic complications.

PREOPERATIVE DIAGNOSES:
1. LEFT LOWER EXTREMITY VENOUS STASIS ULCERATION.
2. LEG SWELLING.
3. CHRONIC VENOUS INSUFFICIENCY WITH SAPHENOFEMORAL REFLUX.

POSTOPERATIVE DIAGNOSES:
1. LEFT LOWER EXTREMITY VENOUS STASIS ULCERATION.
2. LEG SWELLING.
3. CHRONIC VENOUS INSUFFICIENCY WITH SAPHENOFEMORAL REFLUX.

OPERATION:
1. Ultrasound-guided left greater saphenous vein access.
2. Radiofrequency ablation of left greater saphenous vein.
3. Microphlebectomy of varicose veins with six separate stab incisions.
4. Debridement of the lateral ankle ulcer 1.2 x 1 cm to fat layer exposed.
5. Debridement of the medial calf ulcer 2.5 x 3 cm to fat layer exposed.
6. Debridement of the medial ankle ulcer 3 x 2.5 cm to fat layer exposed.
7. All debridements were performed sharp excisional debridement.

ANESTHESIA:
MAC local.

INDICATIONS:
The patient is a 93-year-old female who resides in a nursing home, who has chronic nonhealing left lower extremity wounds and venous stasis ulcerations for greater than six months, for which she has been undergoing wound care therapy and compression. She underwent a venous duplex reflux study which revealed greater saphenous vein reflux and large perforating collaterals of the greater saphenous vein, which are contributing to her ulcer formation. We discussed the risks, benefits and alternatives of saphenous vein ablation and microphlebectomy as well as debridement of her ulcers, which are very painful. She agreed to proceed with the operation.

Account 1828465398 Hoffman, Jeanne Leonie 7/26/2018-7/26/2018 O(A) SUR 4-eOp Reports Rollo, MD, Johnathon 7/26/2018 CUSTDM10\W0TA_JROLLO 7/29/2018 12:26:17 PM -07:00

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 07/26/2018
Acct#: 1828465398
Date of Discharge:
Dictating Physician: Rollo, MD, Johnathon

FINDINGS:
I performed ultrasound-guided left greater saphenous vein access, radiofrequency ablation of the left greater saphenous vein, microphlebectomy with six separate stab incisions, debridement of left leg ulcers using sharp excisional debridement, lateral ankle, medial calf and medial ankle wounds.

DESCRIPTION OF PROCEDURE IN DETAIL:
The patient was brought to the OR. A time-out was performed confirming patient, operation, antibiotics, prophylaxis, placed on the OR table. The left leg was prepped and draped in the usual sterile fashion. Ultrasound was used to identify the greater saphenous vein in the thigh. The greater saphenous vein left the fascia early at approximately the mid thigh and gave off large tortuous collaterals throughout the lower thigh. I accessed the greater saphenous vein under ultrasound guidance after instilling lidocaine in the skin. I saved an image to the chart after I watched the needle enter the vein. I passed the micropuncture wire followed by a 7-French RFA sheath. I then inserted the RFA catheter into the greater saphenous vein under ultrasound guidance and I watched as it approached 2 cm before the saphenofemoral junction. I then marked the catheter and instilled tumescence around the catheter throughout its length, such as is greater than 2 cm from the skin edge and surrounded by tumescent solution and the catheter tip was 22 degrees centigrade. I then performed radiofrequency ablation after rechecking the catheter position. It was indeed 2 cm from the saphenofemoral junction. I performed radiofrequency ablation of the left greater saphenous vein, a total of 4 cycles for a minute and 20 seconds, moving the catheter back to premarked locations according to manufacture guidelines. I then performed a microphlebectomy of the left greater saphenous vein using marking veins identified under ultrasound, which were feeding her ulcers. I ligated the veins using 3-0 silk. I made a 2 to 3 mm incision using 11 blade. I pulled the veins out with a nerve hook, and then ligated them with 3 0 silk or pulled them until they broke and then held pressure for hemostasis. Steri-Strips were

applied to the wound. This was performed in six separate stab incisions on the left lower leg, particularly medial calf and lateral calf. I then performed debridement of her left leg ulcers. I debrided her lateral ankle ulcer measuring l.2 x 1 cm to fat layer exposed using sharp excisional debridement. I debrided her medial calf measuring 2.5 x 3 cm and medial ankle measuring 3 x 2.5 cm. All of these wounds were debrided to fat layer exposed with sharp excisional debridement, debriding fat, slough, debris and dead skin until bleeding healthy tissue was encountered using a curette. Manual pressure was held for hemostasis. Xeroform dressings were applied. The leg was wrapped with Ace wrap, ABD pads up to the thigh and elevated. The patient tolerated

the procedure well.

COMPLICATIONS:
None.

SPECIMEN:
None.

ESTIMATED BLOOD LOSS:
30 mL.

I was present for the entirety of the operation.

SCANNED IN eHIM

Skilled Nursing Facility:
Park Ridge Care Center (PRCC)
1250 NE 145th St.
Shoreline, WA 98155
Phone: (206) 363-5856
Fax: (206) 365-0568

Patient seen today for: Leg pain, SNF f/u visit

History:
93 year old female with history of severe peripheral vascular disease of both venous and arterial, recurrent DVTs, chronic anticoagulation (coumadin), DM II, OA of both hips, homelessness, admitted at Park Ridge Care Center on 6/4/18 from NWH where she was hospitalized from 5/31/18 to 6/4/18 for worsening stasis ulcers on her left lower extremity and cellulitis.

She as previously followed by the NW wound clinic for her venous stasis multiple ulcers of LLE. During her follow up appointment at the clinic there was concern for worsening cellulitis, hence admitted for further workup. She was started on Cefazolin empirically. Wound culture later grew MSSA and Pseudomonas. She will continue to be closely followed by the wound clinic team at NW.

On hospital admission her INR was 4.9. coumadin was subsequently held for few days and then gradually restarted. She also received some IV fluid for dehydration.

Hx Interval:
Jeanne is complaining of leg pain, more like cramps to the calf, more on the right leg than the left. She has no wounds on the right leg. She has stasis ulcer wounds on the left leg which is wrapped with dressing. She states that the cramp-like pain comes and goes, worse in the morning after long rest in bed. She has history of chronic/recurrent DVTs and is currently on chronic anticoagulation coumadin with therapeutic INR for the past month. Pain could also be related to her poor vascular circulation. Her electrolytes are stable and no active clot noted on RLE by duplex.

She is otherwise walking on both legs with one person assist using a walker. Per nursing notes her wounds are gradually healing with current treatment plan. She has no sign of active infection. Appetite fairly stable, remains continent of bowel and bladder. She remains calm and cooperative with care and treatments.

ROS:
Denies fever, chills, sob, n/v, chest pain, headache, diarrhea or constipation.
Rest of the ROS reviewed and were negative except for as above

PMH:
Patient Active Problem List
Diagnosis

- Sensorineural hearing loss, unspecified
- DVT, recurrent, lower extremity, chronic (HCC)
- Other and unspecified hyperlipidemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Unspecified vitamin B deficiency
- Long term current use of anticoagulant therapy
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- Hip joint stiffness
- Leg weakness, bilateral
- Weakness of trunk musculature
- Other physical therapy
- History of recurrent deep vein thrombosis (DVT)
- Thrombocytopenia (HCC)
- Imbalance
- Primary osteoarthritis of both hips
- Non-pressure chronic ulcer of left ankle with fat layer exposed (HCC)
- Non-pressure chronic ulcer of left calf with fat layer exposed (HCC)
- Peripheral vascular disease, unspecified (HCC)
- Cellulitis of left leg
- Venous ulcer of left leg (HCC)
- Homeless
- Normocytic anemia
- Severe protein-calorie malnutrition (HCC)
- Urge urinary incontinence
- Vitamin D deficiency

SH:
Social History

Social History Narrative

6/15/2010 Grew up on Bainbridge. Both parents from Paris. Spoke French at home and English in Public. She recalls her first clot was in her legs when she was 30. She also developed clot in her arms later. She states her grandmother had the same problem.

William E Neighbor, MD

Habits: denies tobacco, ETOH or drug use
Prior living situation: homeless now
Widowed. She has two sons. She had been living with her son in subsidized housing and apparently the landlord was affected by her son's behavior, as well as her other son's bullying, and eventually evicted them (per SW note the son reports they left "willingly").
Social Support: family
POLST: Full code, Antibiotics ok, Long term medically assisted nutrition by tube

DPOA: Louis (son) 360-649-5702

MEDICATIONS:
Please review the facility Medication Administration Record (MAR) for the most up to date and accurate medication list. Please call the facility to have latest medication administration record faxed.

93 year old female with history of severe peripheral vascular disease of both venous and arterial, recurrent DVTs, chronic anticoagulation (coumadin), DM II, OA of both hips, homelessness, admitted at Park Ridge Care Center on 6/4/18 from NWH where she was hospitalized from 5/31/18 to 6/4/18 for worsening stasis ulcers on her left lower extremity and cellulitis.

She as previously followed by the NW wound clinic for her venous stasis multiple ulcers of LLE. During her follow up appointment at the clinic there was concern for worsening cellulitis, hence admitted for further workup. She was started on Cefazolin empirically. Wound culture later grew MSSA and Pseudomonas. She will continue to be closely followed by the wound clinic team at NW.

On hospital admission her INR was 4.9. coumadin was subsequently held for few days and then gradually restarted. She also received some IV fluid for dehydration.

Hx Interval:
Jeanne is complaining of leg pain, more like cramps to the calf, more on the right leg than the left. She has no wounds on the right leg. She has stasis ulcer wounds on the left leg which is wrapped with dressing. She states that the cramp-like pain comes and goes, worse in the morning after long rest in bed. She has history of chronic/recurrent DVTs and is currently on chronic anticoagulation coumadin with therapeutic INR for the past month. Pain could also be related to her poor vascular circulation. Her electrolytes are stable and no active clot noted on RLE by duplex.

She is otherwise walking on both legs with one person assist using a walker. Per nursing notes her wounds are gradually healing with current treatment plan. She has no sign of active infection. Appetite fairly stable, remains continent of bowel and bladder. She remains calm and cooperative with care and treatments.

ROS:
Denies fever, chills, sob, n/v, chest pain, headache, diarrhea or constipation.
Rest of the ROS reviewed and were negative except for as above

PMH:
Patient Active Problem List
Diagnosis
- Sensorineural hearing loss, unspecified
- DVT, recurrent, lower extremity, chronic (HCC)
- Other and unspecified hyperlipidemia
- Generalized osteoarthrosis, unspecified site
- Essential hypertension, benign
- Unspecified glaucoma(365.9)
- Routine general medical examination at a health care facility
- Type 2 diabetes mellitus without complication (HCC)
- Unspecified vitamin B deficiency
- Long term current use of anticoagulant therapy
- Osteoporosis, unspecified
- Osteoarthritis of lumbar spine
- Urine incontinence
- Pseudophakia, both eyes
- Hip joint stiffness
- Leg weakness, bilateral
- Weakness of trunk musculature
- Other physical therapy
- History of recurrent deep vein thrombosis (DVT)
- Thrombocytopenia (HCC)
- Imbalance
- Primary osteoarthritis of both hips
- Non-pressure chronic ulcer of left ankle with fat layer exposed (HCC)
- Non-pressure chronic ulcer of left calf with fat layer exposed (HCC)
- Peripheral vascular disease, unspecified (HCC)
- Cellulitis of left leg
- Venous ulcer of left leg (HCC)
- Homeless
- Normocytic anemia
- Severe protein-calorie malnutrition (HCC)
- Urge urinary incontinence
- Vitamin D deficiency

SH:
Social History

Social History Narrative
6/15/2010 Grew up on Bainbridge. Both parents from Paris. Spoke French at home and English in Public. She recalls her first clot was in her legs when she was 30. She also developed clot in her arms later. She states her grandmother had the same problem.

William E Neighbor, MD

Habits: denies tobacco, ETOH or drug use
Prior living situation: homeless now
Widowed. She has two sons. She had been living with her son in subsidized housing and apparently the landlord was affected by her son's behavior, as well as her other son's bullying, and eventually evicted them (per SW note the son reports they left "willingly").
Social Support: family
POLST: Full code, Antibiotics ok, Long term medically assisted nutrition by tube

DPOA: Louis (son) 360-649-5702

MEDICATIONS:
Please review the facility Medication Administration Record (MAR) for the most up to date and accurate medication list. Please call the facility to have latest medication administration record faxed.

ALLERGY:
Review of patient's allergies indicates:
Allergies

Allergen	Reactions
• Adhesives	
• Aspirin	Other
• Nitrofurantoin	Other
Confusion, loss of appetitie, nausea, abdominal pain	
• Nitrofurantoin	Other
confusion	
• Penicillins	Rash
• Sulfa Antibiotics	Rash

Physical Exam:
BP 124/68 | Pulse 70 | Temp 97.2 °F (36.2 °C) (Tympanic) | Resp 18 | Wt 110 lb 12 oz (50.2 kg) | BMI 20.26 kg/m²
Wt Readings from Last 3 Encounters:
07/06/18 110 lb 12 oz (50.2 kg)
06/22/18 111 lb 6 oz (50.5 kg)
06/19/18 110 lb (49.9 kg)

GEN: appears older than stated age, accompanied by self. Appears thin, adequately hydrated, and groomed. Alert and responding appropriately and in no acute distress.
PSYCH: alert and oriented x 3, interactive, speech w/o dysarthria, full affect, focused content, logical process, no hallucinations or psychomotor agitation. Hard of hearing, hearing in left ear.
HEENT: NCAT, moist mucous membranes. Poor dentition. Oropharynx clear. EOMI and PERRLA. Corrective lenses
CV: RRR, NL S1 and S2, G 1/6 murmurs, no r/g, no JVD.
PULM: normal, unlabored, and regular respiratory effort, CTA B/L.
ABD: normal BT all quadrants, non-tender, non-distended, no masses
MSK: kyphotic, changes in hands consistent w/ OA. MAE
EXT: no c/c/. LLE in xeroform wrap. RLE calf tenderness with deep palpation
NEURO: no focal deficits, Normal tone, motor symmetry
SKIN: dry wnl temp and color, no apparent rash
Labs: nursing home labs not done through UW system, please check with the facility.
- CBC, CMP unremarkable
- INR at goal
- RLE duplex free of active clot

A/P:
(M79.604, M79.605) Leg pain, bilateral (primary encounter diagnosis)
Peripheral vascular disease, unspecified (HCC)
(I83.029) Venous ulcer of left leg (HCC) (I73.9)
Plan: - pain likely related to her poor circulation
- Norco 5-325 mg tab, 1 - 2 tabs po prn q 4 hrs for pain

- continue wound care as ordered
- she will followed by vascular clinic
- f/u with NW wound NP at SNF weekly and at the clinic as needed
- continue supportive care with ADLs
- continue Pentoxifylline 400 mg po q 8 hrs

(Z86.718) History of recurrent deep vein thrombosis (DVT)
(Z79.01) Long term current use of anticoagulant therapy
Plan: - continue chronic anticoagulation with Coumadin
- INR has been at therapeutic
- INR goal is 2 - 3
- continue to check INR twice a week

(G31.84) Mild cognitive impairment
Plan: - stable without behaviors or resistive to care
- continue supportive care
- monitor for mood/behavioral changes

(I10) Essential hypertension
Plan: - stable, no longer on meds
- continue to monitor

(D64.9) Normocytic anemia
Plan: - stable

(E78.5) Other and unspecified hyperlipidemia
Plan: - no longer on statin

(M16.0) Primary osteoarthritis of both hips
(M47.816) Osteoarthritis of lumbar spine, unspecified spinal osteoarthritis complication status
(M62.81) Weakness of trunk musculature
(R29.898) Leg weakness, bilateral
Plan: - PT and OT as scheduled
- supportive care with ADLs
- Norco 5-325 mg tab, 1 - 2 tabs po prn q 4 hrs for pain

(E11.9) Type 2 diabetes mellitus without complication, without long-term current use of insulin (HCC)
Plan: - diet controlled

(H40.9) Unspecified glaucoma(365.9)
Plan: - stable, continue home regimen
- Timolol 0.5% 1 drop both eyes BID

(E43) Severe protein-calorie malnutrition (HCC)
Plan: - weight is gradually trending up. Appetite has been somewhat fairly good.
- will continue to monitor
- followed by dietician
- Prostat 30 cc po daily

(E53.9) Unspecified vitamin B deficiency
Plan: - Vitamin B_{12} 1000 mcg po daily

(E55.9) Vitamin D deficiency

Plan: - recent Vit D 25-OH was 24.3 on 6/8/18
- Vitamin D_3 50,000 units po week x 6 weeks (thru 7/28/18)
- continue Vitamin D_3 1000 units po daily

Ibrahima Touray, ARNP

Please contact the University of Washington Post Acute Care Service at 206-744-5415 or page the provider or the on-call provider through Harborview Medical Center at 206-744-3000.

Calcium 8.5 mg/dL L *(8.9-10.2 mg/dL)*

Coagulation from 5/31/2018 1:15 PM

Prothrombin Time Patient (NWH) 45.7 s H *(8.9-12.1 s)*
Prothrombin INR 4.9 H *(0.8-1.3)*

Coagulation from 6/1/2018 5:50 AM

Prothrombin Time Patient (NWH) 30.8 s H *(8.9-12.1 s)*
Prothrombin INR 3.4 H *(0.8-1.3)*

Coagulation from 6/2/2018 6:26 AM

Prothrombin Time Patient (NWH) 16.1 s H *(8.9-12.1 s)*
Significant change in lab value, correlated with
supporting data for quality assurance purposes.
Prothrombin INR 1.7 H *(0.8-1.3)*

Coagulation from 6/3/2018 5:28 AM

Prothrombin Time Patient (NWH) 12.2 s H *(8.9-12.1 s)*
Prothrombin INR 1.3 *(0.8-1.3)*

Coagulation from 6/4/2018 5:20 AM

Prothrombin Time Patient (NWH) 13.4 s H *(8.9-12.1 s)*
Prothrombin INR 1.4 H *(0.8-1.3)*

Cardiac from 5/31/2018 1:15 PM

C_Reactive Protein 4.3 mg/L *(0.0-10.0 mg/L)*

Infectious Immunology from 6/2/2018 3:30 PM

C. difficile PCR Spec Desc Stool (Reference Range: not available)

C. difficile, Toxigenic by PCR Negative *(NRN)*

Problems

Encounter Diagnosis
- Acute Pain Status:Active.

Additional Problems
- Fall Risk Status:Resolved.

Encounters

Encounter Diagnosis
- Acute Pain Status:Active.

Plan of Care

Treatment Plan from 6/4/2018 1:00 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Treatment Plan from 6/4/2018 3:10 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Procedures

No relevant procedures performed.

Immunizations

No immunizations administered.

Hospital Course

Hospital Discharge Instructions

Detailed Instructions from 6/4/2018 1:00 PM:

Activity Instructions
- Activity : Resume usual activity as tolerated
- Activity Instructions : ambulate with walker, elevate Left leg in bed.

Diet Instructions
- Diet Instructions : Pureed
- Additional Diet Instructions : or mechanical soft diet

Elimination
- Elimination : Continent bowel,Continent bladder

Medication Administration Instructions
- Med Administration Instructions : Whole with thin liquids

Additional Instructions
- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

- Fever of 100.5 F or higher or chills
- Increased/ Excessive Bleeding
- Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
- Frequency, burning, foul smelling or blood with urination or unable to urinate
- Persistent diarrhea or constipation
- Pain, redness and swelling in lower legs
- Pain unrelieved with medication and rest
- Unable to tolerate oral fluids or food
- Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
- Swelling unrelieved by elevation, rest or ice
- Severe leg/calf pain
- Chest pain
- Shortness of breath
- Fatigue
- Weight gain of more than 3 pounds in 3 days

- Community Wellness Tool Reviewed, Signed and Given to Pt/Family : Yes
- Personal Belongings List Reviewed and signed : Yes

Detailed Instructions from 6/4/2018 3:10 PM:

Activity Instructions
- Activity : Resume usual activity as tolerated
- Activity Instructions : ambulate with walker, elevate Left leg in bed.

Diet Instructions
- Diet Instructions : Pureed
- Additional Diet Instructions : or mechanical soft diet

Precautions
- Precautions : Fall
- Isolation : Standard

Skin Condition
- Wound Type 1 : Other
- Wound Location 1 : LLE
- Wound Description 1 : Venous insufficiency
- Wound Treatment Plan 1 : LLE - remove dressing wash leg with warm washcloth. liberally apply vaseline jelly to dry skin. irrigate wounds with NS, wipe exudates free with gauze, cover with xeroform ABD & kerlix daily & PRN. Leg elevation

Elimination
- Elimination : Continent bowel,Continent bladder

Medication Administration Instructions
- Med Administration Instructions : Whole with thin liquids

Additional Instructions
- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

Allergies, Adverse Reactions, Alerts

This section is representative of the current allergy information, at the time of the CCD generation. In the case of regeneration of the CCD, the allergy information may not reflect the state of known allergies at the time of the CCD's subject visit.

- adhesive tape causes Rash. Status:Active.
- Penicillins causes Rash. Status:Active.
- Sulfa (Sulfonamide Antibiotics) causes Rash. Status:Active.
- No Latex Allergy.
- No IV Contrast Allergy.

Medication

It is the responsibility of the patient or patient representative to confirm the list of medications with either the patient's personal care provider or the patient's follow-up care provider to ensure the patient has an appropriate list of medications to take at home.

Discharge medications

New medications

- acetaminophen 325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN FEVER
- acidophilus-pectin, citrus 25 million cell-100 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral twice a day
- enoxaparin 40 mg/0.4 mL Syringe, Ordered By: Paul Luu, MD
  Directions: 40 mg subcutaneous daily
  Additional Instructions: discontinue when PT/INR reach therapeutic level
- HYDROcodone-acetaminophen 5 mg-325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN SEVERE PAIN
  Additional Instructions: ORDERED: 1-2 TAB PO Q4H PRN
- pentoxifylline 400 mg Tablet Extended Release, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral every eight hours

Continued medications

- timolol maleate 0.5 % Drops, Ordered By: Paul Luu, MD
  Directions: 1 drop ophthalmic, both eyes twice a day
- warfarin (Coumadin) 5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral daily QMonday, Tuesday, Wednesday, Friday, and Saturday
- warfarin (Coumadin) 2.5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral QThursday and Sunday
- atorvastatin calcium 10 mg PO daily
- Losartan potassium 12.5 mg PO daily
- Pentoxifylline ER 400 mg TID

Stopped medications

- None

Plan of Care

Treatment Plan from 6/4/2018 1:00 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Treatment Plan from 6/4/2018 3:10 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Procedures

No relevant procedures performed.

Immunizations

No immunizations administered.

Hospital Course

Hospital Discharge Instructions

Detailed Instructions from 6/4/2018 1:00 PM:

Activity Instructions

- Activity : Resume usual activity as tolerated
- Activity Instructions : ambulate with walker, elevate Left leg in bed.

Diet Instructions

- Diet Instructions : Pureed
- Additional Diet Instructions : or mechanical soft diet

Elimination

- Elimination : Continent bowel,Continent bladder

Medication Administration Instructions

- Med Administration Instructions : Whole with thin liquids

Additional Instructions

- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

  - Fever of 100.5 F or higher or chills
  - Increased/ Excessive Bleeding
  - Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
  - Frequency, burning, foul smelling or blood with urination or unable to urinate
  - Persistent diarrhea or constipation
  - Pain, redness and swelling in lower legs
  - Pain unrelieved with medication and rest
  - Unable to tolerate oral fluids or food
  - Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
  - Swelling unrelieved by elevation, rest or ice
  - Severe leg/calf pain
  - Chest pain
  - Shortness of breath
  - Fatigue
  - Weight gain of more than 3 pounds in 3 days
- Community Wellness Tool Reviewed, Signed and Given to Pt/Family : Yes
- Personal Belongings List Reviewed and signed : Yes

Allergies, Adverse Reactions, Alerts

This section is representative of the current allergy information, at the time of the CCD generation. In the case of regeneration of the CCD, the allergy information may not reflect the state of known allergies at the time of the CCD's subject visit.

- adhesive tape causes Rash. Status:Active.
- Penicillins causes Rash. Status:Active.
- Sulfa (Sulfonamide Antibiotics) causes Rash. Status:Active.
- No Latex Allergy.
- No IV Contrast Allergy.

Medication

It is the responsibility of the patient or patient representative to confirm the list of medications with either the patient's personal care provider or the patient's follow-up care provider to ensure the patient has an appropriate list of medications to take at home.

Discharge medications

New medications

- acetaminophen 325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN FEVER
- acidophilus-pectin, citrus 25 million cell-100 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral twice a day
- enoxaparin 40 mg/0.4 mL Syringe, Ordered By: Paul Luu, MD
  Directions: 40 mg subcutaneous daily
  Additional Instructions: discontinue when PT/INR reach therapeutic level
- HYDROcodone-acetaminophen 5 mg-325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN SEVERE PAIN
  Additional Instructions: ORDERED: 1-2 TAB PO Q4H PRN
- pentoxifylline 400 mg Tablet Extended Release, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral every eight hours

Continued medications

- timolol maleate 0.5 % Drops, Ordered By: Paul Luu, MD
  Directions: 1 drop ophthalmic, both eyes twice a day
- warfarin (Coumadin) 5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral daily QMonday, Tuesday, Wednesday, Friday, and Saturday
- warfarin (Coumadin) 2.5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral QThursday and Sunday
- atorvastatin calcium 10 mg PO daily
- Losartan potassium 12.5 mg PO daily
- Pentoxifylline ER 400 mg TID

Stopped medications

- None

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Luu, MD, Paul

DATE OF SERVICE: 06/04/2018

HISTORY OF PRESENT ILLNESS:
This is an urgent admission for a 95-year-old Caucasian female, homeless, who has been followed at the Wound Care Center for multiple left lower extremity ulcers. The patient had been followed at the Wound Care Center for months to treat left lower extremity ulcers which failed conservative treatment. The workup in the past included vascular study which showed that the patient had moderate peripheral vascular disease together with also venous insufficiency. In the past the four ulcers over her left calf and ankle had significantly calcified materials which required local debridement. The wounds had been treated conservatively with different types of dressing but did not show any sign of improving. Treatment of her wounds was also complicated by being homeless. Unfortunately, the patient and her son were evicted and they are currently living in a tent nearby the church. She has a son who is the caregiver. The son definitely shows sign of caring, but occasionally her son performed wound care which was very alarming. In the past, the son was worried about her ulcers and he washed her leg and wounds with diluted bleach. Today, the patient returned to the Wound Care Center for followup and she was found that her left calf to the level of the toe has significant petechiae associated with skin redness. However, the patient denies any fever at home. The patient constantly complained of significant left leg pain even at rest. Examination at the Wound Care Center on the day of admission showed that slight touching her left calf caused significant pain. The patient is well known to have significant high pain tolerance, but at the clinic the patient was tearing and complained of constant left leg pain. Therefore, the patient was advised to be admitted directly under my service for treating her cellulitis and possible other problems, such as petechiae secondary to hypercoagulopathy. The patient was taking Coumadin secondary to history of remote deep venous thrombosis.

HOSPITAL COURSE:
The patient was admitted to the floor and she was started empirically on Ancef 1 g IV piggyback q.8 h. She was placed on bed rest with the left leg elevated above heart level. However, the patient was allowed to ambulate with the help of physical therapist. Physical therapist was ordered to do strengthening exercise and ambulate the patient as much as she can tolerate. Without ambulating the patient was required to elevate the left leg. The swab culture obtained from her wound grew out multiple bacteria, including Pseudomonas. However, within three days of intravenous antibiotics the

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge: 20180604
Dictating Physician: Luu, MD, Paul

cellulitis significantly improved. Dr. Cohen, Infectious Disease, who has been following the patient at the Wound Care Center, recommended to discontinue the intravenous antibiotic. White the patient was admitted, the blood test also showed the patient had sustained hypercoagulopathy secondary to Coumadin. On admission, the patient had a PT of 45.7 with INR of 4.9. Her Coumadin was held and she gradually was restarted on very low-dose of Coumadin until she became therapeutic. At the time of discharge, her PT was 13.4 with INR of 1.5. White the patient was in the hospital it was found that the patient was also significantly dehydrated. After two days of intravenous hydration together with patient's good oral intake; therefore, intravenous supplement was discontinued. Initially when the patient arrived at the hospital, her hematocrit was 35, however, it subsequently decreased to 29 with intravenous hydration. Inpatient team was also called to help to manage multiple medical problems. Dr. Plotkin evaluated the patient and recommend a few changes of her treatment. Dr. Plotkin also contacted Bainbridge official to help with the housing situation for the patient. It was very difficult for the patient to return to the homeless living situation which would complicate the wound care. Therefore, the decision that after her medical condition is improved the patient will be discharged to skilled nursing facility. The patient agreed with placement to the skilled nursing facility. White the patient was in the hospital, she was also evaluated by Vascular Surgery Service, who recommended that she be followed at the vascular clinic with Dr. Rollo, who saw the patient in the past as an outpatient. There is no emergent vascular procedure that needed to be done during this hospitalization.

Overall, after three days in the hospital her medical condition improved significantly. The petechiae of the left lower extremity is also improved. She always remained afebrile during the entire hospital course. Therefore, on June 4, 2018, the patient was discharged to skilled nursing facility, Park Ridge Rehabilitation Center. At the skilled nursing facility, the patient will continue to receive physical therapy to ambulate the patient with the help of a walker. She will also perform strengthening exercise. At the skilled nursing facility, the wound care nurse who works with me at Northwest Hospital will follow and treat her four ulcers of the lower extremity. The patient, at the time of discharge, her Coumadin dose had been resumed and will be monitored closely at the nursing home. While the patient was in the hospital, the social worker also contacted Adult Protective Services to monitor the patient to make sure the patient did not sustain any physical or emotional abuse from any other parties. I also had a long discussion with the patient and recommend that she remains in the skilled nursing facility until health official or the social worker can help her to find permanent housing.

1-eDisch Sum Luu, MD, Paul 6/6/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 6:36:20 AM -04:00

Date of Discharge: 20180604
Dictating Physician: Luu, MD, Paul

FINAL DISCHARGE DIAGNOSES:
1. Cellulitis of the left lower extremity.
2. Dehydration.
3. Peripheral arterial disease together with venous insufficiency.
4. Hypercoagulopathy secondary to Coumadin.

CONDITION AT TIME OF DISCHARGE:
Improved.

DISPOSITION:
The patient was transferred to the Park Ridge Skilled Nursing Facility.

FOLLOWUP:
The patient will be followed by the wound care nurse at the skilled nursing facility.

Collected DTime 05/31/2018 15:32

Care Management Progress Note

Progress Note

Referral from Dr. Luu for SNF placement for this Pt.:
Pt is a 93 yo widowed, homeless admitted for LLE cellulitis and has been started on IV abx. Pt is living with her son/DPOA Louis Hoffman in a tent on Bainbridge Island. Per Louis, Pt was living in subsidized housing until a few months ago with Louis when housing management began harrassing them. Louis states they moved out "willingly" and have been attempting to get housed in another subsidized building on Bainbridge Is with limited success. In the meantime, Louis states they have two tents under an overhang with a stove. They use the local church for showers/baths.

Dr. Luu indicates Pt will benefit from short term SNF stay. Inpatient order dated 5/31/18 @ 12:00 pm. Dr. Luu also stated he will order PT/OT to evaluate Pt's current functioning.

Next Steps

MSW will send out SNF referrals tomorrow AM when more clinicals are available.

Clinical Note:

Care Management Progress Note

Assessment Sts Complete
Collected By Emma Grumm-Johnson, M
Collected DTime 06/01/2018 15:40

Care Management Progress Note

Progress Note

Pt referred to SNFs for short term rehab and was accepted to 5 facilities in North King Co., per Pt/family's request. Two different facilities had onsite visits with the Pt: Richmond Beach SNF & The Oaks at Forest Bay. Both will reach out to son Louis, but could accept this Pt. Dr. Luu anticipates Pt will be stable for dc on Mon.

MSW met with Pt at bedside. She shared that she feels safe living in a tent on Bainbridge Is. The Pt has a SSA benefit ~$800/month, and also sits on her walker daily and asks for donations. She states son Louis gets his own SSA benefit. Louis is Pt's DPOA and, when MSW asked if she has any concerns about Louis, she strongly denied. Pt is agreeable to short term SNF placement, however states her goal is to find housing with Louis.

Pt requested MSW f/up with Louis re: accepting SNFs. MSW left message with Louis @ (360) 649-5702 and emailed him (w/o any PHI) requesting he choose preferred facility ASAP.

Care Management Progress Note

Dr. Luu submitted care mgmt order for concern of potential elder abuse. D/w Dr. Luu, who stated yesterday during a conversation son Louis seemed to be bragging about how much money the Pt gets when she is asking for donations on the street. The interaction felt uncomfortable and Dr. Luu had concern Louis is using the Pt to make more money in donations on the street. MSW made APS referral @ 1-877-734-6277. APS reported no current active case, however Pt is in the system with closed cases. Ashley with APS intake will f/up with MSW.

Next Steps MSW to f/up on SNF referrals and APS report.

Care Management Progress Note

Progress Note

Pt has been accepted to Park Ridge Care Center, and Pt and son agreeable to this placement. D/w Dr. Plotkin, who states Pt is stable for discharge today. Dr. Plotkin and Dr. Luu report Pt will be followed by NWH wound clinic at Park Ridge CC and therefore no f/up appointments are the wound clinic are needed at this time.

Discussed dc transportation with Pt and son, Louis. Pt does not have private pay funds for a cabulance. MSW contacted Hopelink as possible transportation, however she does not have active Medicaid and therefore does not qualify for services. Taxi voucher has been completed for the Pt and US will call for a taxi when Pt's discharge is complete; son Louis will go with the Pt.

Next Steps Pt will dc to Park Ridge CC for short term skilled stay.

An Important Message From Medicare About Your Rights

As A Hospital Inpatient, You Have The Right To:

- Receive Medicare covered services. This includes medically necessary hospital services and services you may need after you are discharged, if ordered by your doctor. You have a right to know about these services, who will pay for them, and where you can get them.
- Be involved in any decisions about your hospital stay, and know who will pay for it.
- Report any concerns you have about the quality of care you receive to the Quality Improvement Organization (QIO) listed here:

Name of QIO
Livanta, LLC
Telephone Number of QIO
1–877–588–1123

Your Medicare Discharge Rights

Planning For Your Discharge: During your hospital stay, the hospital staff will be working with you to prepare for your safe discharge and arrange for services you may need after you leave the hospital. When you no longer need inpatient hospital care, your doctor or the hospital staff will inform you of your planned discharge date.

If you think you are being discharged too soon:

- You can talk to the hospital staff, your doctor and your managed care plan (if you belong to one) about your concerns.
- You also have the right to an appeal, that is, a review of your case by a Quality Improvement Organization (QIO). The QIO is an outside reviewer hired by Medicare to look at your case to decide whether you are ready to leave the hospital.
  - ❑ **If you want to appeal, you must contact the QIO no later than your planned discharge date and before you leave the hospital.**
  - ❑ If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
- If you do not appeal, but decide to stay in the hospital past your planned discharge date, you may have to pay for any services you receive after that date.
- Step by step instructions for calling the QIO and filing an appeal are on page 2.

To speak with someone at the hospital about this notice, call: Care Management Department at 206–668–1304.

Please sign and date here to show you received this notice and understand your rights.

Page 1 of 2

Steps To Appeal Your Discharge

- **Step1**: You must contact the QIO no later than your planned discharge date and before you leave the hospital. If you do this, you will not have to pay for the services you receive during the appeal (except for charges like copays and deductibles).
  - ❑ Here is the contact information for the QIO:

Name of QIO (in bold)
Livanta, LLC
Telephone Number of QIO
1–877–588–1123

  - ❑ You can file a request for an appeal any day of the week. **Once you speak to someone or leave a message, your appeal has begun.**
  - ❑ Ask the hospital if you need help contacting the QIO.
  - ❑ The name of this hospital is : Northwest Hospital & Medical Center.

Hospital Name	Provider ID Number
Acute NPI:	**1700861580**
Geropsych NPI:	**1497766067**

- **Step 2**: You will receive a detailed notice from the hospital or your Medicare Advantage or other Medicare managed care plan (if you belong to one) that explains the reasons they think you are ready to be discharged.
- **Step 3**: The QIO will ask for your opinion. You or your representative need to be available to speak with the QIO, if requested. You or your representative may give the QIO a written statement, but you are not required to do so.
- **Step 4**: The QIO will review your medical records and other important information about your case.
- **Step 5**: The QIO will notify you of its decision within 1 day after it receives all necessary information.
  - ❑ If the QIO finds that you are not ready to be discharged, Medicare will continue to cover your hospital services.
  - ❑ If the QIO finds you are ready to be discharged, Medicare will continue to cover your services until noon of the day after the QIO notifies you of its decision.

If You Miss The Deadline To Appeal, You Have Other Appeal Rights:

- You can still ask the QIO or your plan (if you belong to one) for a review of your case:
  - ❑ If you have Original Medicare: Call the QIO listed above.
  - ❑ If you belong to a Medicare Advantage Plan or other Medicare managed care plan: Call your plan.
- If you stay in the hospital, the hospital may charge you for any services you receive after your planned discharge date.

For more information, call 1–800–MEDICARE (1–800–633–4227), or TTY: 1–877–486–2048. CMS does not discriminate in its programs and activities. To request this publication in an alternate format, please call: 1–800–MEDICARE or email: AltFormatRequest@cms.hhs.gov.

Additional Information:

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0938–0692. The time required to complete this information collection is estimated to average 15 minutes per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. If you have comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: CMS, 7500 Security Boulevard, Attn: PRA Reports Clearance Officer, Mail Stop C4–26–05, Baltimore, Maryland 21244–1850.

Dietitian Evaluation

Assessment Sts Complete
Collected By Leilah Korbines, Dietitian G
Collected DTime 06/01/2018 13:47

Dietitian Evaluation

Initial Assessment	Yes	**Primary Diagnosis**	peripheral arterial disease, chronic venous stasis, hx of deep vein thrombosis (on anticoagulant), chronic L leg ulcers, comes in with cellulitis
Pertinent Medical History	benign HTN, abnormal liver function	**Medications**	warfarin, bowel management
Pt/Family Interview	Pt reports her weight has always been a bit unstable, but says her usual weight is about 120lbs though she is unable to say when she last weighed this weight. Pt is experiencing homelessness after a recent eviction. She now lives in a tent with her son who she says "cooks her meals over the fire". She says she has no appetite and doesn't feel hungry, but she eats 5 small meals per day and eats a lot of fruit and vegetables. Previous to being evicted, pt enjoyed cooking and canning her own foods. Pt is missing most of her top teeth, requires softer textured foods.	**Height (inches)**	5/6 ft,in
Weight (kg)	49.4 kg	**Accept RN Height?**	Yes
Accept RN Weight?	Yes	**Height (RD)**	5/6 ft,in
Weight (RD)	49.4 kg	**IBW (kg)**	63.8
IBW%	77.4	**BMI**	17.6

Dietitian Evaluation

Assessment Sts Complete
Collected By Leilah Korbines, Dietitian G
Collected DTime 06/01/2018 13:47

Dietitian Evaluation

FNS IBW M Calculation	63.8	**Weight History**	Per pt, UBW is 54.5kg; wt was 52.7kg on 2/1/18 - this is a weight loss of 3.3kg (~6% body weight) in 3 months.
Edema	None noted	**Diet Order**	General
GI Function	Pt reports loose stools today; BM x4 noted 6/1 (1 was incontinent); +BTs, abdomen nondistended, soft	**PO Intake**	100% at meals since admit
Current Labs Reviewed	Yes	**Comments**	glucose 132 (H)
Assessment "Feed At" Weight (kg)	49	**Estimated Calorie Needs**	25-30kcal/kg = 1250-1470kcal
Estimated Total Protein Needs	1.2-1.5g/kg = 60-75g	**Estimated Daily Fluid Needs**	1ml/kg = 1250-1470ml
Problem (1)	Increased energy needs related to wound healing as evidenced by multiple venous stasis ulcers on left leg.	**Malnutrition Screening Completed**	Yes
Date Completed	06/01/2018	**Malnutrition Screen Criteria Met**	No
Malnutrition Coding	Pt does not meet criteria for malnutrition at this time.	**(Enteral/Parenteral) Comments**	Encouraged pt to continue eating protein foods as she is able. Plan is to d/c her to a SNF, but she may need assistance with finding housing as well as regular access to food in the future.
Monitoring/Evaluation	Monitor PO intake, weight trend, labs, and plan of care.	**Physical Assessment**	Muscle and fat stores appear WNL for stated age at this time. Did not conduct a full nutrition-focused physical exam.
"Feed At" Weight Source	Current Weight	**Skin Condition**	chronic L leg ulcers

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 06/04/2018 14:15

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a 93 yof admitted for cellulitis. Pharmacy was consulted to dose warfarin for the indication of hx of remote DVT (verbal order from Dr. Luu).
Goal INR: 2-3
PMH includes: Hx of DVT, PVD, multiple treatments for LLE infection
Social hx: homeless

Patient's home warfarin regimen is: 2.5 mg on Thursday and Sunday; 5 mg all other days
Last dose taken: 7.5 mg on 6/3

Objective:
INR: 1.4
Hgb/Hct: 9.9/32
Plt: 203
Tmax: 36.8

Diet/PO intake: 100% of meals
Current potential drug-drug or drug-disease interactions with warfarin: enox 40 mg, PRN apap, PRN norco

Assessment:
INR remains subtherapeutic at 1.4 today despite increased dose of 7.5 mg last evening; possible patient is slow responder and increased PO intake is requiring a higher than normal warfarin dose to reach therapeutic levels. Pt remains on enox 40 mg/d for DVT prophy given INR < 2. Will continue 7.5 mg dose tonight and check INR tomorrow morning.

Based on patient's living situation or discharge disposition, patient will likely not need warfarin teaching/review.

Plan:
Continue warfarin 7.5 mg tonight.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
Next INR draw: 6/5 AM

Electronically signed by Travis Yesiki, Pharm D on 06/04/2018 14:23

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

DATE OF SERVICE: 06/04/2018

IDENTIFYING INFORMATION:
Patient is a 93-year-old woman with severe peripheral vascular disease both venous and arterial who came in with worsening stasis ulcers on her left lower extremity and cellulitis.

PROBLEMS DURING THIS HOSPITAL STAY:
1. Cellulitis left lower extremity.
2. Multiple venous ulcerations from stasis ulcers complicated by arterial insufficiency in her left lower extremity with acute worsening.
3. Coagulopathy without bleeding.
4. Hypertension.
5. Diarrhea, unclear etiology. C. diff negative.
6. Mild transaminitis of unclear etiology.

CONSULTATIONS THIS ADMISSION:
1. Vascular Surgery, Dr. Rollo.
2. Infectious disease, Dr. Cohen.
3. Wound Care, Teresa Gegax-Martinez, ARNP.

PROCEDURES THIS ADMISSION:
None.

BRIEF HISTORY OF PRESENT ILLNESS:
Please also see my admission note from 05/31/2018. The patient is a 93-year-old woman who has had known difficulties with left lower extremity chronic venous stasis ulcers complicated by arterial insufficiency. Unfortunately, she has not had a place to live for the past 2 months, living in a tent with her son. Living situation is not allowed for optimal care of her lower extremity wounds. She went into Wound Care Clinic and was seen to have probable cellulitis on exam and it was felt that admitting her would be the best way to manage this since she did not have good wound care at home. She was also complaining of severe pain in her leg when she first arrived.

HOSPITAL COURSE BY PROBLEM:
1. Cellulitis, left lower extremity. The patient received cefazolin initially on admission for presumed cellulitis. Her leg improved rapidly and she was assessed in the next 2 days and felt to no longer actually have

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

active infection. There was a wound culture obtained initially on admission and it ended up growing MSSA and Pseudomonas. I therefore had Infectious Disease see the patient to see whether the Pseudomonas needed coverage. Infectious Disease consulted and Dr. Cohen felt that the patient did not actively have cellulitis at this time and felt that no further antibiotics needed. We actually watched the patient off antibiotics for 48 hours with no worsening of her wounds or erythema of the leg. Therefore, at this time the culture represents colonization. It is felt that she will do best with aggressive wound care management. She was seen by the wound care team who put her on Xeroform with leg wraps but not pressure wraps. She showed improvement in her wounds even during her hospital stay here. She will go to a skilled nursing facility for further wound care and follow up with the Wound Care Clinic within a week.
2. Stasis ulcers of her legs. Please see discussion above. The patient had at least 5 ulcers of the leg. These were starting to have granulation tissue by the time of discharge. Because she has known peripheral vascular disease mainly venous but also some element of arterial, she was seen by the vascular team. They felt they could follow up as an outpatient to offer procedures once she is improved. She will see Dr. Rollo in followup.
3. Coagulopathy. On admission patient's INR was supratherapeutic at 4.9. She had no evidence of bleeding. We held her warfarin initially in order to let her INR come down to therapeutic. Unfortunately, she went below therapeutic and it is 1.4 at the time of this dictation. I have suggested she stay on enoxaparin until she is fully therapeutic on warfarin with an INR between 2 and 3. Indication for anticoagulation is chronic venous stasis disease with a past history of DVT with significant complications.
4. Hypertension. Patient's blood pressure was adequately controlled.
5. Abnormal liver tests. On initial blood testing patient had an elevated AST at 44 and ALT of 35. Her AST improved to 43, ALT normalized during the hospital stay. This is of unclear etiology, possibly nutritional.
6. Diarrhea. The patient had some loose stools in the hospital. She had reported this had happened prior to coming in as well. She was tested for C. diff and it was negative. She was tested for other enteric pathogens and that was negative. She was started on probiotics with some improvement in her loose stools.
7. Underweight. Patient's BMI was 17.6, making her underweight. She was encouraged to have nutritional supplements.

MEDICATIONS ON DISCHARGE:

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

1. Acetaminophen 650 mg q.4 h. p.r.n. fever or pain.
2. Acidophilus probiotic 1 tablet twice a day.
3. Enoxaparin 40 mg daily subcutaneous until INR is between 2 and 3.
4. Hydrocodone/acetaminophen 5/325, 2 tablets q.4 h. p.r.n. severe pain. May have 1 to 2 tablets.
5. Pentoxifylline 400 mg q.8 h.
6. Timolol 0.5% ophthalmic drops 1 drop both eyes twice a day.
7. Warfarin 5 mg every Monday, Tuesday, Wednesday, Friday and Saturday. 2.5 mg every Thursday and Sunday. Repeat INR q. Monday and Thursday.
8. Atorvastatin 10 mg a day.
9. Losartan 12.5 mg a day.

EXAMINATION ON THE DAY OF DISCHARGE:
VITAL SIGNS: Temperature 36.2, pulse 75, blood pressure 131/69.
GENERAL: She is alert, in no acute distress.
CHEST: Clear.
CARDIAC: Regular rate and rhythm. No murmur or gallop.
ABDOMEN: Nontender.
EXTREMITIES: Left lower extremity shows venous ulcerations with granulation tissue. No evidence of infection. The lower extremity between the knee and the ankle is dark red discoloration related to venous stasis. There is no edema.

CODE STATUS:
DURING THIS ADMISSION REMAINED FULL RESUSCITATION, HOWEVER PATIENT DOES NOT WANT PROLONGED RESUSCITATIVE EFFORTS IF THERE IS NO CHANCE OF HER RECOVERY.

FOLLOWUP:
Will be with Wound Care Clinic within 1 week after discharge from skilled nursing facility.

TIME SPENT:
Greater than 30 minutes spent on discharge activities on the day of discharge.

Glucose 143 mg/dL H *(62-125 mg/dL)*
Urea Nitrogen 12 mg/dL *(8-21 mg/dL)*
Creatinine 0.80 mg/dL *(0.38-1.02 mg/dL)*
Protein (Total) 6.1 g/dL *(6.0-8.2 g/dL)*
Albumin 3.2 g/dL L *(3.5-5.2 g/dL)*
Bilirubin (Total) 0.3 mg/dL *(0.2-1.3 mg/dL)*
AST (GOT) 43 U/L H *(9-38 U/L)*
ALT (GPT) 26 U/L *(7-33 U/L)*
Alkaline Phosphatase (Total) 81 U/L *(49-199 U/L)*
eGFR, Calc, European American >60 mL/min/1.73_m2 *(>59- mL/min/1.73_m2)*
eGFR, Calc, African American >60 mL/min/1.73_m2 *(>59- mL/min/1.73_m2)*
eGFR, Information (Reference Range: not available)
Calculated GFR in mL/min/1.73 m2 by MDRD equation.
Inaccurate with changing renal function. See

http://depts.washington.edu/labweb/test/bclim/cGFR.html
Calcium 8.5 mg/dL L *(8.9-10.2 mg/dL)*

Coagulation from 5/31/2018 1:15 PM

Prothrombin Time Patient (NWH) 45.7 s H *(8.9-12.1 s)*
Prothrombin INR 4.9 H *(0.8-1.3)*

Coagulation from 6/1/2018 5:50 AM

Prothrombin Time Patient (NWH) 30.8 s H *(8.9-12.1 s)*
Prothrombin INR 3.4 H *(0.8-1.3)*

Coagulation from 6/2/2018 6:26 AM

Prothrombin Time Patient (NWH) 16.1 s H *(8.9-12.1 s)*
Significant change in lab value, correlated with
supporting data for quality assurance purposes.
Prothrombin INR 1.7 H *(0.8-1.3)*

Coagulation from 6/3/2018 5:28 AM

Prothrombin Time Patient (NWH) 12.2 s H *(8.9-12.1 s)*
Prothrombin INR 1.3 *(0.8-1.3)*

Coagulation from 6/4/2018 5:20 AM

Prothrombin Time Patient (NWH) 13.4 s H *(8.9-12.1 s)*
Prothrombin INR 1.4 H *(0.8-1.3)*

Cardiac from 5/31/2018 1:15 PM

C_Reactive Protein 4.3 mg/L *(0.0-10.0 mg/L)*

Infectious Immunology from 6/2/2018 3:30 PM

C. difficile PCR Spec Desc Stool (Reference Range: not available)

C. difficile, Toxigenic by PCR Negative *(NRN)*

Problems

Encounter Diagnosis

- Acute Pain Status:Active.

Additional Problems

- Fall Risk Status:Resolved.

Encounters

Encounter Diagnosis

- Acute Pain Status:Active.

Plan of Care

Treatment Plan from 6/4/2018 1:00 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Treatment Plan from 6/4/2018 3:10 PM:

- Additional Follow Up Appointment : Dr. Rollo (vascular surgery/outpatient)
- Follow Up Phone : (206) 668-1070
- When : son to call for appointment
- Referral : Physical therapy,Respiratory therapy,Wound care

Procedures

No relevant procedures performed.

Immunizations

No immunizations administered.

Hospital Course

Hospital Discharge Instructions

Detailed Instructions from 6/4/2018 1:00 PM:

Activity Instructions

- Activity : Resume usual activity as tolerated
- Activity Instructions : ambulate with walker, elevate Left leg in bed.

Diet Instructions

- Diet Instructions : Pureed
- Additional Diet Instructions : or mechanical soft diet

Elimination

- Elimination : Continent bowel,Continent bladder

Medication Administration Instructions

- Med Administration Instructions : Whole with thin liquids

Additional Instructions

- Notify your provider if :

  Notify your Provider if you have any of the following signs or symptoms:

  - Fever of 100.5 F or higher or chills
  - Increased/ Excessive Bleeding
  - Persistent nausea or vomiting or if vomit is greenish, looks like coffee grounds or has blood in it
  - Frequency, burning, foul smelling or blood with urination or unable to urinate
  - Persistent diarrhea or constipation
  - Pain, redness and swelling in lower legs
  - Pain unrelieved with medication and rest
  - Unable to tolerate oral fluids or food
  - Dizziness, fainting spells, difficulty breathing, heart suddenly beating very slowly or quickly, persistent weakness, persistent hiccoughs
  - Swelling unrelieved by elevation, rest or ice
  - Severe leg/calf pain
  - Chest pain
  - Shortness of breath
  - Fatigue
  - Weight gain of more than 3 pounds in 3 days
- Community Wellness Tool Reviewed, Signed and Given to Pt/Family : Yes
- Personal Belongings List Reviewed and signed : Yes

Detailed Instructions from 6/4/2018 3:10 PM:

Activity Instructions

- Activity : Resume usual activity as tolerated
- Activity Instructions : ambulate with walker, elevate Left leg in bed.

Diet Instructions

- Diet Instructions : Pureed
- Additional Diet Instructions : or mechanical soft diet

Precautions

- Precautions : Fall

- Isolation : Standard

Skin Condition

- Wound Type 1 : Other
- Wound Location 1 : LLE
- Wound Description 1 : Venous insufficiency
- Wound Treatment Plan 1 : LLE - remove dressing wash leg with warm washcloth. liberally apply vaseline jelly to dry skin. irrigate wounds with NS, wipe exudates free with gauze, cover with xeroform ABD & kerlix daily & PRN. Leg elevation

Elimination

- Elimination : Continent bowel,Continent bladder

Medication Administration Instructions

- Med Administration Instructions : Whole with thin liquids

Additional Instructions

- Notify your provider if :

Allergies, Adverse Reactions, Alerts

This section is representative of the current allergy information, at the time of the CCD generation. In the case of regeneration of the CCD, the allergy information may not reflect the state of known allergies at the time of the CCD's subject visit.

- adhesive tape causes Rash. Status:Active.
- Penicillins causes Rash. Status:Active.
- Sulfa (Sulfonamide Antibiotics) causes Rash. Status:Active.
- No Latex Allergy.
- No IV Contrast Allergy.

Medication

It is the responsibility of the patient or patient representative to confirm the list of medications with either the patient's personal care provider or the patient's follow-up care provider to ensure the patient has an appropriate list of medications to take at home.

Discharge medications

New medications

- acetaminophen 325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN FEVER
- acidophilus-pectin, citrus 25 million cell-100 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral twice a day
- enoxaparin 40 mg/0.4 mL Syringe, Ordered By: Paul Luu, MD
  Directions: 40 mg subcutaneous daily
  Additional Instructions: discontinue when PT/INR reach therapeutic level
- HYDROcodone-acetaminophen 5 mg-325 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 2 tablet oral every four hours PRN SEVERE PAIN
  Additional Instructions: ORDERED: 1-2 TAB PO Q4H PRN
- pentoxifylline 400 mg Tablet Extended Release, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral every eight hours

Continued medications

- timolol maleate 0.5 % Drops, Ordered By: Paul Luu, MD
  Directions: 1 drop ophthalmic, both eyes twice a day
- warfarin (Coumadin) 5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral daily QMonday, Tuesday, Wednesday, Friday, and Saturday
- warfarin (Coumadin) 2.5 mg Tablet, Ordered By: Paul Luu, MD
  Directions: 1 tablet oral QThursday and Sunday
- atorvastatin calcium 10 mg PO daily
- Losartan potassium 12.5 mg PO daily
- Pentoxifylline ER 400 mg TID

Stopped medications

- None

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

DATE OF SERVICE: 06/04/2018

IDENTIFYING INFORMATION:
Patient is a 93-year-old woman with severe peripheral vascular disease both venous and arterial who came in with worsening stasis ulcers on her left lower extremity and cellulitis.

PROBLEMS DURING THIS HOSPITAL STAY:
1. Cellulitis left lower extremity.
2. Multiple venous ulcerations from stasis ulcers complicated by arterial insufficiency in her left lower extremity with acute worsening.
3. Coagulopathy without bleeding.
4. Hypertension.
5. Diarrhea, unclear etiology. C. diff negative.
6. Mild transaminitis of unclear etiology.

CONSULTATIONS THIS ADMISSION:
1. Vascular Surgery, Dr. Rollo.
2. Infectious disease, Dr. Cohen.
3. Wound Care, Teresa Gegax-Martinez, ARNP.

PROCEDURES THIS ADMISSION:
None.

BRIEF HISTORY OF PRESENT ILLNESS:
Please also see my admission note from 05/31/2018. The patient is a 93-year-old woman who has had known difficulties with left lower extremity chronic venous stasis ulcers complicated by arterial insufficiency. Unfortunately, she has not had a place to live for the past 2 months, living in a tent with her son. Living situation is not allowed for optimal care of her lower extremity wounds. She went into Wound Care Clinic and was seen to have probable cellulitis on exam and it was felt that admitting her would be the best way to manage this since she did not have good wound care at home. She was also complaining of severe pain in her leg when she first arrived.

HOSPITAL COURSE BY PROBLEM:
1. Cellulitis, left lower extremity. The patient received cefazolin initially on admission for presumed cellulitis. Her leg improved rapidly and she was assessed in the next 2 days and felt to no longer actually have active infection. There was a wound culture obtained initially on admission and it ended up growing MSSA and Pseudomonas. I therefore had Infectious

---

Account 1827191558 Hoffman, Jeanne Leonie 5/31/2018-6/4/2018 I(A) PLS 1-eTransf Sum Plotkin, MD, Elizabeth 6/4/2018 CUSTDM10\W0TA_EPLOTKIN 6/5/2018 7:51:52 PM -07:00

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

Disease see the patient to see whether the Pseudomonas needed coverage. Infectious Disease consulted and Dr. Cohen felt that the patient did not actively have cellulitis at this time and felt that no further antibiotics needed. We actually watched the patient off antibiotics for 48 hours with no worsening of her wounds or erythema of the leg. Therefore, at this time the culture represents colonization. It is felt that she will do best with aggressive wound care management. She was seen by the wound care team who put her on Xeroform with leg wraps but not pressure wraps. She showed improvement in her wounds even during her hospital stay here. She will go to a skilled nursing facility for further wound care and follow up with the Wound Care Clinic within a week.
2. Stasis ulcers of her legs. Please see discussion above. The patient had at least 5 ulcers of the leg. These were starting to have granulation tissue by the time of discharge. Because she has known peripheral vascular disease mainly venous but also some element of arterial, she was seen by the vascular team. They felt they could follow up as an outpatient to offer procedures once she is improved. She will see Dr. Rollo in followup.
3. Coagulopathy. On admission patient's INR was supratherapeutic at 4.9. She had no evidence of bleeding. We held her warfarin initially in order to let her INR come down to therapeutic. Unfortunately, she went below therapeutic and it is l.4 at the time of this dictation. I have suggested she stay on enoxaparin until she is fully therapeutic on warfarin with an INR between 2 and 3. Indication for anticoagulation is chronic venous stasis disease with a past history of DVT with significant complications.
4. Hypertension. Patient's blood pressure was adequately controlled.
5. Abnormal liver tests. On initial blood testing patient had an elevated AST at 44 and ALT of 35. Her AST improved to 43, ALT normalized during the hospital stay. This is of unclear etiology, possibly nutritional.
6. Diarrhea. The patient had some loose stools in the hospital. She had reported this had happened prior to coming in as well. She was tested for C. diff and it was negative. She was tested for other enteric pathogens and that was negative. She was started on probiotics with some improvement in her loose stools.
7. Underweight. Patient's BMI was 17.6, making her underweight. She was encouraged to have nutritional supplements.

MEDICATIONS ON DISCHARGE:
l. Acetaminophen 650 mg q.4 h. p.r.n. fever or pain.
2. Acidophilus probiotic 1 tablet twice a day.

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Plotkin, MD, Elizabeth

3. Enoxaparin 40 mg daily subcutaneous until INR is between 2 and 3.
4. Hydrocodone/acetaminophen 5/325, 2 tablets q.4 h. p.r.n. severe pain. May have 1 to 2 tablets.
5. Pentoxifylline 400 mg q.8 h.
6. Timolol 0.5% ophthalmic drops 1 drop both eyes twice a day.
7. Warfarin 5 mg every Monday, Tuesday, Wednesday, Friday and Saturday. 2.5 mg every Thursday and Sunday. Repeat INR q. Monday and Thursday.
8. Atorvastatin 10 mg a day.
9. Losartan 12.5 mg a day.

EXAMINATION ON THE DAY OF DISCHARGE:
VITAL SIGNS: Temperature 36.2, pulse 75, blood pressure 131/69.
GENERAL: She is alert, in no acute distress.
CHEST: Clear.
CARDIAC: Regular rate and rhythm. No murmur or gallop.
ABDOMEN: Nontender.
EXTREMITIES: Left lower extremity shows venous ulcerations with granulation tissue. No evidence of infection. The lower extremity between the knee and the ankle is dark red discoloration related to venous stasis. There is no edema.

CODE STATUS:
DURING THIS ADMISSION REMAINED FULL RESUSCITATION, HOWEVER PATIENT DOES NOT WANT PROLONGED RESUSCITATIVE EFFORTS IF THERE IS NO CHANCE OF HER RECOVERY.

FOLLOWUP:
Will be with Wound Care Clinic within 1 week after discharge from skilled nursing facility.

TIME SPENT:
Greater than 30 minutes spent on discharge activities on the day of discharge.

DATE OF SERVICE: 06/04/2018

HISTORY OF PRESENT ILLNESS:
This is an urgent admission for a 95-year-old Caucasian female, homeless, who has been followed at the Wound Care Center for multiple left lower extremity ulcers. The patient had been followed at the Wound Care Center for months to treat left lower extremity ulcers which failed conservative treatment. The workup in the past included vascular study which showed that the patient had moderate peripheral vascular disease together with also venous insufficiency. In the past the four ulcers over her left calf and ankle had significantly calcified materials which required local debridement. The wounds had been treated conservatively with different types of dressing but did not show any sign of improving. Treatment of her wounds was also complicated by being homeless. Unfortunately, the patient and her son were evicted and they are currently living in a tent nearby the church. She has a son who is the caregiver. The son definitely shows sign of caring, but occasionally her son performed wound care which was very alarming. In the past, the son was worried about her ulcers and he washed her leg and wounds with diluted bleach. Today, the patient returned to the Wound Care Center for followup and she was found that her left calf to the level of the toe has significant petechiae associated with skin redness. However, the patient denies any fever at home. The patient constantly complained of significant left leg pain even at rest. Examination at the Wound Care Center on the day of admission showed that slight touching her left calf caused significant pain. The patient is well known to have significant high pain tolerance, but at the clinic the patient was tearing and complained of constant left leg pain. Therefore, the patient was advised to be admitted directly under my service for treating her cellulitis and possible other problems, such as petechiae secondary to hypercoagulopathy. The patient was taking Coumadin secondary to history of remote deep venous thrombosis.

HOSPITAL COURSE:
The patient was admitted to the floor and she was started empirically on Ancef 1 g IV piggyback q.8 h. She was placed on bed rest with the left leg elevated above heart level. However, the patient was allowed to ambulate with the help of physical therapist. Physical therapist was ordered to do strengthening exercise and ambulate the patient as much as she can tolerate. Without ambulating the patient was required to elevate the left leg. The swab culture obtained from her wound grew out multiple bacteria, including Pseudomonas. However, within three days of intravenous antibiotics the cellulitis significantly improved. Dr. Cohen, Infectious Disease, who has been following the patient at the Wound Care Center, recommended to discontinue the

Date of Discharge: 20180604
Dictating Physician: Luu, MD, Paul

intravenous antibiotic. White the patient was admitted, the blood test also showed the patient had sustained hypercoagulopathy secondary to Coumadin. On admission, the patient had a PT of 45.7 with INR of 4.9. Her Coumadin was held and she gradually was restarted on very low-dose of Coumadin until she became therapeutic. At the time of discharge, her PT was 13.4 with INR of 1.5. White the patient was in the hospital it was found that the patient was also significantly dehydrated. After two days of intravenous hydration together with patient's good oral intake; therefore, intravenous supplement was discontinued. Initially when the patient arrived at the hospital, her hematocrit was 35, however, it subsequently decreased to 29 with intravenous hydration. Inpatient team was also called to help to manage multiple medical problems. Dr. Plotkin evaluated the patient and recommend a few changes of her treatment. Dr. Plotkin also contacted Bainbridge official to help with the housing situation for the patient. It was very difficult for the patient to return to the homeless living situation which would complicate the wound care. Therefore, the decision that after her medical condition is improved the patient will be discharged to skilled nursing facility. The patient agreed with placement to the skilled nursing facility. White the patient was in the hospital, she was also evaluated by Vascular Surgery Service, who recommended that she be followed at the vascular clinic with Dr. Rollo, who saw the patient in the past as an outpatient. There is no emergent vascular procedure that needed to be done during this hospitalization.

Overall, after three days in the hospital her medical condition improved significantly. The petechiae of the left lower extremity is also improved. She always remained afebrile during the entire hospital course. Therefore, on June 4, 2018, the patient was discharged to skilled nursing facility, Park Ridge Rehabilitation Center. At the skilled nursing facility, the patient will continue to receive physical therapy to ambulate the patient with the help of a walker. She will also perform strengthening exercise. At the skilled nursing facility, the wound care nurse who works with me at Northwest Hospital will follow and treat her four ulcers of the lower extremity. The patient, at the time of discharge, her Coumadin dose had been resumed and will be monitored closely at the nursing home. While the patient was in the hospital, the social worker also contacted Adult Protective Services to monitor the patient to make sure the patient did not sustain any physical or emotional abuse from any other parties. I also had a long discussion with the patient and recommend that she remains in the skilled nursing facility until health official or the social worker can help her to find permanent housing.

FINAL DISCHARGE DIAGNOSES:
1. Cellulitis of the left lower extremity.

Patient Name: HOFFMAN, JEANNE LEONIE
MR#: U8170135
Date of Admission: 05/31/2018
Acct#: 1827191558
Date of Discharge: 20180604
Dictating Physician: Luu, MD, Paul

2. Dehydration.
3. Peripheral arterial disease together with venous insufficiency.
4. Hypercoagulopathy secondary to Coumadin.

CONDITION AT TIME OF DISCHARGE:
Improved.

DISPOSITION:
The patient was transferred to the Park Ridge Skilled Nursing Facility.

FOLLOWUP:
The patient will be followed by the wound care nurse at the skilled nursing facility.

Infectious Disease (Progress Note) - Inpatient SOAP Note

Collected On: 06/03/2018 11:23

Subjective

ID/CC: 93 yo with periph arterial disease, chronic venous stasis, h/o DVT on anticoag, chronic L leg ulcers, admitted with cellulitis.
Subjective No new complaints this morning. Mild persistent posterior leg pain. .

ROS

Complete Review of Systems All other systems reviewed and negative except as noted in the HPI.

Exam

General Appearance Not in Acute Distress, Frail Appearing.

Vital Signs (PDoc)
06/03/2018 05:23

- Temperature (C): 36.9 (35.5-38.3Cel)
- Pulse: 72
- Respirations: 18
- BP: 143/73
- O2 Saturation (%): 99

Head/Ear/Nose/Throat poor dentition.
Eye low vision.
Cardiovascular RRR; Normal S1, S2.
Gastrointestinal ABDOMEN Soft; NT; +BS.
Extremities RLE mild venous stasis, no edema
LLE with chronic ulceration and excoriation, persistent erythema with some darkining around the edges. xerosis over foot.
Neurological alert, hard of hearing.
Behavior/Emotional Appropriate; Cooperative.

Labs

Micro wound cx: MSSA and pseudomonas .
Lab Results/Comments WBC 4.5, Hct 29
INR 1.7.

Radiology

All current radiographs have been reviewed by myself as of 6/3/2018 11:25.

Assessment and Plan

1) Stasis Ulcer, Venous Stasis,
Clinical Status No Change,
Plan

Collected On: 06/03/2018 15:13

Subjective

ID/CC: 93 yo with periph arterial disease, chronic venous stasis, h/o DVT on anticoag, chronic L leg ulcers, admitted with cellulitis.
Subjective Feels better, leg no longer hurts her. Swelling is improved. No Fever/chills, appetite good. Asked ID to see the patient due to wound cx which shows MSSA and pseudomonas. He elected to d/c all abx due to improvement in leg, assumed colonized, not infected at this time.
Pt c/o diarrhea, urgent, frequent. She said it started yesterday. Having incont. c diff negative
Per Dr. Cohen, pt no longer needs abx for the wounds.

ROS

Complete Review of Systems All other systems reviewed and negative except as noted in the HPI.

Exam

General Appearance Not in Acute Distress, Frail Appearing.

Vital Signs (PDoc)
06/03/2018 12:55

- Temperature (C): 36.9 (35.5-38.3Cel)
- Pulse: 70
- Respirations: 16

Lab Results/Comments WBC 4.1, Hct 33
INR 1.3.

Assessment and Plan

1) Cellulitis,
Present On Admit Yes,
- mild cellulitis LLE appears to be responding to abx/local care
- per Dr. Cohen, well enough that she no longer needs abx
- he specifically does not think pseudomonas needs to be treated, more likely colonized, as no evidence skin infection,
Plan - discontinue cefazolin per ID.

2) Stasis Ulcer,
Present On Admit Yes,
- venous ulcers, possibly arterial ulcers in LLE, acute on chronic
- seen with wound care
- local care seems to be helping already
- will need more routine wound care and, since homeless, needs SNF at d/c,
Plan
- vascular consult suggested outpt f/u for consideration of venous stasis treatment
- continue wound care
- SNF d/c when ready.

3) Blood Coagulation Disorder,
- mild coagulopathy, no bleeding, now sub-therapeutic
- chronic anti-coag due to h/o DVT,
Plan - continue load with warfarin until therapeutic.

4) Benign Hypertension,
Plan - continue home meds.

5) Abnormal Liver Function,
- mild transaminitis (unclear etiology), improved on latest labs,
Plan - follow periodically .

6) Diarrhea,
- unclear etiology
- stool cx pending,
Plan - start probiotics (acidophilus) today.

Thromboprophylaxis Plan Thromboprophylaxis Yes LMWH Comment enox until therapeutic on warfarin; Warfarin.
Disposition Plan Discharge To SNF, Timeframe Tomorrow, Comment if facility available.
Medical Decision Making Care Plan Discussed With Patient, Consultant Consultant 1) 1) Provider Name/Group Cohen, Seth A MD (503928) - Infectious Disease.

Progress Note - Inpatient SOAP Note

Collected On: 06/03/2018 17:29

Note

Patient is alert and oriented. She still has occasional left calf/leg pain but it is tolerable now. She has good oral intake and very talkative today. Afebrile and vital signs stable. She knows that she will be transferred to SNF and she agrees with the plan.
She may be transferred to SNF tomorrow if bed is available. It would be great that she can be placed in the SNF that the wound care nurse from the hospital will round on her. Otherwise, she can be followed at the wound care center. Vascular service recommended for her to follow with Dr. Rolla as an out patient for possible venous procedure. No antibiotic treatment requires now per recommendation of ID.
Given her age, lower extremity vascular problem, and ulcers over left calf, placing in SNF is the best for her and hopefully social working or APS can find a permanent place for her.
Transferred orders are written.

Paul Luu. M.D.

Discharge Medication Instructions

Allergy: adhesive tape, Penicillins, Sulfa (Sulfonamide Antibiotics)

Take These Medications

timolol maleate 0.5 % Drops
Directions: 1 drop ophthalmic, both eyes twice a day
Additional Instructions:
Last Dose Given Date: _____ Time: _____

warfarin (Coumadin) 5 mg Tablet
Directions: 1 tablet oral daily QMonday, Tuesday, Wednesday, Friday, and Saturday
Additional Instructions:
Last Dose Given Date: _____ Time: _____

warfarin (Coumadin) 2.5 mg Tablet
Directions: 1 tablet oral QThursday and Sunday
Additional Instructions:
Last Dose Given Date: _____ Time: _____

atorvastatin calcium 10 mg PO daily
Last Dose Given Date: _____ Time: _____

Losartan potassium 12.5 mg PO daily
Last Dose Given Date: _____ Time: _____

Pentoxifylline ER 400 mg TID
Last Dose Given Date: _____ Time: _____

acetaminophen 325 mg Tablet
Directions: 2 tablet oral every four hours as needed for FEVER
Additional Instructions:
Last Dose Given Date: _____ Time: _____

acidophilus-pectin, citrus 25 million cell-100 mg Tablet
Directions: 1 tablet oral twice a day
Additional Instructions:
Last Dose Given Date: _____ Time: _____

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 06/03/2018 11:32

Note

Pharmacy Warfarin Management Note:

S/O: 93 yo F admitted for cellulitis. Pharmacy was consulted to dose warfarin for the indication of hx of remote DVT (verbal order from Dr. Luu).
Goal INR: 2-3
PMH includes: Hx of DVT, PVD, multiple treatments for LLE infection
Social hx: will likely to dc to SNF

Patient's home warfarin regimen is: 2.5 mg on Thursday and Sunday; 5 mg all other days
Last dose taken: 5 mg on 5/30

Objective:
INR: 1.3
Hgb/Hct: 10.3/33, Plt: 213
Diet/PO intake: 100% of meals per nursing charting
Current potential drug-drug or drug-disease interactions with warfarin: cefazolin 1g q8h for cellulitis

A/P:
INR remains SUBtherapeutic, decreased from 1.7 yesterday to 1.3 today, after restarting warfarin yesterday at 5 mg. Likely still seeing the effect of held doses. Will continue warfarin with higher dose of 5 mg today in attempt to reach therapeutic level, otherwise anticipate daily dose needed to be 2.5-3 mg daily.

1) Continue warfarin with 5 mg x1 as bolus dose.
2) Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
3) Next INR draw: 6/4 AM

Progress Note - Inpatient SOAP Note

Collected On: 06/02/2018 21:03

Note

Afebrile and stable vital signs. INR is 1.7 today, Coumadin dose is done by in-house pharmacist.

Patient is alert in bed and denies leg pain. She expressed that she "like it here". She verbally expressed that she is willing to go to SNF. Appreciated Dr. Cohen, Dr. Plotkin, and wound care nurse evaluated and treating her. I do not anticipate that all her wounds will heal due to severe lower extremity vascular problems (both PAD and venous), together with advanced age and being homeless. However, as long as she does not develop severe soft tissue infection and the wounds are monitored by healthcare staff, then she will do fine. I would not recommend any surgical or aggressive treatment to the wounds.

Anticipate to transfer patient to SNF in two days. She will need PT at the SNF.

Paul Luu, M.D.

Note

Pharmacy Warfarin Management Note:
Subjective:
Patient is a 93 yof admitted for cellulitis. Pharmacy was consulted to dose warfarin for the indication of hx of remote DVT (verbal order from Dr. Luu).
Goal INR: 2-3
PMH includes: Hx of DVT, PVD, multiple treatments for LLE infection
Social hx: will likely to dc to SNF
Patient's home warfarin regimen is: 2.5 mg on Thursday and Sunday; 5 mg all other days
Last dose taken: 5 mg on 5/30
Objective:
INR: 1.7 (3.4 on 6/1)
Hgb/Hct: 9.2/29
Plt: 191
Tmax: 36.9
Diet/PO intake: 100% of meals per nursing charting
Current potential drug-drug or drug-disease interactions with warfarin: cefazolin 1g q8h for cellulitis
Assessment:
INR remains SUBtherapeutic at 1.7 but significantly decreased from 3.4 yesterday and 4.9 on admit. Will resume warfarin with higher dose of 5 mg today in attempt to reach therapeutic level within the next 2 days, otherwise anticipate daily dose as 2.5 mg.
Plan:
Resume warfarin with 5 mg x1 as bolus dose.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
Next INR draw: 6/3 AM

3-eConsultation Cohen, MD, Seth 6/2/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 4:52:17 AM -04:00

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge:
Dictating Physician: Cohen, MD, Seth

DATE OF SERVICE: 06/02/2018

REQUESTING PHYSICIAN:
Dr. Plotkin.

REASON FOR CONSULTATION:
Left lower extremity cellulitis and venous insufficiency ulcers.

HISTORY OF PRESENT ILLNESS:
The patient is a 93-year-old woman with a history of venous insufficiency in the left lower extremity, chronic ulcerations and peripheral vascular disease who has been followed at the wound care clinic for some time for her chronic ulcerations. She was seen at the wound care clinic on May 31 out of concern for worsening cellulitis and nonhealing wounds. She was admitted to the hospital. She has not had systemic symptoms of infection. Denied fevers or chills. She was otherwise feeling well. She was started on cefazolin. Cultures of her wounds grew MSSA and Pseudomonas. She has been seen by Wound Care who recommended local care, Xeroform and Kerlix, as well as leg elevation. Vascular Surgery was consulted and will follow up with her as an outpatient. She has tolerated her antibiotics without side effects.

PAST MEDICAL HISTORY:
Chronic lower extremity ulcerations for many years, venous insufficiency, arterial insufficiency, bilateral lower extremity DVT about 30 years ago, on Coumadin, peripheral neuropathy, right lower extremity fractures.

MEDICATIONS:
She is currently on

1. Atorvastatin.
2. A bowel regimen.
3. Cefazolin.
4. Losartan.
5. Pentoxifylline.
6. Timolol.
7. Coumadin.

ALLERGIES:
She is allergic to ADHESIVE TAPE. She has reported allergies to PENICILLIN and

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge:
Dictating Physician: Cohen, MD, Seth

SULFA drugs which cause a rash.

SOCIAL HISTORY:
She is widowed. She has two sons. She has been living with her son in subsidized housing but was apparently evicted and has been living in an "igloo," which consists of two separate tents. She denies tobacco, alcohol or drugs.

FAMILY HISTORY:
Mother died of old age at 94.

REVIEW OF SYSTEMS:
A full review of systems was obtained and is negative except as mentioned in the HPI.

PHYSICAL EXAMINATION:
VITAL SIGNS: Temperature 36.9, pulse 64, respirations 18, blood pressure 110/59, saturating 98% on room air.
GENERAL: She is an elderly, frail-appearing woman in no apparent distress.
HEENT: Oropharynx is clear. She has poor dentition. There is no thrush. She has no cervical or supraclavicular lymphadenopathy.
HEART: Regular rate and rhythm without murmurs, rubs, or gallops.
LUNGS: Clear to auscultation bilaterally.
ABDOMEN: Soft, nontender, nondistended with normoactive bowel sounds.
NEUROLOGICAL: She is alert, conversant. She is hard of hearing with poor vision.
EXTREMITIES: The left lower extremity has severe venous insufficiency and discoloration. She has multiple chronic skin ulcers present with one on her posterior leg which is mildly tender. The remainder of her leg is not particularly tender. It is pink with stable erythema, compared to my prior exams.

LABORATORY DATA:

White blood cell count of 4.5, hemoglobin of 9.2, platelets 191. Creatinine 0.66. CRP 4.3. A calf swab shows 4+ MSSA, 3+ Pseudomonas and 3+ diphtheroids.

ASSESSMENT AND PLAN:
1. The patient is a 93-year-old woman with peripheral vascular disease, chronic lower extremity ulcers and severe venous stasis admitted with worsening erythema of her lower extremities. Her cellulitis appears to have improved significantly. A swab of her skin reflects heavy colonization with

3-eConsultation Cohen, MD, Seth 6/2/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 4:52:17 AM -04:00

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135

Date of Discharge:
Dictating Physician: Cohen, MD, Seth

methicillin-sensitive Staphylococcus aureus, diphtheroids and Pseudomonas. Of the three, it is most likely that methicillin-sensitive Staphylococcus aureus may have caused her cellulitis initially. However, today there is no evidence of obvious cellulitis on exam. Her skin is mostly consistent with severe venous stasis and chronic ulceration. Based on her age and medical fragility, she is at extremely high risk of side effects from IV antibiotics. Her Pseudomonas does not need to be treated at this time. I prefer to hold antibiotics now that her infection has improved and watch closely for any signs of worsening. I suspect she will do quite well with aggressive supportive care. It will be important for her to follow up with Vascular Surgery as an outpatient. I also had a long discussion with her son today regarding appropriate skin care, reminding him that he should not use hard bristle brushes to scrape her legs, nor should he use hydrogen peroxide or any other products that are not recommended by Wound Care. Unfortunately, her skin care is complicated by homelessness and she would greatly benefit from wound care at a nursing facility if this is at all possible.
2. History of deep venous thrombosis, on Coumadin. As we transition off of antibiotics, her INR will need to be monitored closely.

Thank you very much for this consultation. The case was discussed with the primary team.

Micro wound cx: MSSA and pseudomonas (sens pdg).
Lab Results/Comments WBC 4.5, Hct 29
INR 1.7.

Assessment and Plan

1) Cellulitis,
Present On Admit Yes,
Clinical Status Improving,
- mild cellulitis LLE appears to be responding to abx/local care
- per Dr. Cohen, well enough that she no longer needs abx
- he specifically does not think pseudomonas needs to be treated, more likely colonized, as no evidence skin infection,
Plan - discontinue cefazolin per ID.
2) Stasis Ulcer,
Present On Admit Yes,
Clinical Status Improving,
- venous ulcers, possibly arterial ulcers in LLE, acute on chronic
- seen with wound care
- local care seems to be helping already
- will need more routine wound care and, since homeless, needs SNF at d/c,
Plan
- vascular consult suggested outpt f/u for consideration of venous stasis treatment
- continue wound care
- SNF d/c when ready.
3) Blood Coagulation Disorder,
- mild coagulopathy, no bleeding, now sub-therapeutic
- chronic anti-coag due to h/o DVT,
Plan - continue load with warfarin until therapeutic.
4) Benign Hypertension,
Plan - continue home meds.
5) Abnormal Liver Function,
- mild transaminitis (unclear etiology),
Plan - follow periodically .
Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Disposition Plan Discharge To SNF, Comment 2 days.
Medical Decision Making Care Plan Discussed With Patient, Family, Nurse.

Progress Note - Inpatient SOAP Note

Collected On: 06/02/2018 21:03

Note

Afebrile and stable vital signs. INR is 1.7 today, Coumadin dose is done by in-house pharmacist.

Patient is alert in bed and denies leg pain. She expressed that she "like it here". She verbally expressed that she is willing to go to SNF. Appreciated Dr. Cohen, Dr. Plotkin, and wound care nurse evaluated and treating her. I do not anticipate that all her wounds will heal due to severe lower extremity vascular problems (both PAD and venous), together with advanced age and being homeless. However, as long as she does not develop severe soft tissue infection and the wounds are monitored by healthcare staff, then she will do fine. I would not recommend any surgical or aggressive treatment to the wounds.

Anticipate to transfer patient to SNF in two days. She will need PT at the SNF.

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 06/01/2018 13:09

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a 93 yof admitted for cellulitis. Pharmacy was consulted to dose warfarin for the indication of hx of remote DVT (verbal order from Dr. Luu).
Goal INR: 2-3
PMH includes: Hx of DVT, PVD, multiple treatments for LLE infection
Social hx: homeless

Patient's home warfarin regimen is: 2.5 mg on Thursday and Sunday; 5 mg all other days
Last dose taken: 5 mg on 5/30

Objective:
INR: 3.4 (4.9 on 5/31)
Hgb/Hct: 9.2/29
Plt: 191
Tmax: 36.7

Diet/PO intake: 100% of meals
Current potential drug-drug or drug-disease interactions with warfarin: cefazolin 1g q8h

Assessment:
INR remains supratherapeutic at 3.4 but down significantly from 4.9 on admit. Expect INR to be in lower end of goal or slightly subtherapeutic tomorrow. Will hole for one more day and anticipate re-initiation tomorrow evening at a reduced dose compared to pt's home regimen.

Based on patient's living situation or discharge disposition, patient will likely not need warfarin teaching/review.

Plan:
Will HOLD warfarin tonight.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
Next INR draw: 6/2 AM

3-eConsultation Ohlsson, MD, Anna 6/1/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 5:09:01 AM -04:00

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge:
Dictating Physician: Ohlsson, MD, Anna

DATE OF SERVICE: 06/01/2018

CONSULTING PROVIDER:
Paul Luu, MD.

REASON FOR CONSULTATION:
Concern for nonhealing left lower extremity wounds with known venous and peripheral arterial disease.

IDENTIFICATION/CHIEF COMPLAINT:
The patient is a 93-year-old woman with a history of venous insufficiency and peripheral arterial disease with chronic lower extremity wounds on the left leg who is admitted for concern for left lower extremity cellulitis. Vascular Surgery is consulted regarding her history of chronic venous disease and peripheral arterial disease in the setting of nonhealing wounds.

HISTORY OF PRESENT ILLNESS:
The patient has had left lower extremity wounds for the past year she states. She has been followed in the Wound Care Clinic previously and recently was admitted from clinic on May 31st for concern for possible cellulitis of her left leg. She was recently hospitalized in February of this year also for a cellulitis of her left leg. She states that she has had these left lower extremity wounds for the past year, but has had a new wound show up on her left posterior calf in the last week or so. She denies any fevers or chills, but states she has had terrible pain associated with her ulcers. She was admitted yesterday and started on cefazolin for possible cellulitis. Wound cultures were taken and are now growing GPCs and GNRs. She was also noted to be supratherapeutic on her warfarin, which she takes for a history of DVT. Her warfarin has been held and her INR has climbed to 4.9 from 3.4. Regarding her history of her wounds, she states that she has tried an Unna boot in the past as well as compression stockings and has had prior skin grafting to the area close to 30 years ago, but she says that her wounds have recurred. She has never to her knowledge had any venous or arterial surgeries done. In her prior hospitalization in February, she had both venous and arterial duplexes done. The arterial duplex demonstrated that she had 3-vessel runoff to both legs with 20% to 49% stenosis of bilateral SFAs and possible distal PT occlusion on the right. Her toe brachial indices were 0.49 on the right and 0.35 on the left. She also had a venous reflux duplex done at the same time demonstrating bilateral reflux in her greater saphenous veins to the common femoral veins.

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge:
Dictating Physician: Ohlsson, MD, Anna

She denies any fevers, chills, shortness of breath, chest pain, abdominal pain, nausea, vomiting, diarrhea ,or constipation.

REVIEW OF SYSTEMS:
A complete review of systems is performed with the patient and is negative other than detailed in HPI.

PAST MEDICAL HISTORY:
1. History of chronic venous insufficiency.
2. Peripheral arterial disease.
3. History of left lower extremity wounds, status post skin grafting about 30 years ago.
4. History of left lower extremity DVT, on warfarin for the past 30 years.

MEDICATIONS:
1. Warfarin 5 mg q. Monday, Tuesday, Wednesday, Friday and Saturday, and 2.5 mg q. Thursday and Sunday.
2. Timolol malleate 0.5% drops 1 drop per eye b.i.d.
3. Atorvastatin 10 mg daily.
4. Losartan 12.5 mg daily.
5. Pentoxifylline extended release 400 mg t.i.d.

FAMILY HISTORY:
Family history of blood clots in her maternal grandmother. She is unsure what type of clot.

SOCIAL HISTORY:
She is currently homeless, living with her son in a tent. She states that she has been homeless for the past 3 months or so. She is a never smoker, drinks one beer per year, and denies any recreational drugs.

ALLERGIES:

1. ADHESIVE TAPE.
2. PENICILLIN.
3. SULFA.

PHYSICAL EXAM:
VITAL SIGNS: Temperature 36.4, heart rate 61, blood pressure 116/55, satting 99% on room air.
CONSTITUTIONAL: Well-appearing elderly woman, pleasantly demented.

3-eConsultation Ohlsson, MD, Anna 6/1/2018 CUSTDM10\W0TA_STM_BackgroundJ 9/9/2020 5:09:01 AM -04:00

Patient Name: HOFFMAN, JEANNE LEONIE **MR#:** U8170135
Date of Admission: 05/31/2018 **Acct#:** 1827191558
Date of Discharge:
Dictating Physician: Ohlsson, MD, Anna

HEENT: Normocephalic and atraumatic.
CARDIOVASCULAR: Regular rate and rhythm. Palpable bilateral femoral, popliteal, DP and PT pulses.
RESPIRATORY: Bilateral and symmetric chest rise. No increased work of breathing.
ABDOMEN: Soft, nontender, nondistended abdomen. No masses.
MUSCULOSKELETAL: Thin. Decreased muscle bulk. Somewhat cachectic appearance.
SKIN: There are three ulcerations on her left lower extremity--one on the left lateral malleolus, one on the posterior calf, and one on the medial ankle. The posterior calf lesion is approximately 4 cm wide. The left lateral ulcer is approximately 3 cm wide as is the medial ankle ulcer. There is minimal serous drainage from the wounds. The left leg below the knee has venous stasis dermatitis with some erythema noted.

LABORATORY VALUES:
INR is 4.9. Creatinine is 0.66. Hematocrit is 29, down from 35.

Wound cultures growing GPCs and GNRs.

Vascular studies reviewed: Venous duplex demonstrating bilateral greater saphenous and common femoral vein reflux.

Arterial duplex: Right toe brachial index is 0.49, right ABI is 1.54. Left ABI was unable to be obtained. Left toe brachial index was 0.35. The right popliteal artery had 20% to 49% stenosis with possible distal occlusion of the PT. Three-vessel runoff is seen. The left SFA and popliteal artery are graded at 20% to 49% stenosis. Three-vessel runoff is seen on the left.

ASSESSMENT AND PLAN:
The patient is a 93-year-old woman with a history of peripheral arterial disease and chronic venous insufficiency with nonhealing left lower extremity ulcers. Vascular Surgery is consulted regarding care for her nonhealing wounds. Given that the patient is currently undergoing treatment for cellulitis and has a supratherapeutic INR, we would not recommend any immediate intervention. As she is pending SNF placement in the next few days, we would recommend that she follow up as an outpatient for discussion of treatment for her venous disease, specifically radiofrequency ablation of her greater saphenous vein on the left leg. We would also discuss the option for microphlebectomies if she has any varicosities that may be contributing to her venous ulcers. Given that she has palpable pedal pulses, we do not suspect that her arterial disease is a significant cause of her inability to heal her wounds and it is more likely due to her venous disease. She should follow up

NWH INPATIENT WOUND CONSULTATION

DATE OF SERVICE: 6/1/18

ID/CC: 93F admitted from wound clinic by Dr. Luu for left leg cellulitis, chronic mixed vascular leg ulcers. Dr Luu requests wound consult for this problem.

HPI: The patient, Jeanne is seen at the bedside with Dr. Plotkin and RN Bereket for exam, chart reviewed. I did see her during her February 2018 consultation for the same issue. She explains that she lost her housing and is living in a tent with her son in Bainbridge Island. In that context wound care has been challenging, she says every 2 or 3 days or so her son will help her with wound care using medihoney and dry dressings. She has not been in formal compression wrapping. She has multiple new areas of ulceration on the left leg and there was reported copious weeping on eval yesterday. LEA & LEV reflux study was done inpatient in February, unfortunately her outpatient vascular consultation never occurred. ABIs were unreliable, DBIs reduced .49 R on .35 L waveforms at the ankle on the left indicated moderate arterial insufficiency. Reflux exam demonstrated deep and superficial venous valvular insufficiency. Since admit WBCs have been WNL, she is afebrile, and is receiving IV cefazolin for the cellulitis which she is tolerating without ASE. Plan is for d/c to SNF in the Seattle area.

ROS: complete ROS is negative except as mentioned above.

PFSH: homeless living in a tent with her son. Habits: no ETOH, tobacco other drug use

PMH from H&P: Chronic lower extremity ulcerations of left leg for many years. History of venous insufficiency, left leg greater than right. History of arterial insufficiency. History of bilateral lower extremity DVT about 30 years ago, on chronic longstanding warfarin. History of poor balance. Possible peripheral neuropathy. History of right lower extremity fracture.
Medications/Allergies: reviewed in the EMR therefore not retyped here

O:

VS reviewed afebrile
Gen: alert, conversant, hard of hearing elderly female sitting up in hospital bed NAD.
Ext: no lower extremity edema. Feet are warm with non palpable pedal pulses.
Skin: right leg is intact without tissue loss. Left leg has extensive stasis dermatitis, and 5 separately identifiable ulceration L medial malleolus 3.5x3x0.3 cm no deep structure exposed mixed yellow slough/pink granulation tissue. L posterior calf 7x3 cm ulceration mixed tissue base (yellow/pink), left lateral foot 2x2x0.2 cm ulcer, L lateral calf with 2 separate ulcers proximal 4x2x0.2 cm mostly red granulation wound base, distal to that a shallow dermal ulcer 2x1cm. see page 2 for reference photos.

A:
93F with left lower extremity cellulitis (improved) mixed vascular disease and chronic, worsening left ankle and calf ulcers – subq level.

P:
-recommend vascular consult, discussed case with Dr. Rollo who kindly agreed to evaluate. Will appreciate input if compression would be tolerated, and if any vascular procedures would be of benefit.
-simple local care daily given exudate, wash leg, emollient to dry skin xeroform ABD & kerlix to the ulcers, leg elevation.
-continue antibiotics per attending team, cellulitis seems nicely resolving.
-will need SNF on discharge and continued OP WCC f/u.

Progress Note - Inpatient SOAP Note

Collected On: 06/01/2018 06:57

Note

Patient is sleeping well. Per nursing staff, she is eating and drinking well. IV fluid will be discontinued. On Ancef and pending culture result. Requested social worker to find SNF for patient. Hct was low at 29, meaning that she was dehydrated at the time of admission (it was 35). PT is ordered - ambulate with walker.

I spoke to the son yesterday and he was proudly said that she was making money from people donating - questionable both of them are food and money beggars? Son is not working and I don't know whether he has any source of income. Does she receive social security money? We must pay attention for possible adult abuse. In short, she should be placed SNF to help manage her overall condition including wound care.

Appreciated Dr. Plotkin evaluated and treated patient.
Wound care nurse will evaluate the wounds today.

Assessment and Plan

1) Cellulitis,
Present On Admit Yes,
Clinical Status Improving,
- mild cellulitis LLE appears to be responding to abx/local care,
Plan - continue cefazolin.
2) Stasis Ulcer,
Present On Admit Yes,
Clinical Status Stable,
- venous ulcers, possibly arterial ulcers in LLE, acute on chronic
- seen with wound care
- local care seems to be helping already
- will need more routine wound care and, since homeless, needs SNF at d/c,
Plan
- vascular consult (Teresa to call Dr. Rollo)
- continue wound care
- SNF d/c when ready.
3) Blood Coagulation Disorder,
- mild coagulopathy, no bleeding
- chronic anti-coag due to h/o DVT,
Plan - continue to hold warfarin until therapeutic.
4) Benign Hypertension,
Plan - continue home meds.
5) Abnormal Liver Function,
- mild transaminitis (unclear etiology),
Plan - follow periodically .
Thromboprophylaxis Plan Thromboprophylaxis Yes Warfarin.
Current Antibiotics cefazolin.
Disposition Plan Discharge To SNF, Comment 2 days.
Medical Decision Making Care Plan Discussed With Patient, Nurse, wound care--Teresa.

Pharmacy Medication Management/Review - Inpatient SOAP Note

Collected On: 05/31/2018 14:32

Note

Pharmacy Warfarin Management Note:

Subjective:
Patient is a 93 yof admitted for cellulitis. Pharmacy was consulted to dose warfarin for the indication of hx of remote DVT (verbal order from Dr. Luu).
Goal INR: 2-3
PMH includes: Hx of DVT, PVD, multiple treatments for LLE infection
Social hx: homeless

Patient's home warfarin regimen is: 2.5 mg on Thursday and Sunday; 5 mg all other days
Last dose taken: 5 mg on 5/30

Objective:
INR: 4.9
Hgb/Hct: 10.9/35
Plt: 213
Albumin: 3.6
Baseline LFTs: 44/35
Tmax: 36.3

Diet/PO intake: Ate 100% of breakfast, no other meals charted
Current potential drug-drug or drug-disease interactions with warfarin: cefazolin 1g q8h

Assessment:
INR at baseline is supratherapeutic at 4.9 while on home regimen. Will hold warfarin tonight and anticipate re-initiation of warfarin at a lower dose. Elevated INR is possibly 2/2 decreased PO intake as patient is homeless. Plan is for patient to discharge to SNF following tx for cellulitis.

Based on patient's living situation or discharge disposition, patient will likely not need warfarin teaching/review.

Plan:
Will HOLD warfarin tonight.
Will continue to monitor for drug interactions, s/sx of bleeding/bruising/clotting, INRs, and adjust dose accordingly.
Next INR draw: 6/1 AM

Electronically signed by Travis Yesiki, Pharm D on 05/31/2018 14:40

NORTHWEST HOSPITAL & MEDICAL CENTER — Partners with the Community for Wellness

Our mission is to raise the long–term health status of our community by providing personalized, quality care with compassion, dignity, and respect.

	WHAT TO LOOK FOR?	WHAT TO DO?
HEART FAILURE	**Call your primary care provider for any of the symptoms below:** • Shortness of breath that gets worse or wakes you from sleep • Weight gain above 2lb per day or 3lb per week • Swollen/puffy feet, ankles or legs • Dizziness or light–headedness with standing • Feeling exhausted during routine activity	• Don't smoke! • Take medications on time, to control blood pressure, choles–terol and glucose • Check weight daily • Pace yourself. Slow down or stop when you need to rest • Participate in activities that you can do comfortably and build exercise into your daily routine • Avoid stress • Eat heart healthy diet: reduce salt, fat, cholesterol, and increase fiber • Limit alcohol intake • Follow up regularly with your primary care provider as directed
STROKE "Brain Attack!"	**Call 911 if you have:** • Sudden numbness or weakness of face, arm or leg • Sudden confusion, trouble speaking or understanding • Sudden change in vision in one or both eyes • Sudden difficulty with walking • Sudden dizziness, loss of balance or coordination • Sudden severe headache with un–known cause	**Know the 2 types of stroke** • Ischemic stroke – blocked artery • Hemorrhagic – ruptured artery **How to prevent stroke** • Don't smoke! • Control blood pressure • Take medications as directed • Manage diabetes • Eat a heart healthy diet: reduce salt, fat, cholesterol, and • increase fiber • Incorporate physical activity into your daily routine • Limit alcohol intake • Maintain healthy weight
QUIT SMOKING	**Did you know?** • Tobacco is the number 1 killer in America today • Second hand smoke is just as harmful to your health • 1/2 million Americans die from smok–ing related disease each year	• Get ready to quit and pick a date to stop smoking • Get support and encouragement from family, friends and co–workers • Do things differently to avoid triggers that make you want to smoke • Consider medication and use it correctly • Be prepared for relapse, it may take several attempts • Join a support group or telephone a quit–line
